"The 'uba' cane of Natal, India, Japan and Cuba grows any place, with or without cultivation, from sea-level to mountain-top, under heat and cold, flood and drought. Whether the soil is rich or sterile is the least of its worries. In Natal it stands up against frost in a truly remarkable manner and runs along yielding crops carrying the ratio of 9 or 10 tons of cane per ton of sugar with minimum cultivation and no fertilizer, Pierce stated. It is harvested every other year and ratoons almost indefinitely.

"The Cuban planters swear by it, for it has the same hardy characteristics in that part of the sugar world. In Cuba they have compared the uba of Natal with the uba of Japan and are inclined toward the African strain as being the better.

"Agee says he believes there is a niche in Hawaiian agriculture for the uba cane. There is a likelihood that the Natal uba would grow in many of the poor uplands of Hamakua where the standard cane varieties make but a sorry showing.

"There used to be a patch of so-called 'uba' at the Waipio substation, but Agee had to throw it out because the manager of Oahu Sugar Company strenuously objected to milling 'just a lot of hay' to see whether there was any sugar in it, and plantation managers have to be humored even by experiment-station scientists.

"Down at Waipio 'uba' never seemed to pay any attention to high-grade fertilizers, careful cultivation and rich soils. Under

ideal conditions it threw its opportunities away, Agee said. So it was ejected into outer darkness.

"However, conditions throughout the sugar-cane countries have changed and there is a premium on varieties that will yield fair returns with no care. Cuba is harvesting uba cane that has never had a hoe or a pound of fertilizer put into the soil, and is making money out of it. Japan, India and Natal are doing likewise.

The question naturally arises whether Hawaii might not find it profitable to do the same thing during the lean years of low prices and a labor shortage.

"Uba cane is a tough citizen. Its stalks are small, hard, siliceous, and when ripe, covered with wax. It plays havoc with mill rollers, is high in fiber, but fairly rich in sucrose. Its good qualities which distinguish it are its hardness under the most adverse environment, the freedom with which it ratoons, and its uniform yields.

"In Natal, wax is one of the standard by-products from every sugar mill, about 13 per cent. of wax being extracted from the press cake. This goes to London. It is used in the manufacture of candles, shoe polish and phonograph records."

READY-MADE LAWNS—Why not buy your lawn ready-made? asks a contributor to *Conquest* (London). Both temporary and permanent lawns are now obtainable "from stock" by those who care to pay the price. It goes on:

—IS WATERED—

"The three photographs on this page show how a temporary lawn—of real live grass, not the imitation variety—can be ordered by post and delivered by the railway company or the carrier at your door. Wooden trays of a suitable size are filled with soil and planted with grass seed, the nurseryman tending them carefully until a suitable crop of fresh, green, closely trimmed grass is produced. If necessary hundreds of these trays can be kept in stock, ready for orders. When a lawn is required, a suitable number of trays are packed into crates (one of which can be seen in the background of the first photograph), and dispatched by suitable means to the purchaser. The method of laying will be understood from our photographs. For those

who require permanent lawns 'ready-to-wear,' grass can be grown on a layer of soil spread over sheets of canvas. The 'finished' lawn can be rolled up, sent by rail, and unrolled over a suitably prepared and leveled surface of ground, whereupon the roots will penetrate the canvas, enter the prepared soil, and flourish, the canvas rotting away after a time and providing no hindrance to growth."

—AND DULY LAID IN PLACE.

RADIO • DEPARTMENT

THE MAN WHO MADE BROADCASTING POSSIBLE

EVERY ONE WHO HAS PASSED BEYOND the novice stage in radio lore has heard of the "feed-back" system which enables a local battery to contribute energy for the amplification of a signal received at a wireless station. But until very recently no one could be quite sure as to who was to be officially credited with the invention of the method, as the matter had been subject of legal controversies since 1914. Now, however, the courts have handed down a final decision in favor of Mr. Edwin H. Armstrong, whose popular sobriquet, "Feed-back Armstrong" thus receives substantial authentication. The *New York Tribune*, after remarking that the decisions of the courts would not only have a far-reaching effect upon all forms of radio communication, but also upon every industry to which an electrical oscillator may be used in the future, makes this explicative comment:

"Stript of its legal and technical verbiage, the decision of the court, which is final, means that no transatlantic telephone conversation can be carried on without the Armstrong principle, nor can any of the big radiophone broadcasting stations now sending music nightly through the ether operate without using the Armstrong patent. Even the modern multiplex forms of wire telegraphy and telephony must use the Armstrong method.

"The decision of the court is very broad. It confirms Armstrong in his patent and recognizes the fact that he conceived the idea which revolutionized radio and made broadcasting possible as early as January 31, 1912, and in this confirms the sweeping decision previously handed down by Federal Judge Julius M. Mayer."

The decision hinged on a simple diagram, clearly showing the feed-back principle, which young Armstrong drew and had witnessed before a notary in January, 1913, at which time he was a student at Columbia. The few simple lines, which any one versed in the art will readily understand, make record of an invention which Professor Michael I. Pupin, of Columbia University, characterizes as "one of the most important inventions, if not the most important, in the wireless art." As quoted in

the *Tribune*, Professor Pupin, after referring to Armstrong's invention of the feed-back circuit, says:

"The invention enabled him to make another most important step in wireless telegraphy, and that is the construction of a vacuum tube oscillator. When the feed-back circuit energized by the local source contributes more than a certain definite amount, then the system of circuits becomes an electrical oscillator, oscillating at the perfectly definite period which depends upon the inductance and the capacity of the controlling circuit. By varying either the inductance or the capacity, we can produce any period of oscillation between a few periods per second and many millions per second, and the oscillation once established maintains its pitch indefinitely.

"It is a generator of electrical oscillations, maintaining its pitch with a degree of accuracy never before obtained by any apparatus constructed by man.

"The importance of the feed-back circuit in the reception of wireless signals and the importance of the electrical oscillator, not only in wireless telegraphy but also in wire telegraphy and other departments of applied electricity, can not be overestimated.

"It is admitted by those skilled in the wireless art that the ordinary electromagnetic generator of high power will before long be superseded by the vacuum tube oscillator, which also will bring about more or less reconstruction of wireless transmitting stations. I am particularly pleased that this decision gives the credit for the invention to a man who is a former student of mine and

a student of Columbia University, and who has made a deal of his work in the Marcellus Hartley Research Laboratory of Columbia University. It goes without saying that long-distance

radio communication and radiophone broadcasting would be impossible without this invention."

In an interview published in the *Evening Post* (New York), the young inventor himself forecasts the future of the new art for which his own work is so largely responsible. What he has to say about prospective receiving outfits has interest for every amateur:

"The time is not far off," said Armstrong, "when the radiophone receiver will be as common as the victrola now is. Not every home will have the radiophone, of course, but I can predict that every home now having a phonograph will be equipped with wireless."

"This equipment will

"FEED-BACK ARMSTRONG."

THE CIRCUIT THAT MADE BROADCASTING POSSIBLE.

The original Armstrong circuit, as depicted in 1913, when the inventor was a student at Columbia University. This is the document that played an all-important part in establishing Mr. Armstrong's claim to priority of invention. Current from the plate battery B2 is "fed back" inductively from the coil L3 ("tickler") through coil L2 to the grid circuit, augmenting, or "regenerating," the current from the aerial.

consist of none of the outside and unsightly wires, switchboards, and batteries now seen in every radio station, he maintains. The whole radiophone receiver, horn and all, will be no larger than the now ordinary music box, and the current to operate it will be supplied by an electric cord connected with the nearest wall plug.

"Instead of the aerial wires now used," he said, "the radiophone receiver will have a small coil of wire, or a metal rod five or six feet long, something no more conspicuous than the ordinary curtain rod. Outside wires will be unnecessary."

"Armstrong can do this very thing now. At his home at 1032 Warburton Avenue, Yonkers, he has set up in his room a small receiver, employing no outside wires, which picks up music and other signals from the Westinghouse station at Newark with such strength that they may be heard for half a mile—if the window be opened.

"In every city he believes there will be one or more broadcasting stations, constantly sending out entertainment and information. The finest concerts can be provided by the city, and sent out free to every citizen who cares to turn on his receiver. There could be baseball reports, stock market quotations, weather predictions, the news of the day, educational lectures, even political speeches, sermons on Sunday, grand opera at night—everything, in short, for the complete recreation or edification of the people. That is to say, if political speeches may be said to do either of these things.

"Would anybody read newspapers then?"

"Armstrong grinned in non-committal silence."

A TINY RADIO RECEIVER

THERE IS MUCH RIVALRY among ingenious boys to make the smallest practical radio telephone receiver. We hear of one outfit contained in an ordinary safety-match box and another contained in the box of a safety razor. But these are relatively large outfits compared with one made by a youth whose portrait appears, with the miniature receiving outfit in the foreground, in *Popular Radio* (New York). We find this editorial comment, which seems to leave the field still open:

"Still another 'smallest radio receiving instrument in the world,' has been completed, this time by Alfred J. De Giovanni, a fourteen-year-old freshman in the Union High School at Knoxville, Pennsylvania.

"This tiny instrument is slightly less than one inch square, not much larger than a nickel, but is said to record distinctly in Knoxville the programs of the large broadcasting station in East Pittsburg, a distance of about fifteen miles.

"Young De Giovanni has been making wireless outfits more than three years."

Inspection of this pocket-size radio receiving outfit leads one to feel that an editorial writer in the *Toledo News Bee* is not hazarding so much as might at first thought appear when he writes:

"Twenty years from now, when pocket wireless outfits will be as common as watches are now, we will be boasting that we saw the pioneer's wireless devices. Times will be so changed, with so many now unthought-of marvels, that the people of 1942 will yawn at us, just as we look bored when an old soldier reminisces."

To put the time when pocket wireless outfits will be in common use twenty years ahead would appear to be a very conservative estimate. There are plenty of pocket outfits in use to-day, altho for the most part they classify as freak apparatus. The great desideratum is the development of a receiving radio outfit that does not require a cumbersome antenna.

WELKIN-RINGING BY RADIO

THE RADIO RECEIVING TELEPHONE made its way into the homes of about three million people in this country during the past year, and made entrance so silently that for the most part the remaining millions of us knew nothing about it until we were aroused by Secretary Hoover's announcement at the Radio Conference. Then we all suddenly realized that a new era had arrived in the history of the transmission of ideas; and soon the word "broadcasting" was on every tongue.

It was inevitable that the representatives of the people in Washington should quickly recognize the new possibilities that radio afforded of keeping directly in touch with their constituents. It chanced that the first to take advantage of the opportunity was Senator Harry C. New, of Indiana, who on March 30, 1922, stood or sat in his office in the Senate office building in Washington and delivered a political address to his constituents six hundred miles away. A correspondent of the *New York Times* describes the novel incident:

"Mr. New had a large number of Republicans in his office to hear him deliver his long-distance radio appeal, including Chairman Adams of the Republican National Committee and a dozen Senators and their wives. President Harding and several friends listened to the Senator over the White House radio system.

"The speech was delivered chiefly to a meeting of women voters in Indianapolis, but thousands of other phones picked up the message.

"Since Congress will not get away until the middle of August, indications are that many office-seekers will use the air route to reach the voters. Miss Alice Robertson, the only woman member, will speak to her constituents in Oklahoma to-morrow night.

"Senator New's successful venture into radio campaigning caused a lot of gossip and speculation in political circles. Some political experts express the optimistic opinion that campaigning by radio soon might leave the field of novelty and become a practical everyday proposition during political fights. They admitted that any one who had suggested such a thing even as

recently as the campaign of 1920 would have been ridiculed, but at the conclusion of to-night's performance they predicted that the radiotelephone facilities in many sections of the nation would be tested to their capacity when the election campaigns were reached next fall.

"The development of the radiotelephone has reached a point where addresses not only can be delivered to crowds in a great auditorium, but to hundreds of homes in almost every Congressional district of the country where receiving sets have been installed during the last six months. In some districts the sets in homes are numbered by the thousands.

"The possibilities of such a development from the political viewpoint are not going to be overlooked, prominent political leaders here said to-night. It would not be surprising if applications soon were made to several commercial sending stations to get 'dates' for speeches in the future in various districts.

"Local receiving stations reported tonight that they had picked up Senator New's speech without trouble and that every word could be heard. Similar reports came from radio users more than 800 miles away. There wasn't a shred of doubt in the minds of radio enthusiasts that plans for radio campaigning were practicable and that they would be distinctly the vogue before many weeks had gone by."

When this estimate was written, the official action that put a curb upon the broadcasting of political speeches had not been taken. Whether this taboo will be lifted before the time for active campaigning remains to be seen.

NOT ONE INCH SQUARE.

Is this tiny radio set here seen with Alfred J. De Giovanni, who made it.

THE DAY OF THE RADIOTELEPHONE

ABOUT A YEAR AGO Mr. H. Gernsback, the editor of *Radio News* (New York), took his readers to task in a signed leader for having neglected the radiotelephone. He declared that all the principles of radiotelephony were well understood by every one interested; but that never the less amateurs still looked upon a radiophone set with awe. Seldom indeed, he said, could they be induced to work up sufficient courage to put together a set, notwithstanding the fact that most of the amateurs have in their possession ready-made equipment that would permit them to construct a set themselves. He elaborated this point, and presented a novel argument for the telephone:

"Now of course there is nothing that is unknown or really very difficult to-day about a radiophone transmitter, and any amateur who has in his possession two or three good vacuum tubes can do a little sending. To be sure, with such an equipment he can not expect to transmit over considerable distance, but for work about town, sending out phonograph concerts and the like, such a set is really ideal. On the other hand nearly every amateur worth while has in his possession right now the equipment necessary to receive radiotelephone messages, so there is no difficulty at all here. The difficulty, if any, lies chiefly in the transmitter, and the disinclination of many amateurs to a little work, a little hard thinking and to have enough patience to put a set in operation.

"It is really amazing and well-nigh astounding that most amateurs still persist in pounding the key and sending out dots and dashes. This not alone takes considerable time, because such transmission is slow, but the physical work is considerable. The average amateur can not transmit more than about 20 words a minute, and he seems to think this good work. During the same time you can speak 200 words into a radiophone and besides you get the human element into your message as well.

"Have you ever stooped to think how clear the nightly ether would be if all amateurs were using radiophone equipment instead of radiotelegraphy? If it takes one minute to send twenty words in code and one minute to transmit 200 words over the radiophone, it becomes apparent that there would be very little jamming, because every one concerned would get there so much quicker; for this reason it would not be necessary for each individual to 'hog the ether' for hours at a time as is the case now."

Probably these words stimulated many amateurs to turn their attention to the radiophone; but they can hardly have been responsible for the veritable tidal wave of interest in the subject that has swept across the country in the intervening months. The semi-official announcement made by Secretary Hoover the other day that the number of amateur users of wireless telephones had jumped within a year from about 50,000 to at least 600,000, reveals a condition of things that no one could have predicted. It is no longer necessary to urge the amateur to take up the wireless telephone. It is necessary only to consider the regulation of his activities. The individual who begins as a receiver of messages may presently wish to become a sender; and with that the air would soon become so "jammed" that confusion worse than babel would result.

THE PRANKS OF THE "STATIC" PEST

A GOOD MANY AMATEURS who made first acquaintance with radio last winter probably have no clear conception of the tricks that the receiving phones may play on them when summer comes. The winter atmosphere is relatively free from the charges of electricity that set up electromagnetic waves that compete with those of the transmitting radio stations, and constitute what an article in *The New York Evening Mail's Radio Review* aptly characterizes as "the static pest." The writer is Mr. Arthur E. Lynch, and what he has to say about the subject deserves the attention of every amateur novice.

"The static charges of electricity that wander about in the atmosphere are obsessed with a desire to reach the earth. Under ordinary conditions the weaker charges can not do this, since there is no conducting medium between them and the earth.

"They suddenly spy some poor fellow's aerial and rush madly toward it. This aerial is like an open door to them, offering as it does a grand chance to get to the earth.

"Static becomes so bad at certain periods during the summer that the operation of a radio receiving set is practically impossible. In the tropics, static prevails nearly the year round and operation at night is very much more difficult than it is by day. Tropical radio stations which would have an effective range of several hundred miles sometimes find it extremely difficult to carry on communication over more than 75 or 100 miles.

"One of the reasons for the existence of static in an amateur receiving set is the fact that many aerials are made too long. During the summer an effort should be made to reduce the size of the antenna, unless this reduction greatly impairs the intensity of signals from a broadcasting station. It is generally better practise to have weak signals with very little static than comparatively stronger signals accompanied by a preponderance of static.

"The former condition is generally found where a small antenna is used and the latter where a larger antenna is used. Radio receiving stations located within comparatively short distances of broadcasting stations may find it advisable during the summer to use indoor aerials.

"A most suitable form of static eliminator for general amateur use is found in the loop aerial. A suitable loop for broadcasting reception may be made by amateurs by securing a frame six inches wide and three feet square, upon which five or six turns of lamp cord is wound, the turns being spaced one-half to

three-quarter inches apart. Each turn should have the insulation scraped off at a point near the base of the loop, permitting a clip to be used for altering the number of active turns in the loop. A variable condenser of .0006 mfd. (microfarad) capacity should be shunted across the active turns of the loop to provide suitable tuning. By 'active turns' is meant that portion of the loop between one extremity and the point to which the clip is connected.

"It may be well to state that satisfactory loop reception is only possible within very short distances from a broadcasting station where a crystal receiving set is used. Where the distance from a broadcasting station exceeds thirty or forty miles it is necessary to employ radio-frequency amplification if a loop aerial is employed. Loop reception by amateurs may only be carried on satisfactorily by employing vacuum tubes and the necessary amplifying units which go with them for this form of reception."

BRITISH AND AMERICAN RAILWAY ARCHITECTURE

ENGLISH TRAVELERS like our railway stations; at least they go away impressed. Perhaps they think we are over-gorgeous in the matter of the Pennsylvania Terminal and the Grand Central in New York, and murmur

about the means exceeding the purpose. At home they show that the spirit of John Ruskin still stalks among them, making their newly reconstructed Waterloo Station a thing to ponder over. History had imbued the English architectural mind with such propositions as these: "The design of a railway station is 'first a traffic proposition, secondly an engineering proposition, and thirdly an architectural proposition.'" But with the new Waterloo in mind the *Architects' Journal* (London) observes that "there is really no reason why architecture should have been made to come in a bad third, except that the gentleman who arranged this order of precedence to his own satisfaction was, of course, a railway man, who has evidently swallowed the whole ignorant fallacy that architecture is a luxury and an afterthought." Tho regarding the fallacy as "egregious," the *Architect's Journal* observes that "John Ruskin seems to have entertained it,"

and the power of that name is obviously stronger in England still than with us, for we read:

"Of the railway traveler he said: 'Carry him safely, dismiss him soon; he will thank you for nothing else. All attempts to please him in any other way are mere mockery, and insults to the things by which you endeavor to do so. There never was more flagrant or impertinent folly than the smallest portion of ornament in anything concerned with railroads or near them.' What false doctrine to come from an esthetic philosopher! It is to be feared that this pernicious doctrine has influenced the design of too many railway stations.

"But the Americans have broken away from this implicit sanctum of uglification, and have rebounded to the opposite extreme. What Ruskin would have said to the American idea of devising and adorning an ultra-modern railway station in the

similitude of the Baths of Caracalla defies conjecture. His most magnificent power of invective would hardly have survived the sight of a string of Pullman carriages coming through a tunnel whose mouth was modeled on the Arch of Titus.

"Yet he would have agreed with the modern view that railways are better buried out of sight; that, at all events, in the interests of cleanliness they should all be electrified, and should approach all great cities through tunnels and tubes—a consummation toward which a rapid approach is being made in our own country and in some others.

"As to the style in which a railway station is designed, architects, having shaken off the glamor of American essays in gorgeousness, now incline to the doctrine that the structure should be essentially business-like without ugliness; that it should be neither dowdy nor sumptuous, neither obtrusively Greek nor Gothic, neither Roman nor Renaissance, but as sturdily and strongly British as the genius that invented the railway."

The editors of this architectural magazine are more or less satisfied with the other London terminals besides the new Waterloo, and over that they are eminently satisfied, saying:

"As the latest built of the great London termini, the new Waterloo Station might, in ordinary circumstances, have been reasonably expected to surpass in most respects its earlier compeers. Most of the London termini, designed as they were in the early infancy of railways, were largely tentative and experimental in planning and design. Experience and precedent were then lacking, but are now superabundant at home and abroad, and are doubtless reflected or embodied in the new Waterloo."

Tho caviling at an entrance modeled after the Arch of Titus, no objection is raised to an entrance which also serves the purpose of a memorial to the war-dead. We read:

"Architecturally the most imposing feature of the station is the 'Victory Arch,' which was formally opened by Her Majesty the Queen. It makes an undeniably impressive entrance to the station, and great care has obviously been given to the proportions of the arch and to the decorative treatment.

"The frontage is slightly set back from the general line, and

A WAR MEMORIAL OVER A STATION ENTRANCE.

The newly reconstructed Waterloo station in London, with its entrance utilized as a memorial to the railway employees killed in the war. Views of Euston and Pennsylvania stations as British and American types will be found on pages 28 and 29.

the arch, which is of Portland stone with a span of 28 feet, is approached by a flight of stone steps. The sculptural decorations are three groups, two of which are semicircular in composition, placed on the pylons either side of the arch. The one on the left, representing War, 1914, has a central figure of Bellona, Goddess of War. The other, on the right, representing Peace, 1919, has for its central motive a figure of Peace. The panel around the arch is decorated with war trophies, and disks giving the names of different centers of war, the whole surmounted and completed by a central group dominated by Britannia. Under the arch, on either side, on bronze tablets, the names of the 585 L. & S. W. R. fallen are inscribed."

London, it seems, went through much the same processes of inconvenient travel during the reconstruction of Waterloo as New York suffered with the Grand Central, and she recalls it with pride:

"Parliamentary powers were obtained in 1899 for the acquisition of the additional land required for a complete reconstruction. The work of reconstruction was carried out both under and over the railway traffic; for instance, to form the entrance from Westminster Bridge Road two spans of the brick arches with the intermediate pier were removed and steelwork substituted, and this under a busy section where the trains entered and left the station. New roofing was constructed over the old, and heavy girders were put together while traffic continued beneath; and it is a source of satisfaction to those responsible for the work that no passenger has been injured nor a train held up during the whole course of reconstruction.

"The practical arrangements of the terminus are extremely efficient, as they should be, for they are based upon the best modern practise, representatives of the company having carefully investigated the methods employed on the Continent and in the United States before setting to work upon the design of the new Waterloo."

THE WASHINGTONS IN THE MOVIES—Perhaps in a spirit of compensation for the loss of Shakespeare to the Germans the British have taken Washington from us. They have made a place of pilgrimage of the early family seat of the Washingtons and lately have "filmed" the place. As the account in the *London Times* reveals, a new use for the movie industry is here shown in the "screen visualizations of the picturesque and historic Northamptonshire homes and surroundings of the English ancestors of George Washington and Benjamin Franklin." We read:

"The film gives a series of views of Northamptonshire and scenes representing both the present and the past of the rural life of the county. It has been produced by Mr. Arthur Branscombe, and the greater part of any profit that may be obtained when it is exhibited to the public, both here and in the United States, will be handed over to the Sulgrave Institution.

"The preparation of this film has roused great interest in America, and the producer recently received a letter from the President of the United States in which the following passages occur: 'You know how great has been the revival of American interest in the British ancestry of so many of the founders of our country, and I want to express my appreciation of your own contribution to its satisfaction. I hope that the effort you are making for a cinema presentation of the themes, both in this country and in Great Britain, may have the effect of strengthening further those ties which have always been so strong, and have done so much for the advancement of the truest interest of both countries.'

"We have received the following letter with regard to this film from Mr. H. S. Perris, director and secretary of the British branch of the Sulgrave Institution:

"May I plead with the heads of the British cinema industry to give a larger share of their attention to the problem of a constructive film-treatment of some of the by-ways of history, where plenty of color, action, and romance is to be found by the imaginative and scholarly producer? What I have in mind is not so much the well-known historic themes, but those links of place, custom, family record, and incident which, when joined together make up a chain of friendship, kinship, and association between great peoples. Such a subject is dealt with in the new British film, *The Cradle of the Washingtons*."

INFERIOR RACES IN AMERICAN FICTION

A NEW AND VITAL THEORY of the whole Main Street and flapper school of fiction, now demanding so much of our attention, would be a boon to writers as well as readers. Fiction is so much a matter of concern that the *New Republic* gives up near thirty pages to a discussion of its prospects. Nearly all the younger practitioners are called in to appraise themselves. But *The Bookman* (New York) has recently put forth a theory by one of wider experience that our youth might do well to note. If writers of fiction to-day would give more of their attention to anthropology and less to psycho-analysis they would "make valuable contribution to sociology." Incidentally they might improve as novelists. So argues one of the most distinguished of the band, Mrs. Gertrude Atherton. "The reason that so many novelists, brilliant in style, profound and searching in analysis, and sufficiently diverting in action, leave the intelligent reader unsatisfied," she declares, "is because the writer has trusted to his intuition and observation and is wholly ignorant of the science that would have steered him with fewer stumbles through that maze we call human nature." In her effort to sustain the thesis that "human nature is largely a matter of the cephalic index," Mrs. Atherton, in *The Bookman* (New York) gives a little course in anthropology as a preliminary to her arraignment of our newest school of fiction writers. Compressed to its simplest statement, it deals first with the "Nordies," who originated in the grasslands of Russia, emigrated to the North and formed the races peopling Norway, Sweden, Denmark, North Ireland, Scotland and England. They were of "great stature and vigor (all weaklings bred out by climatic rigors), with fair hair, blue or gray eyes, white skin, and the greatest genius for government and for war the world has ever known." They were "long-headed," with fine aquiline or straight noses, and the only ones of European origin, and "to them we owe the synthetic Aryan speech." Then there were the "Alpines," who came from Asia and, like the Mongols, were "round-heads." "They were dark, stocky, and powerful, normally peaceful and plebeian." The "Mediterraneans" went to the north of Africa and do not enter the present problem. Of the present status of those "Nordies" and "Alpines," Mrs. Atherton writes:

"Numerically the Nordies are declining, owing not only to their inability to survive in Southern climes if forced to do manual labor in the sun, but to their bravery and initiative in war. Modern France is only one-fifth Nordie. The race exists in its greatest purity to-day in the states or regions on the southern and eastern coasts of the Baltic, in Norway, Sweden, Denmark, North Ireland, Scotland, and England; altho the flower of the latter has been sacrificed in so many wars that the long submerged Mediterranean race is forcing its way to the top. The Alpines now occupy the great bulk of France, Germany, Czechoslovakia, Poland, Austria, Hungary, the Balkans, Jugo-Slovakia, Finland and Russia. They and the degenerated Mediterraneans breed more rapidly than the Nordies, particularly when, owing to diminished stature and other physical defects, they are unfit for military service. So far we are too unenlightened to sterilize such groups and exterminate them.

"It may have been inferred by this time that the great mass of immigrants we have taken to our bosom, with the exception of the Irish, are Alpines and degenerated Mediterraneans. Our best material, if we knew how to treat it, is the Nordie from Scandinavia.

"This country was originally settled by Nordies: British, Hollanders and Huguenots. But after the Civil War—with its terrible sacrifice of Nordies—there was a tremendous industrial impetus. The Alpine round-heads and the scum of Mediterranean were imported in vast numbers, joyfully exported by their governments who even emptied the jails; and native American workingmen, declining to sink to the debased living standards that naturally ensued, ceased to produce large families. The consequence is that the old Nordie-American stock is being rapidly bred out by the refuse of Europe."

Now, as to fiction. The early literature of this country was written by Nordies and was, in Mrs. Atherton's phrase, "aristo-

eratic." "The great bulk of American fiction to-day is essentially plebeian. . . . With the enormous influx of European plebeians the poison of democracy began its deadly work." It began, it seems, in this way:

"It was the pecuniary and political success of these immigrants and their intermarriage with Americans that not only bred the spirit of democracy among themselves but made it the fashion. The tone of the small towns (and this includes the small towns in great cities) steadily declined. The original American in mass may have been uncouth and unlettered, but

ism and deficient in imagination depict the obvious, but because the majority of our present writers were born and bred in small towns. Some, no doubt, are of the old American stock, with the features and coloring, to say nothing of the head measurements, that denote their inheritance from the greatest of the three races. But they are the victims of the lowered standards of their environment. They scoff at the aristocratic standards of their ancestors, they are rampantly democratic because it is the fashion; not realizing that they are slavishly imitating the new democracy of a race that would have been totally incapable of founding the Republic whose inestimable benefits its multiplying numbers enjoy and abuse."

COPIED FROM THE MASSIMI PALACE.

The Euston Station waiting-room in London was designed from Peruzzi's chamber, and "as a piece of abstract design," is declared by its English possessors to be "greatly superior" to the classical structure shown opposite.

he was not common. To-day the great mass of the 'American people' who have prospered in a small way—to say nothing of those that have risen higher still—are commoner than anything the world has ever known. They are smug and dull and vulgar, their standard of manners must make a well-trained English servant feel himself a superior being. What they call idealism is cheap sentimentalism; reticence is unknown, or resented; those that fain would practise the pride they have read of and servilely admire, merely succeed in being 'stuck up' and correspondingly ridiculous. If they encounter natural pride they experience an acute pain in their itching ego. Nor is this the worst. The tone of these groups, infinite in number, is forcing its way upward and altering the tone of society in every stratum it permeates. It threatens to become a sort of social flu which attacks high and low alike. This is the secret of the lowered tone of what was formerly called the best society, unjustly laid to the war. Society like literature is suffering from the democratic flu. In losing its class pride, its aristocratic standard, it has lost its self-respect.

"Of course it was inevitable that these conditions should be reflected in fiction; not only because writers inclined to natural-

The plebeian, that is to say, "Alpine influence in American letters," continues this practised novelist, "has never been so signally demonstrated as in the large and increasing number of Mid-Western novels that have achieved so remarkable a notoriety during the last year and a half." If the writers themselves be not Alpines, "their Nordic mental inheritance, if not their physical attribute, has been 'bred out.'" Specifying such works as Norris's "Brass," Aikman's "Zell," Lewis's "Main Street," as specimens of a large class, Mrs. Atherton writes:

"Convinced they were writing real American fiction for the first time, they have succeeded in giving us an assortment of creatures derived from inferior Asia. The Nordic is creative. He has immense initiative. Not a character in this entire group of novels has a semblance of the creative spark, an ounce of initiative. One and all are the feeble puppets of circumstance, dull, atrophied, futile in their poor aspirations, miserable victims. Their resemblance to the fatalistic Slav is significant. They would be effective as foils. There is no class so contemptible that it should be ignored by the biographical novelist. But it is too much like a portent of dissolution that worthy and conscientious authors should be afflicted with an intellectual myopia that permits them to be fascinated by the mean and spurious alone, and that the public should welcome their deductions as gospel truth. . . . The more pessimistic the author the more careful he should be to recognize the Nordic element in his scene, however his perturbed spirit may crowd it with Alpines. Then, whatever his pessimism, inevitably the Nordics would force his hand; even if he revenged himself by making villains of them. To raise round-heads—forever doomed by nature to inferiority—to the dignity of predominance, shows not only a total lack of values and a blindness of one eye, but some weakness in the author's own Americanism."

Referring to Madison Grant's study of the Nordics in his "The Passing of the Great Race," Mrs. Atherton writes in conclusion:

"Mr. Grant, in his book, predicted the defeat of Germany upon the entrance of the United States into the war, owing to the fact that it could not stand up against another Nordic army. Altho it is safe to say that only Nordics enlisted, the draft caught all eligibles of the other races and, worse luck, many of them were made officers. The generals, however, and the West Point officers were Nordics. Otherwise we should have lost the war, for Nordics have inherited throughout thousands of years not only the warrior genius but the necessary sense of discipline. The best of the rank and file were Nordics, whose American keen sense of personal liberty may have chafed at so much sudden discipline, but who submitted to it with the minimum of grumbling and with that thoroughbred inherited military instinct that precluded any fundamental resentment. And yet Mr. Dos Passos in his story 'Three Soldiers' ignores this predominant class as completely as if it had died of flu on the way over. His three characters were plain American scum. Their ignorance was abysmal. They had inherited nothing from the past but a determination to survive with the least possible effort and risk, and were as little capable of enduring discipline as of administering it. There was not a ray of intelligence nor an ideal

among them. It does not seem to have occurred to Mr. Dos Passos nor to his admirers that if his book had been a truthful picture of our Army we should be German subjects to-day. However, judging from his name, it is possible that his bias is a matter of complexion, and that if he ever heard of the Nordic race he honors it with a resentful hatred. At all events we have the antidote in 'The Wasted Generation.'

"Will not our 'younger school,' having worked off the bitterness of their reactions to sentimental and optimistic fiction and to the war, give the Nordies a chance? They have only to devote a reasonable amount of time to causes instead of dealing exclusively with effects. Let them realize before they begin to write to what *race* their characters belong. *Class* is of vastly less importance."

THE SORROWS OF OUR PLAYS

ONE MAY GO to the theater expecting something like joy, but the common fare apparently, is one of sorrow. Why we should choose to feed only on bitter herbs is a problem that seems to need solution. If the anthropological theory be applied to the plays of the season, would we derive the same conclusions that Mrs. Atherton in the above article gets from fiction? Some confirmation seems to be offered by Mr. Percy Hammond in the New York *Tribune*, who runs over a list of this year's plays, tho he employs a simpler touchstone. The reader may judge for himself. "There is scarcely a play in town," he says, "in which the contents of distress and happiness are not in the inordinate ratio of 'sack to bread' in *Falstaff's Tavern bill*"—Mr. Hammond does not inquire why the people of these plays suffer; their authors will believe them the victims of Fate. Nevertheless—

"The heart of Romance when upon the stage is too bituminous to be the habitat of many golden dreams. Even in such sun fables as 'Thank-U' and 'The First Year' the woes are major, the felicities minor.

"Ernest Truex pays and pays for his happy ending in 'Six Cylinder Love,' and Sidney Blackmer has much, too much, to bear as 'The Mountain Man.' Miss Clare Eames and Tom Powers in 'The First Fifty Years' find life to be a sinister sneer, through no fault of their own. Who is contented in 'The Demi Virgin' except, perhaps, the bosomie and leggy soubrettes as they engage in the moron pastime of 'strip poker'? Miss Laurette Taylor has a surplus of miseries in 'The National Anthem,' including unlimited liquor, cabarets, an over-dosage and widowhood. Mr. Walheim's experience as 'The Hairy Ape' evokes no envious emotions; he is ecstatic while shoveling coal into the furnaces of a steamship.

"No one in 'The Nest' is really happy, the wistful, neglected mother, or her cold and thoughtless offspring, or her lady friend, the paramour of her son. 'He Who Gets Slapped' is a colorful assemblage of dejection, suicides, assassinations, disillusionments and disappointments, as symbolized wholesomely in the unrequited love of a lion-tamer for her largest lion.

"An ancient minstrel of a generation ago used to sing,

Life is ever so pleasant
Upon the stage,
Be you prince or peasant
Upon the stage.

"But that condition now, as then, is almost obsolete. Life in the theater is earnest, if not real, and the dubious goals of its last acts do not as a rule make up for the preliminary pangs, trials, adversities, and cross-bearings. Think of what William Courtenay goes through in 'The Law-Breaker' to attain a bliss invisible. And Miss Margaret Lawrence, who, in 'Lawful Larceny,' bends before her cheap unfaithful husband, a knee so sycophantic as to incarnadine the cheek of any proud feminist.

"Where, then, are the plays which empurple with the drama's happy rouges the pallors of our existence? It is said that the

theater is over-given to sunshine, depicting life as an engaging little puzzle, the merry solution of which is matrimony. But among the scores of entertainments holding forth in New York I recall but three which prove that life is really worth the living. Mr. Cherry in 'The Dover Road' has such a good time intercepting elopers that you feel you would like to be in his place; rich, good looking, humorous and eleemosynary. In 'The Truth About Blayds' we are comforted by the prosperity which is harvested from a fertile lie. . . . 'Kiki' is merely kittenish and therefore not to be considered. But the most successful of the significant rôles is that of *Great Catherine*, as Miss Doris Keane plays her in 'The Czarina.' Rich, handsome, imperial, only

BATHS OF CARACALLA IN NEW YORK.

The main hall in the Pennsylvania Railroad Station, which suffers in the opinion of the London *Architects Journal*, tho Americans may not concur.

forty-eight and amorous, she signs treaties with one hand and makes love with the other. While extending boundaries, she offers her scarlet lips to such Cossacks as may be available, and when weary of them she turns, without penalty, to foreign diplomats and elsewhere. The wickedest of the women in the Broadway theater, she is the least unhappy. 'If drama is life,' says "Old Timer," "I select that of the Czarina as my idea of a good time."

The "Old Timer," here referred to is a correspondent who wrote in that he had endeavored to find a new "channel of diversion in the theater," and was thereby brought up in a certain dismay:

"Ennued by long experience as an eavesdropper at the plays, he decides to change his attitude of an outsider and to put himself in the place of his favorite characters. Instead of listening to the secrets of others and observing, tho hidden, the most private of their misdeeds, he now projects himself upon the stage and lives, as best he can, the lives of those he finds least troubled and most interesting. He is having a hard time.

"A difficulty exists, he admits, in that sorrows in the drama are so irrevocably interwoven with its delights."

RELIGION-AND-SOCIAL-SERVICE

CURING THE VETERANS' VOCATIONAL MUDDLE

GRUMBLES LIKE ECHOES from the Front Line when the supply wagons failed to come up have resounded from many of the vocational schools established for disabled war veterans, and as a result the Government recently established an experimental school in Chillicothe, Ohio, whence more satisfactory responses are being heard. An investigator who touches the sore spot in the old situation finds many mushroom schools where system and supervision are lacking, with ineffectual jobs and even "goldbricks" among the student veterans themselves. A "goldbrick" veteran is described in the *New York Times* by Rose C. Feld, who has made some

ineffectual jobs was vastly greater than the numbers taken care of by the better type of schools and firms." The thing to do, Colonel Forbes found, was to get the man, the training-school and the hospital together, and to tighten up discipline all around. The vocational school at Chillicothe was started as an experiment, and an Army officer installed as its head. But the men had had enough of Army discipline: they objected to constant saluting and standing at attention, and, to correct an admitted mistake, J. Milton Pritchard, of Seattle, Washington, was appointed in the Army officer's place. Mr. Pritchard had never saluted or been saluted, for the very good reason that he had lost his right

hand in an accident in early life, and was soon found to be "the right man for the job, and not the least so by dint of his own disability." He ran the bootleggers out of camp, got rid of the rebellious element, and eliminated all aspects of military discipline. All the work in the camp has been made practical, as for instance, says the writer:

"When the tailor shop needs a table the men in the carpentry shop make it. When the office typewriters need repairs they are sent to the men in the typewriting schools. The auto mechanics department takes care of the trucks and automobiles at the school; the upholstering department makes the chairs for the quarters of the personnel. For a time the shoe-repairing school took care of the men's shoes, but both the instructor and the men

HELPING BATTLE-BROKEN SOLDIERS TO HELP THEMSELVES.

No "goldbricks" are among these disabled veterans, all of whom seem willing to learn a new means of earning their livelihood under wise and sympathetic supervision.

study of the situation, as one to whom "nothing is as distasteful as the thought of rehabilitation and discharge." Some of the vocational schools, finds this writer, offered opportunities for profiteering on the part of the management without corresponding profit to the veteran. Hank Smith, disabled soldier, drew his \$100 every month; the school got its tuition and supply check from the Government, and "the longer the training lasted, the more satisfactory to both parties of the agreement." Training in factories was found in many instances to be similarly ineffective. "Men extended their period of training by changing from vocation to vocation." And "the fact remains that of the 100,000 and more men who have been getting vocational training, it is asserted that only about 5,000 have up to the present been discharged as rehabilitated." Only the colleges, where there was neither malingering on the part of the student veterans nor profiteering on the part of the authorities, seem to be immune from complaint.

In the midst of this muddle Colonel Charles R. Forbes was appointed Director of the War Risk Bureau, and in August of last year the War Risk Bureau, the Public Health Bureau, and the Federal Rehabilitation Board were all unified as the United States Veterans' Bureau, with Colonel Forbes at the head. Colonel Forbes, says the writer, discovered that "there was much good work going on in vocational schools and placement training, but that the number taken care of by mushroom schools and

felt that training was lacking in women's and children's shoes. To-day this lack is made up by large shipments of old shoes sent by Salvation Army Headquarters for repair. Wherever possible an effort is made to give the man the training that will enable him to open a shop for himself. Production, *per se*, is not the factor taken into consideration, and is used only as a means to an end. What matters most to the instructors as well as the men is the giving and the gaining of intensive training in the trade chosen.

"An important feature of the school is the agricultural work now being undertaken. That has been placed under the supervision of a college-bred man who has for the last fourteen years been a practical farmer. Courses have been planned in agronomy, animals husbandry, horticulture, poultry, bees and farm mechanics. There are over 5,000 acres of fertile land within the environs of the camp. It is the plan of the head of this division to give the 500 agricultural students expected practical training in using it to the best advantage. Already a small number are engaged in poultry and hog-raising work. Several of these are men who have been gassed and who need training in work that will keep them out in the open."

In all the work undertaken the student gets part-time work in related education. For instance, the auto mechanic goes to school for arithmetic, the sign painter for spelling. There is no malingering, and "what's more, there is little inclination for it." As to the time taken up in study:

"The hours at the schools are from 8 to 11:30 and 1 to 4:30. After that the time is the students' own. They are free to go to the town proper. Most of them, however, choose to remain at

the camp. Bowling alleys, a motion-picture theater, a dance-hall, a rifle range, a gymnasium, a recreation hall, are the opportunities offered for amusement. A small admission fee is charged, enough to make the activities self-supporting. It is not out of proportion with the allowance given the men. . . .

"The vast majority of men are satisfied and happy. A small number, however, are not. Not a few of these resent the fact that the training here has a definite objective—speedy and successful rehabilitation. Owing to the weakness of past administration they have been hospitalized and made fearful. They take up a tailoring course, stay at it for a couple of months, then want to change. If the change is denied them, they want to leave. Or, if they are nervously weak, they weep. . . .

"The school is dealing with men who are neither students nor artisans, and disabled in the bargain. To create a working body with a school spirit out of this material is no easy matter. Adverse criticism, undoubtedly deserved on the face of matters, but not understood from more than superficial survey, has not helped the situation. The writer mingled with the men in the shops, in the recreation halls, in the mess and in the streets for almost a week. Some may be lonely, some may miss the gay life of New York, some may resent not being able to take a day off without getting a leave from the doctor, but, without exception almost, they agree that the school is giving them what they lacked before, training and medical attention, under the supervision of a man who can understand them and work with them."

SERMONS IN SLOGANS

USING AN ADVERTISING SLOGAN as the text for a sermon might seem at first sight to be rather far-fetched, but, remembering that there are "sermons in stones; books in the running brooks; and good in everything," a Massachusetts minister turned successfully to advertising pages and highway billboards to find inspiring truths. "Ask Dad, He Knows," for instance, makes us think of the matter of a father's example, says the Rev. Harold Sugden Metcalfe, a Methodist minister of North Adams, Mass., in one of four sermons based on advertising slogans. "Dad knows a lot by experience; much of it bitter; some of it sweet. Too often sonny finds out what he wants to know in the wrong way. Dad knows; why not ask

Magazine (New York). The phrase, "Eventually, Why Not Now?" caught the minister's eye, and, after looking afield for parallel phrases, he decided on the well-known slogans, "His Master's Voice," "Ask Dad, He Knows," "Eventually, Why Not Now?" and "The Flavor Lasts" as the four texts for a series of sermons labeled "Spiritual Truths in Popular Advertising

BETTER THAN THE ONCE FAMILIAR DUGOUT

A comfortably arranged student's bedroom, where the ex-soldier can sleep without fear of being bombed.

Phrases." Excerpts from the sermons show how the minister realized the possibilities of each, writes Mr. Allen, who furnishes us extracts also from the other three homilies:

"His Master's Voice": The Victor dog recognizes the familiar voice of his master. He is all attention. Why? The voice is familiar; it is a trustworthy voice; it represents to that dog the highest value the world holds in human terms. The world of this day is full of voices—some strident; some warlike; some harsh with criticism; some selfish; some challenging; some divine. Which voice is our Master's? How can we know it? How did the dog know? By absolute familiarity with his master. So may we understand which of the voices is the Divine."

"The Flavor Lasts": There is a bitter taste in the world's mouth. What can take it out? Let us analyze the cause of the world's indigestion. It has been overfed on war; on ease; on materialism. The world's tongue is coated. Its stomach is all wrong. Its heart is a-quiver and its arteries are hardening. Wrigley has made a fortune out of Spearmint. And no small part of this fortune is due to a splendid product, well advertised. In the advertising this phrase sticks out like a burr—"The Flavor Lasts." Isn't that just what this old world needs? Some remedy, some agency that can take the bitter taste away, regulate again the vitals of the world's life and leave an everlasting sweetness in the world's heart."

"Eventually, Why Not Now?" Washburn-Crosby are builders for the future. Every advertisement they run is a brick in a future building of prosperity. They

are teaching a nation to use their product. You'll come to it! Why not do it at once? It's a great plea. They have hopes. We all have hopes. Some of us hope to be rich; others hope to be powerful; others wish only to be useful. Wealth does not consist merely in the possession of the coin of the realm. One can be rich in the truest sense. Power does not mean necessarily what the world connotes by power. We can all be powerful in the finest way. Our job is to transform this world: this age; this place in which we live by the power that is given us. By the might of a strong body; by the keenness of

A PRACTICAL ILLUSTRATION OF LEARNING BY DOING.

Disabled veterans, who really want to be rehabilitated, are finding an opportunity at the experimental school established by the Government at Chillicothe.

him? Ask Dad about the social problems, the political problems—yes, and the spiritual problems of life. He knows. So in a very reverent way we can spiritualize this common advertising phrase and we can ask the great Dad, our Father, any question that comes to us. He knows."

The idea of turning business advertisements to spiritual account came to Mr. Metcalfe while he was looking at a copy of one of the national weeklies, writes Victor A. Allen in *Forbes*

a developed intelligence; by the sensitive power of the real heart, we are to make the 'eventually' come true in the present generation. 'Why not now?' is a mighty good slogan for any man who dreams dreams and sees visions."

Dr. Metcalfe has had some experience in publicity, says the writer, and he uses "short, punchy copy of a human-interest type on his church bulletin board." Many a copy man, we are told further, could take an object lesson from the texts on the board of this Massachusetts minister.

THE SPIRITUAL PARALYSIS IN ENGLAND

CHRIST OR PLATO, a philosophic code of morals or Christianity—which is it to be in England? where, as a "Gentleman with a Duster" believes, the Church has lost its moral leadership, largely through the intellectual decadence of the shepherds of the flock. If, he argues, the Church will not teach the world, modern science will inspire philosophy to take up anew the teachings of Plato, "and the world will go forward into the light, but with no creative love in its soul to save it from itself." Persuaded of this alternative, the author of "The Mirrors of Downing Street" sets himself in "Painted Windows" (G. P. Putnam's Sons)—a study in religious personalities—the task of examining the mind of modern Christianity, "the only religion of the world with which the world can never be done, because it has the lasting quality of growth, and to see whether in the condition of that mind one can not light upon a cause for the confessed failure of the Church to impress humanity with what its documents call the Will of God—a failure the more perplexing because of the wonderful devotion, sincerity, and almost boundless activity of the modern Church."

The wielder of the duster believes that the disordered state of the world is by no means a consequence of war; rather, he holds, its confusion is "immemorial." In seeking the causes of the moral chaos he finds so prevalent in England he looks, not among the people, but at the Church itself, at the religious leaders, to whom "the hungry sheep look up and are not fed." Twelve religious personages of rank are arbitrarily selected for a study to prove his point, perhaps because he believes them to be representative of the whole army of clergy, tho he leaves out some important and interesting figures. To all he accords a measure of tribute. They are earnest, sincere and pious. But he holds that they lack the quality of leadership, and not infrequently absent are the chief ingredients of Christianity—its humanity and its sympathy. At present he beholds in the Church a war of words, a struggle between conflicting creeds, whereas "Christ should be sought in the living world and not in the documents of antiquity." Theological controversy holds sway too often where the teaching of Christ is the need. Formalists argue from the cloister instead of heeding the command of Jesus: "Feed my lambs." So, in the combat of creeds, in the struggle between Traditionalism and Modernism, men forget the Founder of the Faith and neglect his teaching.

The author begins his dusting with the Bishop of Oxford, the Rt. Rev. Charles Gore, who made the fatal mistake of descending into the "dust of controversy," but who, nevertheless, "remains the greatest spiritual force among the Churches of England," and ends with Archbishop Randall Thomas Davidson, under whom "a divided Church has held together; but religion has gone out of favor." To bring order out of the moral chaos the anonymous author proposes a return to the teachings of two thousand years ago, and does our own country the honor of believing that if he should expect anywhere a response to his suggestion that a new definition of the word Faith is a clue to the secret of Jesus, "it is in America."

Why is the Church so powerless? asks "The Gentleman with a Duster." "Why is it she has so fatally lost the attention of man-

kind? Is it not because she has nothing to give, nothing to teach?" He suggests a new point of view:

"I believe that there are more evidences for the existence of Christ in the modern world than in the whole lexicon of theology. I believe it is more possible to discern his features and to feel the breath of his lips by confronting the discoveries of modern science than by turning back the leaves of religious history to the first blurred pages of the Christian tradition. I believe, indeed, that it is now wholly impossible for any man to comprehend the Light which shone upon human darkness nearly two thousand years ago without bringing the documents of the Church to the light which is shining across the world at this present hour from the torch of science."

A new line of work, too, is proposed for the Church:

"Let us suppose that the entire Church of Christ was at work in the world teaching Christ's teaching, *educating* men, bringing it home to the heart and mind of humanity that 'life is mental travel,' that it is in our thoughts we live and by our thoughts we are shaped, that flesh and blood can not inherit the Kingdom of God, that all terrestrial values are radically false, that to hunger and thirst after anything is to get it, that the power of 'the dominant wish' is our fate, that in love alone can we live to the full stature of our destiny, that the Kingdom of God is within us, that the engine of faith has not yet been exerted by the whole human race in concert, that conquests await us in the spiritual world before which all the conquests of the material world will pale into insignificance, that we are spirits finding our way out of the darkness of an animal ancestry into the Light of an immortal inheritance as children of God; let us suppose that this, and not dogma was the Voice of the Church; must we not say that by such teaching the whole world would eventually be rescued from our present chaos and in the fulness of time be born again into the knowledge of spiritual reality?"

"I believe it is only when a man realizes that in its final analysis the whole universe is invisible, and ceases to think of himself as an animal and becomes profoundly sensible of himself as a spirit, and a spirit in communion with a spiritual reality closer than hands and feet, that it is possible for him to fulfil the two great commandments on which hang all the Law and the Prophets. And without that fulfilment there must always be chaos."

LESS DRUNKENNESS AMONG THE POOR

PROHIBITION HAS REFORMED SOTS, declares Evangeline Booth, Commander of the Salvation Army in America, in a statement announcing that since the enactment of the Volstead Act drunkenness among the poor has almost entirely disappeared and that the money which formerly went into the barroom till is now going into bank deposits. In their replies to a questionnaire sent to them from Salvation Army Headquarters, the social secretaries said cases of drunkenness are now the exception among men who frequent the Army hostels, shelters and industrial homes. According to the statement, as it is quoted in press reports,

"More than two million beds were supplied by the Salvation Army last year, and it is on these two million cases that our secretaries base their answers. In one hostelry it was reported that 120 men who have never been known to keep a dollar more than twenty-four hours now have banking accounts of considerable size. In another hotel twenty-five men of the sort who before prohibition could not keep a dime now have deposits ranging from \$100 to \$500. These are unusually bright instances, but everywhere the workers of the Salvation Army have found a marked increase in thrift and prosperity and a decrease in drunkenness.

"In refutation of the charge that drunkenness has increased since prohibition, Commander Booth cites the fact that the Salvation Army's annual 'Boozers' Day,' when drunken men and women were collected from the streets, fed, clothed and prayed with, has been abandoned and the day given over to entertaining the newsboys and poor youngsters of the city.

"Because prohibition has cleared our park benches of drunkards, we are able to entertain 5,000 boys under 14 years old in New York City on this day, these boys being benefited because one of the greatest curses of humanity had been placed beyond the reach of men and women."

CURRENT - POETRY

Unsolicited contributions to this department cannot be returned.

THE Cumberland mountain folk are well exprest in a little volume of verse "Kinfolks" (Houghton, Mifflin Co.), by Ann Cobb. We introduced her to our readers several years ago when she first published in *The Outlook*. The first of these selections represents "the chief outlet for the artistic sense of the women" which has been the weaving of woolen coverlets, "many of them of elaborate pattern and rare beauty."

KIVERS

By ANN COBB

Yes, I've sev'ral kivers you can see;
'Light and hiteh your beastie in the shade!
I don't foller weaving now so free,
And all my purtiest ones my forebears made.
Home-dyed colors kindly meller down
Better than these new foteheJ-on ones from town.

I ricollect my anny at the loom
Weaving that blue one yonder on the bed,
She put the shuttle by and laid in tomb.
Her word was I could elaim hit when I wed.
"Flower of Edinboro" was hits name,
Betokening the land from which she came.

Nary a daughter have I for the boon,
But there's my son's wife from the level land,
She took the night with us at harvest-moon—
A comely, fair young maid, with loving hand.
I gave her three—"Sunrise" and "Trailing Vine"
And "Young Man's Fancy." She admired 'em fine.

That green one mostly wrops around the bread;
"Tennessee Lace" I take to ride behind.
Hither and yon right smart of them have fled.
Inside the chest I keep my choicest kind—
"Pine-Bloom" and "St. Ann's Robe" (of hickory brown),
"Star of the East" (that yaller's fading down!)

The Rose? I wove hit courting, long ago—
Not Simon, though he's proper kind of heart—
His name was Hugh—the fever laid him low—
I allus keep that kiver set apart.
"Rose of the Valley," he would laugh and say,
"The kiver's favoring your face to-day!"

THE MAIL BOY

By ANN COBB

Lonesomest part of the road I foller,
Just at the edge of dark,
Little old frogs in a swampy holler
Allus begin to bark.

Sensible critters are gone to their sleeping—
Jay-birds and chickens and hogs—
Quare how it jest sets your innards a-creeping—
Nothing but little old frogs!

Sets you to thinking of ghosts and dying,
Everything sorry and sad.
Gee! but I go past that holler a-flying!
Cain't even shoot straight, by gad!

AN "OLD REG'LAR" PREACHER

By ANN COBB

O Lord, look down upon the souls
That's mustered round the trees,
And bring them back from foreign ways,
Repentant to their knees.
Skeercely a one but what his heart
Is set to disbelieve.
That opposite old way, like what
Deceased our Mother Eve.

The good, old-time religion, Lord,
Hain't what it uster be;
Quare level-landers wander in
To make a sport of me.

Right within gunshot of my voice
The lads are courting gay,
And swapping nags, and fiddling, too,
Upon Thy Holy Day!

Full forty years since my Election
Day has traveled by,
And now this body's dwindling down—
I'm aiming for to die.
My pilgrimage is almost done,
My soul will find release,
And sweep hits way triumphant through
The pearly gates of peace.

Lengthen the brittle thread of life,
That I may garner in
Some silly sheep that's lost amidst
The thorny paths of sin.
Poor, feeble stoek, us humans be,
Unfit for courts above,
O Lord, dig round the roots of our hearts
With the mattock of Thy love.

THE BOY

By ANN COBB

Everything's predestined,
So the Preachers say—
Wisht I'd been predestined
To be my brother Clay.

He's the only man-child
Mammy ever bore,
Four of us that's older,
Sev'ral young-uns more.

Eats with Pop and Grand-sir',
While we women wait.
Has his wings and drumsticks
Waiting, if he's late.

Rides behind with Poppy,
When he goes to mill,
Fun'ral-meetings, anywhar
Hit suits his little will.

Folks delight to sarve him,
Let him come and go,—
No! he's not so pettish,
He's a marvel, though

Everything's predestined,
And hit's not so bad.
We'd 'a' been right lonesome
With nary little lad.

GINSENG

By ANN COBB

The War has shorely made a change in Jeems,
He used to be a mortal doless lad;
Why, if he jest set out to shoot a bird,
And hit set in to sing, he'd hearken till
Hit winged away, and then ride gayly home.
Not at his books, though,—he's a master-hand
At larning; why, he never tuk a chair,
Without he had a book inside his fist.
That's how he got into the War so quick.

Nary a grain of peace I seed those days,
Rememb'ring his onhandy way with guns.
But he come loping back at last,
Healed of his wounds, with all his arms and legs.

He'd scarcely et when he drew up afore
The fire, and said, "Dad, let's put in a crap—
Not corn—I'm sickened fair of hit—and beans—
Sang is the stuff for us. Up in New York
A fellow said he'd take hit off our hands
And both of us could make our fortunes, too.
You know the heathen set a sight of store
By sang, for charms and doctor-stuff and sech."

Quare how a thing comes out that's in the blood;
My gran'sir' follered sangin years afore
My time, on this same ridge of land. I've heard
Ole men pipe up the sangin cries right smart.

Our land's jest pine-blank fixed to raise hit, too,
Five acres of the onliest level piece
In miles. (A body gets so mortal tired
Creeping up hills like flies upon a wall.)

Well, thar stood Jeems, a-waiting on my word.
Of course I didn't aim to say him nay,
And him jest home from France; allus did like
To devil him a bit, though, so I said.
"Eh, Jeems, how-come you drawed up sech
A notion in your head? Sangin's a sight of work.
There's plenty stuff in reason for us two."

He srouged around a bit, and then drawled out,
"Plenty for two, but sort of scant for three."

It seems as he come home along from camp
He stopped by on the river where Sue Lee
Got her a school to teach the year he jined.
Gee-oh, I sartinly am glad hit's Sue,
And not some Frenchy maid, with furrin ways.

His mother allus hoped the two would wed.
Lord, but 'twill be a mighty pleasant sight—
A woman in the house again—and then,
The little trot of children of your blood
Wandering in and out the open door.

FROM the simplicity of these Southern mountain people to the sophistication of another class, also Southern, is a long stride. In one of those "non-commercial" magazines of the new school called *The Reviewer* (Richmond) we find this:

SEAWARD

By BEN RAY REDMAN

Passing along the shore,
With undivergent steps, and eyes incurious,
How many fail
To glimpse the pagan sail
Of Beauty, riding over distant waves.

A sail that tempts the swimmer
To essay the sea;
Woven of gold and crimson rapturously;
Shot through with magic threads,
Ravished from dreams,
It seems
A flame of deathless eestasy,
That rides afar elusively.

But, when we do attempt the deep,
'Tis with sure knowledge we must fail;
Though in our last defeat we keep
At least the image of the sail,
Golden and crimson that we fought to reach
And, when at last we're flung back on the beach:
Or when, half way, we meet deep death,
Still thrusting forward with our parting breath;
Facing our failure with a brave surprise,
We die—with Beauty mirrored in our eyes.

Too infrequently now come verses from this one of the most exquisite and spiritual of English poets. In the *London Mercury* appear these lines:

THE POET AND HIS BOOK

By ALICE MEYNELL

Here are my thoughts, alive within this fold,
My simple sheep. Their shepherd, I grow wise
As dearly, gravely, deeply I behold
Their different eyes.

Oh distant pastures in their blood! Oh streams
From watersheds that fed them for this prison!
Lights from aloft, midsummer suns in dreams,
Set and arisen.

They wander out, but all return anew,
The small ones, to this heart to which they clung;
"And those that are with young," the fruitful few
That are with young.

A Lesson from the Stars

IN the garden of a country home two men were talking. Near them sat a small boy, looking at the stars.

Said one of the men: "I am making a product that I know is the best in its class—and still I can't sell it."

There was a moment of silence. . . . Then the second man called to the boy who sat near them. "Son," he said, "if you had your choice of any of those stars up there, which one would you choose?"

The boy promptly pointed to the brightest star in sight. "That big one over there!" he said.

The man who had addressed the boy turned to his companion. "As a matter of fact," he said, "there are other stars in the heavens, which the boy cannot see, that are far brighter and bigger than the one he chose. But he didn't know the other stars were there—and so he couldn't choose them. That's why your product isn't selling. People simply do not know it exists."

"I know what you mean," said the first man, "advertising. But I have tried advertising in the past—two or three times—and it didn't work."

His companion seemed preoccupied with the stars. . . . "If we stand here and watch the sky for a few minutes," he finally said, "we shall see a shooting star. It will spurt across the heavens for a second, and then it will die out. There are thousands of shooting stars every night. People pay little attention to them and they are instantly forgotten. That's the kind of an advertiser you were.

"The Pole Star," continued the speaker, "has stayed on the job so long and so faithfully that its very name has come to mean 'a guide, a controlling principle.' And that's the way to advertise. There are certain products today whose names are regarded as a guide to satisfaction and a controlling principle of quality. They are the pole-stars. In this present economic situation, the pole-stars are doing the business."

THIS MAN LEWIS

JOHN L. LEWIS, leader of the coal miners in their nation-wide strike, has been a coal miner himself, tho you would little guess it. As a correspondent of the Brooklyn *Eagle* remarks, "to see him walking from his hotel to the offices of the United Mine Workers of America, one would not think him different from the hundreds of trim-dressed Indianapolis men." He is modest, and a man of few words. But every word counts. When the Government enjoined the miners from participating in a nation-wide strike two years ago, he said:

"Gentlemen, we will obey the mandate of the court. We do so under protest. We are Americans. We can not fight our Government."

On December 12, 1919, he was publicly commended by the President of the United States as a man of honor and a patriotic citizen for the action taken. Writing in the New York *Tribune*, Mr. Gilman Parker says of him:

John L. Lewis was born in Lucas, Iowa, a small mining town, on Lincoln's Birthday of 1880. His father and mother were Welsh. Both his father and grandfather were coal miners in Wales, where coal miners are born and not made. His parents came to the United States in the '70's, settling in Lucas. The elder Lewis worked in one of the mines there for several years, until 1882, when, at the age of two, the present miners' president came into his first contact with a coal strike.

The fighting blood of the House of Lewis showed itself during that strike, for the elder Lewis was placed on the blacklist of all the Lucas operators and could not get a job there after the trouble was over. Hence, the family moved to Des Moines, where the father succeeded in getting a new job at his trade.

John, the boy, was reared in Des Moines. He attended the public schools, but left high school before completion of his studies to go to work as a pick-and-shovel miner. He was taught the trade by his father, by whose side he worked for several years.

At that time conditions in the mines were not nearly as advanced as they are now. There were no safety laws in an industry which even now, with numerous legal requirements for safeguarding the workers, takes a toll through accidents of some 3,000 lives a year. None of the present ventilation laws was then in existence, and the miner was forced to perform half of his day's work amid powder fumes. The ten and eleven hour day was usual, and some miners earned as little as \$1.60 a day.

So this was the hard school in which John L. Lewis got his training, and it was there that he formed a resolution some day to do all in his power to improve the lot of the miners. Furthermore:

As he grew older, the wanderlust of youth gripped him and he went on several roving expeditions, working in mines in

various sections of the country. Meanwhile he developed a craving for more "book knowledge," and wherever during his wanderings he could get books he read them. He was especially fond of English literature, philosophy and history. In later years he devoted himself seriously to the study of economics.

Throughout his early mining experience he had taken an interest in the affairs of the Miners' Union, and when he moved to Illinois he became engaged more than ever in its activities. His ability soon became apparent to union heads, and in 1910 he was elected by the convention of Illinois miners to serve as their legislative representative, chiefly to urge the enactment of laws favorable to the miners. He also aided the passage of a number of measures in that State benefiting organized labor generally, including a workman's compensation law.

His work in this connection soon attracted the attention of the American Federation of Labor and he was appointed a general organizer and field representative of that body, continuing in this work for five and a half years. In this connection he was one of the leaders of the Calumet copper strike and the strike of rubber workers at Akron.

He was chairman of the organizers in the campaign to unionize the steel industry in 1913, which was not carried through because of industrial depression. A part of his activities during this time embraced legislative work for the Federation at Washington and at several of the State Legislatures. On several occasions he had performed special services for the United Mine Workers, bringing him into closer contact than ever with that organization. Thus he was made a member of the Interstate Scale Committee in 1916. In that year he was also chairman pro tem of the

national convention, and in the year following, was chosen as its vice-president. Also during this year he became a member of the National Committee on Coal Production organized by Secretary Lane as a war effort.

In 1919, due to the illness of Frank J. Hayes, Lewis became active president of the United Mine Workers. As such, he was in charge of the bituminous strike in 1919, which won a twenty-seven per cent. wage increase, the largest in the organization's history. In February of 1920 he was elected the miners' president by the largest vote ever given a candidate for that office.

Shortly after his election Mr. Lewis had occasion to go to Washington. In one of the hotel lobbies he chanced to meet Joseph Tumulty, secretary to former President Wilson.

"I see," observed Mr. Tumulty, "that you got more votes than the Democrats."

The mere fact that Lewis is president of the United Mine Workers in itself attests to his high qualities of leadership. For leadership in the miners' organization, whether it be a secretaryship in its smallest local or the supreme direction of the international union, is evidence *per se* that the holder of office has come through the test of the survival of the fittest. Also, that he has done some very effective surviving even after getting into

THE "BEST POKER FACE WEST OF THE HUDSON"

Is this of John L. Lewis, who leads the coal miners' strike. "Somehow he recalls to mind—in appearance, not in temperament—the Bryan of a couple of decades ago, but a Bryan metamorphosed into a James J. Jeffries, and with the additional virtue of the knowledge that silence can be golden."

To Make Old Furniture Look New— Use Valspar Enamels

PORCH furniture finished with Valspar Enamels can be freely washed—can be left out in sun and rain without losing color or lustre. Valspar Enamels are fine pigments carefully ground in durable, waterproof Valspar—the varnish that won't turn white.

You will find Valspar Enamels easy to use. They work freely under the brush, dry dust-free in two hours and hard in twenty-four.

Porch furniture needs a durable, lasting finish. Don't waste time with inferior enamels. Valspar Enamel, wherever used, including automobiles, *starts* bright and *stays* bright.

Valspar Enamels are made in 12 beautiful lasting colors, also in Black, White, Bronze, Aluminum, Gold, and Flat Black. Send for complete color chart. For sample can use coupon below.

office, for the same elemental forces that influence the miner down in the pits extend right on up to the top of his organization. The difference is that where they combine with a narrower, restricted outlook and a callousness toward personal risks to make the man in the mines rich soil for the blandishments of radical agitators, they express themselves in factional bickering among the miners' chief leaders, who nearly always have been classed as conservatives in the labor movement.

In Mr. Parker's opinion, Lewis owes much of his success as a leader to his build and physiognomy, or, to use the word Mr. Parker prefers, his personality:

He is slightly under six feet in height, of heavy yet compact build, and with shoulders possibly an inch or two less broad than the width of the average door, but not less than that. His face is oval shaped and of the sort described as full, but the fulness does not detract a whit from the fact that its nether convergence is to one of the squarest and most determined jaws extant in these United States. It was that sort of a jaw that probably led some one to sit down a century or two ago and chronicle for the benefit of posterity that discretion is the better part of valor. His forehead is high and wide, and it is surmounted by a great shock of brown hair, coming to a Bryanesque bulge at the back. Somehow he recalls to mind—in appearance, not in temperament—the Bryan of a couple of decades ago, but a Bryan metamorphosed into a James J. Jeffries, and with the additional virtue of the knowledge that silence on occasion can be golden.

His face is no guide to what he is thinking when he so wills it—it has been called "the best poker face west of the Hudson"—but on occasion, such as when he faced the most riotous convention in the Union's history last February and declared himself against the attacks of Frank Farrington, the Illinois miners' leader, and Alexander Howat, his expression is Berserk in registering anger. On the other hand, he possesses one of the most friendly, boyish and disarming of smiles, not a small part of the source of his magnetic qualities.

He has a voice of excellent speaking timbre. He speaks slowly and distinctly, choosing his words with deliberation and from a better vocabulary than many labor leaders possess. Apparently, it is no effort for him to throw his voice, even in the largest of auditoriums. It is the voice of a trained and skilful orator.

One illustration of the "holding" qualities of Lewis in action was his appearance last Monday before the House Labor Committee in Washington, when he read some seventy closely typewritten pages in presenting the case of the miners to the Congressmen. Before the reading each of the score of newspapermen present was handed a complete copy of the statement, which was replete with percentages, averages and technical data bearing on coal and its production. Ordinarily, knowing that such a statement would take a long while to read aloud, the newspapermen would have left the stuffy committee room for the time being to bask about a bit in the sunshine outside, leaving the Congressmen to their fate in the matter. It required Lewis four hours to read the statement. Every correspondent present remained in the room throughout the reading.

The hearing before the committee also furnished a demonstration of Lewis's ability to make friends. Following the reading of the statement, the miners' leader was questioned at length by the Congressmen. The interrogation was fair and friendly, for the most part, until a representative of the sovereign State of Texas was permitted to take a hand. This gentleman, first making it clear that he was there to represent the public, began asking Lewis a series of questions which partook of the nature of heckling.

"Would not your demand for a six-hour day add \$245,000,000 a year to the national coal bill?" he asked.

"I am unable to follow your mental gyrations," replied Lewis, "or to ascend with you into your mathematical realms. However, it would not."

There was a titter about the room. The complexion of the gentleman from Texas turned several shades toward crimson, but he kept on.

"I understand," he said, "that the wages of the miners have been increased no less than 75 per cent. since 1913."

"Mr. ———," answered the center of the coal strike, "the miners of the United States are gifted with a number of talents, but they can not eat percentages."

A chorus of chuckles greeted this comeback, and a Congressman from Maryland turned about in his seat, winked at the press gallery and said, "Haw!" By this time the gentleman from Texas was willing to call it a day, and he was relieved of further embarrassment by a fellow Congressman with a more chummy line of questions.

Is Lewis a radical? During the bituminous coal strike of 1919, certain of the operators declared that he was. It is "a most unjust accusation," we are told. Says Mr. Parker:

There are radical elements among the miners. So are there in nearly all big union organizations—men who advocate everything from "peaceful Socialism" for the workers to seizing the Government through revolution and passing the country over to Russia on a silver platter with watereress around it. But Lewis is not one of these, and he will have none of them.

This was demonstrated at a meeting of the miners' representatives about a year ago. A labor leader whose views on "political action" have been undergoing a transformation from light pink to dark maroon during the past few years came to the meeting and asked permission to address it.

"Bill," replied the miners' president, "you can go out there and talk your head off, if you want to. But the minute that you start ripping the Constitution of the United States up the back or start advocating the cause of the Soviet Government, in fact, the instant you begin pulling anything with the slightest shade of red about it, I'm going to interrupt you and chase you off the platform."

"Bill" was considerably huffed for the moment, but he got over it after a bit and made his speech—and strictly according to the prescriptions.

That Lewis does not hesitate to act against any radical "movements" within the miners' organization was forcefully shown during the "One Big Union" disturbances in Canada, in 1919. When the officers of one of the unions' Canadian districts declared for the "One Big Union" organization, Lewis promptly revoked the autonomy of the district and caused the expulsion of the officials concerned.

"LOOKING BACKWARD" ON THE CRIME WAVE

ALTHO THE "CRIME WAVE" in New York City is no joke, it is a subject for jokes galore, and the New York *Globe* comes out with an editorial showing how some future H. G. Wells might view the situation:

In those far-off days of 1800–2100 A.D. [writes the great historian, Basjuh No. 67, in the year 4091] the foolish attempt to maintain "organized society," also called "government," had not yet been abandoned. Its decay and eventual doom, however, had already become evident.

New York, a town on the banks of the Yuzn River (then called the Hendrickhudson, or sometimes merely the 'Hudson), offers a good example of the breakdown of local organization. This town, in the year 1922, was governed by an hereditary royal society (or, as some elaim, family) called Tammany. The citizens engaged themselves in all sorts of absurd enterprises called "business" and acquired thereby "wealth," tokens exchangeable for food, clothing, precious stones, objects of art, and the like. Since the tokens were interchangeable, classes developed in the community which sought to take from others instead of acquiring by entering "business" for themselves. One class was "bootleggers," who sold poisons such as the people were in the habit of drinking to make themselves blind (perhaps in connection with the religious ceremonial of crowding themselves twice a day into subterranean caves called "subways").

The other class was called "hold-up men." They slew the citizens with clubs and guns in order to take from them their tokens, jewels, and "hooch" (finger rings?). At first a body of men called "police," also armed with clubs and guns, made feeble attempts to stop the process; but the hold-up men grew so numerous and bold that soon the police retreated to their fastness, the Tombs (not to be confused with the cemeteries, where the bodies of murdered citizens were hidden). Thereupon the citizens sought to fight the hold-up men with their own hands, and the newspapers of April 5, 1922, recorded the fact that 25,000 persons, despairing of protection from the dwindling number of police, had purchased guns with which to protect themselves.

Within a few months the city found itself engaged in guerrilla civil war. The popping of revolvers and cries of the wounded might be heard in all quarters at any time of the day or night. The hold-up men soon numbered more than half the adult male population. In September, 1922, they took possession of Forty-second Street and, instead of hunting out their victims here and there, required each person who passed from one part of the city to another to give up half of all he possessed.

How the pretense of government was abandoned at last in favor of a universal orgy of hold-upping, and organized society disappeared, never to return, is too well known to need repetition here.

for in no other way can you **ALWAYS BE SURE** of
getting the **GENUINE RUBBERSET** you asked for!

From the time we made THE WORLD'S FIRST BRUSH
which could safely be used in any compound in which a bristle
brush might properly be asked to serve, we have striven to
put into every brush of our making THE BEST of quality
in both materials and workmanship.

In honest pride in the proven superior-
ities of our process we gave to our brushes,
and imprinted upon each and every one of
them, the trade name RUBBERSET,
in witness that they were products of
RUBBERSET COMPANY—true crea-
tions of the ideas and ideals which inspire
our every operation.

Today, no brush is so widely asked for
by name as RUBBERSET. But in this
very protection lurks this peril to the
unwary:—Not every person who
simply ASKS for a RUBBERSET
brush, GETS IT!

THAT YOUR PROTECTION MAY
BE MADE COMPLETE, take to heart
this simple warning:

Claims to duplication of our proc-
ess are not uncommon. Con-
fusing imitations of our trade
name are frequently found.

SIMILARITY IS NOT IDENTITY!
A brush may SEEM to be made some-
what like a RUBBERSET, yet NOT
be as good a brush. It may even
bear a trade name that LOOKS like
RUBBERSET, and SOUNDS like
RUBBERSET, but it will NOT be ours.

ACCEPT ONLY THE GENUINE. Should you live in one of
those rare places where RUBBERSETS are not obtainable,

60 tons of water from a raindrop

One shower—even one storm—doesn't make this deluge. It's the rainfall of a whole year—a multiplied raindrop of 60 tons—that your roof must stand.

Think of the punishment! Sixty tons of water—in driving, pounding, slashing rain—hurled each year on top of your house! No cheap, inferior roofing can withstand it. And you can't afford to gamble on roofings of unknown quality.

Why not play safe by asking your dealer for GENASCO Latite Shingles—"the shingles that lock on"? He'll show you why hurricane winds can't rip them off—why water and weather can't get through. Then put them over your old weather-battered shingles or on smooth boards. They're easy to lay and they'll cost you no more than ordinary roofing.

GENASCO Latite Shingles are surfaced with crushed slate—in natural, fadeless colors of red and green. They are beautiful and fire resisting. If your dealer doesn't yet handle the GENASCO Line of ready roofings, ask us where to get them. Write for "The Tampa Hurricane" book.

SPORTS • AND • ATHLETICS

A THRILLER THAT IS BECOMING MORE AND MORE RARE.

"The stolen base is the most perfect example of the unexpected. It enables a player to be a thinking human being, not a mere cog in a machine."

BASE-STEALING'S SENSATIONAL DECLINE

ALTHO IT HAS ALWAYS BEEN the showiest feature of baseball and perhaps the most popular with grandstand and bleacher alike, base-stealing is undergoing what Mr. F. C. Lane, a contributor to the *Baseball Magazine*, regards as nothing short of a "sensational decline."

Ten years ago base stealing was developing in both major leagues about as rapidly as fielding and pitching skill. For several years, as far back as we care to trace the upward trend, base-stealing totals were climbing, and then came the turning-point. Base-stealing declined for a number of years, crept down the slope just about as rapidly as it had ascended. But this decline unfortunately did not terminate in another gradual incline. On the contrary it speeded up as it progressed, so that the last few seasons have seen a falling off in base-stealing so pronounced as to prove alarming to any one who wishes to see baseball preserved as a game well rounded in every department.

No corresponding increase in batting or fielding can quite compensate for the deplorable shrinkage in the stolen bases.

The decline of the stolen base is not an incident to be brushed aside with a casual comment. In fact, it is not an incident at all. It is a steady and seemingly accelerating trend. Base-stealing which a year ago had reached a point which we confidently hoped would be termed the zero mark has since that time sunk many degrees below that zero.

The story of the rise and decline of modern base stealing may be graphically traced in the records of fifteen seasons. At the beginning of this era, in 1907, the National League stole 1,380 bases. In 1908 that figure remained about the same, namely, 1,372. The following season it took a decided brace to 1,539. A year later, in 1910, it stood at 1,593, while in 1911, it reached its highest total, 1,691.

Nineteen hundred and eleven was the red letter year in National League base-stealing. From that date to the present there has been a pretty steady decline, marked by a few variations, slumping dismally to the abyss of the past two seasons. For example, five years after 1911, the base-stealing total had fallen off practically 500 bases and stood at 1,194. There was a temporary spurt the next year, succeeded by an even deeper depression in 1918. In 1920 the total slumped under the one-thousand mark to 969. And last year it ebbed still further to a meager 803.

How melancholy is this showing may be better expressed in terms of percentage. The base-stealing total in 1921 was about 47 per cent. of the base stealing total in 1911. The intervening years had seen stolen bases decline by nearly 53 per cent. This is no mere fluctuation of one season contrasted with another, but a drastic decline which cuts to the very heart of base-stealing as a popular department in the game.

To emphasize this decline still further, we might refer to the records of the individual clubs. For example, in 1912 the Giants,

the league leaders in that respect, stole 347 bases. Last year the Giants were still league leaders, but against the shining total of 347, they presented a new total of 137, a falling off of 210 bases, or more than three-fifths. In 1911, the club which stood at the bottom of the list was Philadelphia, with 153. Last season Philadelphia also stood at the bottom of the list with 66. The tail-ender declined proportionately as much as the champion, but the tail-ender of 1911 far surpassed the champion of 1921.

Even more deplorable, so Mr. Lane tells us, is the record in the American League, where base-stealing increased during the seasons following 1907 and reached its red-letter year in 1912, with a total of 1,809 stolen bases that season, but immediately began to decline.

Three years later base-stealing had fallen off by nearly 400 bases. In 1918 the total of stolen bases slumped below the one-thousand mark and has still further slumped through succeeding seasons. In 1920 it was down to 750. Last season it hit a low level of 693.

Ten years have wrought a strange and ominous decline in the American League stolen base. That ten years has seen a total considerably higher than the National League total dwindle to a meager residue, considerably below the National League's low level. In other words, American League base-stealing has fallen from even greater heights to lower depths than has been the case in the National circuit.

The total last year, 693, is but slightly more than 38 per cent. of the total ten years earlier. In other words, ten years have seen American League base-stealing fall off nearly 62 per cent.

In 1912 Washington was the champion base-stealing club, with a total of 262. Last season by an odd fatality, Washington also led American League clubs with a total of 111. The tail-end club in base-stealing in 1912 was St. Louis. But St. Louis in 1912 stole 176 bases, which was more than 50 per cent. increase over and above the showing of the champion American League base-stealing club in 1921.

Prior to 1918, no club in the American League stole so few as 100 bases. Two hundred bases was a very common showing. Last year only one club in the American League stole as many as a hundred bases—the Washington club. Cleveland, which contended with the Yankees for the pennant until the close of the season and ranked as World's Champion by virtue of its victory the previous season, stole exactly 58 bases. Is there not something to cause concern in the trend of the game when the team that is considered the most powerful in either league steals a little more than half a hundred bases, approximately two a week for an entire club?

Still further light is shed upon this melancholy story by the records of the champion clubs in the American League. For

many years the leading club perforce stole considerably more than 200 bases. Had it failed to do so, it would not have been the champion. In 1913 American League base-stealing saw its leading champion, Washington, steal 288 bases. In 1918, the American League champion slumped under the 200 base total. In 1920, Washington, which again led, stole 160 bases which, compared with previous champions, was a miserable showing. But last year, Washington, though still retaining the championship, stole but 111 bases, the poorest showing of any base-stealing champion in fifteen years of major league history.

In the National League the rise and fall of base-stealing champions is much the same. In 1910, Cincinnati led the league with 310 stolen bases. In 1911, the Giants stole 347, the high-water mark for a major league club of modern times. In 1920, Pittsburgh led with 181. Last year the Giants regained their leadership with 137, the worst record for a National League champion within the scope of our present investigation.

Where league averages and club championships so clearly mark the fall of the stolen base, there surely must be individual records worthy to compare with those of former years. So we might hope, but such is not the case. Last year George Sisler led all other American League base-stealers with a total of 35. Not so long ago the man who stole 35 bases would be considered only fair. For eight straight years of the fifteen, the American League champion slumped under the 70 mark but once.

In the National League, Frisch with 49 stolen bases to his credit did measurably better. There have been other seasons when the National League champion stole even fewer bases, but on the other hand even 49 compares indifferently with the sixties and seventies and eighties of previous years.

The Giants in the past fifteen seasons have stolen more bases than any other club, namely 3,057. Cincinnati comes second, while the Detroit Tigers lead the American League with 2,794. For many years the Tigers were noted for their speed and daring on the base paths. And yet there is a striking contrast between 1915 and 1921 in Tiger history. Why do we mention those two particular dates? In 1921, Detroit, under the leadership of Ty Cobb, stole 95 bases. In 1915, Cobb himself, unaided and alone, stole 96. In other words: one player in a Detroit uniform stole more bases in 1915 than the entire Detroit club in 1921.

The records show that National League base-stealing in approximately a decade has fallen off nearly 53 per cent. The same decade has seen a decline of nearly 62 per cent. in American League base-stealing. Specializing in generalities, we may say then that only one base is stolen on a major league diamond now where two or more bases were stolen ten years ago.

Confronted with these sensational figures, the baseball enthusiast will ask, naturally, what accounts for the slump they represent. In his effort to make his explanation entirely clear, Mr. Lane begins by reminding us that

This admittedly is an impressive slump, but just what is its inner significance?

Baseball may roughly be divided into four departments—batting, base-running, pitching and fielding. The first two comprise the main elements of the offense, the latter two of the defense. Batting has always outclassed base-running as the prime feature of baseball offense. But base running has been a conspicuous and valuable factor none the less.

Of the two, base-stealing calls for the greater daring, the keener head work. Batting may be and generally is a thing of natural aptitude, based largely upon the batting eye. Base stealing is a more varied talent and may be more readily acquired. The batter has little scope for initiative. After all, he must hit what the pitcher offers him, and what the pitcher offers is a thing beyond his control. To be sure there is a certain latitude in the

batting system, in position at the plate, type of bat used, and manner in which the bat is held. There are also the chop swing and the full swing of the slugger. Batters with a scientific bent study place hitting and diversify their attack with the bunt. But when all is said and done the scope which batting offers for individual initiative is strictly limited.

On the other hand, provided the manager leaves him alone, the base-runner is forever confronted with a prospect of limitless possibilities. To steal or not to steal is a thing which he himself can determine unaided and alone. The actions of a star base-stealer on first are a miniature drama in themselves. Ty Cobb in his prime probably caused more damage to opposing clubs' defense by his base-stealing than he did even by his phenomenal hitting. There never was a more demoralizing influence to opposing pitchers' and infielders' nerves than Ty Cobb on first. Whether he would attempt to steal second was always a problem, but the very uncertainty of that problem was a disquieting factor which was ever present. And once on second, he was as apt to steal third if the slightest occasion offered. From third it was only a short dash home, and well did pitcher and infielder know that the slightest slip on their part would enable Ty to cross the rubber. Cobb in his prime was perhaps the best illustration of the potent influence of a star base stealer. Such influence can

never adequately be expressed in mere figures. Even the sum total of Ty's base thefts utterly fails to tell the story. Ty's base-stealing was the greatest individual factor in baseball offense ever seen, with the exception of Babe Ruth's terrific slugging.

As baseball develops it tends to get hide-bound. The managers grope ever for the best possible system. Once they have found it, they relinquish all others, for is not the best the best? The way to win ball games is to eliminate chance so far as possible and to follow the prescribed course which experience and long experiment has proved the safest. The stolen base is an intruder in this scheme of things. The stolen base properly employed calls for individual skill and player initiative of high order. But these things are diametrically opposed to managerial wisdom, and in this we can read one great reason, perhaps the greatest, for the decline of the stolen base.

Mr. Lane appreciates the man-

agers' efforts to reduce baseball to an exact science, but contends that they "have overlooked one very important point." For—

The best possible system is not as might be supposed at first blush, a cut-and-dried stereotyped affair. The machine-made system even of the very highest quality is not the ultimate attainment of human skill. Beyond and above all mere rules and regulations must be placed human daring and ingenuity. The best possible play ceases to become the best when every one knows it will be employed. The element of uncertainty, the unexpected attack is for that very reason frequently the most effective. It is difficult to guard against an assault that has not been foreseen.

The stolen base is the most perfect example in baseball of the unexpected. In attack it is the farthest removed from the mere established rule. It injects an element of uncertainty into the game very welcome in these days of crystallized baseball methods. It allows scope for human initiative which is also very welcome. In short, it enables a player to be a thinking human being not a mere cog in a machine, and for that reason, if for no other, it deserves the unwavering support of all who wish to see baseball maintained as a well-rounded sport, strong in every department.

Is it not time that this most interesting, most thrilling of baseball plays should be rescued from the slow moving but iron-bound tendencies of the modern game which are crushing out its very existence? Isn't it time that the stolen-base totals paused in their precipitate descent toward zero and began an upward climb? Or is it a matter of popular indifference that the stolen base, the most picturesque, the most fascinating play in baseball should be sacrificed on the altar of mechanical perfection?

TY COBB STEALING A BASE.

"There never was a more demoralizing influence to pitchers' and infielders' nerves than Ty Cobb on first. Cobb in his prime was perhaps the best illustration of the potent influence of the star base-stealer."

The Right of Way to Tire Leadership

A year or so ago, the American public placed the leadership of the tire business in the hands of the men who make U. S. Royal Cords

THE first Royal Cord Tires were made and sold in 1916.

No cut-and-dried story could possibly account for their position of command today—earned in a short six years.

It mostly comes down to the car-owner as an out and out human being. Forget him as a mere tire customer and consider him as a personality. With an inborn instinct for quality. With a pride in demonstrating his quality beliefs.

How many tire manufacturers, would you say, have even guessed that American car-owners were shifting so fast to better tires?

* * *

Certainly U. S. Royal Cords have proven this fundamental thing—

For every low-grade tire made there is arising some motorist with a fine, human indifference for it.

He and his kind have become out and out loyalists of Royal Cord Tires—as representing the highest expression of their demands.

The makers of United States Tires urge upon everybody—manufacturer and dealer alike—a new kind of competition.

Let us compete for more and more public confidence.

Let us compete for higher and higher quality.

Let us compete for still more dependable public service.

**United States Tires
are Good Tires**

WHAT WENT WRONG?

MR. WALTER CAMP is too old a sportsman to believe that mere accident or mere luck ever wins or loses a game. They are a contributing factor. Nothing more. The real blunders, like the real successes, are the work of the human factor, argues Mr. Camp in *Collier's*, meaning by the human factor the thing we call judgment. A curiously untrustworthy thing it can be, now and then, for the very risks that should end happily will now and then lead to disaster. Says Mr. Camp:

I remember, some years ago, in a football game between Michigan and Chicago, when one of Michigan's most promising players made what the public thought was a serious blunder, and was driven from the game because of what was actually a piece of quick thinking and sound taking of a risk. It was near the end of a scoreless game, and a Chicago punt had rolled across the Michigan line. This player tried to run the ball out. If he touched it down, it would have to be kicked right down the field, and Eckersall, Chicago's kicking wizard, would have an excellent chance to win with a field goal. But if the ball were run back into the field of play, Michigan could scrimmage and then kick out of bounds and avoid giving Chicago an easy kick at the goal. The play was nearly successful; the man had actually crossed into the field, when he was beaten by an odd chance. A Chicago end, coming down the field, tackled him and literally hurled him back across the line—a thing that could not be done under to-day's rules—which resulted in a safety and won for Chicago. The player took a wise chance, but when he lost the public called it a blunder. It ought to have succeeded.

The Carpentier-Dempsey fight showed a taking of chances that involved also the question of a man's knowledge of himself. In the Jersey City battle Carpentier took a long chance. Every one expected that, as the weaker and smaller man, he would play the long-distance and waiting game, hoping to last out the bout, with a chance of landing a lucky blow. Instead, he carried the fight to the bigger man right from the gong, and he was roundly criticized. But he took account of his own weakness and knew that his one chance to win, or even to last through, was to land one of his astounding swings, with the power of his wonderful transverse body muscles behind it, early in the fight. He actually did this in the second round. Dempsey was groggy for nearly a minute, and many believe that if Carpentier had not hurt his hand with that blow, he might have followed up and won the fight then and there. He had correctly judged his own strength and, tho his swift offensive lost, it was not a mistake.

More recently, in the fight between Benny Leonard and Rocky Kansas, Leonard won on a similar calculation, which resulted in an exact reversal of these tactics. The prediction was that he would have to win quickly if at all, and so when he began with a defensive strategy, the ringside abused him roundly. But Leonard knew that he had been trained too fine and had little strength to spare. By waiting he not only tired out Rocky Kansas, but avoided the danger of having his scanty reserve of strength used up suddenly. His victory justified his course, yet he was no wiser than Carpentier, who lost.

Two years ago, in a Centre-West Virginia game, the taking of a reckless chance justified itself. Early in the game the Centre defense, with four men back, was unable to stop Rodger's wonderful passing, and a touchdown was put over quickly. Then Centre closed up her back field and sent Roberts into the line, risking everything on being able to hurry Rodgers and force him to make his pass before he could get his ends down the field. It was a nervy thing to do, and would have been a historic blunder had it failed.

Mr. Benjamin Brooks, author of "The Dangers of Safety," might almost have written Mr. Camp's remarks on the general unwisdom of "holding 'em close to your belt" and "playing it safe." No one is surer to lose in the long run than this over-cautious player. Mr. Camp maintains, tho he recognizes that there are exceptions, and tell us:

The "safe" game carries a heavy penalty, on the human side, in the effect it has on the morale of the man who plays it. For example, when Marston and Gardner were playing for the American amateur championship in golf, Marston came to the eighteenth hole one up. Marston had only to sink a three-foot putt to halve the hole and win the match. He could have done it in ten seconds. Instead he studied that putt for minutes, and all the while the importance of making it weighed on him more and more, and the difficulties of hitting the ball just right

swelled up in his mind till, when he finally and very gingerly made his stroke, he missed. After that, quite naturally, he lost on the play-off. It was a blunder of caution.

On the other hand, the effect on yourself and your opponent of a daring game can hardly be overestimated. In another golf game, the match between Barry and Maxwell at Prestwick, years ago, Barry, who was supposed to be the poorer player, took the most hair-raising chances, while Maxwell played a steady and 'safe' game. The climax came on a hole, where Barry, with 190 yards to go to clear a bunker which is one of the most deadly in the world, wound himself up and let drive a terrific brassy shot that completely broke Maxwell's heart. Barry cleared the hazard, Maxwell played safe and short, then topped his iron shot into the hole, and was beaten from there on.

The underestimation of one's opponent is another common human factor error, but so well understood that it needs little illustration. Harvard made it last fall when she sent second-string men in against Centre, and it cost the Crimson a game. Willard's careless attitude toward Dempsey at Toledo is the last important case of the kind in the fistie world. Before Willard had time to revise that error he was listening to the referee counting him out.

A curious twist of this blunder comes to light occasionally when the misjudgment affects the temper of the opponent and his reaction to certain kinds of pressure. It is important to know whether a man or a team is or is not a quitter. Rough play against a man or a team may have astonishingly unexpected results. Instead of intimidating, as may be anticipated, it may arouse; and such a psychological misjudgment may very well result in defeat where victory might otherwise have been assured. Many coaches and individuals can bear witness to this.

The converse of this, of course, is overestimation of one's opponent. The man who backs down before a bluff, and the man who is afraid to try, both make this mistake. But most often it crops up in the middle of a contest, when one side, strained and weary and battered, fails to remember that the other is in just as bad condition. In the Harvard-Princeton game last fall what seemed an error of this kind came when Owen was taken out after a slight injury. He had been plowing down the field, and it looked as if another plunge would have given a touchdown. But the Harvard field generals would not trust him again, and on the next play there was a missed signal, and the ball was lost. Princeton benefited again from the same error in an early Yale game, when, just before Lamar made his famous run, the Yale captain abandoned the running game, which would have made the game secure, and took a chance on a kick which Lamar ran back the length of the field.

Another source of false tactics, so Mr. Camp goes on to say, lies in getting too much interested in a small point and, consequently, overlooking a big one. For example:

Lord Dunraven, in the quarrel he stirred up over the races between his *Valkyrie III* and *Defender* for the America's Cup, charged that the ballasting of the *Defender* had been changed after she had been measured for the races. The thing was manifestly impossible to any unprejudiced and expert judge, and was entirely impossible to the high type of American sportsmen who were in charge of the *Defender*. But Dunraven permitted his blundering resentment to go so far that he abandoned a series of races he had at least a chance to win, and caused a breach between British and American sportsmen which it took years to heal.

A case in which the small point was won with disastrous results came in the case of a Princeton-Harvard eligibility quarrel which resulted in the calling off of games between the two for a long period of years.

A different kind of insistence on a small point came in the international tennis match between Williams and Wilding. Williams took his first games easily and was breezing along nicely when he happened to drive a backhand stroke out of the corner of the court. He was not rattled, but he was a little obstinate. The next time he had a chance he tried the stroke again, and again missed. Thereafter he played for that corner every time he got a chance, missing steadily and losing the match to steady-going Wilding because of his desire to make a particular, and unnecessary, play.

One of the blunders which in the light of events becomes most ridiculous is that of getting out of touch with the way the world is moving. This seldom occurs in sports, and when it does come it affects the general standing of some sport, rather than a particular game. But one of the kind, which is truly historic, occurred at Princeton away back in 1787, when the faculty passed the following rule:

Whereas, the game played by students in the rear campus with bat and ball is rude and unbecoming gentlemen,

And whereas, on account of the alternate heats and colds,

How Manufacturers Reduce Cost of Building 15%

*The Application of Mill Construction to Factory Building.
Also Reduces Carrying Charges, Taxes, Insurance*

MANY a business man has, in the last twelve months, come to realize the true meaning of costly factory buildings.

Extravagant building investments, entailing high, fixed overhead, are proving an almost insurmountable handicap in the present intensely competitive period.

A big price to pay for yielding to fear of fire, instead of investigating the causes of fire and the real facts of fire protection.

And entirely unnecessary when the application of a single established principle of commercial building construction, coupled with adequate sprinkler protection, might have *saved them 15% on building investment, 15% on interest carrying charges, a considerable amount on taxes and as much as 75% on actual insurance costs.*

NO wonder industrial executives are, more and more, figuring necessary industrial building in terms of fire resistant, sprinklered "mill construction."

They are finding that insurance rates are much lower than on so-called fire-proof buildings, unsprinklered, while the rate is, at the same time, applied on a lower valuation.

It is, after all, not buildings so much as contents that consti-

tute fire hazard; and trying to reduce fire hazard by increasing building investment only piles up the overhead, and unnecessarily increases costs.

Engineers and architects, long familiar with the principle of fire-resistant, sprinklered "mill construction," yet obliged to limit its use because of lack of sufficient uniformly safe timbers with which to apply it, are now unhesitatingly recommending it.

MANUFACTURERS who have assumed that so-called fire-proof building is necessary to lower insurance rates are surprised to discover that thousands of the greatest mills in the country—sprinklered "mill construction" buildings, in which brick and wood have been intelligently combined into factories of great utility and adaptability—are paying today lower insurance costs than almost any other class of insurance risks and that their losses over a recent three-year period have averaged only 3½ cents per \$100.00 of insurance written.

*Let us make every day
"Fire Prevention Day"*

Timber values are no longer a matter of guesswork.

The work of testing engineers, scientists and lumber experts, extending over a period of years, now makes possible the selection of timbers for "mill construction" based on uniform values.

IT is now possible to secure selected timbers for the most exacting industrial uses from the Douglas Fir Mills of the Weyerhaeuser organization or from its great distributing plants in the heart of the Eastern and Mid-western markets.

Just what the principle of fire-resistant, sprinklered "mill construction" is as applied to commercial buildings, and just why Weyerhaeuser selection of timbers now makes this principle practical of application, is told in two booklets sent free on request.

Weyerhaeuser Forest Products are distributed through the established trade channels by the Weyerhaeuser Sales Company, Spokane, Washington, with branch offices at 208 S. La Salle St., Chicago; 1015 Lexington Bldg., Baltimore; and 4th and Roberts Sts., St. Paul; and with representatives throughout the country.

SPORTS AND ATHLETICS

Continued

it is injurious to the health of those entrusted to our care: Therefore, be it forbidden."

That rule was not repealed for many generations and went far toward convincing the students that age had no sympathy with youth. Many direct clashes with the faculty grew out of it.

Allowing favoritism to creep in is one of the worst errors, and one of the commonest. There was a story, true or not, of a successful foot ball coach who used to boast privately that his strategy was to find out what players on an opposing team belonged to the same fraternity as the captain or coaches, and to direct his plays against those men. He declared they always averaged well below the rest of the team.

One of the most spectacular defeats in sport, hinging on obstinacy, came in a Yale-Dartmouth baseball game. The pitcher, who was the Yale captain, had as his relief a man whose ability later made him a star in professional ball. In spite of the protests of the team, the captain, altho hit hard, insisted upon staying in. Dartmouth ran up six runs in the first two innings, and altho the change pitcher, who then went in, held them down to nothing in the remaining seven, the game was lost. Yale could get only three runs.

In view of the recent efforts to "clean up" college sports, especial interest attaches to Mr. Camp's observations of the folly of hiring ringers:

The psychological blunder of believing that loyalty and zeal can be bought shows up not infrequently in sport, where it takes the form of hiring "ringers." In the big schools the use of ringers is dying out not only for ethical reasons, but because they go wrong.

In the first place, they are not "at home" and comfortable with the regular students; they get no feeling of loyalty and solidarity; they are likely to become resentful, and they play only half-heartedly. In the second place, their play is merely a job to them, without personal interest, and they are likely to break up the morale of a team.

One of the most deadly of all blunders is the failure to know the rules of the game, and this is again an error in humanity, but turned in on oneself. When Merkle lost the Giants the world's championship his team paid a tremendous price; for a little neglect on the part of the coaches in the Yale-Harvard game, only last fall, there was a ghastly moment when a similar ignorance of the rules on the part of the Yale men almost brought early disaster, for in a momentary lapse the team seemed to forget that any ball kicked from a free catch is a free ball, and can be put in play wherever any onside man of either team can get it. Harvard had made a free catch and followed it with a try for goal, which failed. The ball went bouncing along behind the Yale goal line, none of the Yale men making any attempt to pick it up, since they all thought it was a normal touchback and not in play. But Macomber of Harvard followed it across the line and fell on it as soon as he could. If he had been able to do this before it rolled out of bounds, he would have had a touch-down. Fortunately for Yale the ball rolled a foot or two past the ropes, and she was saved.

ENTER PROF. COACH

SEVENTEEN college presidents met in Springfield, Mass., the other day and passed a resolution designed to take the control of athletics and coaching entirely out of the hands of the students themselves and deprive alumni councils of their power in college athletics. It was resolved:

That, recognizing that intercollegiate athletics are at present a part of the work of the Department of Physical Education, we recommend to our respective faculties and trustees that, beginning with the Fall of 1923, all coaches be appointed in the same way as are members of the faculty and other officers of the institution.

That, we further recommend that as soon as it is practicable, and if possible by the Fall of 1923, the present system of seasonal coaches be replaced by coaches who are members of the faculty as defined by the following terms:

They shall be paid by the college and only by the college; they shall be in residence throughout the year; they shall have other duties in the physical training department, or in some other department in addition to their coaching; they shall be paid at the same rate as other members of the faculty; they shall have the same permanence of appointment as other members of the faculty; they shall be selected in the same way as other members of the faculty."

Eleven colleges were represented at the Springfield conference—Amherst, Trinity, Bowdoin, Colby, Hamilton, Middlebury, Tufts, Vermont, Wesleyan, Williams, and Union. The resolution would give the coach a wholly new standing. Enter Prof. Coach.

A correspondent of the *Newport Times* reports that "Harvard, Yale and Princeton are not expected to vote to do away with the seasonal coach," tho "some stand may have to be taken in favor of graduate coaches in case it is possible to secure suitable ones for the different sports." As the writer goes on to say,

Of the five major sports at Harvard only one is coached by a professional, the baseball team, which is handled by Jack Slattery, an ex-major leaguer. The sole seasonal coach is Dr. Heber Howe, in charge of the crew, who is listed as an instructor in physical education.

Graduates coach football, track and hockey, and among the minor sports, tennis and lacrosse. Faculty coaching, it is said, could be applied to smaller colleges where the candidates for athletic teams are few, but it would be almost impossible at a large college where several thousand students are eligible for athletics.

Commenting on the position taken by the eleven college presidents at Springfield, the *New York Tribune* observes, "This is a revolutionary move," but approves of it on the whole, as

The system of seasonal coaches not only has tended to put a premium upon a single small successful team, but also has placed an advantage on the side of the college with a large financial backing, which has the opportunity of obtaining more skilled instructors than its less wealthy rivals. Thus to eliminate the money element is at the same time to remove some of the dangers of encroaching professionalism and to exclude unwelcome foreign influences.

It is perhaps unfortunate that there is no prospect that the good points of this change are likely to be readily adaptable in the bigger colleges. Under the present system institutions such as Harvard and Yale and Princeton, with many wealthy graduates keenly interested in the athletic contests, enjoy to a peculiar extent the advantages of being able to hire the best possible instructors and concentrate on the development of crack teams.

However, it appears that the "Big Three," as represented by their undergraduate press, are anxious to "clean up" college sport in whatever ways seem feasible. According to the *Providence Journal*,

There are three drastic changes advocated by these undergraduates: first, the abolition of pre-season practise; second, the disapproval of intersectional games; and third, the ending of organized scouting for players.

At Princeton, meanwhile, eighteen athletes have been barred from participation in college sports because found to be receiving financial aid from the alumni. As the *New York Herald* declares,

In justice to the young men the faculty can not make it too clear that nothing dishonorable is charged or implied against them. The academic requirements at Princeton always have been high. All of these eighteen students have met those standards.

But the financial aid from alumni strikes the *Herald* as misplaced and a detriment to the college, for

When an old grad picks a student to send to the alma mater, he picks him rather for breadth of shoulder than for breadth of forehead. The alumni are not bothered by reports that their colleges have fallen down academically, but they suffer great mental anguish when their college teams are beaten at football or on the track by their ancient rivals. Hence the alumni recruit brawn rather than brain. Sending a mere dig back to the dear old college will not bring any great glory to the alma mater, but a good drop kicker and line plunger certainly will. The fact remains, nevertheless, that Chief Justice Taft's plea for scholarship before athletics is of the utmost importance.

Harvard and Yale are passing through the same phase that has produced these results at Princeton, and the Princetonians expect the same frankness from the other members of the collegiate trinity because the investigation which was made at Princeton was made under an agreement with Harvard and Yale to go thoroughly into the finances of every student in athletics.

The alumni of Harvard and Yale are quite as philanthropic as those of Princeton and, like the alumni of Princeton, they have been aiding some broad-shouldered youths to get the full benefits of a university training and some of the best football coaching available. Some persons may think Princeton is leaning over backward in the effort to keep its sports absolutely above suspicion. The other two should lean with Princeton.

An "important step," the *Herald* calls the eleven college presidents' endeavor to enthrone Prof. Coach, as eventually "This may lead to dispensing with all coaches.

Jim Henry's Column

An Interesting Theory

You may have noticed during the past year, at the bottom of my column, this little phrase, "Mennen Talcum for Men—it doesn't show."

An advertising expert gave me the theory. He said that if a man sees a simple, true statement about an article repeated often enough, he is bound to believe it in the end and buy.

There must be something in it, for our sales on Mennen Talcum for Men have increased not quite 100%.

I don't understand such things myself. Advertising gets more mysterious to me every day. For example, I am going to devote this whole column to telling you about our Talcum for Men. When I get through, you will know how good it is and how necessary to after-shaving and after-bathing comfort, and you will fully intend to buy a box at once. Yet I may have to keep reminding you for months, before you try it.

It is unfortunate for men that talcum was used first on babies, and second, on noses. I suppose if soap had started as a beautifier, most men would still be too proud to use it.

Now, Talcum is simply a skin soother and protector. It supplies a fairy, gauze-like film which covers sensitive skin and protects it from wind, sun and the friction of clothing.

After shaving, your pores are open and your skin is sensitive, especially so where a collar rubs against your neck. Talcum protects it. Of course, Talcum makes your face feel smooth and silky, but that is unimportant, except to the amorous.

Mennen Talcum for Men is a regular male powder, made and mildly perfumed exclusively for men. Being neutral in tone, it doesn't show when used after shaving. A Talcum shower after your bath will make you feel cool and loose for hours. Of course, if you are one of these big fellows who chafe and get all raw in hot weather, you need Kora-Konia, but for general, every day, all over comfort, try Mennen Talcum for Men.

The druggist round the corner sells it.

SPORTS AND ATHLETICS Continued

At least it should end the ridiculous practice of hiring professional athletes at salaries higher than the college presidents receive." And if Prof. Coach appears at first blush a somewhat amusing addition to the faculty, there are those who suggest that the innovation, once adapted, will be highly beneficial in its effect upon the faculty itself. Says Mr. S. D. Edwards in a letter to the sporting editor of the New York Tribune:

I submit this text: "Why not restore the balance between college football and academic work by raising the standard of class-room instruction to the plane of professional coaching?"

Coaches are required not merely to know football, but to be able to teach it.

Professors lecture on "Motivation." Coaches practise it. Professors advocate skill in fundamentals; coaches demand it. Professors aim at self-mastery on the part of students. Coaches secure it for their purposes.

The place of football is surely out of proportion as compared with academic work, but proper proportion can be restored by invigorating the latter as well as by weakening the former.

WOMAN—CAN SHE GOLF?

THE other day the famous English golfer, Mr. Harry Vardon, was talking with a friend who remarked upon the curiously small number of first-rate women golfers. "Proportionally," said his friend, "the number compares very unfavorably with that of first-class men players," and he asked:

"What is the reason?—as a rule, women have more opportunities than men for practising. Their sphere being in the home, they are usually within easy reach of the local course, and on most days they can spare enough time from their household and social duties to have a round of golf.

"As a matter of fact, I am certain that they do play more than men except at week-ends. And look at the lessons they take all the year round! The average man has virtually no lessons in the winter, because it is as much as he can do to obtain two or three rounds. And yet what do we find? Miss Cecil Leitch and Miss Joyce Wethered stand virtually in a class by themselves. Miss Janet Jackson, Miss Gladys Bastin, Miss Joy Winn, and Miss Molly Griffiths are very fine players, but where are the others who could be called first-class lady golfers? They are very hard to name."

This seemed to Mr. Vardon an observation worth answering, and in the New York Evening Post he writes:

I am far from saying that my good friend's criticism is wholly sound. It is set down simply as the opinion of one who has seen most of the championships—women's and men's—in recent times. But there may be an element of truth running through it in the sense that while lady golfers are tremendously keen—I always think that they contest their everyday "friendly"

matches in a spirit of greater intensity than men show in theirs—comparatively few attain a very high standard.

Truly, I suppose, the number of first-class lady players ought to be larger. One point which has appealed to me particularly in a long experience as showing that ladies are well adapted to excel at golf is that they scarcely ever lose their tempers. They are far more patient than men in a game which has many exasperations and setbacks. Or, at any rate, they are capable of controlling their feelings, which is in itself a golden gift on the links.

Most of us know male acquaintances who in provocative circumstances look as black as thunder; declare that they will never play the wretched game again; protest that they only knock the ball round for amusement, and that the fellow who can find any satisfaction in doing record scores is welcome to it, and, after a few more fozzles, fling an offending club into the rough. Has anybody ever seen a feminine golfer thus demonstrative? I never have in the whole of my forty years on the links.

So that it is not a temperamental failing—a very important matter in golf—that prevents the sex from producing an army of first-class players. Then what is it? More than anything else does it seem to me that many lady golfers with perfect swings and every promise of greatness miss their opportunities because they do not put enough pace into the club-head during the down swing.

This certainly is not the weakness of Miss Cecil Leitch, nor of Miss Joyce Wethered, nor of Miss Janet Jackson, nor of Miss Gladys Bastin, nor of a few others mentioned by my friend, the critic. These players hit the ball with decisiveness and snap; there is nothing sluggish about the way in which they make the impact. But they are the exceptions.

To be sure, there are plenty of men players who lack that great essential of the down swing—accelerating the club-head more and more from the moment that it has reached a stage about a quarter of the way down until it strikes the ball. You do not want to start putting pace on to it the instant you begin to recover it from the top of the swing; the first movement should be, indeed, strictly a matter of recovering the club-head from behind your own head and guiding it into a position in which you feel that you have perfect control over it for hitting.

That instant arrives just after it has passed the perpendicular in the down swing. From that moment speed up the club-head for all you know, for the rest of the swing must have a considerable element of snap in it.

I really do think that the great majority of lady golfers fail in this respect—that they are more addicted than men to hesitancy in the down swing. "Slow back" is an old maxim and a very good one for most golfers. Champions sometimes flout it, having cultivated infinite confidence and certainty; on the other hand, I do not know anybody who takes the club back much more slowly than Edward Ray. But when he brings it down it gathers pace so rapidly that at the impact his club-head is traveling just about as fast as club-heads could be made to travel by human hands.

That so many lady golfers have a true swing which lacks the "swish" coming down—the keynote of accurate, decisive hitting—is due, perhaps, to self-consciousness. The feminine player is apt to fear that she is going to make a blunder, and so she hesitates and lets the shot trail off at

SPORTS AND ATHLETICS

Continued

the last moment. I verily believe that most of the bad shots made by women with good golfing styles are caused by hesitation just where there should be acceleration.

A mistake made by many lady golfers is that they think they ought to have clubs appreciably lighter than those used by men. If a woman player selects a very light club it will not be capable of doing the work that is needed of it. It will be so much like a feather in her hands that more or less naturally she will bring it down gently. I am by no means a believer in heavy clubs (my own driver weighs 13½ ounces), but you want to "feel" the club-head as you address the ball with it, and to feel that, while it is not dragging at your hands, there is sufficient substance in it to stimulate the desire to hit hard with it.

Worst of all is a light niblick. A lady golfer requires a stout niblick of average weight. One of her handicaps as compared with man is that often she lacks the strength to recover from difficult places.

She must have a heavy niblick to do the work for her. It will do it all right if she brings it down firmly just behind the ball in a bunker, burying the head of the club in the sand with the force of the blow. The ball will be forced out of its retreat. Lady players have the reputation of being weak in bunkers. I think it is often because their niblicks are too light.

AMERICA, MEET MR. CHOW

"NO can do," or words to that effect, express the Chinese gentleman's attitude toward sports only a few years ago. They were beneath his dignity. And yet from China comes "this chap with a name made famous the world over by the dough-boy" and in athletic circles by the recent record: "Running Broad Jump—won by Chow, Penn., distance, 21 feet 10½ inches." Accordingly, the American intercollegiate indoor broad jump champion is Frederick S. T. Chow, of Peking, China. Writing in the New York Tribune, Mr. Jack Masters observes,

Until this sturdy son of the "Forbidden City," which houses the Dragon Throne of the Son of Heaven, flashed across the title horizon, none of his race had so much as made a dent in the surface of our national amateur track and field championships.

Chow, who speaks with only a slight accent, would much rather tell of his brother's exploits than relate his own achievements, but as the brother in question also appears to have reached into the heights of fame, possibly Frederick is justified. I shall let him tell about it in his own quaint manner of speech.

"I have been broad jumping since I was in school in Peking, where I attended preparatory department of the Peking National University. I was then champion of all-around athletics—that is, I scored most points. At home I received training from my brother, Clarence S. K. Chow, who is a Yale letter man in basketball.

"He is quite an athlete also in hurdles and pole vault, and has record of 11 feet 10 inches in latter event. Clarence represented China in the first Far Eastern Olympic games at Manila, in which only

How We Got Our English

Dr. James C. Fernald gives a most interesting answer in his new book—

HISTORIC ENGLISH

THIS BOOK is even more than a story of the development of the English language. It is a fascinating historical résumé of the English people as shown in the evolution of their speech. Beginning when Britain was a savage island, it graphically describes events, including the invasions of neighboring tribes, that helped to form our language; gives unique samples of Anglo-Saxon and Chaucerian English and charmingly describes the gradual refinement of our words. The book reveals the recognized scholarship of the author and the diligent research the work required.

"One of the most interesting books we have read."
—New York Herald.

"The book is more than one of information. It is one to thrill us with pride in our common heritage and to give us greater language perspective and a greater respect for the significance of the words we utter."
—Boston Herald.

"As fascinating as fiction."
—Topeka Capital.

12mo. Cloth. 293 pages. \$1.90, net; \$2.00, postpaid

WHAT MODERN MEDICAL SCIENCE HAS DONE FOR THE WORLD

See THE HOMILETIC REVIEW for MAY

FUNK & WAGNALLS COMPANY, New York
30 cents a copy \$3.00 per year

the Philippine Islands, Japan and China were eligible. He won second place in decathlon and standing high jump, and was third in pole vault. I mention him because I owe him a good deal in coaching and training me before I came to this country.

"Since coming here several years ago I received valuable training from Coach Moakley, of Cornell, and my present tutor, Lawson Robertson. In Cornell I made my numerals and was on the freshman team, but before I advanced far I had to go to University of Illinois to study railway administration, as I am specializing in that course. I was there only one year and was not eligible for the team.

"Then I was transferred to Penn to finish off my course, and as a junior last year I did not compete or enter team but simply took track class to fulfil credit for physical education as required here."

Lawson Robertson, the Penn coach, deserves the credit for discovering Chow, we are told, and it took shrewd discernment, as the young Chinaman "lacks the stature of many of the most successful broad jumpers." But size and weight are not everything, one way or the other. Mr. Masters quotes Chow as remarking:

"One afternoon while on the field Robbie said to me, 'See that man running along the backstretch?' I turned and saw a great fat man running so slow along the track that even a snail could have beaten him. 'What is he doing?' I asked. 'You guess,' said Robbie. 'Well,' said I, 'he must be your weight man, training for a fat man's race.' Then Robbie laughed heartily and said, 'No; he is my best pole-vaulter.'"

Chow began to hit his stride as soon as Robertson took him in hand. The youngster won six first and two second places in the fall meets in addition to his crowning effort at the national championships.

He is devoting much time to the technique of his specialty and will most likely develop the famous snap of the legs, which, coming just as the athlete is about to land, adds several inches to the jump.

Should he master this trick Chow will surely be a factor in the coming outdoor intercollegiate championships, as well as the national A. A. U. title meet. He is unusually keen about jumping, and the expert advice of Robertson, coupled with the lad's already great start, may easily carry him to greater heights. He will undoubtedly represent China in the next Olympic games, as will his brother.

It appears that Chow wanted to compete in the high hurdles at the title meet. He did run in two of the preliminary heats of that event, but Robbie insisted that he reserve his full strength for the running broad jump, in which he later scored his impressive victory.

The little Penn star has great hopes that his ancient country will awaken to the advantages of athletics. He is especially anxious that American coaches be retained by the China university to teach track, football, baseball, swimming, tennis, etc. Baseball and soccer have advanced rapidly; the latter is a national sport in the Far East, and the Chinese baseball team which recently toured this country administered several defeats to our leading college nines.

SCIENCE • AND • INVENTION • CONTINUED

THE GAS THAT WILL GO UP WITHOUT A BLOW-UP

A NEW era in the progress of lighter-than-air aviation began on the day when the United States Navy non-rigid airship C-7 was drawn out of her aerodrome at Hampton Roads, Virginia, and headed for the national capital, 140-odd miles away. The C-7 was the first lighter-than-air vessel to be inflated with helium; and her voyage was intended to demonstrate the value of that non-inflammable gas in the realm of aviation. Her envelope was filled with 176,400 cubic feet of the rare gas, which represented the fruit of epoch-making labors on the part of a group of American technicians. Let us hark back more than five decades, suggests an aeronautical writer, Robert C. Skerrett, in *Leslie's Illustrated Weekly* (New York)—

when scientists discovered in the sun the presence of that element which made the exploit of the C-7 possible. In 1868 a party of "star gazers" were in India for the purpose of observing a solar eclipse, and they had with them an instrument called a spectroscope. When the vaporous atmosphere around the sun was viewed through this apparatus there was revealed a peculiarly brilliant yellow line which differed somewhat from the yellow line characteristic of sodium. The wise men finally decided that the novel luminous streak was evidence of a new element—at least, one unknown to the dwellers on earth, so they named it helium, derived from the Greek word for the sun.

In 1895, Sir William Ramsay, repeating an experiment made seven years earlier by Doctor W. F. Hillebrand, of the United States Geological Survey, obtained a gas which also produced in the spectroscope the yellow line seen in 1868, and thus showed that helium did exist on our globe. Subsequently, this rare gas was found to be given forth in volcanic exhalations and in the breath issuing from various mineral springs; and its presence in the atmosphere was also determined in the proportion of one volume of helium in 185,000 volumes of air. Laboratory tests proved that the gas would not ignite nor would it combine chemically with any other element. In short, it was inert.

While investigations brought to light that helium was widely distributed throughout the terrestrial crust—generally in minute quantities, it remained for two American technicians to disclose that large supplies of helium were carried in the natural gas of oil-fields. Here, again, is an instance of how the scientist stumbles unexpectedly upon Nature's secrets. Out in Kansas, nineteen years back, a well sunk to a depth of four hundred feet tapped gas which was so low in heat value that it was thought to be commercially useless, and a sample of the gas was submitted to the State University for analysis. Messrs. H. P. Cady and D. F. McFarland, of that institution, ascertained that the natural gas was very high in nitrogen, which is a very common inert or incombustible gas. This was sufficient to explain the undesirable properties of the natural gas; but these experts pursued their analyses further and thus discovered the existence of 1.84 per cent. of helium. Strange as it may

seem now, little if any heed was given to this revelation, which meant that millions of cubic feet of helium were liberated from the bowels of the earth annually and set free into the atmosphere. The World War altered the common indifference which had hitherto prevailed toward helium as an element of any practical importance; and we shall see presently that helium-bearing natural gas may henceforth be counted among the richest of our underground resources.

As early as 1915, we are reminded, Sir William Ramsay was seeking in the British Isles for a source of helium to supply the British dirigibles, which were hampered by fear of a fate like that which was overtaking so many of the hydrogen-filled German airships. However—

Sir William Ramsay failed in his quest at home for helium; and similar efforts in Canada bore no practical fruit, altho some helium was recovered from native natural gas. The whole outlook was improved, however, when we entered the war, and steps were promptly taken to profit by the earlier discoveries of Messrs. Cady and McFarland and by the later surveys of certain of our Federal Bureaus. It was then known that natural gas from some of the oil-fields in Kansas, Oklahoma and Texas contained more than 0.50 per cent. of helium, and it was believed that this could be extracted mechanically and on a commercial scale provided existing apparatus were adapted to this end. What followed is typical of American enterprise and engineering cunning. But before we tell this story the reader should have some basis of comparison by which to judge what has been done to give us helium to replace gaseous hydrogen. Hydrogen can be made for from four to twenty dollars a thousand cubic feet, depending on its qualities, and there are three methods available for its manufacture—known as the silicol, the electrolytic, and the iron-contact processes.

Prior to 1917, helium, generally speaking, was pretty much of a laboratory curiosity, and there had been separated the world over probably not more than 100 cubic feet—the cost of production being somewhere around \$2,000 a cubic foot. To-day, thanks to the Government's efforts, we are in a position to obtain helium from natural gas for approximately six cents a cubic foot! This price is admittedly too high to warrant the substitution of helium for hydrogen in civil airships, but the state of the art of recovery, considered in the light of what has been achieved in so brief a span, is a promise of still cheaper helium in the near future. Any widening of the use of dirigibles for the transportation of passengers and postal or express matter will give the necessary encouragement to the erection of industrial plants for the extraction of helium.

To-day our Government dirigibles are drawing upon Production Plant No. 1 at Fort Worth for their helium. This establishment was constructed after three experimental plants had been in service for some months. It has been operating for a little more than a year, and is able to treat about 5,000,000 cubic feet of raw gas daily. It is capable of yielding from 25,000 to

30,000 cubic feet of helium in that interval, depending upon the composition of the natural gas. This helium, 92 per cent. pure, costs \$56 a thousand cubic feet; but it seems that this figure does not include certain overhead charges or the amortization of the plant.

It should be borne in mind by the reader that the extraction of helium from natural gas tends, if anything, to make the gas better suited to industrial and domestic consumption; and, as a fact, the gas so modified at the helium plants has been passed right on into the distributing mains which supply the populace of Fort Worth and Dallas. There is a decided improvement in the burning quality of the natural gas where the process removes a measure of the nitrogen, as is the case in Production Plant No. 1. The nitrogen so reclaimed is used in one stage of the extraction of helium from the raw gas.

Our Government geologists have determined that natural gas emanating from fields in Kansas, Oklahoma, Texas, California, Montana and Ohio carries helium in sufficient volume to justify commercial recovery; and with the creation of suitable collecting facilities it would be feasible to gather from these sources every twenty-four hours quite 5,000,000 cubic feet of this non-inflammable buoyant gas. The amount of helium required for airships varies agreeably to the size of the craft. In the case of the *ZR-2*, her gas bags had a capacity of 2,700,000 cubic feet of hydrogen, and for a given lifting force a somewhat larger amount of helium would be essential. This fact is mentioned in order that we may appreciate how much helium would be needed to inflate a numerous fleet of commercial or military dirigibles. And this brings us to a fascinating aspect of this whole subject.

The scientific world is at odds as to the origin of helium. One faction contends that helium is the by-product of radioactive processes occurring within the earth's crust, while another group claims that helium formed a part of the globe's atmosphere when our sphere was cast off from the sun ages back, and they tell us that this "primordial helium" was imprisoned within the terrestrial substance during successive geological alterations. If this be true then the gas, which may yet revolutionize aeronautics, is actually kin to the helium of the solar atmosphere! Whatever be the origin of helium, the immediate question is: How can we conserve this buoyant medium in immense quantities when we have effected its recapture by the means already described?

Experience has proved that we can not rely upon innumerable small steel tanks, each charged at high pressure with 200 cubic feet of free helium; and suggestions have been advanced looking to underground storage. For instance, tunnels four or five hundred feet long and eight feet in diameter might be driven in sandstone formations and made tight by lining them with copper or lead; again, great bottle-like cavities, fifty feet in diameter, might be excavated deep in salt deposits; while parts of abandoned mines of divers sorts could be sealed with concrete and rendered fit for the retention of helium at a pressure of several hundred pounds per square inch. Helium stored in this manner would involve an annual outlay of but a fraction of a cent. per cubic foot of gas.

From a laboratory curiosity helium has become a commercial commodity, and there are ample reasons for believing that it may yet be found of much service to man in other ways than that of robbing the airship of one of its greatest perils.

"And they said it wasn't good enough!"

A salesman and an advertising man met in a Hartford hotel.

"Just been down to Glastonbury," said the salesman, "to show the J. B. Williams Company a sample of a certain oil that they use in their Shaving Soaps. It's the best I carry. Very high grade. Practically edible. *And they said it wasn't good enough.* What do you know about that?"

"I know a lot," said the advertising man. "I know how finicky they are about the stuff they put into their soap. Good enough to eat. That's their motto."

"Good enough" only if it's the best there is. And it's this *best* in materials, skill and experience that has given Williams' Shaving Cream these distinctive features:—

It thoroughly softens the beard

It thoroughly softens and lubricates the skin so that it gives a shave that's a delight to even the tenderest face.

If you are not one of the millions who already know Williams' Shaving Cream, try a few shaves with a FREE SAMPLE TUBE.

Like a hot water spring in your home

NOTHING adds more to the comfort and convenience of a home than unlimited hot water. With a Pittsburgh Automatic in your home, one or a dozen can take a hot shower or bath at any hour of the twenty-four without waiting for water to heat. The Pittsburgh delivers hot water instantly, whenever you want it, without delay or limit on quantity.

When you open a hot water tap, here's what happens down cellar where the Pittsburgh Automatic is hidden away. The gas flashes into an intensely hot flame *concentrated right on the copper coils the water is passing through*. No waste heat! As fast as the water flows through the coils, it is heated—not lukewarm, but *hot*. When the tap is closed, off goes the gas—**AUTO-MATICALLY**.

Pittsburg AUTOMATIC GAS WATER HEATERS

Whether your home is large or small, there is a size that will just fit it. There are also big installations for hotels, hospitals and large buildings.

EASY PAYMENTS PUT A PITTSBURG IN YOUR HOME

The convenient terms of our deferred payment plan enable you to enjoy hot water luxuries while paying for the Water Heater. A small payment puts the Heater in your home.

LOOK UP THE PITTSBURG DEALER IN YOUR CITY OR WRITE US. Probably the local gas office or a prominent plumber has a Pittsburgh connected up so you can see it in action. If you write direct to us, mention the number of people and how many faucets you have. We will advise you which size you need and at the same time send you a free copy of "THE WELL-MANAGED HOME."

Pittsburg Water Heater Co.
Pittsburgh, Pa.

SCIENCE AND INVENTION

Continued

THE FARTHEST STAR

THE record long distance for stellar objects is held at present by a faint globular star cluster which is 220,000 light-years from the earth, we are told by Isabel M. Lewis, of the U. S. Naval Observatory, writing in Science Service's *Science News Bulletin* (Washington). This cluster is known only by its catalog number of N.G.C. 7006. When the human race was still in its infancy, the light-rays that are now entering our telescopes from this cluster started on their journey at the speed of 186,000 miles a second. While these rays have been traveling, the sun with its planets has also been journeying onward at the rate of about one million miles a day, and has covered a distance of fourteen light-years. She continues:

Every 15,750 years the sun covers a distance of one light-year, which is equal to about six trillion miles. The nearest star, Alpha Centauri, is four and one-third light-years away, and the brightest star, Sirius, is eight and one-half light-years from the earth. So our solar system has traveled a distance greater than that which separates us from the nearest stars while the light from this cluster has been speeding toward us.

The method of measuring the distances and diameters of the globular star clusters was developed by Dr. Harlow Shapley, formerly of the Mount Wilson Observatory, now Director of the Harvard College Observatory. Dr. Shapley has made a detailed study of practically all of the known globular clusters, about seventy in number. The results of his investigations show that all of these clusters are at enormous distances from the earth. Even the nearest Omega Centauri is more than 22,000 light-years away, and many of the clusters are nearly as distant as N.G.C. 7006.

Measurements of the distances of the globular clusters are obtained through a determination of the apparent brightness of giant variable stars that exist in all of the clusters. The absolute magnitude or intrinsic brightness of the giant red and giant white variable stars is very accurately known. So when the apparent brightness of these stars has been found, the distance of the cluster they are in is obtained from a very simple relationship connecting the apparent brightness and the absolute magnitude or intrinsic brightness. In fact, now that the method has been perfected, there is less labor entailed in determining the distance of a globular star cluster many thousand light-years away than in finding the distance of the nearest stars by the trigonometric method of direct measurement, and the results are proportionally more accurate. It has been estimated that the errors in the values given for the distances of the globular clusters do not exceed one-fifth of the measured distances.

All the globular clusters consist of thousands of suns, many of which are several hundred times more brilliant than our own sun. Indeed, a star no brighter than the sun would be entirely invisible if located in one of these clusters. The diameters of some of the globular clusters are so great

Chickens, dogs and young America are natural enemies of your garden, lawn, flowers. They can undo, in a hurry, what has taken you months or years to accomplish. that light would take several hundred years to cross them.

In the most powerful telescopes N.G.C. 7006 appears visually as a nebulous star, but a seven-minute exposure on a fast photographic plate has shown about two hundred stars in this cluster that are well within the limit of visibility of the greatest telescopes.

GRAVITATION WORKING FULL TIME

H. G. WELLS, in his "First Men in the Moon," tells how his hero invented a "gravitation screen," through which the earth's attraction could not act, so that above it he and his companion rose to the Moon unhindered. According to an Italian physicist named Majorana, any mass of matter is capable of acting in some degree as such a screen. In other words, he thinks that ordinary matter possesses a power of "gravitational absorption," lessening the attraction between two other bodies when it is interposed. The possibility of such action had been foreseen, but the proof of its non-existence had been regarded as satisfactory. That other investigators do not regard Majorana's discovery as thoroughly well established, we gather from the following article, by Paul R. Heyl of the U. S. Bureau of Standards, in *Science* (New York). Says Mr. Heyl:

"Russell, in a recent article, has shown that astronomical and tidal phenomena would limit any gravitative absorption to one-thousandth or less of the amount announced by Majorana.

"Eichelberger and Morgan, of the U. S. Naval Observatory, have recently published the results of clock observations from 1903 to 1911, reduced so as to show a difference, if any, between the day and night rate. It appears from these results that such a difference can not exceed 0.005 second, about one-tenth that previously announced by the Lick Observatory. The writer is verbally informed that the Naval Observatory results from 1913 to 1918 bring this difference to a smaller figure.

"The existence of gravitative absorption should cause a pendulum clock to run slower by night than by day, on account of the absorption by the earth of the gravitative action between the pendulum bob and the sun. Taking Majorana's coefficient of absorption the average absorption of gravitation by the earth during the night would amount to about three per cent. of the solar gravitative acceleration at the distance of the earth. The total gravitative acceleration to which the pendulum bob is subjected would therefore be reduced at night by about 2 parts in 100,000 and the average time of swing increased by 1 part in 100,000.

"Taking 0.005 second as the greatest permissible change in 12 hours, the observations of Eichelberger and Morgan would limit the change in time to swing to something like 1 part in nine million.

"Majorana himself, in a later series of experiments carried out with a much more massive screen, apparently finds an absorption coefficient of only one-third the value given by his earlier experiments. In view of the extremely small quantity to be detected and the large amount of evidence against the existence of such an effect, it may be fairly assumed that Majorana's result is in error."

"Controlled Heat"

"CONTROLLED-HEAT" means that with a touch of your finger the radiator instantly gives the exact heat you want—no more, no less.

Think of the comfort of being able to regulate the temperature in each room, to suit the occupant or to meet sudden weather changes.

Think of the economy of never wasting heat—never having more than you want.

That's what Hoffman "Controlled-Heat" gives you—Comfort—Economy.

Furthermore "Controlled-Heat" is radiator-heat—heat *where you want it*.

"Controlled-Heat" is vapor-heat—steam heat operating on low pressure and correspondingly low fuel consumption—it *reduces coal bills*.

"Controlled-Heat" is flexible heat. It instantly responds when radiators are regulated and functions without waste.

"Controlled-Heat" is clean heat—no dust or dirt.

"Controlled-Heat" is silent heat

—no thumping, banging pipes, no hissing, leaking steam.

"Controlled-Heat" is almost self-operating. It is so simple that it requires no expert knowledge or special care.

Above all, "Controlled-Heat" is *Safe*. No matter what you do or don't do through carelessness it is impossible to burn out or crack the boiler.

If you want heat that can be regulated; heat that is economical, silent, clean, flexible, efficient, simple to operate and safe, get "Controlled-Heat"—controlled by Hoffman Equipment.

Hoffman Vapor Equipment is made by the makers of the famous No. 1 Hoffman Valve "Watchman of the Coal Pile" and, like the No. 1 Valve, Hoffman Vapor Equipment is guaranteed in writing for five years of perfect service.

Whether you are planning a skyscraper or a bungalow, investigate the Hoffman way of heating. Send for the interesting illustrated booklet, "Controlled-Heat."

INVESTMENTS AND FINANCE

THE SPRING BUILDING BOOM

IF construction is the key to the industry of America, which "unlocks all our activities and resources," as a business authority recently stated, then the most solid ground for belief that the present revival in business is something real, permanent and substantial, lies in the reported beginnings of an actual building boom. Both *The American Contractor* (Chicago) and the F. W. Dodge Company

shouldering its way into activities which will shortly take the slack out of the present industrial situation." Official returns from the building departments of 190 cities in the United States show a valuation of \$262,283,354 for building permits issued in March, where the returns for March, 1921, were only \$131,905,317. The returns this year from 194 cities were \$138,799,280 in January, and were \$139,-

X 185 FOR MAR.- BREAKS ALL RECORDS
TOTAL VALUATION OF PERMITS ISSUED IN TWENTY CITIES
BY MONTHS IN 1914, 1919, 1920, 1921 and 1922
Valuation in millions of dollars (000,000, omitted)

From "The American Contractor."

IT LOOKS LIKE A BANNER YEAR FOR BUILDING.

With March breaking all records by showing building permits valued at a total \$184,944,534 in 20 of our leading cities. These cities are: New York, Chicago, Philadelphia, Boston, Pittsburgh, Detroit, Los Angeles, Baltimore, San Francisco, Cleveland, Seattle, Minneapolis, Kansas City, St. Louis, Dallas, New Orleans, Indianapolis, Milwaukee, Buffalo and Atlanta.

report that there was a tremendous jump in building permits for March. The F. W. Dodge Company's figures show a more marked rise in residential than in industrial building. Recognition of the fact thus indicated led a banker to remark recently that whereas recovery from depression generally "begins with that kind of construction which has to do with business and industrial enterprises, this time it is beginning with that which concerns the comfort and welfare of people."

The American Contractor takes an extremely optimistic view of the situation in building, saying: "March building statistics throughout the United States break old records extending as far back as 1914, and conclusively point to the fact that the construction industry, which is the keynote industry in ushering back good times, is

919,847 for 188 cities in February. Figures from the 41 cities reporting each more than a million dollars of new building for March show that March permits are almost half the whole valuation for the first three months of 1922. *The American Contractor* has been keeping statistical records of building permit valuations for 20 of our largest cities since 1914. The valuation for these 20 cities for March 1922 is \$184,944,534, as compared with \$102,120,974 in February and \$102,037,602 in January. The March figure is the record for any month since *The American Contractor* began to keep records, "and is probably the record for all time." It "stands for itself and needs no explanation." More particulars about the building booms in certain important cities are given as follows:

New York City establishes an unprecedented record, its March valuation being over one-half its total valuation for the first three months. The closest approach to the \$104,598,548 March record was in October, 1921, when the total for the five boroughs amounted to \$52,253,437. New York's total for the whole year 1921 was only \$443,106,299, or just a little better than four times its March total for this year.

Chicago shows a steady growth in activity. Its permits in January amounted to \$7,991,550; in February to \$13,493,800; and its March permits to \$19,333,900. This is a good showing which would be much better if labor disturbances were not a serious retarding factor.

Los Angeles activity continues to increase, its March returns being the highest of the year. Los Angeles' total for the year 1921 was \$82,713,386—third highest in the United States.

Philadelphia takes a decided spurt in March, nearly totaling the sum of its January and February permits. Philadelphia's total valuation for 1921 was \$43,291,550. The current March figures of \$9,210,010 indicate that it will take much adversity to hold Philadelphia's 1922 record anywhere near to that of last year.

Indianapolis, Cincinnati, Portland, Ore., Pittsburgh, St. Paul, Atlanta, Louisville, Grand Rapids, Jersey City, Columbus, Fort Worth, Lawrence, Denver, Albany, Canton, Newark, and Dayton all record a greater valuation for March than for January and February combined.

"Construction Is on the Upgrade," is the title of an article in the current *Nation's Business*, in which the writer says:

Reports compiled by the Civic Development Department indicate that in 1922 we shall, for the first time since America entered the war, meet and perhaps by a small margin exceed the current increase of demand for dwellings. So we shall begin to cut down the accumulated shortage, which is estimated at from a million and a quarter to a million and a half.

Attention is called to the F. W. Dodge Company figures showing the very great increase in house building of recent months. But, says the writer, "we need to get what encouragement we can from this." For—

Up to the close of last year we were still adding to our housing shortage. And so great has this shortage become—estimated at approximately three years' pre-war normal production—that even if we begin on its reduction now, it will take us 12 years working at 25 per cent. above normal, to provide as adequately for our population as we did before the war.

In trying to forecast what the next few years, or even the remainder of this year, will show in the way of house-building, there are many factors to be considered, we are reminded. "If there is no general rise in materials prices, the prospect for continued revival of construction is good. Money for building is becoming more plentiful and cheaper." But, adds the writer in *The Nation's Business*, "if we begin to believe that the houses we are building and buying are so poorly constructed that money invested in them is money sunk, the effect may upset all our

GOOD HEATING— at lowest cost

A MANUFACTURER who produces in large quantities can sell at a *lower price*. You know that is true because of what you have seen in the automobile industry. It is equally true of furnaces. The Sunbeam Pipeless Furnace is made by one of the oldest and largest makers in the country. Never before has it been possible to buy a modern heating furnace at such a small cost.

It is guaranteed to be made only of the finest materials. It can be installed within a day. It burns any kind of fuel with remarkable economy. No feature has been omitted which will give greater efficiency, longer life, or a higher degree of fuel saving. In short, the Sunbeam is designed to give the utmost satisfaction to every user.

Takes but little room and does not overheat the cellar.

The Sunbeam Pipeless Furnace is made in many sizes. It is suitable for homes, stores or churches; in fact, it is ideal for small buildings of every nature.

There are dealers in every section of the United States who sell Sunbeam Pipeless as well as Sunbeam Pipe Furnaces.

The "Sunbeam Book" explains why the Sunbeam Pipeless Furnace can heat your home evenly and thoroughly for so little money. It shows why a Sunbeam can save one-third on the cost of your fuel and why this method of heating is so healthful. A copy of the "Sunbeam Book" will be sent to you, together with the name of your local Sunbeam dealer, if you will just mail the coupon. There is absolutely no obligation involved, so just mail it now, while you think of it.

Can be installed without muss or dirt in one day's time.

The FOX FURNACE CO.
Elyria, Ohio.

SUNBEAM PIPE and PIPELESS FURNACES

Users say that this pipeless furnace "Warms like the Sun"

THE Sunbeam Pipeless Furnace is simplicity itself. Only one register is needed to heat the entire house. As everyone knows, warm air rises and cold air falls. The arrows indicate how nature sets up a constant, even circulation of warm moist air as soon as the Sunbeam furnace is started. The register is divided into two parts; through its center, warm air rises, spreading rapidly to every part of the house, and, at the same time, drawing cold air from the house down through the outer part of the register. You get good ventilation as well as ample heat. As long as there is no obligation, why not tear off and mail this coupon right now?

THE FOX FURNACE CO.
Elyria, Ohio

Gentlemen: Without obligating me in any way, I would like to learn more about heating my home, and the "Sunbeam" Furnace. Also, please mail me a copy of your "SUNBEAM BOOK."

Getting Big Business out on time—contented

Anything that expedites the administration of business is a source of profit.

The new Light-Running, Quiet-Running Royals speeds up the stenographer's work by lightening it. Its super-elastic touch is a marvel of lightness to her. The keys seem to fly and carry the fingers along with them. Contentment!

This Quiet Royal materially reduces the noise and clatter of typing. Disturbance and distraction are real dollars and cents liabilities in an office. Everything that is conducive to clear thinking and concentration is a real dollars and cents asset, and the Quiet Royal is exactly this.

The Light-Running, Quiet-Running Royal is already getting the stenographic forces of Big Business, and businesses that are going to be big, out on time—contented. It is the answer of a great inventor to a need long felt by aggressive executives and office managers.

Our fifty-six page book, "The Evolution of the Typewriter", beautifully illustrated in color, will be mailed free on request. Address Department D.

calculations." Of late, it seems, there has been a great deal of poor workmanship, of shoddy construction, which is often blamed on the war. Now "the shoddy house is not a good investment. And unless houses are good investments we shall fail to find the capital necessary to build more than a fraction of those for which there is to-day a potential market. People will continue to live in cramped quarters as they are doing."

PRESENT HOLDINGS OF ALLIED LOANS IN THIS COUNTRY

IN DISCUSSIONS of the Allied debt problem, the statement is sometimes made that American bankers favor canceling the debt because of their own large holdings of European government bonds, issued during the war period and sold on the market here, the idea being that a cancellation of the debts of our Government would enhance the value of other obligations. Some estimates of the amount of European government loans floated here since the beginning of the war and now held by private investors have put the total as high as \$5,000,000,000. Statements like these are not exactly true, says Mr. Thomas W. Lamont of J. P. Morgan & Company. As *Bradstreet's* briefly summarizes information given by Mr. Lamont to the press:

The total amount of loans to the Allied Governments issued publicly in the United States—bought by American banks and banking houses and sold by them to investors—from the outbreak of the war in August, 1914, to January 1 of this year, Mr. Lamont says, was approximately \$2,587,000,000. Of that total there has already been paid off about \$1,770,000,000, leaving outstanding less than \$818,000,000.

The total loans to European Allied Governments thus floated here and the amounts paid off and outstanding on January 1, 1922, are shown in the following table:

	Issued Aug. 1, 1914, to Jan. 1, '22	Paid off Aug. 1, 1914, to Jan. 1, '22	Outstanding Jan. 1, '22
Britain.....	\$1,420,818,000	\$1,027,231,000	\$393,587,000
France.....	805,000,000	611,965,000	193,035,000
French cities...	131,000,000	86,000,000	45,000,000
Belgium.....	109,270,000	9,525,000	99,745,000
Italy.....	36,311,000	25,000,000	11,311,000
Russia.....	85,000,000	10,000,000	75,000,000
Total.....	\$2,587,399,000	\$1,769,721,000	\$817,678,000

Loans placed here since the Armistice aggregated about \$641,000,000, but of that total approximately \$500,000,000 represented merely refunding operations, Mr. Lamont points out, and therefore called for no fresh funds. Of the \$818,000,000 still outstanding, the amount held by bankers is, he asserts, negligible, judging from a careful canvass; practically all of that total is in the hands of American investors. With the possible exception of the Russian \$75,000,000 loan, he expresses the opinion that "they are good in themselves, and irrespective of whatever action may be taken on the debt question, as among the governments themselves."

How Henry Wilkinson Became Rich

Although never favored by fortune Henry Wilkinson died leaving a fortune. The small sums he was able to save never would have amounted to much but for a discovery Henry made of the power of compound interest. By a simple but unsuspected method Henry Wilkinson doubled his money and doubled it again.

Henry Wilkinson's system is not a secret. It has nothing to do with speculation. There is nothing left to chance or luck. It is a sound plan of investment which you or anyone else can follow.

THE SPICE OF LIFE

Alas, Poor Darwin!—Mr. Bryan should not be so bitter against Darkin's theory of evolution.—*Shoe and Leather Reporter*.

Correct Impression, Too.—Jud Tunkins says a thoroughly self-satisfied man always gives the impression of being easily pleased.—*Washington Evening Star*.

Lenient, at That.—"The Poet Laureate," says a weekly paper, "used to get a butt of sack for his trouble." But nowadays many people are thinking that the butt should be dispensed with.—*Passing Show*.

Natural Climax.—"Jim Bilkins is dead." "How come?" "He stuck his head into the Red Dog saloon and hollered FIRE." "Well?" "They did."—*Siren*.

Not Past Hope.—PATRON OF THE ARTS—"Eighty-five francs? That's rather expensive for the work of a painter who's still alive." ART DEALER—"Well, you might give me the money, and I'll see what can be done about it."—*Le Matin*.

Eccentricities of Genius.—THE INTERVIEWER—"And please, sir, what have you to say on the subject of anonymous letters?"

THE GREAT MAN—"Stupid missives! I admit I invariably read anonymous letters—but I never answer them."—*Paris L'Illustration*.

Isn't Nature Wonderful?—"But surely," said the haughty dame, "if I pay the fare for my dog he will be treated the same as other passengers and be allowed to occupy a seat?"

"Of course, madam," the guard replied politely, "provided he does not put his feet on it."—*Pearson's Weekly*.

The Wonderful Movies.—"We'll have to stop work on 'The Gladiator's Daughter,'" said the movie producer.

"But we've built a section of Rome just for that picture."

"We can use it for 'The Steel King's Romance.' Put up a few modern signs, have one of our utility men pose as a traffic cop and we'll call it Pittsburg."—*Birmingham Age-Herald*.

Times Have Changed.—"Do you remember the old stories about the boy who went to the great city and came back home just in time to pay the mortgage off the farm?"

"Yes," replied Farmer Cornfossel. "It's different now. When a boy leaves the farm the home folks have to hold themselves in readiness to go to town and help him out with his rent and his grocery bill."—*Washington Evening Star*.

Sufficient Excuse.—Jack and Mary had just been to the grown-ups' church for the first time. A day or two afterward they were found in the nursery whispering audibly to each other.

"What are you children doing?" their nurse asked.

"We're playing church," replied Jack. "But you shouldn't whisper in church," admonished nurse.

"Oh, we're the choir," said Mary.—*Christian Advocate*.

Your office can be like this one as Light as Day

THE T. R. B. Lighting Unit was made, not merely to please the eye, but actually to serve it. Years of experiment and test produced its patented shape. It is the shape that insures so perfect a diffusion and distribution of electric light as to give it the quality of natural daylight at its best.

T. R. B. light is the ideal working-light. In eliminating glare it eliminates fatigue. Soft and refreshing, it gives the maximum illumination on the working-plane. Notice in the picture that there is no desk-light on the desk. The T. R. B. Unit eliminates the necessity of this additional strain on your eyes and your pocket-book.

Write to us on your letterhead for free illustrated booklets about better working light for your own office.

It is Thirsty Fibre (millions of him in each ScotTissue Towel) who absorbs four times his weight in water and is responsible for that essential, thirsty, absorbing quality that instantly absorbs the moisture from your hands and face. No other towel is like ScotTissue.

Clean Hands in Business

SCOTTISSUE Towels make it easier for you to uphold the doctrine of "Clean hands in business," by providing a clean, fresh, sanitary, DRY towel for every washer at every wash.

The luxurious, refreshing feeling following the use of ScotTissue Towels cannot be experienced with any towel that is used over and over again. Thirsty Fibre has the same attraction for moisture that a magnet has for steel. This assures you a satisfying "dry" every time.

Learn the satisfaction of the regular use of ScotTissue Towels. Put them in your washroom today. 150 fresh towels in a carton, only 50 cents (except in foreign countries). That's 3-for-a-cent! Less by the case.

Thirsty Fibre—His Biography, a delightful booklet, will be sent free to all who ask for it.

THE SPICE OF LIFE

Continued

By the Sideshow Tent.—"Is the bearded lady your mamma?"

"No, she's my daddy."—*Kasper (Stockholm).*

A Dotty Reply.—Captain Jeffords hailed two of the craft and asked them if they needed assistance, but the hardy skippers answered "...o."—*New York Times.*

They Ought to Know.—"Do blondes have more admirers than brunettes?" asks a weekly journal. Why not ask some of the young ladies who have had experience in both capacities?—*Passing Show.*

Sure Sign.—JACK—"Halloa, Bert, who's the girl?"

BERT—"What d'you mean?"

JACK—"Well, you're not wearing a collar like that for fun, are you?"—*London Tit-Bits.*

Land of the Free.—Irv Cobb says he prefers to live in some free country, if there is one. Well, a man with his sense of humor ought to be able to call this a free country.—*R. K. Moulton in New York Evening Mail.*

Anywhere but Here.—You can lead a horse to the water, but you can't make it drink. An usher can lead a woman to a seat in a motion-picture house, but the chances are that she will take another one.—*Milwaukee Journal.*

Symptomatic Treatment.—DOCTOR—"But, my dear sir, I can't prescribe whisky for you unless I am convinced that you need it. What are your symptoms?"

PATIENT—"What symptoms would you suggest, Doctor?"—*Life.*

Try Him with Hash.—Mrs. Jones was entertaining some of her son's little friends. "Willie," she said, addressing a six-year-old who was enjoying a plate of cold beef, "are you sure you can cut your own meat?"

The child, who was making desperate efforts with his knife and fork, replied:

"Yes, thanks. I've often had it as tough as this at home."—*The Christian Evangelist.*

They're Growing Rarer.—General Cornelius Vanderbilt, at a dinner on his yacht *Romola*, told a war story. "What was true of the Civil War will be true of the World War some day," he began. "In a hotel smoking-room back in the '90s a number of veterans got into a dispute over a certain battle. The veterans—all men of high rank—argued very turbulently. But a quiet man spoke up and said: 'Gentlemen, I happened to be there at that engagement, and I think I can settle the point at issue.' And settle he did. The hotel proprietor, much imprest, said to him when he got through: 'My dear sir, what may have been your rank in the army?' 'I was a private, sir, a full private,' was the calm reply. A short time afterward the full private asked for his bill, as he was about to depart, but the proprietor said to him: 'Not a penny, sir! Not a penny! You owe me nothing.' 'Why, how is that?' the other demanded in bewilderment. 'I couldn't dream of charging you, sir,' said the proprietor warmly. 'You are the first private I have ever met.'"—*The Argonaut (San Francisco).*

CURRENT EVENTS

FOREIGN

April 12.—Announcement is made that an earldom has been conferred on Sir Arthur James Balfour, former British Premier and at present Lord President of the Council.

The Prince of Wales arrives in Tokyo on a visit to Japan.

April 13.—The Reparations Commission informs the German Government that if it does not take the necessary measures to put German finances in order, the Commission will be obliged on May 31 to exact penalties.

A parley between Republicans and Free Staters results in a formal statement expressing the hope that there will be no further interference with public meetings in Ireland.

Sir Ross Smith, the Australian aviator who, with his brother, Sir Keith Smith, made the first flight from England to Australia in 1919, is killed in a test flight in England.

April 14.—Mutineers of the Irish Republican Army seize the building of the High Court of Justice in Dublin and the adjoining hotel.

April 15.—The Russian delegates to the Genoa Conference ask for the immediate payment of 2,000,000,000 gold francs, as part of the debt they allege the Allies owe Russia because of the backing given by them to Denikin, Kolchak and Wrangel. Premier Lloyd George replies that Russia must first recognize her own liabilities.

"America has broken the back of the biggest famine in the world's history," is the Easter message sent to America by Walter Lyman Brown, European Director of the American Relief Administration in Russia.

April 17.—Michael Collins, head of the Irish Free State Provisional Government, narrowly escapes assassination at the hands of six men, and himself wounds one and captures another of his assailants.

Dr. Walter Rathenau, German Foreign Minister, informs the Genoa Conference that Russia and Germany have signed a separate treaty of peace and commerce, reciprocally renouncing reimbursement of war expenses and war damages and immediately resuming consular and diplomatic relations.

Hazrat Mohani, President of the All-India Moslem League, is arrested at Cawnpore, India, on a charge of sedition.

April 18.—Backed by Poland and the Little Entente, the Allies, in a joint memorandum, notify the German delegates to the Genoa Conference that because of their treaty with Soviet Russia they will not be permitted to take further part in conference proceedings when relations with Russia are under discussion.

Jemal Azmyk Bey, former Governor of Trebizond, and Bahaeddin Chakir, a leading member of the Turkish committee of Union and Progress, are slain in Berlin by Armenians.

DOMESTIC

April 12.—A resolution proposing endorsement of the Jewish national home in Palestine, in accordance with the Bal-

More Mileage at Less Fuel Cost

STROMBERG SERVICE STATION

For Any Car Any Size—Old or New

THE foremost item to consider in the upkeep of your car, is fuel consumption. Are you getting every ounce of energy from the gas you buy? There is a way, the New Stromberg Carburetor makes a slave of the gas—gets a "full day's work" from every drop—makes a gallon go farther. It means actual economy through the saving of fuel.

A substantial saving, a noticeable increase in efficiency of operation and additional power is evident where the Stromberg is installed.

Made by
Stromberg Motor Devices Co.

CARBURETOR

UNIVENT

"LIVE OUTDOORS-INDOORS"
(TRADE MARK)

Phantom elev

Fresh heated air from the window

Not only Better Ventilation, but Lower Building Costs

The Univent system is your Ideal ventilating system. It is as simple and more positive than opening wide the windows—but without the cold and dangerous draft.

The Univent draws air directly from outdoors, heats it and thoroughly diffuses it throughout the room.

The Univent heating and ventilating system does not use uncleanable ducts or flues. Thus, more sanitary ventilation is provided and building costs are lowered, and space is saved.

Each room is heated and ventilated, as a unit by itself. Open windows or other conditions in other parts of the building do not affect its perfect operation.

Only the Univent in the room in use, need be operated. It is not necessary to operate the whole ventilating system to ventilate two or three rooms. This means economy. It is the most flexible system known—insures fresh, pure air, perfectly diffused.

The Univent system is designed for schools and all buildings requiring mechanical ventilation. It may be installed in old or new buildings.

School board records show as high as 33 1/3% increase in mental efficiency of pupils and 50% decrease in sick leave after good ventilating systems have replaced inferior ones.

If you are truly interested in better ventilation, write for free copy of our special 72-page illustrated book—"Univent Ventilation."

Note to Architects and Engineers—If you will send your request on your professional letterhead, you will receive a copy of our special 72-page Architects' and Engineers' edition—"Univent Ventilation."

THE HERMAN NELSON CORPORATION, Dept. L, Moline, Ill.

QUALITY without Extravagance*

NOBODY wants a "cheap" hat. Every man hopes to get style and quality at a fair price. Here's the answer—Berg Hats.

Their popularity with college and business men endorses the style—and for 58 years they have been noted for "Quality without Extravagance."

four declaration, is introduced into the Senate by Senator Lodge.

Representative John Philip Hill, of Maryland, introduces a bill to create Federal local option districts to provide money for the expected deficit in the Treasury. The bill provides for a vote on 2.75 per cent. beer.

April 14.—In a letter to Representative Longworth, President Harding urges Congress not to reduce the Navy enlisted personnel below 86,000.

Four persons are killed and many are injured by a rain, hail, wind and lightning storm sweeping through Kentucky.

April 15.—By a vote of 177 to 130 the House of Representatives establishes the Navy enlisted personnel at 86,000.

Payment of \$19,672,500 by Great Britain as a second instalment on the debt of \$122,000,000, created by that Government's purchase of silver during the war is reported to the Treasury by the Federal Reserve Bank of New York.

The Senate passes a joint resolution for the extension of the 3 per cent. immigration act for two years, or until June 30, 1924. The House recently voted to extend the act one year.

April 16.—Captain G. S. Little and Sergeant James L. Johnson are killed in an airplane crash at Dallas, Texas.

Out of a total of 134,321 votes, cast by prisoners in 322 jails, only 909 favor the repeal of the prohibition amendment, announces E. E. Dudling, President of the Prisoners' Relief Society.

April 17.—Two marine officers and one enlisted man are killed at the Marine Corps base at Quantico, Virginia, when their machines lock wings and fall.

Twenty-eight persons are reported killed, and hundreds injured and left homeless as a result of a tornado that sweeps through Kansas, Indiana and Illinois.

April 18.—The Senate Republicans decide in conference to urge the Senate to pass a soldiers' bonus bill.

Congratulations.—"Well," cried Mrs. Henpeck, "our son is engaged to be married. We will write to the dear lad and congratulate him." Mr. H. agreed; he dared not do otherwise. "My darling boy," read the son the next day, "what glorious news! Your father and I rejoice in your happiness. It has long been our greatest wish that you should marry. A good woman is heaven's precious gift to man. She brings out all the best in him, and helps him to suppress all that is evil." Then there was a postscript in a different handwriting: "Your mother has gone for a stamp. Keep single, you young noodle."—Argonaut.

Just as in New York.—FIRST WORKINGMAN—"What sort of a job have you got now?"

SECOND WORKINGMAN—"Oh, I collect alms on the Puteaux bridge, between midnight and 1 o'clock in the morning."

FIRST WORKINGMAN—"Are the people particularly generous there at that hour?"

SECOND WORKINGMAN—"Yes. They generally give me everything they have on them."—Paris Le Baionnette.

Precel Radio

Precel Radio equipment is quality product and fully guaranteed. Precel means unexcelled. Five years of actual service is back of the Precel factory. We can give shipment on the following three items. We can also ship complete receiving sets.

Precel Transformer

Coils specially wound and impregnated. Layers of wire separated by varnished paper of very high dielectric strength, minimizing the possibility of burning out. The high grade electrical sheet steel laminations in the core are separately varnished. Has aluminum legs for panel mounting or standing.

Precel Rheostat

Operates smoothly. Holes are provided for either panel or table mounting. Screws for mounting with Rheostat. Resistance 6 ohms. Carrying capacity 1 1/2 amps.

Precel V. T. Socket

Beautiful nickel brass rim, composition base, spring contacts. Special binding posts, rubber protection feet. One set of holes in the panel supports both rheostat and socket. Rheostat and socket can be mounted together making audion control unit for panel or table mounting.

Write for complete literature and price list.

Prevented Strikes For Twenty Years!

The famous Brooks Agreement, "the finest example of industrial statesmanship yet framed," has prevented strikes in the cotton manufacturing industry of England for twenty years. This document was written by Sir Charles W. Macara, Bart., and in his fascinating new book, "RECOLLECTIONS," he reveals his conciliatory methods of stopping strikes and bringing Capital and Labor harmoniously together. Sir Charles also throws attractive sidelights on manners and personal characteristics of some great men, besides giving a survey of conditions in the cotton manufacturing industry throughout the world. To any one this book will be interesting; but if you are concerned in any way with Labor, Capital or Cotton, it will have extraordinary significance.

Authoritative Vindication of Ireland's Ancient Greatness

As a result of some ten years of research and travel collecting and verifying a vast amount of data and reading hundreds of volumes of manuscripts, Mr. Fitzpatrick sheds a strange new light on the conspicuous part Ireland played in history, and has made a contribution which no other individual has attempted, in his remarkable new volume entitled

IRELAND

AND THE MAKING OF BRITAIN

By Benedict Fitzpatrick

Backed by indisputable authorities, this work shows the Irish as masters and preceptors of the English in every department of civilized knowledge; quelling the suicidal warfare of English tribes; saving the English from barbarism; and as chief among the builders of Christendom. Throughout the whole volume there is revelation after revelation, as is indicated by such chapter headings as "The Irish Kingdom of Scotland," "Irish Principality in Wales," "Fruits of the Irish Apostolate in England," "Centers of Irish Influence in England," "Irish Tutelage of England"; etc. No one henceforth will be able to pose as an authority on Irish, British or European history without taking account of the historical reconstructions in this volume.

"He has not uttered the last word on this important and fascinating theme, but he has uttered one to which the world must listen and which will not be without its lasting effect."—Tribune, New York.

Cloth, 8vo, 378 pages, with colored map of medieval Ireland and Britain. At booksellers, \$4.00; by mail, \$4.16.

FUNK & WAGNALLS COMPANY, 354-360 Fourth Ave., New York

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the current use of words, the Funk & Wagnalls New Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"J. M. L.," New York, N. Y.—"(1) What is the derivation and meaning of the word *gazette*? (2) Before the word *newspaper* was used in English, *coranto* was the word for news-sheets. I have a feeling that this word came to the English through the Dutch rather than the French. Can you give me any help on this point? (3) Another word frequently used for newspaper at the beginning of the seventeenth century, possibly before, was the word *ariso*. Do you know where the word came from?"

(1) The earliest entry of the word *gazette* is in Randle Cotgrave's "Dictionarie of the French and English Tongues" (1611): "*Gazette*. A certaine Venetian coyne scarce worth our farthing; also, a Bill of Newes; or, a short Relation of the generall occurrences of the Time, forged most commonly at Venice, and thence dispersed, every month, into most parts of Christendome." The Italian form *gazetta*, is given in Lye's edition of Franciscus Junius's "Etymologicum" (1743), which quotes the French lexicographer, Menage (1613-1692), as authority for the definition from Cotgrave given above. Florio (1625) defines these *gazette* as "running reports, daily news, idle intelligence, or flim-flam tales that are daily written from Italy." The etymology of the Italian word is doubtful. It was originally the name of the coin paid for the paper, or for the privilege of reading it; but the diminutive of *gazza*, meaning a magpie, and, by extension a chatterer or tale-bearer, may have provided the source. The first is, however, the most plausible source of origin.

(2) The first English "Courant" was issued Dec. 2, 1620. There are 24 of these in the Library of the British Museum, London, bearing weekly dates from that given above to Oct. 22, 1621. See Vizetelly's "Essentials of English Speech," pp. 132-136. As to the word *coranto*, a variant of *courant*, derived from the French *courant*, it is an old Venetian substantival use of *courant* (It. *coranta*, -to), meaning "running or posting." None of the authorities gives this as being derived from the Dutch. (3) The word *ariso*, used for advice, news or information, and later for a dispatch, is derived from the Spanish *ariso*, meaning "advice or intelligence."

"D. J. H.," Oak Park, Ill.—"Kindly give an account of the origin of 'Dieu et mon droit.' Is it especially associated with the arms of the British Royal Family, and was it adopted under the Conqueror? If not, why is it in the French language?"

The motto "Dieu et mon droit" (God and my right), on the royal arms of England, was first used as a battle-cry by Richard I at the battle of Gisors in 1195 to indicate his right to the French and that he did not hold his empire in vassalage of any one. Edward III revived it in 1340 when he asserted his right to the crown of France. Excepting under Queen Elizabeth and Queen Anne, who used the motto *Semper eadem*, and under William III, who brought over with him from Holland and used "Je maintiendrai," the motto of the Netherlands, "Dieu et mon droit" has, ever since 1340, been the motto of England. The claim of English sovereigns to the kingship of France was resigned by George III in 1801 when the French fleur-de-lis was removed from the British shield.

"F. R. K.," Long Beach, Calif.—"Is the expression 'very dissatisfied' correct? Is it correct so to modify a modifying participle directly with an adverb? I know no reason why it should not be done, but it sounds extremely awkward to me. Would not 'very much dissatisfied' be better?"

From the grammarian's point of view *very* properly qualifies a participle only when the latter is used merely as an adjective, as, *very tired*; *very pleasing*. The grammatical critics accordingly object to such expressions as *very pleased*, *very dissatisfied*, or *very hated*. It must be said, however, that altho it may be better grammar to interpose an adverb; as, *very much pleased*, *very greatly dissatisfied*, or *very bitterly hated*, yet this use of *very* has been good English for centuries.

"A. F. C.," Tishomingo, Okla.—The word *déclassée* is pronounced *de'klas'se'*—e's as in *prey*, a as in *art*.

THE SHEPARD ELECTRIC LIFTABOUT

A new and smaller
ELECTRIC HOIST

LiftAbout with yoke attachment for handling small parts in cans. Used by Hyatt Roller Bearing Co.

Low cost load-moving now when most needed

THE *LiftAbout* method for lifting, carrying, and putting down loads could not be offered at a more opportune time than *right now*, when everybody in every business is "weeding out" inefficiency and slashing overhead costs.

This small, but powerful, electric hoist was designed so every business, small as well as large, could enjoy the advantages and economies of power lifting—and because it provides a faster, safer and cheaper way for load-moving and lifting, it is today being applied in practically every line of business.

With a *LiftAbout*, one man in a systematic orderly way can do the work of many. He can handle loads of every type and proportion in capacities to 2000 pounds.

A *LiftAbout* is easily and quickly installed and runs on overhead I-Beam track, taking up no valuable floor space. It is surprisingly low in price, and negligible in upkeep. Has same principles of design and construction that have made "Shepards" America's best known and largest used electric hoists.

Permit us to demonstrate *LiftAbout* economies for your work. Drop us a line today.

DODGE BROTHERS, DETROIT

STEADFAST THROUGH THE YEARS

It was midsummer. In the forest a traveler paused beside a mighty fir tree to rest. Seated there he was attracted by the beauty that surrounded him—gay wild flowers caught and pleased his eye; a darting dragon fly, brilliant in green and gold, excited admiration; the cheerful babbling of a little brook brought him delight.

The fir tree that sheltered him he scarcely noticed.

Months later the traveler passed that way again. Winter winds had driven away the flowers, the dragon fly had lived its little life and died; the brook lay silent, a twisted ribbon of ice.

But the fir tree stood as in the summer—strong and straight, its branches covered with eternal green.

Every industry produces its commercial fir trees—business houses rooted deep in honesty and trustworthiness, whose growth is steady and sure, whose products are of one high quality under all conditions.

Since 1858 the chemical and pharmaceutical business of E. R. Squibb & Sons has been of this type. Its products are always as pure and efficacious as it is possible to make them. Its laboratories conduct a constant search for better methods of manufacture.

The fact that you find a Squibb product for sale upon the drug store counter is a guarantee that its ingredients are correct. Rather than lower its standards Squibb has frequently suspended the manufacture of certain products until the right materials could be secured.

When you use a Squibb product its finer quality is immediately apparent. Examine Squibb's talcum powder for example. Note its exquisite smoothness, its fineness of texture, its velvety touch on the skin; or try Squibb's cold cream and note how cooling and soothing it is. This fine quality is the result of years of laboratory experiments directed to the one end of producing a perfect powder, a perfect cream.

Most of the Squibb products are in-

tended for use only by the physician and the surgeon. But every Squibb Household Product is made with equal regard for purity and efficacy.

For some of the Squibb Household Products described below you may have only an occasional need. But for Squibb quality your need is endless.

Squibb's Bicarbonate of Soda—exceedingly pure, therefore without bitter taste. Squibb's Epsom Salt—free from impurities. Preferred also for taste.

Squibb's Sodium Phosphate—a specially purified product, free from arsenic, therefore safe.

Squibb's Olive Oil—selected oil from Southern France. Absolutely pure. (Sold only through druggists.)

Squibb's Sugar of Milk—specially refined for preparing infants' food. Quickly soluble. In sealed tins.

Squibb's Boric Acid—pure and perfectly soluble. Soft powder for dusting; granular form for solutions.

Squibb's Castor Oil—specially refined, bland in taste; dependable.

Squibb's Stearate of Zinc—a soft and protective powder of highest purity.

Squibb's Magnesia Dental Cream—made from Squibb's Milk of Magnesia. Contains no detrimental substance. Corrects mouth acidity.

Squibb's Talcum Powder—a delightfully soft and soothing powder. Boudoir, Carnation, Violet and Unscented.

Squibb's Cold Cream—an exquisite preparation of correct composition for the care of the skin.

Squibb's Pure Spices—specially selected by laboratory tests for their full strength and flavor. (Sold only through druggists.)

Sold by reliable druggists everywhere, in original sealed packages.

"The Priceless Ingredient" of every product is the honor and integrity of its maker.

BECOME AN EXPERT STENOGRAPHER AND SPEED TYPIST

A profession that offers men and women rich rewards, fascinating work, big pay, and opens the way for promotion to high executive positions paying \$50 to \$100 a week and up. Many of America's biggest business men and women got their start because they mastered stenography. Demand for expert stenographers and typists always exceeds the supply at salaries of from \$30 to \$50 a week. The Tulloss New Way makes you an expert, one who can start in at a large salary. Complete course in shorthand and typewriting, new principles, insures exceptional speed and accuracy. You can write shorthand the new way 125 to 150 words a minute. You can typewrite 80 to 100 words a minute and with this speed goes accuracy and ease of operation—no fatigue as with the old way. Remarkable methods—remarkable results. You learn faster the Tulloss New Way. No previous stenographic schooling necessary. Train at home during your spare time. Only about half usual cost—you will become a far more efficient stenographer—worth more money than the average right from the start. If already a stenographer you nevertheless need New Way training in speed typewriting, for no matter how good you are in shorthand, you can never expect the high salaried position until you get speed, real speed and accuracy on a typewriter. Quickly acquired in ten easy lessons. Will send you free our amazing book, "How to Be a Big Men's Right Hand." It tells how business men choose their private secretaries, how they advance them to executive positions. Send postal or letter and indicate whether you are interested in the complete stenography course or simply speed typewriting. No obligation—write today.

THE TULLOSS SCHOOL, 535 College Hill, Springfield, Ohio

Lighten the Worries of Parenthood

KNOW that you are acting in full harmony with the latest scientific rules for keeping your children in the sun of health. KNOW that the courses you are following will lay the foundation for their future sturdiness. Secure this valuable information from the two books of one of New York's most eminent child specialists—

- 1 The Health Care of the Baby
- 2 The Health Care of the Growing Child

Both volumes by Dr. Louis Fischer, formerly Instructor in Children's Diseases, N. Y. Post Graduate Medical School, and a well-known authority and specialist.

In each volume you are given not only the simple and time tested rules to follow in protecting your children from diseases, but also in caring for them when they are sick. Proper ventilation, feeding (with valuable recipes and formulas), bathing, clothing, the care of eyes, teeth, nose, and ears; medicines, training, teething, growth, and in fact all of those topics upon which conscientious parents are continually seeking authoritative, sensible guidance are treated most thoroughly.

The Health Care of the Baby, 144 pages, 11 illustrations, Cloth, \$1.00 net; by mail, \$1.12.

The Health Care of the Growing Child, 358 pages, illustrated, Cloth, \$1.50 net; by mail, \$1.62.

FUNK & WAGNALLS COMPANY, 354-360 Fourth Avenue, New York, N. Y.

WIRELESS TELEGRAPHY

AND HOW TO MAKE THE APPARATUS, a handy manual for the amateur or the expert. Shows how to make, erect, and control every part of a small working wireless plant. Cloth, illustrated with helpful diagrams, by mail, \$1.10.

Funk & Wagnalls Company, 354 Fourth Ave., New York

For Violin Lovers

At last! A new violin with the true Cremonese tone of the great Stradivarius! For centuries the art was lost. Now it has been recovered and a noted violin maker of England, W. J. Farrell, in his remarkable new book—

The True-Tone Violin

just from the press—tells of the wonderful discovery—how the new violin is fashioned and finished to produce the right tone, with detailed specifications of construction, illustrations of parts, etc. The author also points out wherein the new instrument differs from the "factory fiddles" of yesterday. All lovers of the violin, as well as those engaged in the manufacture, will find this book all-absorbing.

12mo. Cloth, 96 pages. \$1.50 net; \$1.58, postpaid.

Funk & Wagnalls Company, 354-360 Fourth Avenue, New York

WE TEACH COMMERCIAL ART

Properly Trained Artists Earn \$100 a week and up. Meyer Both College—a Department of the Meyer Both Company—offers you a different and practical training. If you like to draw, develop your talent. Study this practical course—taught by the largest and most widely known Commercial Art Organization in the field with 20 years' success—which each year produces and sells to advertisers in the United States and Canada over ten thousand commercial drawings. Who else could give you so wide an experience? Commercial Art is a business necessity—the demand for commercial artists is greater every year. It's a highly paid, intensely interesting profession, equally open to both men and women. Home study instruction. Get facts before you enroll in any school. Get our special booklet, "Your Opportunity"—for half the cost of mailing—4c in stamps.

MEYER BOTH COLLEGE of COMMERCIAL ART

Michigan Ave. at 20th St.
Dept. 12 CHICAGO, ILL.

BECOME AN EXPERT ACCOUNTANT

Executive Accountants command big salaries. Thousands of firms need them. Only 3000 Certified Public Accountants in U. S. Many are earning \$3,000 to \$10,000 a year. We train you thoroughly by mail in spare time for C. P. A. examinations or executive accounting positions. Knowledge of bookkeeping unnecessary to begin. The course is under the personal supervision of William B. Castenholz, A. M., C. P. A., former Comptroller and Instructor, University of Illinois; also former Director of the Illinois Society of C. P. A.'s, and of the National Association of Cost Accountants. He is assisted by a large staff of C. P. A.'s, including members of the American Institute of Accountants. Low tuition fee—easy terms. Write now for information. **LaSalle Extension University, Dept. 552-H Chicago**

Which will succeed?

WHICH will succeed? The one who spends all his precious reading time with the daily paper? Or the other, who is gaining, little by little, in a few delightful minutes each day, that knowledge of a few truly great books which will distinguish him always as a really well-read man? What are the few great books—biographies, histories, novels, dramas, poems, books of science and travel, philosophy and religion—that picture the progress of civilization?

Dr. Charles W. Eliot, from his lifetime of reading, study, and teaching, forty years of it as President of Harvard University, has answered that question in a free booklet that you can have for the asking. In it are described the contents, plan, and purpose of

Dr. Eliot's Five-Foot Shelf of Books

Every well-informed person should know about this famous library. The free book tells about it—how Dr. Eliot has put into it “the essentials of a liberal education”; how he has so arranged it that even “fifteen minutes a day” are enough; how, by using the reading courses he has provided, you can get the knowledge of literature and life that every university strives to give.

Every reader of The Literary Digest is invited to have a copy of this handsome and entertaining free book.

*Merely clip the coupon
and mail it today.*

LITERARY DIGEST readers seek-
ing schools or colleges will find
in these pages a variety of educational
institutions, including summer schools
and supervised summer camps. In the
first issue of each month, May to
September, there will appear display
advertisements describing these insti-
tutions. In the issues other than the
first issue of each month, from May
13th to September 9th, we publish
a Classified Directory giving the de-
sired names and addresses of those
advertising with us. You are invited
to write to the schools or camps in
which you are interested.

Our School Advisory Department
continues to serve, as it has for many
years, our readers and the schools with-
out fees or obligation. It is necessary
that inquirers give age and sex of the
child, approximate cost of tuition, local-
ity and size of school (or camp), and
any other information that may aid us
in giving prompt service.

A Short Cut to French

HERE is a practical workmanlike little book based on a new method of attacking the problem of learning French, a method that has been thoroughly tested and has proved unusually successful. If you would avoid the learning of long lists of irregular verbs, that bugbear of the beginner, and would substitute for this task an easy and effective Key system for conjugating all verbs, regular or otherwise, you will find material help in

Rapid Method for French Verbs

By R. A. de MASSABIELLE

which discards all the usual complexities of verb conjugation and reduces it to a simple matter of adding to the stem form certain unchanging terminations. The pupil is taught to form the tenses of verbs he has never seen before and does it with ease. Complete, with auxiliary verb exercises, sentence formation, vocabularies and illustrative quotations. Useful alike to the child and the adult seeking a time-saving method of acquiring a new language. 12mo, Cloth, \$1.00 net; by mail, \$1.05.

FUNK & WAGNALLS COMPANY, 354-360 Fourth Avenue, New York

James C. Fernald's Latest and Last Book on English

The thousands who have enjoyed and been benefited by Dr. Fernald's other masterful works on English (*English Synonyms, Antonyms, and Prepositions*; *Expressive English*; *Connectives of English Speech*; etc.) have cause to hail with delight this new volume. Starting over ten years ago and laboring throughout this entire period up to his death to enrich and perfect it, Dr. Fernald produced this most personal and perhaps most delightful of his twenty-five books—the last to come from his gifted pen.

HISTORIC ENGLISH

By James C. Fernald, L.H.D.

This is more than a history of English speech or English language. It is a quick, sweeping, and fascinatingly interesting résumé of the history of the English people as seen in the development of their language. Those who love their Emerson, Holmes, and Henry James will find in *Historic English* a work that lacks none of the graces of these masters. Written by a man who combined an amazing versatility of mind with vivacity of intellect and an intuitive sense of harmonious associations, *Historic English* is marked by a discrimination and elegance seldom, if ever, excelled. Dr. Fernald's flowing style, his infectious enthusiasm, his broad scholarship, and his selection of pregnant facts and incidents to illustrate his points—all combine to lay graphically, clearly, and interestingly before the reader the vital facts bearing on the development of our language. It is an invaluable book on the history of English, and will render an unequalled service to every reader.

A New Right-Hand Help for Writers and Speakers

Fifteen Thousand Useful Phrases

A New Book for Building the Vocabulary

This is a practical handbook of felicitous phrases, striking similes, and literary, commercial, conversational terms for the embellishment of speech and writing.

Grenville Kleiser has designed the book for the convenient use of business men, public speakers, writers, lawyers, clergymen, teachers, students and all persons who wish to write and speak the English language with facility and power.

In gathering the material for this book Mr. Kleiser has drawn freely from the great masters of English, including Shakespeare, Milton, Scott, Goldsmith, Lamb, Macaulay, Browning, Carlyle, De Quincey, Newman, Ruskin, Pater, Stevenson, Tennyson, Arnold, Kingsley, Bulwer-Lytton, George Eliot, Dickens, Thackeray, Hawthorne, Emerson, Irving, Longfellow, Lowell, Mabel, and many living writers.

There is an interesting Introduction by Frank H. Vizetelly, Litt. D., LL.D., and a practical plan of study by the author.

It is believed that this is the only book of the kind so far published, and that it will fill a distinct and valuable need. It will be a useful supplement to the dictionary and regular book of synonyms.

12mo, Cloth. Price, \$1.60 net; \$1.72 postpaid.

FUNK & WAGNALLS COMPANY, 354 Fourth Ave., N.Y.

HOW TO SPELL

AND PRONOUNCE

25,000 WORDS

FREQUENTLY MISPELLED AND MISPRONOUNCED

Nothing conveys the impression of slipshod mental processes so much as the misspelling and mispronouncing of words. No one can afford to allow these errors to creep in and ruin the effect of what he has to say. Every one who wants to be sure of the spelling and pronunciation of the words he uses will welcome this unique and practical new book—

A Desk Book of 25,000 Words Frequently Mispronounced

By FRANK H. VIZETELLY, Litt. D., LL.D. This volume contains, in instantly accessible, alphabetical form, a selection of the words about whose spelling or pronunciation you are ever likely to be in doubt. Whenever you meet a tricky spelling or doubtful pronunciation, this book will set you right. Or, if you will glance through the volume for five minutes a day, you will become a "good speller" in a surprisingly short time. This book is very different from an ordinary dictionary—it specializes in spelling and pronouncing the every day English words that all of us use; foreign terms, and proper names of all kinds. It must prove "mispronouncer"; every speaker, letter writer, salesman, conversationalist, and every one else who aims to speak and write with accurate English.

"So far as my experience goes, it is quite the best book of its kind."—Brander Matthews, Litt. D., LL.D.

Almost 1000 pages, cloth bound, thin paper
 Price \$2.00 net; by mail \$2.12. With thumb-notch index \$2.25; by mail \$2.37

FUNK & WAGNALLS COMPANY, Dept. 461, New York City

These Five Great Books Are Sold by Booksellers Everywhere

How To Live

The Nation's Foremost Book of Health—New Enlarged Edition

Prepared by Professor Irving Fisher of Yale, and Eugene Lyman Fisk, M. D., under the auspices of the Hygiene Reference Board of The Life Extension Institute, which numbers among its members Asst.-Surgeon General Rupert Blue; Harvey W. Wiley, M. D.; Russell H. Chittenden, Yale; Lewellys F. Barker; Johns Hopkins, etc. 160,000 copies already sold.

This Book Tells You How to Keep Well

Influenza slew more Americans in a month than all the German guns! Constipation, autointoxication—diseases of all kinds are daily taking their toll of health, even life itself, from thousands who might be happy and well if the clear, authoritative instructions given in "How to Live" had been followed. This volume covers such vital topics as: How to Avoid Colds, Pneumonia, etc.; Eating to Get Fat; Eating to Get Thin; How to Cure Constipation without Drugs; Relief from Insomnia; Nervousness; Rheumatism; Rules for Good Health; Blood Pressure, etc., etc. 12mo, Cloth, 497 pages, illustrated with photographs and charts. \$1.50, net; by mail, \$1.62.

Will Power and Work

By JULES PAYOT, Litt.D., Ph.D.

Authorized translation from the French by Richard Duffy

(FIRST AMERICAN EDITION)

Unlock the vaults of your success powers! Right now, you have unused mental forces which need only to be loosened and guided, to produce amazing results for you socially, financially, personally.

Shake off your thought and action handicaps. Develop and make use of your powers of mind. Obtain control of your will. Link it with your work. *You can do it* by following these clear, sympathetic, easy-to-understand plans. Get more health, wealth, and happiness out of life. Let this famous French author of "The Education of the Will" (30 editions) show you how in "Will Power and Work." 12mo, Cloth, 462 pages. \$1.75, net; by mail, \$1.87.

English Synonyms, Antonyms and Prepositions

By JAMES C. FERNALD, L.H.D.

Have you ever fully realized the wonder and witchery of words? A single word can be a blessing or a curse, an incantation or a prayer, a blow or a caress. It can mirror all the haunting glamour of starlight on the sea or limn the blackest abysses of despair. There is no other work on the English language that can compare with Fernald's "English Synonyms, Antonyms and Prepositions" as an aid for selecting the exact word to make your meaning absolutely clear—to give "punch" and "power" to a proposed letter, advertisement, speech, sermon, article, report, or story. Without this handy book at your elbow, you may be wasting half of the power of your thoughts in weak expression. Contains over 8,000 words classified and discriminated, with their correct use shown by actual examples. Nearly 4,000 antonyms are included, together with the correct use of prepositions. 12mo, Cloth, 740 pages. \$1.90, net; by mail, \$2.00.

15,000 Useful Phrases

By GRENVILLE KLEISER

You can't flounder around with a host of confusing words and expect your listeners or readers to understand you, or even to pay attention to you. Here is a volume that will enable you to *command* attention. Grenville Kleiser, the great authority on public speaking, author of many works on practical talking and writing, has gathered and classified in one volume an astonishing variety of telling and forceful sentences that will exactly express the thoughts you desire to utter. No matter who or what you are—public speaker, writer, teacher, preacher, lecturer, club woman, lawyer, executive, advertising man, business man or woman,—this book will prove an invaluable boon and friend. It will add force and beauty, subtlety and directness, quality and variety to your expressions. 8vo, Cloth, 455 pages. \$1.60, net; by mail, \$1.75.

25,000 Words Frequently Mispronounced

By FRANK H. VIZETELLY, Litt.D., LL.D.

Managing Editor of the NEW STANDARD DICTIONARY

Why advertise your carelessness by mispronouncing and misspelling words? It's *easy* to spell and pronounce correctly when you use this unique and practical new book. In it you are given, in instantly accessible, alphabetical form, a selection of the words about whose spelling or pronunciation you are ever likely to be in doubt. Whenever you meet a tricky spelling or doubtful pronunciation, this book will set you right. Or, if you will glance through the volume for five minutes a day, you will become a "good speller" and a "good pronouncer" in a surprisingly short time. This book is very different from an ordinary dictionary—it specializes in spelling and pronouncing the every day English words that all of us use; foreign terms, and proper names of all kinds.

"So far as my experience goes, it is quite the best book of its kind."—Brander Matthews, Litt.D., LL.D.

Old World Intrigue Laid Bare!

HOW the murder of a prince and his wife in a little Serbian town in 1914 gave a pretext for declaring war—almost overnight. And then—how “diplomacy” was like a joke in Europe. Treaties between sovereign states became “scraps of paper.” Constitutional rights of countries were violated. Nation after nation was drawn into the vortex—England, France, Russia—thirty in all. The greatest—and the worst—war of modern times was fought.

Now that correspondence of the intrigues and secret diplomacy that brought on this war has been revealed, it has been carefully collated and printed for your information in the opening pages of

The Literary Digest

History of the World War

THIS GREAT WORK, in TEN big volumes, is the result of four years' labor.

It tells the **WHOLE STORY** as never told before, of that terrible struggle, which, despite twentieth century civilization, lasted five years, killed or injured nearly thirty million human beings, destroyed six thousand ships, brought about “meatless” days and suffering throughout the United States, laid waste vast parts of Belgium, Poland, and Serbia, completely changed the face of Europe, and imposed a tax on every one of us that we are still paying to-day. You ask how such a conflict would rage so long among nations professing to be religious and most of them worshipping the same God? For answer read this remarkable History. It will give you a clearer insight into the causes underlying the war—way back of that royal couple's murder in Serbia—than you can possibly get from any other source.

Generals as Historians

The Literary Digest History of the World War is not a mere one-man history. It is a careful compilation by Francis Whiting Halsey of official reports and thrilling personal experiences supplied by distinguished officers and enlisted men in the fight; by war correspondents, strategists, statesmen and other authorities.

You will read what was said by General Pershing, Marshal Foch, Admiral Hugh Rodman, Field Marshal Haig, Major-General von Bernhardt, Field Marshal von Hindenburg, Major-General Maurice, and other noted officers on both sides.

You will find elaborate reports, official and otherwise, of blood-stirring happenings, deeds of daring,

suffering, sacrifice, cruelty, torture, mass cre. One tells you of works of kindness and charity. Another tells of acts of wholesale murder and destruction.

Full Accounts of Battles

You will read thrilling reports of battles in France, Belgium, Italy, Russia, Japan, China, Egypt, the Holy Land, everywhere—on land, on and under the water, in the air. You will read—perhaps for the first time—carefully guarded information about the transportation of two million American soldiers to Europe, notwithstanding German submarine activity.

You will discover the remarkably quick turn in the tide of the war when the “Yanks” finally landed on the firing line.

You will devour the memorable campaigns of “Our Boys”—maybe of YOUR boy—thru every glorious engagement, including the memorable moment at Chateau Thierry, where the French had been fighting almost hopelessly for days, when the American officers hurried up, saluted and spoke eight words to the French: “Vous êtes fatigués. Vous allez partir. Notre job.” (“You are tired. You get away. Our job.”)

From that point you will follow the triumphant course of our armies thru the Marne salient, in the Argonne, at the St. Quentin Tunnel and on to the overwhelming victory under General Pershing at the St. Mihiel salient.

Was Your Boy There?

These battles, with the names of troops taking part, have gone down into history and taken their rightful places with the battles of Bunker Hill in 1775, New Orleans in 1815, Gettysburg in 1863, Manila Bay in 1898. The Literary Digest History of the World War in your home tells of these glorious deeds and will lead your children and generations to come to revere the memories of their ancestors.

as we now do homage to the valorous achievements of Washington, Lafayette, Andrew Jackson, Grant, Lee, Dewey, and others who gave us our heritage of freedom and made possible the United States as it is to-day.

EVERY American home should have this History—for study and reference. Especially should it be in homes from which a father or son or husband or brother went into the war. Perhaps you never have heard the whole story of what **HIS** did! And so you should have this History. You should have a complete, authentic record of **HIS** achievements as shown in accounts of when and where **HIS** company or regiment or division went “over the top,” and how **HIS** helped to strangle German imperial autocracy. This History links **HIS** life and **HIS** heroism with the greatest military victory of civilization.

More Than a War History

The Literary Digest History of the World War does not end with the signing of the armistice in 1918. It vividly describes all the events of reconstruction days, including the surrender of Germany's ships. It tells of the abdication of Wilhelm, the German Kaiser; his flight into Holland; his life at Amerongen. It gives long-suppressed facts about the abdication, imprisonment and cold-blooded murder of Nicholas II. Czar of Russia.

You have all the facts about President Wilson's activities in the war, from his proclamation of neutrality in 1914 to and including trips to the Paris Peace Conference, and his veto of the Knox Peace resolution in 1920. The story has never been published before in such readable form.

Nothing But Praise

General Pershing said he was “very pleased to have this valuable History in his library.”

Ex-Secretary of the Navy Josephus Daniels said: “It is remarkable how full and clear and informing this narrative is. It will be of lasting value and its pages will be drawn upon by future historians to emphasize this or that phase of the great struggle.”

Major-General Leonard Wood said: “Your work will give the general public a very satisfactory and interesting story of the war and furnish information which the reading public is anxious to obtain and will enable it to follow the progress of the war from the beginning to end. It will also furnish a useful reference for the military student.”

Send \$2—You Get the Books

On receipt of \$2 and a copy of the coupon below we will forward to your address, **ALL CARRIAGE CHARGES PREPAID**, the ten volumes of The Literary Digest History of the World War. The remaining \$23 of the purchase price you can send in installments of \$2 a month.

Remember we **DELIVER** the books without expense to you. Our guarantee of satisfaction is backed by nearly **HALF A CENTURY** of great publishing achievements. Copy this coupon on a post-card or letter—**NOW**.

THE BRIDGE-BUILDERS AT WORK.

Mr. Lloyd George, British Prime Minister, who sits at the center of the long table, has likened the Genoa Conference to the building of a bridge across a torrent. If the Conference succeeds it will have spanned the economic gulf which the war and the Russian revolution dug between Russia and Western Europe. Near him, Luigi Facta, Italian Premier and chairman of the Conference, is delivering an address, standing.

THE BOLSHEVIKI NOW ASKING TO BE TRUSTED

BOLSHEVISM AS A SMILING, bargaining diplomat seems to arouse more apprehension in some quarters than it did in its most militant and aggressive guise. When Tchitcherin offers to recognize Russia's pre-war debts, to drop the \$25,000,000,000 counter-claim against the Allies, and to compensate foreigners for their property confiscated in Russia under Communism, in return for *de jure* recognition of the Bolshevik Government and a loan, the response of the American press resembles the attitude of the Trojans toward the Greeks bearing gifts. "What is Russia's game?" asks the *New York World*, which thinks that "if Russia has really agreed to waive all counter-claims and to acknowledge all the Allied claims in return for recognition and financial help, then the time to be suspicious of the Soviet Government has arrived." To *The World* such an agreement suggests another "scrap of paper," and one likely to be dishonored when it comes due. "Perhaps there is some other explanation," remarks this liberal New York daily, "but at first glance it seems as if the Russians were saying:

"Why should we not sign any amount of promises to pay that can not be paid for many years at best? The Germans have signed them for the Allies. The Allies have signed them for the Americans. We'll add to the pile and take our chances in the future. In the meantime the Allied politicians at Genoa can take our paper home, show it to their constituents and give us recognition. With the recognition their financiers will lend us money. As a result of the arrangement real wealth will come into Russia and only paper wealth will go out. When the paper comes due, we shall see what we shall see."

Lenine's whole record as a financial administrator, remarks the *Boston Transcript*, "harmonizes with the theory that, if accom-

modated with this loan, he would put it where it would do Bolshevism the most good, and then make sure of a safe refuge when the inevitable reaction arrived." Continues this Boston paper:

"He began his career by seizing all the assets and deposits of the late Imperial Government, then he plundered the Russian banks, business houses and manufacturing concerns. He 'nationalized,' that is, seized, all the private wealth he could get hold of. Never had there been such a record of plunder in the history of the world. And last of all, he has been ravaging the churches for their plate, the jewels in which the sacred ikons are framed, and the easings of gold and silver about the altars. Is there anything in this record that would incline any one to believe that Lenine and his companions would do anything else with a loan advanced to them by the besotted bourgeois of Europe and America? It might well be a case of 'Give us our loan—and after us the deluge!'"

"There is but one consideration which might incline the Powers to listen to the Soviet proposition, and that is that any régime which followed the Soviets would be bound by its promise and might be held to the responsibilities that it assumed. But if the Bolsheviki receive a new lease of life—and the granting of a loan would have that effect—they would only continue the destructive course as regards every Russian resource and item of potential wealth that they have followed from the start, and would leave a country so impoverished, so stript that nothing could be paid for a generation or more. The only hope of the restoration of Russia to responsibility lies in the speediest and completest possible overthrow of the rule of the Soviets."

"To recognize a debt and to make an honest effort to pay it are quite different things," notes the *Washington Star*, which wonders whether Lenine and his associates "can be so unsophisticated as to think that America and England and the few other countries which have money would be childish enough to lend

them enormous sums with no better security than the faith of a Government which brazenly proclaims that it is under no obligation to keep faith with other governments or with 'capitalism'?" To quote *The Star* further:

"Only a few hours before Tehitcherin, head of the Russian delegation in the Genoa Conference, delivered his bewildering reply to the Russian proposals of the allied experts, Leonid Krassin, Soviet trade expert and a member of the Conference delegation, told the commission on economies at Genoa that it was neither possible nor desirable to restore liberty of trade in Russia, and that the idea of complete socialization of the means of production and exchange had by no means been abandoned. In other words, there will be no resources in Russia which will not be under complete control of the State, and, therefore, no security to offer for the loans which are demanded except the credit of the State. And the State will 'admit' loans or repudiate them, depending upon which course offers the greater political or other advantage!"

"Beggars on horseback" is the Philadelphia *Public Ledger's* characterization of the Russians at Genoa. This paper goes on to say of them:

"Bluffing? Of course, but it was and is a bluff backed up by a cynical and dangerous fanaticism. The Reds must take something home from Genoa, if it be no more than a new quarrel with Europe, some 'new cause' to rally the proletariat. The German agreement was not enough: there was no ready cash or immediate help in the Treaty of Rapallo, which is for the long future. Hence, then, the Russian offer on Friday to recognize and admit her debts, restore or pay for alien-owned property, since nationalized, and to yield all her counter-claims, if the Soviets are recognized, and mark you, if Russia be given immediate and adequate financial aid.

"Arrogant as they are, or were, these Red delegates at Genoa are in a pathetic position. To get the relief promised the Russian masses from the West, they have come to a place where they must sign away the communistic birth-right for a mess of hated capitalist pottage. What they do can not be hidden, even in Russia, where the word will move over that land like a wind. The Red bluff is cracking and threatening a total collapse.

"What the Russians take home they must buy at a price. Tehitcherin and his colleagues face the hard necessity of going back and admitting that the whole communistic system is a myth that can not live. It will be hard to tell a people that all the hell of blood and nightmare of suffering and starvation has been for nothing and that realities do still exist. Tehitcherin, with this before him, cries out at Genoa when told that Russia must recognize her debts:

"Our people believe that they have created a new world. We can not go back and tell them that it won't work and that they must still settle all obligations, as under the old system."

"This is the dread task Tehitcherin and his brethren face. Against it bluffs and arrogance avail not. Realities can not always be washed out in a flood of Marxian phrases. Into the wilderness the Reds led the deluded, seeking a gate to a fairy-land away from all debts, human obligations, old laws and old ways. This mirage lured them and they waded after it knee-deep in blood. Now it is fading.

"There is high irony and rich poetic justice in the prospect that the Tehitcherins, Litvinovs and Rakovskys must go back and by deed, if not word, admit that communism was a mirage over dead sands, and not a Promised Land."

The Russians want a loan, "and it may be that in the end they will do anything to get it," remarks the *New York Times*, but—

"In the meantime the British, who are certainly not hostile to the Russians, say they are acting like lizards; and the Italians, still more friendly, can think of no better apology than to compare the Russians to ants who scamper around a good deal but do get somewhere eventually. To say that former property owners are to get their property back 'whenever possible,' and then to explain that it is never possible; that they will be recompensed for their just claims, and then to add that the Bolsheviki who seized their property are alone to pass on the justice of the claims, is not the way to restore confidence in Russia.

"Tehitcherin says that only the pretensions of a few former property owners stand in the way of agreement. How do these pretensions obstruct agreement? Because they discourage future investors. In the Anglo-Russian trade agreement these former property owners were thrown aside. Their claims were virtually outlawed; but it was discovered that nobody was willing to risk his money in a country where the same thing might happen again. Physically to restore the nationalized property is no doubt impossible in most cases; but there must be compensation if foreigners are expected to put more money into Russia. This is a matter on which Tehitcherin and his colleagues will have to make up their minds very shortly. How badly Europe needs Russia, how badly Russia needs Europe, can be argued forever without any conclusion. But certainly Europe does not need Russia if Russia is to be merely a sink-hole of lost investments. There must be a prospect of getting something out before anything is put in. If the Bolsheviki want money, they will have to offer inducements to those who have it."

What Tehitcherin offers is "a Micawber settlement," says the *New York Tribune*:

"He offers no security that he will redeem the promise to begin to pay fifteen years hence Russia's pre-war obligations or to restore the property of foreigners that he has seized. When the fifteen years have passed, if he

survives that long, he is at liberty to change his mind; if there is another dictator this one may repudiate just as Lenine has done.

"Germany has shown how easy it is to escape obligations. Her technique has been studied in Moscow. The world is full of the doctrine that enforcement of payment when due is not to be thought of. Moreover, if Lenine, as he amiably suggests, can induce the Allies to make a loan to him, he will be ahead this money as net gain.

"Divers interests at Genoa are greatly desirous of seeming to make some sort of Russian settlement. Lloyd George apparently does not want to confess failure, and Tehitcherin is naturally making the most of this. But when the Genoa brain-storms subside probably the Allies will doubtless see the need of doing something more than to accept from Lenine a note of hand of little more current value than those Micawber so freely signed."

Russia and Germany combined "contain over two-thirds of the people of Europe," Lloyd George reminds us; and he adds: "Their voice will be heard, and the Russo-German treaty is the first warning of it." Unless the problem of these two nations is met with justice and strength, he predicts, it will not be many years before Europe again welters in blood. The United States, as a humane nation, can not regard such a possibility with indifference. But there are other reasons as well why this nation,

Copyrighted by Underwood & Underwood.

WHERE IS THAT SILK HAT?

Tehitcherin, the head of the Russian Soviet delegation, who shares with Lloyd George the center of the spotlight at Genoa, apparently does not always wear the topper which his Government ordered him to take with him and which he actually donned when he accepted an invitation to lunch with the King of Italy.

to use the phrase of the Moscow *Pravda*, is "invisibly present" at Genoa. To the question "What are American interests in Russia?" the New York *World* replies:

"We can only guess, for there is no official statement of them. Are we interested in the pre-war debt, the war debt, or the nationalized properties, and if so, to what extent and in what proportion? It is not enough to say we are interested in the sanctity of contract and the rights of private property and let it go at that. Every other nation at Genoa is thinking in terms of specific contracts and specific properties, and the final settlements with Russia will represent some kind of balance between conflicting claims.

"Our claims are not represented. Therefore, one of two things is likely to happen. Either we shall accept the settlement made by the other Powers or we shall arrive at the last moment and upset their settlement if it does not suit us. In the first instance Mr. Harding may have to sacrifice legitimate interests; in the second he will add to our reputation for throwing monkey-wrenches into the machinery of peace."

Richard Washburn Child, American Ambassador to Italy, has notified the Genoa Conference that the United States reserves all its rights on the repayment of war debts due from Russia, says an Associated Press dispatch, which adds that these debts include private bankers' loans and advances to the Kerensky Government. According to a Washington correspondent of the New York *Evening Post*, "the claims against Russia now pending before the United States Government are two thousand in number and total the very considerable sum of \$800,000,000 in amount." We read further:

"Among these are the claims of American manufacturers maintaining plants in Russia, or owning securities in Russian

In the event that Russia closes a trade agreement with the rest of Europe at the conference "the United States will be in the position of holding a second mortgage on all claims in that country," says a Genoa correspondent of the New York *Tribune*, in whose dispatch we read further:

"Until the United States recognizes the Soviet Government and grants to the citizens of Russia the same rights that are

enjoyed by other nations American interests in Russia and American residents there can expect no special treatment; nor can they make any claims contingent upon concessions granted by any former régime. This was the ultimatum which followed a special inquiry conducted by J. Hamilton Lewis, representing large American interests in Russia, one of the largest being the oil concessions. Mr. Lewis was also given to understand that if Russia concludes any arrangements with other European countries, American interests must take a second mortgage. This, Mr. Lewis holds, amounts to confiscation of American interests in Russia."

Harold Phelps Stokes, writing from Washington to the New York *Evening Post*, reports the prevailing opinion at the capital regarding the Russian situation to be as follows:

"No solution of the Russian economic problem is possible, it is the belief here, short of a restoration of the economic initiative of the Russian people themselves. During recent months capable observers here have come more and more definitely to the conclusion that the 'retreat from Communism' has not had the effects which the propagandist loudly proclaimed. It has resulted in no economic recovery in Russia. The railways are going to pot. No hope is held out for Russian restoration, except as a result of a complete economic regeneration, initiated from within, aided from without.

"Before the Russians can get anywhere at Genoa, it is argued, they must abandon that 'Oriental diplomacy' of which Lloyd George complains, and accept in their main outlines the recommendations of the experts. First and foremost, they must give up the illusion that the rest of the world has to have Russia in order to live.

"As seen here, exactly the reverse is the case. The trade of the United States with Russia does not amount to 1 per cent. of the American total, and that of England to not much more than 2 per cent. of the British total. As seen here, it is not Russia that is essential to the rest of the world, but the rest of the world that is essential to Russia. The rest of the world is not going to be in any mood to help so long as Bolshevik finance and economics prevail."

plants. These claims are based on the theory that nationalization completely wiped out the interests of the claimants which, under this category alone, aggregated several hundred millions of dollars. All of these claims will undoubtedly be greatly scaled down if and when we get into actual negotiations with the Russian Government; even then they will represent no mean sum."

SPRING STYLES IN POLITICAL STRAWS

STRAWS BLOWN ABOUT by spring breezes may not help the weather prophet to determine the velocity and direction of next November's gales, but in the political field these straws in the way of special elections and primaries are given serious consideration in respect to their bearing on the results of next fall's Congressional election. "Both parties are already facing the fight," remarks the New York *Evening Mail* (Ind.), "nor is it too early for the nation to examine the issues." These preliminary fights are the most important, as the Washington correspondent of the Cleveland *Plain Dealer* notes, because the elections in the fall will be "the first great test of political opinion since Mr. Harding became President," and the Republican party will be compelled "to go before the country for a vindication of its record." Thus, he adds, these tests are helping to "shape national politics toward the next Presidential campaign, regarding which early mutterings already are audible." The political pot thus boiling will continue to bubble in one part of the country or another with increasing heat until September, writes Mr. Mark Sullivan in the New York *Evening Post*; "by the latter part of September the primaries will be completed and the month of October will be the most heated of all, leading up to the election on November 7." As a result chiefly of their success in reducing Republican majorities in special elections in Maine and New York, "the Democrats are cocky," as the Washington *Star* (Ind.) observes. W. W. Jermaine, Washington correspondent of the Seattle *Times*, in a careful appraisal of the situation, comes to the conclusion that "for several months a strong reaction has been in progress against the Republican party, but there are no indications thus far that it is to culminate in a landslide." The Democrats, he adds, "see the drift setting in toward their party but can not yet be certain that it will continue."

Official spokesmen for the Democratic party—committeemen and other leaders—talk confidently of reducing or wiping out the present overwhelming Republican majority in the House of Representatives. "We ought to carry the next Congress," cries the old standard-bearer, W. J. Bryan, in his *Commoner* (Lincoln): "prospects brighten; each month something adds to the Republicans' embarrassment and improves the chances of the Democrats." "Municipal elections in Rhode Island, Maryland, Connecticut, West Virginia and Missouri give renewed evidence that this is a Democratic year"—thus speaks the Buffalo *Times* (Dem.), which holds that "Democratic municipal victories in a Congressional year have always been reliable signs of Democratic national victory in the fall." Besides these municipal elections, notes the Richmond *Times-Dispatch* (Dem.), Congressional elections have been held in Maine, Michigan, Iowa, New York and Virginia during the past six months, "and in all these contests the Republican vote has been decisively reduced." "In every by-election since that for Senator in New Mexico the Democrats have made either substantial or startling gains," and so, it concludes, "Democratic leaders can not fail to be cheerful." These municipal and Congressional elections may be "little straws" but, remarks the Boston *Post* (Dem.), "they do seem to be pointing quite markedly in the same direction. If the Republicans control the next House, it will be by a greatly reduced majority." The New York *Times* (Dem.), likewise impressed, makes the observation that "for many reasons many heels are lifted sacrilegiously against the Republican party." The Democratic Norfolk *Virginian-Pilot* is particularly heartened by the fact that so many of these little elections "indicate a change of political sentiment in States where comparatively little change is needed for their transfer to the Democratic column." In the frank opinion of ex-candidate Cox's Dayton *News* (Dem.), "the country has awakened to the fact that it was buncoed in 1920."

An independent estimate from cautious Missouri is made by the St. Louis *Star*, which thinks these conclusions may be drawn from by-election straws as follows:

"The Republican majority in the House will be cut down tremendously and may be wiped out altogether. That scores of Congressmen who came into Washington on the landslide of 1920 will be replaced by Democrats is freely admitted by the G. O. P. party leaders. Privately they will be content if they can hold domination over the House by as many as fifteen or twenty votes. In the Senate the Republican prospects are better, since a great part of those who come up for reelection are Democrats, mostly from the South, and most of the new ones elected in 1920 are Republicans, who hold their jobs for four more years."

Thus an observer in the metropolis of the great agricultural Mississippi Valley sizes up the great political situation. It is interesting to note that a similar prognostication comes from New York. Here *The Commercial*, after pointing out that it considers itself "an impartial observer" of things political, declares that the Republican party "has blundered to such an extent that it seems to be heading straight for disaster." This business man's newspaper adds:

"The Democrats propose to make their campaign at the coming Congressional election on the basis of the do-nothing policy of the Republicans. We have no assurance that the Democrats will do any better, but that will not prevent the people of the country expressing their disapproval of the party in power by turning it out."

And there are Republicans quite ready to admit that their Democratic opponents have mighty good reason for looking cheerful. Take, for instance, the Boston *Transcript*, dubbed by a contemporary, "that ancient organ of Back Bay Republicanism." It observes:

"New Englanders are quite prepared to rebuke the party in power by depriving Republicans of the control of the next House unless the Republican party under the leadership of the President and with the support of the Senate majority overthrows the oligarchy in the House from which this section is unwilling to suffer for another two years. We know of six members of the Massachusetts delegation in the House whom it will be easy to defeat as a rebuke to the G. O. P., and we venture the other New England States can do as well."

And in an editorial entitled, "A Discouraging Record," the Republican Rochester *Post-Express* points out the likelihood of a popular reaction which may go so far as to take the control of the House of Representatives from the Republican party:

"While reasonable people have not expected the impossible of the present Congress, it is only the truth to say that they had very generally expected a more intelligent handling of national problems than has been given, more wisdom, more insistence on economy, more patriotic devotion to the public welfare than has been shown."

"It is a very serious question in many minds if the campaign soon to open has not been lost before it has begun, if the Congressional majority can regain the popular confidence it has forfeited, or if it will not be cut to a narrow margin or wholly disappear."

After criticizing the action of Congress on the soldiers' bonus, tax revision, the tariff, and other legislative matters, the Rochester daily concludes:

"This is not a record to be proud of, and while Republicans in Congress are not solely blamable therefor, the fact remains that the party able to control legislation if it had been able to control its Congressmen will be held responsible in the fall elections, and properly so."

Perhaps it is editorials like this which lead the New York *World* (Dem.) to claim that there is a "definite feeling within the inner circles of the Republican best minds that the 67th Congress when it goes to the polls in November is in for one of the finest political wallopings ever administered to any aggregation of muddle-headed law-makers." But this important organ of the

Democratic party in the East goes on to express some wonder whether dissatisfaction with the Republicans really means any relish for the return of the Democracy to power. As *The World* puts it:

"The Republican managers will never win the fall elections by telling the country that the Harding Administration and the Sixty-seventh Congress have surpassed all expectations. They would stand a much better chance if they went before the country admitting their own hopeless incompetency, but triumphantly pointing to the Democratic minority's record of unsurpassed stupidity in Congress. That would be something to talk about, and the Republicans could fairly claim that a political trial balance would show that they were no worse than the Democrats and that their leadership had been no more blundering. On that issue they would have a debatable case, and a great many voters might be convinced.

"To claim, however, that the Administration and the Sixty-seventh Congress have more than met the expectations of the American people is to claim in effect that the American people are less than half-witted. Outside of the select circle of Republican office-holders nobody is satisfied with the work of the Administration or with the work of Congress. Republicans are no less vehement in their complaints than Democrats. The average voter is rapidly losing his faith in political parties, and his faith in government itself is at the lowest ebb that it has ever reached. Everybody is dissatisfied, altho nobody quite knows what could be done about it. . . .

"If it were possible to organize a third party which could start with a clean slate and with a leadership that betrayed some faint understanding of the economic problems of the country, both of the old parties would have to fight for their lives, and one of them would have to go under. All that is saving either of them to-day is the inability of the country to find means by which effective expression can be given to its political discontent.

"The Republicans in Congress are still thinking in terms of 1897, and the Democrats are thinking only of the mistakes made by the Republicans. The country in the meantime is sick of party politics and sick of party politicians, but somehow it seems to have lost its capacity for political initiative. It has forgotten the trick of recovering possession of its own affairs."

But there are Republicans who study the recent election returns and report, in the words of a *Kansas City Journal* editorial headline, "No Republican Disaffection." In fact, *The Journal* insists that "the returns from the various special Congressional or Senatorial elections held since the inauguration of President Harding have signally failed to verify the persistent predictions of the Democracy that the voters would repudiate the President and his policies." It cites Republican victories in New Mexico, Massachusetts, Maine and Hawaii, and believes that:

"If these scattered instances are any reliable criterion, the Congressional elections this fall may be depended upon to demonstrate, on a larger scale, that the people are abundantly satisfied with the policies of the Harding Administration, which is, so far as can be judged, growing stronger all the time as the pledges made by the President are being redeemed one by one."

While the election of a Democratic House next fall is, of course, "not an impossible development," it is, in the opinion of the *Indianapolis Star* (Ind. Rep.), "so unlikely as to give the Republican Administration very little anxiety." Realizing that there are eddies in every tide, and that local issues and the reluctance of voters to come to the polls in an off year are likely to count against a party and power in special elections, the Republican *New York Tribune* sees little reason for Republican discouragement. Naturally, it observes, "Republican leaders who fancy that they can repeat the achievement of 1920 in by-elections, or even in the Congressional election in November, are hoping beyond reason." But—

"The Republicans have not lost as many votes as they might well expect to lose under the circumstances. Every day the excellent work of the Administration is bringing about a return to normal business conditions. When that work comes to full fruition the voters will approve what has been done, perhaps not by a majority like that of 1920, but by a substantial indorsement of Mr. Harding and the Republican Congress."

LABOR'S DISTRUST OF THE COURTS

ABLOW AT COLLECTIVE BARGAINING between capital and labor is discerned by many editors in the announced opposition of Samuel Gompers, President of the American Federation of Labor, to any interference by courts or legislatures with organized labor. Appearing as a witness before the Lockwood Housing Committee, of New

HOW MUCH AM I OFFERED?

—Baer in the *American Federationist*. (Edited by Samuel Gompers.)

York, which has been investigating building material combines and unions alike, the veteran labor leader admitted that while irregular practises in labor unions had been brought to light, the cure should come from within the unions. Some of the abuses and unlawful practises charged to the unions are that work on a \$30,000,000 power plant was held up for six months by a purely jurisdictional controversy; that gross tyranny and extortion were practised; that enormous fines have been imposed for trivial causes; that some of the building unions are "close corporations"; that molds for plaster work were destroyed, altho paid for by the owners; that members who showed a sense of responsibility to the public were expelled from the union; that membership to certain unions is limited; that contractors were blackmailed into paying higher wages than were agreed upon; that unwarranted strikes were called, and that agreements were repudiated and contracts broken.

Admitting that abuses have existed and that they still exist, Mr. Gompers nevertheless maintains that they are not to be corrected by courts or other agencies which he regards as hostile to organized labor. "God save labor from the courts!" was his dramatic reply to such a suggestion. Reading an extract from a speech by former Secretary of State Elihu Root to the effect that in the courts "the poor stand little chance against the rich, or the honest against the unscrupulous," and a statement from ex-President Taft that "we must make it (the administration of justice) so that the poor man will have as nearly as possible an

equal opportunity in litigating as the rich man," Mr. Gompers declared that the courts have ceased to mete justice to the worker in matters respecting employer and laborer.

"The worst enemy of union labor could hardly do more to injure it than Mr. Gompers did by his statements," thinks the *Philadelphia Inquirer*; "he admits abuses, he admits that the unions themselves can not check them, and yet he protests against giving either worker or employer the protection of the law." "When he upholds unions that break their contracts, he is striking at the very heart of collective bargaining," agrees the *Philadelphia Public Ledger*; "a contract that is not equally binding on both parties is not a contract, and if each side does not keep its word, then the whole plan of collective bargaining must go to pieces." As this paper goes on to explain:

"Gompers believes in law for the employer, but not for the worker. He insists there should be no law to govern human beings in industrial strife, but believes in curbing the employer.

"He would let labor go free of restraint to hammer the employer and the public, but would give society and the public no chance or right to defend themselves.

"Yet Gompers is regarded as being sane, conservative and even old-fashioned in his view-points as compared to many of his followers and sub-chieftains."

At times during the hearing, reports the *New York Herald*—

"Members of the committee were unable to follow Mr. Gompers's logic. For instance, it is Mr. Gompers's doctrine that, while a contract is a contract, it is not mutual. Where a wage agreement exists and a labor shortage develops, labor should not be blamed or the unions penalize their members for accepting a wage in excess of the agreement. But on the other hand, with a surplus of labor, union members must not work for less than the specified wage."

"When he urges that labor organizations should be exempted from the law's recognition, he is asking for a favored class distinction against which he would very properly rebel if accorded elsewhere," points out the *Utica Press*.

To the charge that the courts are unfair to labor, the *New York Evening Mail* replies that "in ninety-nine cases out of a hundred the courts administer the law justly." Of course, observes the *New York Times*,

"It is true that the very poor, being unable to employ competent counsel, are sometimes at a disadvantage in our courts, and that our foremost jurists and statesmen admit the fact and are seeking a remedy. But organized labor does not fall into that category. No power of capital can prevent a labor union from securing full benefit of the law as it stands."

"Mr. Gompers may desire to protect labor from the courts, but it would be a serious outlook for the public if these same courts were provided as a balance wheel," remarks the *New York Commercial*, which does not believe that Mr. Gompers speaks for representative labor in the present instance.

With these conclusions, however, we find one paper that is not in accord—the *Socialist New York Call*. In this paper's opinion:

"Courts have always been a clearing house for property interests. They were precisely this when slave property was supreme, and they are this with capital the great power of to-day. Unions might just as well assign their decisions for review to the bosses of industrial plants as to permit them to be reviewed by the courts. The decisions on the whole would be the same."

IRELAND'S ONE-DAY STRIKE

IRELAND'S ONE-DAY STRIKE against militarism and disorder, called by the Labor party and the Trades Union Congress on the sixth anniversary of the Easter uprising, was the third time that Irish labor had called a general strike to give the strongest impression of the whole country's opinion on a great popular issue. In April, 1918, it successfully protested against English conscription, and in April, 1920, it succeeded in persuading the English Government to release the 89 hunger strikers then in Mountjoy prison. The recent action, taken by the 300,000 trades unionists throughout southern Ireland, "was a nationwide protest against bloodshed and disorder," in the words of the *New York Herald*, which considers the one-day strike "significant of the general feeling in the Free State

counties of southern Ireland, and significant of what is likely to happen at the general elections in May." "Generally speaking," notes this paper, "a strike is a poor weapon to use against disorder; it is likely to add fuel to the fire. But in this case it brought the Provisional Government to a full sense of its responsibility." "Actually, however, the strike was a warning to the De Valera party," declares the *New York Evening Post*, "and it indicates that the Irish workers will stand a unit against any attempt to plunge Ireland into civil war and impose the will of a minority upon it."

During the 24 hours of the strike social, commercial and industrial activities ceased. The shutdown included the postal and telegraph services, railway and street-car services, restaurants and schools. As we are told by the Dublin correspondent of *New York Herald*:

DON'T PULL THE TRIGGER.

—James in the *St. Louis Star*.

"There was no disturbance, no outrage; but the various political leaders were shown clearly where the real strength of the country lies. Business came to a dead halt, particularly in the south, where every wheel ceased turning as a protest against factional strife.

"Altho the strike was directed against the leaders of all factions, it resolved itself, in the opinion of Dublinites, into a protest against the De Valera extremists; and while the Provisional Government officials played a passive part, it is agreed that they won a signal victory."

In the opinion of the *Springfield Union*—

"Those members of the Republican army who have become so accustomed to fighting for their cause that fighting has become a habit should realize that the Irish workingman does not intend to keep on laboring to support the island while the rebel, in the name of a blind patriotism, seeks to destroy it."

These followers of De Valera, according to the *New York Evening Post*, are "the hoodlum element that comes to the top like seum whenever the political pot boils." "If the one-day strike had failed, De Valera and other extremists who are in rebellion against the Provisional Government could have claimed that the majority was with them," we are reminded by the *New York Globe*, "but the complete success of the demonstration proves that the majority of Irishmen are against a dictatorship by the military forces of De Valera, which are in the minority. Ireland has protested against civil war in tones which can not be misunderstood. The entire stoppage of work revealed as nothing else would the might of the free people."

THE JOB-FAMINE BREAKING

HAS LAST YEAR'S JOB-FAMINE been checked? On February 6 Washington authorities estimated that 2,500,000 persons were more or less without regular work, as against 5,000,000 last fall. Forty American cities, including Detroit, St. Louis, San Francisco, Cleveland, Chicago and Baltimore, reported an employment increase in February over the previous month. Nine industries reported increases, and five

reported decreases. A month later the United States Employment Service announced that "231 of the principal industrial centers, with but few exceptions, show a general improvement in employment conditions." Among the principal lines showing an increase were the iron and steel and automobile industries. "And it should be remembered that the steel industry is regarded as a sure business barometer," remarks the *Marion Star*. As a matter of fact, notes the *Chicago Daily News* "even more significant and reassuring is the information that the industries which have been stimulated by enhanced demands for their goods are nearly all basic in character."

Late in March reports from the Employment Service of the Department of Labor showed that for every hundred places listed at the employment bureaus throughout the country there were 194 applicants in March, as against 205 in February and 226 in January. On April 6 figures obtained by a canvass of 1,428 firms, in 65 leading industrial centers, each employing 501 or more persons, and representing the more important industries, showed a net increase of employment for the entire country of 39,558, or 2.5 per cent. of the total number employed, 1,604,959. On April 20 the National Conference on Unemployment announced that "for every hundred jobs available there are now only 160 applicants, as compared with 226 in January. The Government, however, announced on April 26 that the coal strike, and consequent closing down of plants by fuel shortage, had swelled the unemployment total for the entire country to some 3,800,000. Beginning with the New England district, including the States of Maine, New Hampshire, Vermont, Massachusetts, Rhode Island and Connecticut, we find the general employment comment of the Employment Service to be as follows:

"The strikes which are now on in the cotton-mills act as a damper on business conditions, and unemployment is heaviest

in the metals, machinery, building, and shipbuilding trades. In Vermont, however, some textile plants are working overtime. In the Middle Atlantic district, including the States of New York, New Jersey and Pennsylvania, business has shown a gradual improvement, particularly the iron and steel industries. The railroad situation is becoming much better, orders for railroad equipment are coming in, and there is considerable increased activity in the building industries. New Jersey reports that the

volume of unemployment is decreasing and that in several skilled trades, notably the metal trade, there is an apparent shortage of workers.

"In the East North Central district, including the States of Ohio, Illinois, Michigan, Indiana and Wisconsin, large equipment orders placed by the railroads, steadily increasing output of iron and steel, increased activity in the automobile industry, and a demand for farm implements are encouraging factors in the business situation. The farmers, too, it should be added, have absorbed quite a number of unemployed in this district. The West North Central district, including the States of Minnesota, Iowa, Missouri, North Dakota, South Dakota, Nebraska and Kansas, report a marked decrease in unemployment, mainly due to spring work on the farms. There is said to be practically no unemployment in Lincoln, Neb., or Wichita, Kansas. Conditions are not so favorable in the South Atlantic district, including the States of Delaware, Maryland, District of Columbia, Virginia, West Virginia, North Carolina, South Carolina, Georgia and Florida. Reports from thirty cities in this district, however, show a steady gain in employment; wherever decreases are noted in industrial concerns, railroad shops, and textile mills, they

have been small. What unemployment exists is said to be mostly among common laborers and shipyard workers. The unemployment situation in this district is not serious.

"Kentucky, Tennessee, Alabama, and Mississippi, comprising the East South Central district, report a dropping off in the manufacture of shoes and cotton, silk and wool textiles, and a consequent decrease in employment. In this district, however, unemployment is said to be only temporary, as the workers are rapidly being absorbed by farms. A marked improvement is shown in the iron and steel industries of Alabama. The West South Central district, including the States of Arkansas, Louisiana, Oklahoma and Texas, report that employment conditions are beginning to show an upward trend, unemployment being noticeable mainly in the textile and metal trades. Railroad shops and allied activities in Oklahoma are said to show only a slight improvement. Conditions are better, however, in the Mountain district, including the States of Colorado, New Mexico, Arizona, Utah, Wyoming, Nevada, Idaho and Montana. Em-

CHART - Showing Comparison in Employment in 14 Manufacturing Industries obtained from Payroll Records of 1,428 Concerns usually employing 501 or more Employees in the 65 Leading Industrial Centers in Monthly Periods -1921-1922

From the Industrial Employment Survey Bulletin, United States Department of Labor.

RISE OF EMPLOYMENT SINCE DECEMBER.

In March employment in representative industries reached the level of February, 1921.

ployment generally, it is estimated, has increased about 15 per cent., the chief gain being in the iron and steel industries, railway shops, mines, oil-fields and building. In Colorado the increase in employment is said to be twenty per cent., and it is said that comparatively few persons are now unemployed in New Mexico. This is also the situation in Arizona, Utah, Wyoming and Nevada. In Idaho employment conditions seem to be better than in any other State; there has been an increase of about 50 per cent. In Montana the railroads are handling more lumber and more coal, and two more copper mines have been reopened—all of which considerably reduces the number of unemployed.

"In the Pacific district, and including the States of Washington, Oregon and California, there has been a slight gain in employment. Oregon reports that ship-building is at a standstill, but that there is considerable building activity. In California there is said to be no unemployment in the building industry. While some lumber mills in Washington are running night shifts, other mills are practically normal, and whatever unemployment exists is regarded as temporary."

To one paper, however, all this news of an industrial revival seems too good to be true; says the *Chicago Journal*:

"The U. S. Employment Service of the Department of Labor should explain how it arrives at the conclusion that 2.5 per cent. more workers were employed on the last day of March than on the last day of February.

"That conclusion may be correct—if it is, every one will rejoice. But on the last day of March 600,000 miners laid down their tools. Did the employment service allow for them? Did it allow for the slackening of some industries already traceable to the miners' strike? Most damage from the stoppage of that basic industry will show later, of course; but a little of it was visible at once.

"The charitable organizations find no improvement in the labor situation. So far as ordinary observation can tell, the mining strike has thrown far more men out of work than the feeble revival of industry has taken on."

But a survey of the press in all parts of the country shows that the great majority of editors are of the opinion that, to quote the *Buffalo Times*, "the industrial pace that for some time has been evident has grown into a stride." "The rapid ebbing of the tide of business accompanying the general post-war let-down has halted; the waters are rising again," is the way the *Washington Herald* puts it. "What is taking place in the cities covered by the Department of Labor's statistics likely is also taking place in the majority of other large municipalities," believes the *New Orleans Times-Picayune*, which ascribes the reduction in the ranks of the unemployed to a general improvement in business conditions. "The movement is slow," admits the *Rochester Post-Express*, "but this is due to the conservatism, or rather, the pessimism of many financiers and business men." And "it should not be forgotten," we are told, "that improvement in economic conditions is cumulative—like a snowball rolling downhill."

"The fact that jobs are becoming more plentiful, and applications for them fewer, is far more important to the country than the wage question," thinks the *New York Tribune*, which expects this to be "the best business year since the war." This

prediction is also voiced by the *Seattle Times* and other papers. As the *Kansas City Star* points out:

"Press dispatches announce a long list of improvements and extensions now planned by the railroads. The announcement is important chiefly in relation to the cumulative force of the list, as almost every day of recent weeks has witnessed the move of one or more roads to add to equipment, build additional track-age or open repair shops closed for months. The development is a result of improvement in railway business, this in turn being but the reflection of improved business generally.

"A complete account of labor possibilities now in sight would include reference to road-building work that gives signs, perhaps in every State, of unprecedented progress as soon as weather conditions are more favorable; public improvements in the cities, and the shops and factories that will be called upon for supplies as all forms of construction are pushed forward. Especially encouraging are the reports of new building construction to be undertaken that will call for the expenditure of almost a billion dollars."

According to the *Minneapolis Journal*, however, "the time has not yet arrived when the problem of unemployment can be dismissed with a wave of the hand," altho it admits that the crisis is past. As we are told by this paper:

"A marked feature of the crisis has been the way the people voluntarily set themselves to provide as much work as possible for the idle. Nearly every city formed its emergency committee to push concrete measures of relief. Cities like Chicago started clean-up campaigns which gave work to hundreds. Los Angeles, Sa-

vannah, Baltimore and Dayton set aside large sums to push public works and improvements. St. Paul invoked a clause of its charter to borrow a hundred thousand dollars for sewer building and bridge repairs. Minneapolis set aside a large sum to provide relief for the needy. The emergency has been met largely by the good old method of personal and local help. Altho the larger phases of the problem still wait solution, the crisis has been passed, and the unemployment situation shows great improvement."

Granting all this, says the *Chicago Journal* in another editorial, nothing has been done to prevent a recurrence of unemployment or to solve the problem of the floating laborer. What the country needs, in the opinion of *The Journal*, is "a comprehensive survey of the unemployment problem and a nationwide and concerted effort to coordinate industry so as to eliminate the waste of labor caused by employment peaks coming at about the same time." Some such effort has resulted in success in California, we are told in a San Francisco dispatch to the *New York World*; the remedy was first worked out and applied through the cooperation of officials of the Government, California State officials and San Francisco organizations, and applied throughout the State. The various cities, counties, school districts and State governmental bodies, and the financial, commercial and industrial concerns throughout the State not only solved the acute problem of unemployment last winter, but formed an organization to prevent a recurrence of that condition on the Pacific Coast next winter. Continues *The World* dispatch:

"Through the cooperative plan the railroads, street-car systems, ferry and steamship lines, lumber manufacturers and other

WAGES LARGER, BUT—

—Baer, in *Labor* (Washington)

industries have provided work for thousands, and through State highway activities, individual county highway activities, State building, other public building and private building activities, school district work, etc., millions of dollars' worth of work is being gradually put under way throughout the State, all of which is being reflected in general industrial and commercial conditions. All of this is being accomplished by increasing employment through normal channels rather than by encouraging emergency appropriations by either city, county or State legislative bodies."

It will be recalled that the main object of the National Conference on Unemployment, called by President Harding last fall, was to stimulate the community itself to solve the unemployment problem, altho the Emergency Committee, headed by Colonel Arthur Woods, furnished suggestions as to the best way to attack the problem. In a *New York World* résumé of the Committee's work, by Colonel Woods, we are told that—

"Reports from hundreds of Mayors and City Managers throughout the country, who took the advice of the Committee and applied themselves to the solution of their own local unemployment problems, may be roughly divided into three groups, each of which shades into the other: 1. Cities which undertook public projects in order to create work; 2. Cities which appropriated money for the immediate relief of distress; 3. Cities which devised campaigns to stimulate business and provide employment. Some cities may be found in all three groups; others in two groups.

"Among the many towns in the first group might be mentioned: Toledo, O.; Davenport, Ia.; Spokane, Wash.; Indianapolis, Ind.; Galesburg, Ill.; Middletown, O.; Youngstown, O.; Wilmington, Del.; Wilmington, N. C.; Pensacola, Fla.; Portland, Me.; Dayton, O.; Los Angeles, Cal.; Savannah, Ga.; Shreveport, Ill.; Baltimore, Md.; Detroit, Mich.; Saginaw, Mich.; St. Paul, Minn.; Schenectady, N. Y.; and Boston, Mass.

"In the second group of cities, where the community actually appropriated money or raised it to care for the destitute, some are New Haven, Conn.; Hartford, Conn.; Kansas City, Mo.; Poughkeepsie, N. Y.; Cincinnati, O.; Lima, O.; Racine, Wis.; Cleveland, O.; Buffalo, N. Y.; St. Louis, Mo.; Detroit, Mich.; Logansport, Ind.; Butte, Mont.; Little Rock, Ark.; Portland, Me.

"In the third group of cities, which conducted campaigns to stimulate employment, were Chicago, Ill.; Dallas, Tex.; Kearny, N. J.; Rockford, Ill.; Youngstown, O.; and Allentown, Pa. I could go on almost indefinitely, but I select these merely because they have turned in fuller and more complete reports. Let me take up a little space in citing a few novel instances. In Fort Wayne, Ind., advertisements were published in the newspapers and the unemployed were asked to fill out and send in blanks. These were turned over to the local employment agency and hometown industries secured the help they needed. Boston asked all employers to increase the number of their employees by at least one and as many more as possible.

"New London, Conn., ran special entertainments in the theaters with local talent. The unemployed were allowed to sell tickets and retain a good percentage of the proceeds. Houston, Tex., maintained a gang of laborers ranging in number from 200 to 600, paying them \$1.25 a day for work in the parks, and if they had dependents, supplementing this by charity. Public-

spirited citizens in Rock Island, Ill., banded together to hire one man one day a week to keep him from becoming an object of charity. Lima, O., put 100 men to work two or three days a week, paying them in orders on groceries for food. This helped the merchants too. Butte, Mont., raised \$60,000 each month and extended some sort of aid to 2,500 families. Unemployed single men could get two meals a day out of this fund. Galesburg, Ill., put \$100,000 into water mains, and work went on right through the winter, while the town provided lodging and food for the destitute. Fort Dodge, Ia., reports that jobless miners worked abandoned coal mines in the vicinity, which gave them a living and reduced the price of coal at the same time.

"No conference," Colonel Woods points out, "can merely wave a wand, and bring good times. The President's Conference did, however, arouse the cities of the United States to do the two best things that could be done in an emergency—create temporary work and relieve acute distress." Continues Colonel Woods:

"Let me briefly show another large group of cities, widely scattered, which reported an upward trend by doing just these things. They include Asheville, N. C.; Baltimore, Md.; Clarksburg, W. Va.; Columbus, Ga.; Johnson City, Tenn.; Macon, Ga.; Omaha, Neb.; Passaic, N. J.; Sacramento, Cal.; San Francisco, Cal.; Atlanta, Ga.; Auburn, N. Y.; Beloit, Wis.; Colorado Springs, Col.; Lincoln, Neb.; Los Angeles, Cal.; Nashville, Tenn.; Pueblo, Col.; Roanoke, Va.; Seattle, Wash.; Sheboygan, Wis.; Tucson, Ariz.; and Wheeling, W. Va.

"The worst is over. The tide has turned. We are on the up-grade. The peak of unemployment has been reached. It must be remembered, however, that there are to-day a great many thousands of men who have been entirely self-respecting and self-supporting but who have been driven through the stress of the times, without fault of their own, to become public dependents. From points of view both of humanity and of the conservation of man power of the country these men must be helped back into the independent class.

"I feel certain that the industrial skies are clearing, but clearing skies do not repair men broken on the wheel. A factory speeding up to 100 per cent. of output does not want a hand to tend its machinery who can not deliver 100 per cent. of labor because he has been at death's door with influenza, coupled with under-nourishment. That is the job which is left for American humanity.

"How to ward off bad times in the future—that is problem No. 2. It is highly important now to see if something can not be worked out to prevent these regular recurrences of business depression.

"Then there is the so-called seasonal unemployment. Men who harvest crops or pick fruit are laid off during the winter. On the other hand there is no logging in the summer. Fishing has its bad times every year. So do road construction and house-building. There are off-seasons in many of the industries.

"We of the Emergency Committee, and other agencies which have offered their help, hope to arrive at workable plans by which the peak of booms may be cut down and the trough of depression partly filled up. At the same time we hope to reduce the evil of seasonable unemployment, just as some industries and individual plants have already done."

FOREIGN - COMMENT

AN EXPERT BRITISH VIEW OF INDIA

EXCITING EVENTS in home politics and inadequate information about what is really happening in India combine to handicap the British public in seeing the Indian situation understandingly. Thus we are told by Lord Meston, K.C.S.I., who is described as one "intimately identified with the Indian reform scheme" and therefore "speaking with particular authority." He points out that the London morning news paper is obsessed by three topics: "The antics of Mr. Gandhi, the outrages for which he and his teachings are directly accountable, and the efforts of an irresponsible majority in the Legislative Assembly to wrest all power from the Central Government at Delhi." But this is not the whole picture, according to Lord Meston, for it shows nothing of the feeling in the Indian public services, the treatment of Europeans, especially in isolated areas, or even the part played by the new Indian Ministers, to whom Englishmen naturally look for leadership of Indian public opinion. Meanwhile it is pointed out that private letters from "both Englishmen and friendly Indians" continue to bring the most perturbing news, and "experts are not lacking to tell us that we are on the eve of losing India." The true remedy for the present ferment lies not in drastic change, says Lord Meston in the *Asiatic Review* (London), but in patience and a consistent policy on the part both of His Majesty's Government and of the Viceroy and his counselors on the spot, to which he adds that—

"Their first and most urgent duty is the prevention of disorders; and for this task the local authorities must have an adequate force available. Its disposition may be safely left to them; all that we can do from this end is to resist any weakening of the British garrison on grounds of economy or otherwise. Sixpence off the income-tax would be a poor compensation for civil war in India. But next to armed force, which no one wishes to see employed, the chief insurance against disturbance of the peace is a steady enforcement of the ordinary law. If seditious meetings and the activities of Mr. Gandhi's 'volunteers' are prohibited, the prohibition should be absolute and effective. Once the Government is seen to be in earnest, the sober-minded will soon rally to its support, and the pleasurable excitement of defying the law will steadily wane.

"Then will come the harder task, the slow reconstruction of the position which Mr. Gandhi has endeavored to destroy. His assaults were delivered not only at our scheme of political progress, but through it at our whole mission in India. 'India for the Indians' is no new war-cry; there was a well-known revolutionary orator of Lord Minto's time who used to tour Bengal with a banner which bore the sole device 'EXPULSION.' But simple patriotism has never been its inner meaning; and if we believe that we have anything of value to leave with India when we

finally depart, we must now mobilize and strengthen that section of Indian thought which accepts our ideals of civilization and does not find the words of all wisdom in the Vedas. To this end we must resolutely pursue our policy of training India in the use of free institutions, and obliterating all color distinctions which lower the self-respect of Indians. In this way only can the spirit of cooperation replace the fever of racial bitterness."

If there is to be cooperation, Englishmen and Indians must each have their allotted share in the work, and it is recalled that this is the keynote of the Reform Act of 1919, and the sooner there is a return to it the better. Altho the system of diarchy may be "irksome to the impatient or the ambitious," Lord Meston believes it preserves the "balance of duties during the march toward full self-government." Short-cuts, or what Sir Valentine Chirol describes in his "India, Old and New," as "skipping diarchy" may easily set

a province on the slippery path which ends in the ministers "enjoying power without responsibility and the Governor-in-Council being saddled with responsibility without power." Lord Meston calls attention then to the fact that "it was precisely this denouement which certain Indian politicians strove to secure, and the government of India strenuously resisted, when the Act was on the anvil." Among the merits of India's new constitution, he tells us, elasticity is not the least, and it would be foolish to imagine that improvements in machinery and procedure will not be devised long before the first decennial stage is complete. Meanwhile—

"The main principles are the only rails on which the new Constitution can run: abandon them, and a smash is inevitable. If this is recognized when India returns to her senses and the bogey of Non-Cooperation is laid, harmonious progress will become possible. Conflicts over jurisdiction where the law is clear can end only in the breakdown of the Constitution, and a breakdown means victory for reaction. Now reaction has two barrels: one is the creed that democratic institutions are unsuited to India, and that she must return to paternal government; the other is the belief that Western civilization is unsuited to India, and that she must get back to her own archaic past. A shot from either barrel is death to all that Englishmen have been trying to do for India in the last 150 years."

Among the Indian press we find the Madras *Hindu* saying that what is most important about Non-Cooperation is "the intensity of political feeling which gives it life and sustenance," and this is a truth that "has not been widely recognized." If the Government of India persist in their present course of suppression, remarks this Moderate organ, the Moderates "will find themselves between the devil and the deep sea." The

THE ELEPHANT TAMER.

BOLSHEVIK PROPAGANDA IN INDIA.

UNCLE BOLSHIE FROM MOSCOW: "My little pet here has devoured Liberty in Russia, and now your people may wear her clothes if you will give us the run of your place."

—The Bulletin (Sydney N. S. W.)

Lahore *Tribune* (Ind.) regrets that "insight and imagination have never been among the strong points" of certain English politicians, which it classifies as "Lord Curzon's school." For instance, it tells us that Lord Curzon issued a statement in which—

"He attributed the ferment in India with its recent explosions to the reflex influence of war, which was exprest in India, as in Western countries, in increasing prices, stifled trade, high taxation and also to some extent to the persistence of embittered memories of the events of 1919, and partly, perhaps, to the Islamic agitation, which was being pursued in India, not exclusively, not even mainly on its own merits, but often on seditious grounds, and it was due to that feeling spreading everywhere throughout the Eastern World, and being enormously exaggerated by preachers of war, that feeling for self-determination, self-government, or whatever phrase they like to employ, which was surging in the mind of all Eastern peoples."

In other words, sarcastically observes this Lahore newspaper, it is the opinion of Lord Curzon that the Indian situation is the outcome of a combination of forces in which there is "no room for the doctrine of nationality, of the inherent right of a people to govern itself, of the destiny of a people being in its own hands—the most potent and inspiring of all the forces at work, the force which even a tyro could tell Lord Curzon is more than anything else at the bottom of all that has happened in India during the last few years!" Adverting then to a question asked of Mahatma Gandhi, whether his arrest would cause the collapse of Indian resistance, this newspaper cites his answer as follows:

"There is so much superstition regarding my supposed powers, human and superhuman, that sometimes I feel that my imprisonment, deportation and execution would be quite justified. This belief in the possession of superhuman powers by me is really a bar to national progress and the Government will deserve the thanks of reasonable humanity if they remove me from the people's midst and do not afterwards become mad themselves, but deal with the people with justice and without terrorism."

Such a statement, declares *The Tribune*, "has really nothing to do with the merits or demerits of civil disobedience or Non-Cooperation or any other of the shibboleths of the hour, whether non-official or official, whether Liberal or Extremist." It stands "above all party dissensions and feuds, and points with unerring finger to the supreme height to which humanity can rise."

A BRITISH BOUQUET FOR UNCLE SAM

MANY A BRICK is shied at Uncle Sam's rakish top hat in these days of his "non-cooperation in Europe," we are reminded, but at the same time foreign observers point out that both in England and on the Continent full meed of praise is given to "our rich American uncle" for the Washington Conference. Whatever its arrangements may accomplish, or fail to accomplish in meeting the hard realities of practical politics and national mass spirit, they say, there still remains the one big fact that Washington gave the disarmament idea its initial world-wide impetus. By an act "impressive from its very complexity and difficulty," remarks the *London Spectator*, the United States has "shown the whole world that it means peace business and not merely peace talk in that portion of the world which the American people have marked out as the special field of their activities." This weekly considers also that with the Senate's ratification of the quadruple pact of the Pacific there is registered not only "a tremendous triumph for the cause of international peace," but what to its thinking is "even more important, a tremendous triumph for the cause of Anglo-Saxon good faith and good understanding." We read then:

"No one wants less than we do to see anything in the way of a fixed alliance, entangling or otherwise, between the British Empire and the United States. No one, again, wishes less than we do to see either Power claim any sort of right to intervention or interference in its kinsman's affairs. Each Power must, and will, do what it wills with its own. America, no doubt, may often do things in the future which we shall think hard, or wrong, or ill-timed, and we shall also, no doubt, do things which will incur strong criticism in America. But that does not matter any more than the friction between brothers and sisters, who are often exceedingly hard and even unjust critics of each other.

"What does matter is that we two Powers have come thoroughly to understand each other's ultimate aims and aspirations. Both Powers stand for peace and not for wasting the substance of the world upon armaments and preparations for war. Both Powers stand for enforcement of treaty obligations until those obligations have been by due process abrogated. They stand, that is, for the sanctity of international contract. Both Powers stand for democratic government—for government by the Will of the People, constitutionally and clearly exprest. This

A CANADIAN TIP TO ENGLAND.

"Some day John may learn that a cub grows."

—The Daily Star (Montreal.)

last may, at first sight, seem to some Englishmen and some Americans as a principle out of place in the context. They will be inclined to regard it as something in the nature of an interference with the complete liberty of each nation to insist upon a particular principle and type of government. As a matter of fact, it does not mean interference. What it does mean is a clear recognition of the fact that, taking the world as it is, there can be no successful basis for a firm peace between nations unless those nations are in the last resort self-governing and the Will of the Majority prevails and not the will of an autocrat or of an oligarchy.

"No durable or enforceable contracts can be made with any nation which has not got a democratic basis. The reason is obvious. Some usurper, revolutionary or otherwise, will always claim to speak for the people, tho he has no such right. He will tell you that he can not maintain this or that former contract of his Government because that contract was *ultra vires*—it was not recognized by the people. To make stable contracts you must deal with plenipotentiaries, and no man can be the plenipotentiary of a nation unless he is appointed by a Government that rests on the popular will."

This conservative London weekly goes on then to reveal a conception of the Far East that is said to be very satisfactory to certain sections of the British public, but not to others of less restricted outlook. To believers in China's democracy, for instance, there is piquancy in its assertion that the condition of democracy "tends to exclude the Asian Powers except Japan, for none of them is at present fitted to be a democracy in the true sense." The trust reposed in Japan's future, as a chief cooperator with Great Britain and the United States in world affairs, contrasts sharply with the somewhat skeptical estimate *The Spectator* fixes on Orientals in general. Meanwhile it proceeds serenely confident to advise us as follows:

"There is something in the mind of the Oriental which makes him desire autocracy, and it is no good pretending that this is not so and trying to camouflage the situation by torrents of rhetoric. We must accept things as they are, not as we should like them to be. No good can be done by diluting any system of contractual international law if in that system something in the nature of a paramount law court is to be the *ultima ratio* instead of the bomb and the bayonet.

"It may be that the final trustees of the peace of the world will have to consist of the White Powers, Japan being included in that category, and that for communities which have not yet shown themselves capable of establishing a true democracy something in the nature of tutelage will have to be worked out. Anyway, we are convinced that the road to success in the matter of universal peace lies through a good understanding among the whole of the English-speaking race. If once that understanding is made permanent, and statesmen on both sides learn that they must not play tricks with it but must work it unselfishly, for the sake of each other and for the sake of the world, we shall have taken an enormous step in the right direction.

"But our union of hearts, tho it will be exclusive in the matter of sentiment, must never be exclusive in the matter of action. We must welcome to our peace banquet all other Powers just as we have welcomed Japan. On the handfasting of Britain and America may be built up the handfasting of the world. That is why it is a cause worth living for and dying for."

A TURKISH EDITOR SPEAKS

THE GREATEST BLUNDER committed in tackling the Near Eastern problem is insistence on religious discrimination, we are assured by Mr. Ahmed Emin, editor of the well-known Constantinople *Vakit*, who declares that while the fate of the Christian minorities in Turkey is diseased with fanaticism, the actual sufferings of the Turkish minorities in Macedonia and the extermination of the Turkish majorities in Thrace and Smyrna, "hardly draw the slightest attention." Addressing himself to the editor of the London *New Statesman*, he declares that such a condition means that human life is differently valued according to whether it is a Christian or a Mohammedan who is concerned, and, he proceeds:

"Those making this dangerous discrimination may think, in their deep bias, that they are in their right; they can not prevent the other side, however, from considering this discrimination in valuation of human life as a gross insult and in retorting with the same sort of reactionary feeling. The moment those responsible will sincerely decide to make no religious discrimination in the protection of minorities, not only will the interests of peace be served, but also those of the poor Christian minorities whose real cause of suffering is the excess of hypocritical interest of the foreign Powers, which in reality consider them as convenient objects of propaganda."

As to the general charges against Turkish administration, the editor of *Vakit* confesses that "it is useless to deny that we are a retarded people." After the Armistice, he relates, it seemed a reasonable thing to many idealists that special arrangements should be made to help all backward nations, both Christian and other, to become "normal factors of world life, instead of passive objects of imperialistic designs." Not the Turks only but nearly all the countries in southeastern

Europe seemed to need education and help, according to this writer, who believes that Greece in particular needed it. And, we read:

"After the Balkan War, Greece easily succeeded in making a desert out of the most prosperous part of the former Turkish Empire. While the Greeks in Turkey were economically a very prosperous element, the large Turkish population in Macedonia had to choose between migration and extermination.

"When this same Greece was sent to Asia Minor on a civilizing errand, as a mandatory of the Powers, we at once got rid of our dangerous illusions, and became keen realists. In addition, the advanced European nations taught us very soon that we need not be so anxious to advance rapidly in order to reach them, because they themselves were taking every care to fall back on our level of government.

"I do not think any one of us over here sees anything happy in the reaction in Western countries. But we can't help feeling grateful for the grave mistakes committed by the European statesmen. If these statesmen had made up their mind to help us sincerely, they would not have succeeded, because we were too much worn out as a result of successive wars, had lost too much of self-confidence, had become too disunited. As blind enemies,

too proud to examine facts, too obstinate to go back on a wrong decision, the European politicians prepared, step by step, our resurrection and our unity.

"I hope that, in face of all these accumulated experiences, it will at last be realized that a militaristic and imperialistic policy in the Near East does not pay at the present cost of things. The real objective of this policy can only be economic interests. Well, these interests can be best assured by a loyal policy of the open door. Trying to do business with the help of costly armies reminds me too much of a 'Nasriddin Hodja' story. Turkish people are used to giving to their accumulated experiences of daily life the form of funny stories, of which a man named 'Nasriddin Hodja,' who is believed to have lived four centuries ago, is invariably the hero. This Nasriddin Hodja used to buy five eggs for one 'para,' and sell ten for the same price. His wife became alarmed at this way of doing business, and asked him what this crazy thing meant. He gave this answer: 'Oh, it is quite all right; I only want my friends to see that I am doing active business.' The imperialistic policies of the recent variety look too much like Nasriddin Hodja's conception of doing active business."

MR. LLOYD GEORGE'S TEN-YEAR PEACE

PEACE FOR TEN YEARS is promised in Europe by Mr. Lloyd George's proposed compact of guaranty, we are told, which is to be signed by the thirty-four nations at Genoa, who will thereby agree to refrain from aggressive action during that period. No penalties for infraction of the agreement are provided, say Genoa dispatches, for the present treaty, like those of Washington, would be "based on international morality." The plan is hailed as an advance step toward the disarmament discussion by the Assembly of the League of Nations which is dated for September at Geneva. Of course, the press remind us, members of the League are now bound by its covenant, but Germany and Russia are not members. Russia is said to be willing to sign the promise of no aggression, if it is signed by her neighbors, and the Germans are reported to have no objections to sign. One of the difficulties noted by some British correspondents is that the French wish the compact to be drawn so that it will not prevent military action to enforce the Treaty of Versailles, in case of necessity. Another reported difficulty is the presence of the Japanese in Siberia, which is objectionable to the Russians. Commenting on the Lloyd George proposal, the *Paris Journal des Débats* remarks:

"One discerns in this proposal an indirect method of posing the question of disarmament. Whether this purpose be implied or not, it will be easy for the delegates of France and of Central Europe to protect their rights from attack. We have no interest in opposing a proposition that flatters the world's opinion, if it does not involve harm to us: We must not forget that the real aim of our adversaries during the conference is to put the blame on us for any failures it may suffer and then to denounce us as the scourge of the universe. As long as we know that we have adversaries it is the business of our delegates to unmask them and fix their responsibility in the world's disorder, and they must not hesitate to ask questions and demand explanations."

This important Paris daily goes on to relate that Soviet Russia is now occupying the Republic of Georgia by force, and Georgia is an "independent state recognized in fact and by right." Therefore the Russians are guilty of an act of aggression against the will of the people of Georgia. As a climax to Soviet "impudence," we read that the Russians have recently held an assembly election at Tiflis, under bayonets, in which of the 351 members elected to this body 99 are taken from the Soviet troops of occupation. The assembly elected in this fashion, we read further, has voted in favor of keeping the Russians in Georgia and of proclaiming them as the "adopted sons" of the workers and peasants of that country. In this manner, says this Paris newspaper, "do the Soviet Russians express their understanding of peace and the independence of nations" and "it offers Genoa a fair occasion to put them to shame."

In the semi-official *Paris Temps* it is stated that persons ill-

disposed to France have raised the cry at Genoa that France is "an enemy of Russia," but "the truth is that the French are not fighting against Russia, but for her." This journal adds:

"We know perfectly well who the enemies of Russia are. They are, first of all, her present masters. Next come the accomplices of these masters, who may be divided into two sets. On one side we have the German militarists and politicians who wish to make Russia an instrument of their revenge; and on the other the profiteers of every possible stripe who are hungry to fling themselves into the country in order that, as they say, they may put it on its feet. But in reality they mean to pillage it. Our aim is to see Russian liberty and prosperity properly guaranteed, and as this is the only proper aim it should triumph."

Le Temps then advises us of some new facts about the Red Army, which were given out by Mr. Rakovsky, formerly a Bulgarian agitator in Roumania, who was a German agent during the war, and at present one of the principal Russian delegates at Genoa. According to Mr. Rakovsky's statement before the Conference the Red Army consists of about 1,450,000 men, which this daily says is about the same figure given by Trotzky last December before the Soviet Congress. Trotzky stated that the effectives number 1,370,000, plus 225,000 men for the navy and the military schools. Now, exclaims this semi-official Paris organ, it must be remembered that these figures are official and therefore undoubtedly do not fall below the exact tally. With Soviet Russia having one million and a half soldiers under arms, "how is it possible to talk about disarmament in Europe?" We read then:

"It is said that Moscow offers to reduce this army. But what value can such an offer carry as long as the acts and facts of Soviet Government exceed not only all international authority but all authority of the Russian people, who have neither liberty of the press, nor right of assembly, nor even the opportunity to elect freely a constituent assembly? In his speech of April 3 Mr. Lloyd George truthfully observed that we do not know what is going on in Russia: 'You can not tell what is happening in Russia,' explained the British Prime Minister. He even added: 'It is an impenetrable jungle.' How can we believe the word of the masters of this jungle when they say will disarm?"

BELGIAN WARINESS OF GENOA—Adventures in Russia do not greatly appeal to the Belgian mind, we learn from the Brussels press, in which we read that the gains to be expected for Europe by renewed business intercourse with Russia must be considered in the connection with certain risks inevitably to follow. *La Nation Belge* believes that Russian reconstruction is a fine idea and it is as strong for it as the next man, but "if reconstructing the Soviets, under pretext of reconstructing Russia, stops the break-up of Bolshevism that is going on in Russia, the proposal is one that we find difficult to support, even out of love for Mr. Lloyd George." Referring to an article in one of Mr. Lloyd George's supporting journals, the *London Daily Chronicle*, the *Indépendance Belge* points out that Mr. Lloyd George's program apparently includes certain subjects that had been supposed tabu at Genoa. Among these this Brussels newspaper mentions disarmament, reparations and recognition of the Soviet Government. Such inclinations of the British Premier are by no means new, it observes, and may, perhaps, be wholly satisfactory to him because they tend to keep him in power in England. But this daily declares that they present "an unmistakable peril to Belgian and French interests as affected by Germany"; and the consequence is that instead of hastening practical plans which would involve the economic restoration of Europe, Mr. Lloyd George's ideas promise delay and in fact complete frustration of such recovery. To be noted further in the Belgian press are strong suggestions toward Franco-Belgian cooperation and various newspapers urge that the delegates of the two countries should form a solid bloc, so that by no turn of events may the execution of the rightful terms of reparation be compromised.

IF GERMANY HAD RUSSIA'S ARMY

GERMAN. MILITARISM BY ITSELF was menace enough to the world, but joined in the "unholy bonds of alliance" with Soviet Russia, say adverse critics of the German-Russian agreement, it becomes a cloud on the horizon sufficiently ominous to justify the jeremiads of the most panicstricken Frenchmen. For the Bolshevik Red Army, which has been described alternately as "an undisciplined horde lacking equipment and arms" and "an invincible force ready at any moment to inundate Western Europe" may be safely described, they say, as a military arm that deserves at least careful appraisal. For authoritative advices about the actual condition of Russia's Red Army we have the testimony of General A. Noskoff, formerly of the Russian General Staff under the late Czar. Writing in *Smyena Vekh*, a Russian language weekly published in Paris by former supporters of Admiral Kolchak, this General says:

"The mass of the rank and file of the Red Army consists of the peasant soldiers who, under the banners of the Empire marched the length and breadth of Europe. . . . They are the same soldiers who through centuries have sacrificed themselves without complaint, paying with their lives for the ignorance and the intrigues of their great and small commanders. In a word, it is the flesh and blood of the Russian people, who are deservedly esteemed by Peter the Great as 'the most obedient in the world.' But it would be false to assert that the mass of the Red Army is the same blindly obedient human material in the hands of its chiefs and the new government as was the mass of the old Russian Army under its commanding officers. The revolution has perhaps not so much roused their self-consciousness as it has lifted them from the naive simplicity of children."

Yet it would be a mistake to think that the great enlightenment of mind of the new Russian Army results in a dis-

A FALSE FRONT.

—The Passing Show (London).

—La Liberté (Paris).

persal of its force as a unit, says the writer, because four years' training under a definite authority that knows what it wants and gets it, has made due impress for discipline and coordinated strength. Besides, he tells us, the aim of the new government in Russia is to exact "not blind but conscious obedience to orders," and "for this purpose it has a powerful weapon, unknown to our ancestors, the weapon of extensive propaganda." When ably used, propaganda obtains in a few years results that under the old order took centuries to secure, and the writer believes

that "the excellence of the Soviet Government's propaganda played a large part in the victories of the Red Army over its adversaries." As to the official personnel, this writer informs us that the commander-in-chief is General Kameneff, a veteran army officer, and we read:

"The majority of the higher posts in the army, as is known, are filled by people who are not nearly so well qualified as General Kameneff. We know, for instance, that the cavalry is commanded by the former non-commissioned officer Budenny; the Army on the western frontier by the former infantry lieutenant, Tukhaevsky; the southern Army by a novice in military matters, one Frunze, etc. However, the experience of the wars prosecuted by the Soviet Republic has shown these self-made Army leaders competent to master their tasks. The long 'practise' of war, first the world war and then the civil war, has served as a good school for these military talents. Like many of Napoleon's generals, the Soviet Army chiefs came from the soldiery and the people. The excellent knowledge of their native element, a mind not clouded by metaphysics, power of will born of and nourished by a clear political idea have successfully made up for the lack of special military education. . . .

"It may be assumed that their technical efficiency is not below that of the probable adversaries of the Red Army; but it does not matter whether it is a trifle lower or higher. The significance and value of a popular commanding personnel lies in its organic connection with both the Government and the masses of which neither Russia's neighbors nor the 'White' forces can boast."

RUSSIA'S REAL ENVOY AT GENOA.

—Cri de Paris (Paris).

SCIENCE - AND - INVENTION

FOOD VALUE OF SOFT DRINKS

SOFT DRINKS POSSESS FOOD value largely on account of the sugar and the fruit juices that they contain. A soft drink may be made with chemical flavoring and sweetening and no food value whatever. It may still, of course, have an agreeable taste and be a thirst-quencher. In an article written for the *Monthly Bulletin* of the California State Board of Health, M. E. Jaffa, consulting nutrition expert of the board, divides soft drinks into four classes on this basis and discusses each at some length. Our quotations are from a reprint in *The Forecast* (New York). Mr. Jaffa quotes as a good definition of food, "that which, when taken into the body, either builds tissue or yields energy." If soft drinks meet either of these requirements, he says, they should be classed as food and would be more or less valuable nutritionally. He continues:

"Bottled drinks may be conveniently divided into four main classes:

"(1) Drinks compounded from artificial flavors, artificial coloring matter and artificially sweetened. (2) Drinks compounded from artificial flavors, artificial coloring matter and sweetened with sucrose. (3) Drinks compounded from fruit juices or syrup with or without the addition of sucrose. (4) Drinks compounded from syrups containing stimulants such as caffeine.

"We know to-day that all proteins have not the same biologic value—that cereal proteins are inadequate for the best growth and development. Milk fat and egg-yolk fat stand out very prominently as sources of vitamin in addition to their high caloric value. Again, we have been conclusively shown that in order that the diet may be adequately supplied with mineral matter it must be varied and contain a generous amount of fruit and vegetables. The latter also serve as most excellent sources of the water-soluble vitamins.

"Class 1, or artificial drinks, is rarely, we are glad to say, met with to-day. A few years ago, drinks sweetened with saccharin were common. The prohibition of the use of saccharin as an artificial sweetener has proved beneficial in every way in safeguarding the food of the consumer. This is well emphasized by the following statement from food inspection decision No. 142:

"The substitution of saccharin for sugar lowers the quality of the food. The only use of saccharin in foods is as a sweetener, and when it is so used, it inevitably displaces the sugar of an equivalent sweetening power. Sugar has a food value and saccharin has none.

"In making this decision we are not unmindful of the fact that persons suffering from certain diseases may be directed by their physicians to abstain from the use of sugar. In cases of this kind, saccharin is often prescribed as a substitute sweetening agent. This decision will not in any manner interfere with such a use of saccharin."

"Class 2 comprises drinks containing artificial color and flavor but sweetened with sucrose. An examination of a large number of the bottled soft drinks indicates that the average amount of sugar per drink is about two rounded teaspoonfuls. The minimum number of calories recorded for any drink was 46 with a maximum of 103 and an average of 70.

"This average of 70 calories compares very favorably with the corresponding figures for the average helping of many fruits and vegetables, while the maximum of 103 equals the caloric value of a slice of bread, an average helping of edible nuts, crab, oysters, codfish, etc. It must not be forgotten in making such comparisons that the caloric value in a bottled soft drink is due as stated almost entirely to sugar, while in nuts, fish, etc., no inconsiderable part of the caloric value is derived from protein. Furthermore, the average caloric value of soft drinks is less than that noted for the sugar and cream added to a cup of coffee or tea.

"It will be observed that in addition to the sugar, the drink often contains acids, chiefly citric, which have a certain therapeutic and hygienic value, but can not be considered as being of any value nutritionally.

"Class 3, drinks compounded from the fruit juices or syrup with or without the addition of sucrose.

"Fruits have long been recognized as being very valuable ingredients of the diet. The mineral matter contained therein is basic and very necessary to offset the acid character of the minerals found in meat, cereals and eggs. Too much stress can not be laid on the importance of including in the menu, therefore, a generous amount of fruits and vegetables if for no other reason than to be sure that there shall be a proper balance of the mineral matter so that the alkalinity of the blood shall not be interfered with. During the last few years, however, still further nutritional studies have indicated that the fruit juices contain an appreciable quantity of water-soluble vitamins.

"As an illustration of the foregoing it may be said that a carbonated drink containing one and a quarter ounces of condensed, pure grape syrup will equal in nutritive value about one-half glass of plain or normal grape juice, yielding 100 calories, but in addition to the calories would also furnish vitamins and valuable mineral matter, which are not present in beverages prepared from sugar syrup as a basis.

"While it is true that the grape is probably one of the richest fruits in iron a bottle of carbonated grape juice would, at best, contain one-tenth the amount of iron that a man should receive in his daily food. Reference is made to this matter because there are advertisements stating, in effect, that certain grape products will furnish the necessary amount of iron daily required by man."

The above is typical, we are told, not only of the grape, but of many other fruit juices and condensed fruit syrups, such as the loganberry, raspberry, etc. It must be understood, however, that what has been said applies to fruit juices, as such, or condensed, and not to fruit extracts. Again, a glass of lemonade from lemon juice is, comparatively speaking, rich in antiscorbutic vitamins and minerals, while the artificial beverage is devoid of these two dietary essentials. We read further:

"Class 4, drinks compounded from syrups containing stimulants such as caffeine. The introduction of this form of drink has been so favorably received that to-day there are upwards of fifty-seven varieties.

"Many were under the impression that this class of beverages contained cocaine. Such is not the case, however, because, as Dr. Wiley tells us:

"The laws controlling the traffic in cocaine and its sales have become so strict that the use of this body in so-called soft drinks is practically prohibited. The only alkaloid which is employed at the present time in the preparation of these beverages is caffeine.

"The caffeine which is used commercially is extracted chiefly from tea sweepings, altho it may be obtained from coffee. It is a white, crystalline powder, colorless when pure, and at high temperature is sublimed unchanged."

"A cup of tea, as ordinarily made, contains about one grain of caffeine, the corresponding figure for coffee is 1.7 grains. The average amount of caffeine found by the Kentucky Station as the result of the examination of 25 samples of caffeine-bearing beverages was eight-tenths grain with a minimum of four-tenths and a maximum of one and a quarter grains per bottle of six and one-half ounces.

"With reference to the stimulants, other than caffeine, such as capsicum, cay, etc., which are found in small quantities in different soft drinks, it should be stated that their value should not be ignored. At the same time they can not be classed as foods.

"The large majority of the bottled soft drinks are colored artificially; the exception being ginger ale, sarsaparilla, root beers, carbonated grape juice, etc. The colors which are used are those permitted by the Bureau of Chemistry, U. S. D. A., for the artificial coloring of foods. They have, however, absolutely no food value and have no injurious effects on the system. They are added for the purpose of pleasing the eye.

"The artificial flavoring ingredients very largely added to soft drinks are present in extremely small amounts and have no

nutritional value. It is very encouraging to note, as indicated by the investigations of the Bureau of Chemistry, that there is an increasing demand for the natural or true flavors, evidenced by the larger use of fruits in the preparation of soft drinks. This type of flavor has also practically no nutritional value other than that which is contained in the alcohol carrying the flavor, etc. It must not be forgotten that there is a great difference between a fruit juice carrying the flavor and an extract containing the flavor of the fruit juice. In the former case we have all the nutritive value of the fruit, whereas in the latter case we have merely an alcoholic extract carrying only the flavor."

OPEN-AIR COLLEGE DORMITORIES

ALL students at the University of Arizona, Tucson, sleep in the open air, on sleeping-porches. This is obligatory on all those who live on the college grounds, and it has been found advantageous from all points of view, we are told by A. O. Neal, Registrar of the University, in an article contributed to *The Nation's Health* (Chicago.) This Arizona university, Mr. Neal tells us, is unique in many ways. In percentage of growth in the past six years it has exceeded all institutions of higher education, except four. The housing of the increasing number of students is a vital problem, and its solution has been the plan in which all students sleep on open-air porches. We read:

"The dormitories have all the usual provisions of the college halls. There are reading-rooms, social rooms, and congenial quarters for guests. All dormitories have showers and toilets on each floor, and all rooms are heated by steam from a central heating plant.

"Each women's hall is in charge of a competent head who has supervision of the work, health and social proprieties of the members of the group.

"In each men's dormitory there is a suite for the head resident, who is a member of the faculty. The plan followed is to have a man and wife, and in this way a home atmosphere is maintained.

"While these provisions are usual in many institutions, accommodations for sleeping are unusual if not unique—all students sleep on open porches. This applies to women students as well as to men students. Students are *required* to sleep outside their study rooms and, if unable to adjust themselves to the condition, must secure living quarters off the campus or in the infirmary.

"In addition to these dormitories operated by the University, there are six fraternity houses and six sorority houses with similar outdoor sleeping arrangements.

"The climatic conditions at Tucson during the school term made it very easy to follow the advice of those who recommended outdoor sleeping-quarters. The climate is mild, dry, and equable. The rainfall during the winter is very light, fogs are unknown, and cloudy days rare. The percentage of sunshine throughout the winter months is greater than that recorded at any other place in the United States. The total amount of rainfall for the year averages less than twelve inches, the greater part of which comes in July, August and September. These advantages insure a wide range of outdoor recreation throughout the college year. The nights are clear and the night temperature will average thirty degrees less than the maximum daily temperature.

"The first dormitory—North Hall, built in 1898—was provided with sleeping-porches up-stairs and down. Each of these porches

was fitted with fifteen single beds. The porches are reached by passing through long corridors from the rooms to the porch. The exposure of these porches is to the north and east. Rolling canvas curtains were provided for protection in case of driving rains. For twenty-three years the plan has proved satisfactory.

"East College, built in 1896, provided sleeping-quarters for sixteen girls. Here the sleeping-porches were at the rear of the house and provided with double-decked beds. This arrangement was unsatisfactory and has been discontinued.

"When South Hall was built in 1900 it provided no open-air sleeping-quarters. As the number of students increased, it became necessary to provide additional sleeping-quarters, and beds were placed entirely outside the building. This practise led to the provision of two large wings on the second floor. These were open on three sides and provided space for thirty-five single beds on each of the two screened porches. This lends itself to confusion or disturbance through the movements of so many occupants.

"In Arizona Hall, built in 1912, a different plan is provided.

Here the building is built on the 'U' plan with all rooms outside rooms with a screened porch around the central court. Each room opens upon this porch, which serves as corridor and sleeping-porch. Single beds just outside the door of each room provide sleeping-quarters for the occupants of the room and make it unnecessary for them to pass through long corridors or stairways going from room to bed, or *vice versa*. This plan is satisfactory and has many desirable features.

"Maricopa Hall, a dormitory for women, was completed in 1920. It has three floors accommodating thirty-five girls each. The rooms accommodate two girls each and are all outside rooms. On each floor there are three sleeping-porches, so that the number of beds on

each porch is limited. The passageways from rooms to sleeping-porches are heated so that in extreme weather there is no exposure.

"The porches are screened and curtains provided, which are used only in case of driving rain or wind-storm.

"Cochise Hall, just completed, is regarded as the last word in dormitory arrangement. In this building, which provides quarters for 110 men, study rooms are provided to accommodate two students each. These rooms are in suites of three—two study rooms and a sleeping-porch situated between the two rooms.

"The sleeping-porch is provided with four single beds and this provides the outdoor sleeping-porch. This has the advantage of having a sleeping-porch directly connected with the rooms, and the number of occupants is limited to four. This minimizes opportunities for disturbance as well as providing greater privacy, and is much more satisfactory.

"The experience of twenty years has led the administration of the University of Arizona to the belief that this plan is thoroughly satisfactory. It affords rest and sleep in the open, the benefits of which are shown in the vitality and work of the students.

"It is not unusual for students to make extraordinary gains in weight and endurance in remarkably short time and this is in part attributed to the dormitory plan. Few students are willing to return to indoor sleeping-rooms after having had a semester's experience sleeping in the open air.

"There are some features of the plan which are readily adaptable to localities where the climate is not so favorable as in Arizona.

"The plan of Maricopa Hall or of Cochise Hall is readily adapted to other situations and could be used in any climate where the plan of outdoor sleeping is endorsed."

COTTON THAT GROWS ON TREES

"TURNIPS should never be pulled," wrote Mark Twain, according to his own story, when he edited a farm paper. "A boy," he went on, "should always be sent up to shake the tree." Had he made a similar remark about cotton, it would doubtless have been greeted with equal

SILKY FLOSS OF THE KAPOK.

merriment; and yet the Javanese gather cotton from trees with poles. Kapok, usually known as silk floss cotton or silk cotton, is obtained from the fruit of a tree found in the Dutch East Indies, the Straits Settlements, Ecuador, Brazil and India. Under the microscope this floss shows a very delicate construction, consisting chiefly of fiber shaped like miniature pipes, and hollow; thus the substance is filled throughout with air which imparts to it a buoyancy which renders it particularly adaptable to manufacturing purposes. Says A. Villagrains, writing in *The Grace Log* (New York):

"The bulk of the world's supply of kapok at present is imported from Java. The production of India, Brazil, Ecuador and the Straits Settlements combined is comparatively negligible. Furthermore, the varieties coming from these latter countries are not as well standardized as those coming from Java and are therefore not in as great demand in this market, which is exacting in its quality requirements. Indian kapok, for instance, besides being heavy and musty, is not always completely cleaned and freed from seeds and other foreign matter, and has neither the elasticity nor the resiliency of Java kapok. On the other hand, the Ecuadorean and Brazilian varieties are coming to the fore as trade prospects, due to earnest efforts on the part of planters to standardize the article in accordance with export needs. The likelihood is that in the future kapok-growing will become a highly specialized industry in these Latin-American countries.

"The major part of the land in Java devoted to kapok culture is native owned, altho there are a number of estates under European management. The tree is found everywhere, even along the roads, and on the estates the plant is grown in conjunction with the coffee and cocoa plants.

"Kapok harvesting in Java is picturesque in the extreme. The natives sally forth with great poles of bamboo with which they bring down the long pods in much the same manner as apples might be struck from a tree, if that careless method of gathering fruit were still in vogue with us. Agile Javanese climb aloft into the branches with the grace and suppleness of trained acrobats. The tedious task of opening the pods and extracting the fibrous contents is left to the women and children. Floors, usually of cement, offer a bed for laying out the yellow, silky mass. To guard the downlike substance against being carried away by the wind, wire netting is put over it; under the rays of the tropical sun the moisture natural to all plant life is dried out. The fibrous substance, of remarkable elasticity as well as lightness, is placed in bags for shipment. Care must be used in putting it into containers, for if too tightly packed the delicate

membrane may be crushed and thereby robbed of its delicate properties.

"Exporters state that the United States requires first quality only, while medium grades go to Europe, and the lowest to Australia. The statistics for 1920 show the following kapok shipments from Java:

Into United States.....	5,545 tons
Into Australia.....	3,415 tons
Into Holland and the rest of Europe.....	2,528 tons

"Before the war most of the production was shipped to Amsterdam, but since 1915, due to scarcity of freight and poor market conditions in Europe, most of the trade has gravitated to America, San Francisco and New York becoming the largest importing and distributing centers.

"As time passes it would seem as if the article were entering into an increasingly larger sphere of usefulness. During the war each doughboy who braved the dangerous submarine wore around his waist a life-preserver made of kapok, and ever and again there comes the rumor out of Germany that at last science has found a way to spin silk from this delicate Asian fiber."

HOW FAST THE FISH SWIM—The speed of various birds and the distance that they are able to cover in a single flight or in a day, are often discussed, and many observations have been made, but the habits of fishes in this respect have been much less observed. Most persons will be astonished to learn that fish are not much behind birds in their rate of motion. Says *Die Umschau* (Berlin) in substance:

"An English observer came to the conclusion after certain experiments that trout travel through fresh water at the rate of about 28 miles per hour, even in the case of a small fish. In the course of a trip by water in Florida, the same observer noticed a school of porpoises traveling in wedge formation ahead of the ship. Suddenly as if by a preconcerted signal, they divided into

YARN AND WEB OF KAPOK.

two troops which turned and swam around the ship and back to their position ahead of it. This maneuver was repeated a number of times, and since the boat was traveling at the rate of 15 knots, all those who witnessed the phenomenon concluded that the rate at which the porpoises were traveling was not less than 50 miles per hour—in other words, they were going three times as fast as the ship."

HOW HOT CAN WE LIVE?

THIS QUESTION does not mean, "In how hot a place can we survive?" because the skin automatically moistens itself in a hot environment and the body cools off by evaporation. Thus we may live with some degree of comfort

Illustrations by courtesy of "The Illustrated World," Chicago.

HOUSE-GOWN AND LAP-ROBE LINED WITH KAPOK.

in air of a temperature which, if communicated to the body, would cause death. But how high may the bodily temperature rise while there is still life in the organism? Above 98° there is fever and hence departure from normal health. A temperature of 103° indicates a "high" fever. During the recent influenza epidemic a statement was circulated in the daily press that a temperature of 114° had been recorded in the case of a servant girl, who recovered without any lasting damage. Commenting on this, an editorial writer in *The Lancet* (London), in an article on "The Limits of Body Temperature," writes:

"In appraising such reports of extremely high temperatures, which recur from time to time, several factors need to be taken into account. Many of our readers will have met with malingerers who have placed the thermometer on the radiator, in hot water, or inside a hot poultice, or who have compressed the bulb with the teeth, so as to force up the mercury. Faulty thermometers must also be allowed for; it is possible so to shake a thermometer as to break the mercury thread above the trap, thus leaving a space, with the result that the top of the meniscus records a temperature far above the true one. Definitely erroneous thermometers are also insufficiently rare. Apart from all such possibilities, what is the highest real temperature compatible with life? An exact figure certainly can not be given, not only because of individual differences, but because a temperature that would be supportable to some tissues would kill others. And it should also be borne in mind that while the body tempera-

ture of all warm-blooded animals approaches with singular constancy a norm of about 100° F., the smaller birds and mammals in general have a slightly higher normal temperature than the larger species. The normal temperature of a swallow is about 104° F. But there is little doubt that for man the temperature of the body can not well rise above 115° F., for even a short time, and 111° F. may be placed as the highest temperature compatible with life. At this temperature some permanent injury is certain, because the nerve cells are definitely changed by heat coagulation at about 110° F. Accounts of temperatures above 115° F. certainly can not be accepted; perhaps immediately after drinking hot liquids the local temperature in the mouth may be as high as, or higher than, this, but these are not real body temperatures. The heart, for one thing, probably fails at about 108°-109° F."

INFLUENZA WITH A DIFFERENCE—The influenza of the past few months has been a different thing from that of the 1918-19 invasion, says the writer of an article in *The Statistical Bulletin* of the Metropolitan Life Insurance Company (New York). So far as present indications show, the age distribution of fatal cases has been conspicuously unlike that of the earlier epidemic. We read:

"In the world pandemic of 1918, the deaths were largely concentrated between the ages of 20 and 40. In the last few months the deaths have been concentrated in early life and more particularly in old age. About one-half of the deaths were those of persons over 45 years of age. In this respect they were distributed very much as pneumonia deaths generally were before the epidemic period set in. This fact is an additional indication that what has transpired during the last few months has not been a recrudescence of the serious influenza epidemic of three years ago, but is something very similar to what happens every winter with the increase in influenza cases and of primary pneumonias. If the number of cases and deaths for this year has been higher than last year it is chiefly because that for last year was exceptionally low. In fact, the rate for respiratory disease this February can not be considered a high figure according to the standards of a few years ago. These conclusions are reached by a study of the death claims presented during four recent weeks in the cases of 1,752 decedents whose deaths were reported as due either to influenza or pneumonia. The deaths studied occurred over a wide area; in fact, almost every State and Canadian province is represented. Nevertheless, there has been a distinct concentration in the northeastern section of the

THE CARDING MACHINE.

country—more particularly along the Atlantic seaboard. Almost one-half of these 1,752 deaths of Metropolitan Industrial policyholders occurred in the States of New York, New Jersey, Pennsylvania and Massachusetts. This would indicate either that the disease was much more wide-spread in these northeastern states or that it was present in a more fatal form."

"UNDERWEIGHT" A DELUSION

IS THERE BUT ONE NORMAL, healthy standard weight corresponding to every height, so that he who exceeds it is "overweight" and he who falls below it, "underweight"? That this idea is a dangerous fallacy is contended by Charles K. Taylor, of the Carteret Academy at South Orange, N. J., writing in *The Outlook* (New York) on "The Great Underweight Delusion." According to Mr. Taylor, a "stocky"

Courtesy of "The Outlook."

EIGHTEEN POUNDS DIFFERENCE.

Yet not necessarily "underweight" or "overweight." These three lads, of approximately the same height, represent three normal types, so to speak—slender, medium and heavy. There being about eighteen pounds between the types. Ordinarily the slender boy would be put down as "underweight" and, no doubt, be subjected to various dieting programs. The fact is that he is very strong and wiry for his type of build. Again, the heavy boy is not overweight. He hasn't an ounce of fat, and is unusually muscular for his age. He is well developed for his own type of build.

boy, or a slender one, may be just as normal and healthy as one who has the "standard" proportions of the Apollo Belvidere. They are of different types, that is all. Some people are doubtless too fat and others too thin, but that fact is to be ascertained, not solely by comparing weight with height, but by a system of measurements taking both these figures into account. Mr. Taylor has worked for years to construct a system of tables for this purpose, and thinks he has now a satisfactory method of applying his ideas in practise. He writes:

"Children are frequently slender because it happens to be a hereditary type just as it is hereditary for some to be stockier and heavier than the average. Some races are typically slender, with weight below the general average of humans.

"The very essence of our delusion is the claim that there is only one normal and healthy type of build—the 'average'—and if children (not to mention adults) happen to be more slender than this highly worshipful average, then, obviously, *obviously!* something is wrong with them. They are *underweight!* A frightful term that sends whole communities into providing fattening diets for perfectly healthy children and doing everything

that uncanny genius will suggest to make a lot of normal children morbid over matters they do not need to worry about.

"It might be interesting for some one to analyze the Worship of the Average. I don't know what we would do without it! Why, our whole educational system is based upon it! The *average* child! And that is why, tho the duller-than-average child is perhaps prodded up a little, children brighter than average are caught fast in the machine, so that educationally they are rarely able to come anywhere near their capacities.

"So when we insist that children should at least come up to an average in weight we are doing only what we also do in the classroom, with this difference, however: When a child's weight is over-average, then we are likely to smile with approval; but when a child is mentally over-average, well, we just let that child remain in the grip of the machine that keeps achievement down to the average scale of things.

"Our stand is simply this—that it is just as normal and healthy for some children to be more slender than the average and for others to be stocky or thick-set, as for still others to approximate the average, that it is a matter of inherited type of build, and all we need to do is to see that a child is properly developed for his or her normal type of build.

"When a child is in good physical condition, and particularly when that child's muscles are not flabby, but firm and efficient, then we may be sure that the child's weight is correct, *no matter what it is.* And our work, then, is merely to see that a child has a physical development corresponding to his or her type of build.

"It will take a very serious mental upheaval to bring many of us to see that the question is health and development, and not one of weight, but we are coming to it little by little. And once this is accepted, then another question will come promptly into being. Here is this one: 'How are you going to know when a child is well developed?' Nor is this going to be difficult to answer."

Mr. Taylor's plan is to prepare, from an actual study of healthy children of various heights and weights, tables on what he calls "a height-weight basis." Instead of requiring one particular weight for a given height, these tables give bodily measurements corresponding with various weights, running from the slender type to the "stocky" and the "thick-set." By comparison with these it is easy to see whether the boy is normally developed for his particular height and weight. He adds:

"Our standpoint is based on an intensive study of some thousands of children over quite a number of years. If a child is healthy, and is not one of those typically 'fat' children, then the child's weight is correct, no matter what it is."

SHOOTING OUT FIRES WITH A PISTOL—For certain kinds of fires what are known as "dry extinguishers" are preferable to water. They operate, of course, by liberating some gas, such as carbon dioxid, which prevents combustion. These extinguishers, however, require considerable strength to manipulate. This disadvantage is absent in a new device which is attracting attention in Germany. It is a "pistol" which is light enough and simple enough in construction to be readily handled by a woman or even by a child. When the trigger is pulled the extinguishing powder (usually sodium carbonate) is projected against the blazing area and the flames are at once extinguished, provided the area is not unduly large, in which case the shots must be repeated. The powder is packed into air-tight cartridges provided with percussion caps, similar to those used by hunters. Experiments with this new apparatus have been highly successful. Even the dangerous fire caused by benzine is instantly put out if it has not spread to too great an extent. It is especially noteworthy that the pistol is effective against vertical as well as horizontal surfaces. Thus it can be used to extinguish burning curtains or draperies. Writing in *Die Umschau* (Berlin) a German engineer, Mr. S. Nelken, tells us that this pistol is likewise useful for checking automobile fires. At some automobile races which recently took place in Berlin it was observed that nearly all the cars were provided with this useful weapon.

RADIO • DEPARTMENT

FREAK RADIOPHONES

A MORE OR LESS apocryphal announcement from Paris assures us that the newest thing in street costumes includes a parasol equipped with a receiving radiophone. "A young Parisian inventor," we are told, "hopes to enable the damsel promenading the fashionable boulevards to enjoy the strains of the orchestral music sent out by the Eiffel Tower wireless, hear the latest scandal, and receive a report from her cook concerning the progress of the luncheon. The inventor placed the radio antennae in a parasol, so that when expecting a communication from home or desiring to hear a concert Madame has only to raise her dainty parasol and 'listen in.'"

The photograph that accompanies the announcement of this interesting program suggests to the sophisticated eye an outfit made up chiefly to meet the needs of the camera, but there is no reason why such an outfit should not work reasonably well, wires being adjusted about the parasol frame to make a crude sort of loop antenna. Nor need we go so far afield as Paris in order to see similar outfits in actual operation. The utility of the umbrella as an improvised antenna was discovered some time ago by the American boy; and there are any number of youngsters here who could give "pointers" to the "young Parisian inventor," if we are to assume that the parasol outfit represents his best achievement. There is, for example, Alfred G. Rinehart, the New Jersey lad, whose latest invention is a receiving radiophone to be worn as a finger-ring, and who uses an umbrella for

Science and Invention (New York), Mr. A. N. Mirzaoff describes the thirteen-year-old Plainfield boy's achievement.

"This youthful inventor has reduced his miniature set to the simplest possible form. All the apparatus, except for the head

"MAKES THE PARISIAN MODEL SEEM CUMBERSOME."

Kenneth Hinman, of New Jersey, and his simple outfit.

aerial and a grounded screwdriver to complete his antenna system. Then there is another Jersey lad, Kenneth R. Hinman, of Plainfield, who also makes receiving radiophones that make the Parisian model seem cumbersome by comparison. In

phones, is confined within the dimensions of a regular safety match-box. With it he is able to receive not only telegraph signals, but music, stories, sermons, and news items given out by the broadcasting stations twenty and thirty miles distant. Wrapt around the outer shell of the match-box is a coil of wire, which serves as a tuning coil. In the drawer of the box is a crystal detector of the cat-whisker variety; the drawer is provided with a spring finger which bears against the coil of wire; the insulation is scraped off along the path of the spring slider, which is moved in or out of the shell more or less. Inductance is thus introduced into the circuit, thus tuning the instrument for different wavelengths. No battery is necessary. The instrument is provided with spring clips which may be connected by lengths of wire to a brass bed or a fence wire.

"Almost since the days when he was 'knee-high to a grasshopper,' Master Hinman showed marked liking for and skill in producing things minute and mechanical. While little more than a baby in his kindergarten days, on his own initiative, he cut out of paper and pasted together without previous drawing, a velocipede, complete as to pedals, handle bars, and wheels, on a scale so small as to cause all who saw it to marvel; on another occasion he cut an automobile with steering wheel and headlights out of paper."

"As the years went by, to his interest in things minute and mechanical, he added an interest in things electrical. Among his early experiments was a microphone so connected by wire as to convey quite audibly at a distance, or up-stairs, the ticking of the dining-room clock. He was forever fussing around with bells and buzzers; once surreptitiously running a wire to the house next door, where there lived another small boy. He arranged with this boy to operate a home-made telegraph key which should cause a sounder on the window-sill in his own home to chirp, cricket fashion, much to the mystification of his elders not quite up to his scientific pranks."

There you have the typical American boy of inventive mind.

"LISTENING IN" AT A MILE-A-MINUTE: RADIO BY RAIL.

Hundreds like him are playing at the game of radio with the zeal of neophytes and the skill of trained artists. They are the Lee Deforests and Edwin H. Armstrongs of to-morrow; and the future of radio discovery is in their hands. That is why the thoughtful person must examine the freak radiophones with unfeigned interest, and regard their makers with admiration and respect.

RADIO EN ROUTE

IT APPEARS THAT RADIO is not merely to bring information into the home, but is to follow us abroad as well, making entertainment and up-to-minute news available for the voyager in the railway car, who hitherto has been obliged to admit that the world was getting on without him, at least between stations. Already report has come of the regular installation of telephone service, both sending and receiving, on certain trains in France and Germany. Now we learn that successful experiments have been made on several American railways, including the Rock Island, which now plans to install a regular service on the Rocky Mountain Limited. The Lackawanna was a pioneer in this movement, having made successful tests as long ago as 1914, which were given up, as a matter of course, during the war, and which were only resumed a few weeks ago. The *New York Globe* tells of the success of the new experiments on the Cornell Special of the Lackawanna, en route from Ithaca to New York:

"Several features of the experiment, as pointed out by David W. Richardson of Princeton University, who with G. D. Murray, Jr., carried out the tests, were that communication was attempted at all heights and over all kinds of terrain; that the 'pointing' of the aerial seemed to have a marked effect on audibility, and that woods and 'cuts' interfered with reception, whereas open country and bodies of water intensified it.

"In the way of an experiment, perhaps, the most

the location of a mountain immediately between the train and stations in a certain locality would cut out the signals entirely. This was evident very strongly when we lost 8 B U W while rounding a mountain, but then, again, could hear him when higher up on a plain. The best signal strength of all was when passing on a high embankment across a bare plain. This seemed even better than the proximity of a lake. Of course, all these observations are those from only two trips, but yet they seemed to hold true in nearly every case."

Perhaps the most unexpected observation was that on another occasion, when the train was inside the Bergen tunnel, which is 4,283 feet long and 90 feet under ground, one or two continuous wave stations and several ships were heard distinctly. The sounds, to be sure, were faint, and increased with a "bang" when the train emerged from the tunnel; yet the fact that the radio waves penetrated the earth sufficiently to reach the tunnel at all was sufficiently notable. Again it was observed that in a tunnel several hundred feet long, near Scranton, a message being received was hardly interfered with.

All in all, these experiences furnish valuable data as to the penetrative power of the radio waves. Also they give hints to the amateur about the placement of his aerial; confirming the belief that the location of choice is a flat open region, remote from high hills and considerable woodland. Where such a location is available, it is not necessary to install the aerial at a great height. The Lackawanna aerials, placed a few inches above the tops of

Copyrighted by the New York "Tribune."

IT HAPPENS IN THE BEST REGULATED FAMILIES.

—Briggs in the *New York Tribune*.

the cars, served an admirable purpose. It may be recalled, too, that when Mr. Godley made his famous demonstration in Scotland, by receiving the signals of American amateurs, he erected his aerial only twelve feet from the ground. These observations, however, apply to the receiving aerial only. It is generally believed that a transmitting aerial for long-distance work should be placed at a much greater elevation.

MESSAGES THROUGH EARTH AND WATER

IT AUGURS WELL for the immediate future of broadcasting as an educational method that Dr. Charles P. Steinmetz, the distinguished chief consulting engineer of the General Electric Company, should have been willing to take the radio public into his confidence with a popular talk about lightning. The newspapers have had a good deal to report about the remarkable experiments made by Dr. Steinmetz in his Schenectady laboratory, in which he has produced lightning flashes that are at least fair imitations of the original. Equal interest attaches to the pronouncement of the famous electrician as to the possibilities that radio waves or their equivalent may perhaps be sent through solid earth as readily as through the air. In the *Syracuse Herald*, Dr. Steinmetz is quoted to this effect:

"Radio messages that course through the earth and through water, as well as the air, are a well-founded possibility in the light of the recent and unusual performances of lower-power radio apparatus in transmitting messages to surprising distances.

"These possibilities are not difficult of belief. In fact, I believe that under certain conditions it will be easier for wireless waves to pass through the ground than through the air. Submarines already have sent radio messages successfully while submerged—a primary substantiation of the theory which looks to the conquering of another element in addition to ether.

"If radiations through the earth do take place, however, they will be wholly in accordance with accepted electrical laws. This is due to the circumstances that the sending antennae and the receiving set were both connected to the ground and that the earth, in such a case, would act as a return circuit for the current.

"It is difficult to look into the future of radio, for it is such a big thing. One thing is certain, however. Uninterrupted communication throughout the world is now a reality because of radio. There can hardly be a time when any place will be out of communication with the rest of the world. In case of a disaster, when ordinary communication is cut off, messages can still be sent out by radio. Expeditions in distant lands, where wires have never been stretched, can keep in constant communication with the world through the radio. Communication at sea, of course, holds great possibilities, too.

"It is not likely that the radio will ever replace the ordinary telephone. Radio messages can not be directed so that they will pass merely from one individual to another. Radio is too general. Others—not everybody, but some—could hear the message as well as the person for whom it was intended.

"However, toll messages might be transmitted by radio from city to city. A telephone subscriber might talk by wire with the central station in his own city and the message might then be put on the wireless and transmitted to another city and then delivered by wire telephone to the person concerned."

ON THE WATCH FOR MARAUDERS—The directors of the Cleveland Radio Association, as we learn from the *Plain Dealer*, have an interference recording set with which they intend to keep tabs on any one who tends to interfere with the broadcasting concerts. "Phonographic records of several instances of interference with Sunday evening concerts are in the hands of the officers of the club," we are told. And if necessary others will be taken and sent directly to S. W. Edwards, Radio Inspector of the Eighth District. "The concerts are put on for the benefit of radio fans; they cost nothing as far as the receiving stations are concerned, and every person with a receiving set has an equal chance of hearing good speakers, singers and musicians. Interference with the concerts is something the directors plan to overcome, and a close watch is being kept during the concerts."

RADIO EQUIPMENT FOR AIRPLANES

THE REMARKABLE DEVELOPMENT of radio that took place during the war was to a considerable extent due to the use of the new art in the airplane service. Notwithstanding this, radio has not been as fully used as might have been expected in the commercial airplanes of the more recent period. The death of several passengers on a crippled

Photo from Underwood & Underwood.

DR. STEINMETZ,

Chief consulting engineer of the General Electric Company, who says that "radio messages that course through the earth and through water, as well as the air, are a well-founded possibility."

seaplane not far off the Florida coast recently served to call attention to what seems an inexcusable neglect to safeguard airvoyagers. Meantime it appears that the same need is being recognized abroad, and, in England at any rate, has come up for official action. In *The Wireless Age* (New York), we read:

"Owing to the agitation by aeronautical experts for wireless to be fitted to aircraft, the British House of Parliament announces that regulations are to be issued making the carrying of wireless apparatus by British aircraft compulsory as soon as the International Convention on Aerial Navigation has been signed by the majority of the signatory states.

"This Convention provides for wireless apparatus being carried by aircraft used in public transport and capable of carrying ten or more persons.

"The Air Secretary also stated that all large airplanes at present employed on the subsidized cross channel service shall be equipped with wireless."

It has been found that the most effective antenna for an airplane involves the use of a wire, weighted at the end, that is let down from the body of the machine, and trails behind during flight, being of course drawn up before the plane approaches the earth or water. Such an aerial would obviously not be available after the plane has made a forced landing in water. But its place may be taken by a wire carried by a kite, of type recently devised for the purpose, that may be sent up from the disabled airplane. There can be little question that had the seaplane that was disabled off the Florida coast been thus equipped, a tragedy that cost the lives of four tourists might have been averted.

LETTERS - AND - ART

LITERATURE DRAMA MUSIC FINE-ARTS EDUCATION CULTURE

OUR RED "PRIMITIVES" IN ART

"INDIAN ART! They ain't no sich animile." And so we dismiss the thought that our aborigines were or are capable of what we call "artistic expression." Some there are, doubtless, who will repel this imputation by Mr. E. H. Cahill, tho admitting that we have not bothered ourselves much about "the higher elements of the Indian civilization, its philosophy, its poetry and its art." The present year's exhibition of the Independent Artists has proven that an aptitude for artistic expression is possest by the Pueblo Indians of New Mexico. Their talent has been especially fostered by Dr. Edgar Lee Hewett of the Santa Fé Museum, who for many years has worked to preserve what remains of the Pueblo civilization of the Southwest, "and to encourage the Indians in new creative and

The works of these Indian artists, it is asserted, "mark the birth of a new art in America, the expression by the Pueblo Indian of his amazingly rich ceremonial life in the art medium of the white man." The field open to them is almost limitless, for—

"The number and remarkable character of the ceremonial observances of the Pueblos has captured the imagination of all those whose good fortune it has been to know this wonderful Indian people. No month passes among them without several ceremonial 'dances,' and every able-bodied Indian takes part in some performance during the year. Walter Hough says that these people have 'the best round of theatrical entertainments enjoyed by any people in the world, for nearly every ceremony has its diverting side, for religion and the drama are here united

as in primitive times.' And he adds that this ceremonial life, 'in the opinion of enlightened men, should have a record before the march of civilization treads it in the dust.'

"This record, in the finest possible way, is being made by the young Indian artists whom Dr. Hewett is encouraging. Their pictures record the emotional quality, the very feel and color and movement of the astounding Pueblo ceremonies. But more than that, these water-colors are works of art in themselves, valid for all time, even if they were records only of the creative imagination of the artist who conceived them. In them one feels the solemnity of great quiet places, the delicate embroidery of clouds against the endless heights of the desert air, the Sun-Father gleaming upon the yellow sands, and the mesa rising suddenly out of the arid expanse, much the same as the figures in these drawings materializing in all their rich and vibrant life out of the sheer blank whiteness of space.

"In the 'Hopi Mask Dance' Fred Kabotie has achieved a fine rhythmic balance of figures. In

the bending of the forms in columns there is a sort of mass modeling that is very beautiful. Here is rhythm and action and a vivid sense of life, not too realistically rendered. Kabotie has a feeling for bulk very near—one might almost say perilously near—to that of his white brother, but he knows how to keep it in check. The 'Fructification Ceremony' has sensitive earnestness in the execution of the rows of strange masked figures bending and projecting toward us on the right and on the left of the composition.

"Awa Tsireh keeps to the formalism of the Indian in his figure drawing. His 'Women's Wheel Dance' shows a remarkable manipulation of the blacks of the heads against the gorgeous close-knit orchestration of color in the costumes. In the 'Green Corn Ceremony' the yellow painted bodies strike in warm relief against the black skirts and hair. Awa Tsireh resists the sensations of bulk and consistently preserves the flatness of the Indian method."

An American or European painter seeking to represent these Indian ceremonies would almost certainly approach them from another angle:

Photographs by courtesy of "The International Studio."

YELLOW PAINTED BODIES AGAINST BLACK SKIRTS AND HAIR

is the mode of Awa Tsireh, the Pueblo painter, in his "Green Corn Ceremony."

expressive work." The story of the budding and growth of Indian talent is told by Mr. Cahill in the *International Studio*:

"Some years ago Dr. Hewett, through his interest in the pottery of the San Ildefonso Pueblo, met Ta-e, the first of these Indian water-colorists. Ta-e had got hold of some water-colors and paper, and he conceived the idea of putting down the characters and costumes of the dance dramas of his people. In his spare time he made single figures from the dances. When these pictures of Ta-e came to the notice of Dr. Hewett, he was struck by their simplicity and earnestness. He saw immediately that here was something to be encouraged, the spontaneous beginning of a new art among the Indians. Ta-e went on producing his pictures until he died, during the influenza epidemic which carried off a third of the San Ildefonso Pueblo. But art is the child of imitation, and Ta-e's delightful pastime had been taken up by other young Indians. Since his death it has been carried on and enlarged in scope. One of Ta-e's first followers was Awa Tsireh. The group of water-color artists now includes Awa Tsireh, Fred Kabotie, Velino Shije and Tonita Pean, the last a girl."

"He would probably paint the time of day and the New Mexican sky. He would be struck by the nature of the sunlight and would think the Indian blankets and costumes wonderful. He would handle his subject as masses of color in light and shade. That is, he would paint the phenomenon. The Indian concentrates on the thing itself. The European would record his visual sensations. The Indian records what he knows, emending his vision by his knowledge and his intuitive understanding—and art is usually in proportion as the artist does this. These water-colors are an instinctive expression of the Indian's esthetic life in a new dimension, the dimension of the European's art medium. These Pueblo Indians have made this medium their own, a part of their esthetic and religious life."

These water-colors prove, asserts Mr. Cahill, that the "creative life of the redman of the pueblos is far from finished."

"The ability of any race to create an art as great in its originality and its simple power as is this Indian water-color art is proof sufficient that it is far from its period of artistic senescence. These Pueblo Indian boys are the pioneers of a new race of American primitives."

PRESERVES THE FLATNESS OF THE INDIAN METHOD.

does Awa Tsireh in his very decorative "Women's Wheel Dance."

COOLING ARDORS OVER JERITZA

RECONSIDERING JERITZA is one of the pastimes of music critics now that the opera season is over. What she achieved in one night in the way of popular acclaim was all that "any, however ambitious, person might hope for in the course of twenty years," says Mr. Carl Van Vechten, one of the free lancers in the field. It is worth while going outside the established field of critics and papers for an unconventional view. Mr. Van Vechten tells us that he has heard more "about Marie Jeritza during the last three months than I have heard about Eleanora Duse in the last ten years." Thus in writing in *The Reviewer* (Richmond) he begins to build up his thesis that great ones are never immediately acclaimed, and he cites Olive Fremstad, Chaliapin, Caruso, Mariette Mazarin and Mary Garden as examples. "Claudio Muzio made her New York debut as *Tosca*, and the critics wrote about her very much as they are writing to-day about Marie Jeritza. Rosa Ponselle was hailed as one of the greatest sopranos of all time." To-day, they are figured in Mr. Van Vechten's unenthusiastic phrase as "accomplished and useful members of the Metropolitan Opera Company." What he thinks of the critics who put Jeritza on the operatic map is interesting.

"The majority of music critics in New York—and, God knows, the majority is for Marie—is almost invariably wrong. Their attitude has been autocratic, aggressive and overbearing. Their sympathies have been meager and their taste is deplorable. Every successive novelty by a new composer, Wagner, Strauss, Debussy (let us call the roll), has been lambasted by these gentry. They literally drove poor Mahler to his grave. They attacked Toscanini with bladders for his conducting of Wagner and Beethoven, the two composers to whom he had devoted his most serious study. For an entire season they abused Feodor Chaliapin, who was as great an artist in 1907-08 as he is recognized to be (by these same critics!) to-day. They have consistently ridiculed Mary Garden, who comes nearer to real creation than any interpreter I have ever seen or heard. They have tried to set up autocratic rules to guide composers. They have tried to dictate programs and have told singers how to comport themselves on the concert platform. They are responsible for nine-tenths of the silly routine which makes concert-going no longer a pleasure. They have tried to give orders to impresarii, and they have tried to keep the public under their thumbs. Lately they

have not been entirely successful, but in the case of Marie Jeritza, their triumph has been complete. The public has stormed the opera house whenever this paragon has been announced, and during her first season here she has succeeded in defeating Geraldine Farrar, a vastly superior performer, though no great favorite of mine, on her own ground."

Mr. Van Vechten is not contending that the critics have picked a goose for a swan. Jeritza "merits study and it may be admitted at once that to some extent she repays it." For—

"She is no routine singer, no Claudia Muzio or Rosa Ponselle, whose vocal gifts, by the way, she entirely lacks. Certainly, she is tall; certainly, she is commanding; certainly, she is blond, and her hair is as long as Mélisande's ('Mes cheveux sont plus longs que mes bras. . . . Ils sont plus long que moi'). She sings *Sieglinde* with her own flowing tresses. Her face is quite lovely, in a style perhaps more rare here than in Vienna. She is, as a matter of fact, a type not uncommon in certain parts of Germany and Austria, though more often to be found in the music halls than in the opera houses, the type of German hoyden, lively, vivacious, blond and big. There is no doubt about her magnetism. She 'gets herself over.' Here the list of her assets ends. It can be stretched no longer. Those who have called her graceful will live to repent the day. When they are no longer befuddled by her magnetism and beauty, they will realize that she seldom makes a graceful move. Her acting is not without a certain gay vivacity, which is often effective, but in certain rôles, notably *Marie* in *Die Tote Stadt*, this vivacity is exploited to a degree where it becomes unpleasantly nervous and feverish, and in *Tosca*, verges on what is called 'overacting.' In the rôle of *Sieglinde*, on the other hand, she makes only a negative kind of impression. If Jeritza had made her debut in New York in 'Die Walküre,' she would have been judged more strictly on her merits. Her high voice is powerful. In the lower and middle registers it lacks resonance and has little force and next to no brilliancy, nor does it sound fresh. Her ability to color her tones is limited, so my poor ear tells me, to singing either fortissimo or pianissimo. When she sings pianissimo her tones frequently stray from the pitch. She is addicted to the unpleasant habit of scooping. It is difficult to judge singing in an opera like 'Die Tote Stadt,' written in an unvocal and declamatory style, speaking from a traditional point of view. The rôle of *Sieglinde* exhibits Mme. Jeritza at her worst, both as actress and as singer, for *Sieglinde* is a mezzo-soprano rôle and the tessitura lies in the weakest part of this singer's voice, her medium. Certainly, she is the least interesting and the least audible *Sieglinde* I have ever heard. *Tosca*, on the other hand, is her best rôle. It suits her flamboyant style of acting, and the high music lies in the best register of her voice. It may be added that there are those who think it is difficult and original to sing 'Vissi d'Arte' lying on the floor. These naive souls appear to forget that every *Nedda* in every performance of 'Pagliacci' sings a good half of the Bird Song from this position. It also may be recalled that Luisa Tetrazzini was wont to stoop to pick up the train of

her dress as she attacked a high E flat in the first act of 'La Traviata.' To return to Puccini's opera, has any one ever failed as *Tosca*? Ternina, Fames, Fremstad, Destinn, Farrar, Muzio, Garden, Cavalieri, Sylva, Carmen-Melis, Chénal, Raisa, how many others, have all made successes in this rôle. Like *Mimi* in 'La Bohème,' it is both singer and actor-proof.

"This investigation has been undertaken in no spirit of hostility; rather, the contrary. It is high time that some one pointed out Mme. Jeritza's limitations before the capricious public, quick to tire of a sensation, begins to discover them for itself. More is expected of a sensation than of a failure or a mediocrity, and unless Mme. Jeritza finds it possible to scale new vocal heights

A BRITON CONCEDES OUR LANGUAGE

THE "JEALOUSY COMPLEX" which some of our writers are attributing to the English in their judgments of American books does not attach to all. Mr. F. B. Osborn is one of those who sees beauty and even interest in the American language, and does not merely wave it aside because it is not wholly English. His one impregnable point is that English and not American is the predestined universal tongue, and consequently dwellers in this land of ours must perforce learn English while his own countrymen will not be under the same obligation to acquire American, or "Statesish," if we go so far as to adopt so hideous a word. Mr. Osborn, who writes for the *London Morning Post*, is reconciled to the inevitable, and more or less enjoys the fulfilment of prophecies uttered in the early days of our life as a nation that "the language spoken by the American people would diverge widely from that spoken in England." For example:

"The new circumstances under which we are placed," wrote Thomas Jefferson in 1813, 'call for new words, new phrases, and for the transfer of old words to new objects. An American dialect will therefore be formed. And nearly a quarter of a century before this another famous American—Noah Webster—ventured upon a prophecy even more bold and specific. In his 'Dissertations on the English Language,' printed in 1789, and

dedicated to Benjamin Franklin, that master of homespun speech, he formulated the following declaration of linguistic independence: 'Numerous local causes, such as a new country, new associations of people, new combinations of ideas in arts and sciences, and some intercourse with tribes wholly unknown in Europe, will introduce new words into the American tongue. These causes will produce, in a course of time, a language in North America as different from the future language of England as the modern Dutch, Danish and Swedish are from the German, or from one another.' These authorities, particularly Webster, did not make anything like a sufficient allowance for the various factors that were to put the brake on the process of divergence through a twofold change—twofold because English also is a living language with its own principles of growth. They did fully take into account the stabilizing influence of the books that are the common property of both peoples—the Bible which dominates the speech of either from the cradle to the tomb and, next in consequence, the works of the undying dramatist which are still so widely read on both sides of the Atlantic that there is even now much truth in the saying that English and Americans alike are 'the subjects of King Shakespeare.' One of the factors in question could not, of course, be foreseen by Webster and Jefferson. They never dreamed of that vast improvement in transoceanic communications which has brought New York relatively nearer to London to-day than it was to Boston or even Philadelphia, when Jefferson was President, and has brought about a steady exchange of ideas, opinions, and the gossip which bears slang words and phrases in its petulant current. Then English authority, even when its influence is unconfessed, counts for a good deal. And, strange to say, the American politician, tho indulging in twisting the Lion's tail or 'defying the nations of Europe at a clam-bake' (like the statesman in George Ade's 'Fables in Slang'), still uses the Johnsonian diction with the 'highly-charged and heavy-shotted' periods (to use Matthew Arnold's phrase) which was spoken in our political orations and written in our leading articles fifty or sixty years ago."

The Americans, Mr. Osborn admits, have now "an exuberant

PROOF OF A CHILDLIKE VISION AND A DELIGHT IN THINGS SEEN.

Fred Kabotie, of the Pueblo Indians, thus represents the "New Year Fructification Ceremony."

and descend into unexplored vocal depths, to refine somewhat upon her present explosive method of acting and upon her somewhat uncertain style in singing, she will soon lose some of her all too easily won admirers. A reputation is sometimes very easy to gain but it is often found very difficult to maintain it. These few remarks, therefore, may be taken as an attempt to place this paragon somewhat nearer the earth on which she stands so firmly, so that, in adjudging her future performances, she may be criticized as a charming woman, exceedingly magnetic, with a great deal to learn and yet more to forget."

'WARE OF HOOPSKIRTS—As a reaction to flapperism, shall we soon be plunged back into Victorianism? The *London Times*, assuming that London may take some of the thunder of Paris in the setting of modes, points to the possibility. Thus:

"Not the least interesting event of the London season is likely to be a series of tableaux of Victorian characters, to be given for a charitable object. We understand that it is proposed to represent Winterhalter's well-known picture of Queen Victoria and Prince Albert with their young children, and the almost equally well-known group of the Empress Eugénie and her maids of honor. The tableaux may be expected to have even a certain influence on the fashions of the future. As is well known to our feminine readers, in the last few years tentative efforts have been made toward a return to the modes of the fifties and the sixties. There was never any reason to fear the return of the crinoline, with its billowy immensities; the practical conditions of modern life would always prevent the great majority of women from obeying such a decree of fashion, even supposing it were ever to be issued. But a return with subtler modifications to our grandmothers' costumes is quite possible, and might easily win more approval from the purely artistic eye than has ever been accorded to the present or penultimate fashions. Certainly the experience of both the stage and the film demonstrates the permanent interest taken by the public, in 'period' costume."

vernacular, which is more than a new dialect, if not yet a separate language." Taking Mr. H. L. Mencken's book on "The American Language" as his point of departure he brings out some interesting reflections on the comparative speech of the two nearly related peoples:

"The Americans have always coined new words and similitudes much faster and with more audacity than we do, and the result is that we really need a guide to their speech and grammar, such as Mr. H. L. Mencken, who has just published a revised edition of his famous treatise—a much more entertaining work than any lexicon that was ever compiled, not excepting Dr. Johnson's. Mr. Mencken's point of view closely resembles that of Mr. Dooley, who once said: 'When we Americans are through with the English language, it will look as if it had been run over by a musical comedy.' The vernacular of his compatriots, he thinks, is full of what Bret Harte called the 'sabre-cuts of Saxon.' When a new problem turns up for the word-smith, he believes that the Americans show superior imaginativeness and resourcefulness; for example, *movie* is better than *cinema*, and 'tis a gladder and a wiser thing to call the fender in front of a steam-engine a *cow-catcher* than a *plow*. The American language, he insists, offers a far greater variety of synonyms than ours; to take a case in point, transatlantic equivalents for *drunk* are *piffled*, *spifflicated*, *awry-eyed*, *tanked*, *snooted*, *stewed*, *ossified*, *slopped*, *fiddled*, *edged*, *loaded*, *het-up*, *frazzled*, *jugged*, *soused*, *jiggered*, *corned*, *jagged*, and *bunned*. Farmer and Henley place only *corned* and *jagged* among English synonyms, and I think *tanked*, *loaded*, and one or two others have come to us through American humorists on and off the stage. Even in the matter of new drinks, surely an inspiring theme, we are inferior at finding picturesque names; thus we call a mixture of whisky and soda a *whisky-and-soda*, whereas in America it has the poetical name of *high-ball*. It is some consolation to know that the Americans may invent such pleasant appellations for cunning comminglings of 'hard' ingredients, as *golden-slipper*, *whisky-daisy*, *blue-blozer*, and *white-plush* (to give four names as yet unknown here), they will have to come to England to get a chance of drinking them! Often what seems an American neologism turns out to be the revival of an old English word or meaning (e. g., *mad* in the sense of *angry*), or a simple employment of that franchise of our language which many great authors have taken advantage of (e. g., the use of *tip-toe* as a verb which is found in 'Clarissa Harlowe,' where we are told 'Mabel *tip-toed* it to her door'). And we English may welcome, indeed we have welcomed, many of the terms which are translations of Indian words (*war-path*, *pale-face*, *fire-water*, &c., &c.). And I for one have a liking for the metaphorical phrases, familiar to readers of Bret Harte and Mark Twain, which recall memories of spacious days in the wild and wonderful West."

Mr. Osborn surrenders the British point of view and grants that nothing they can say "is likely to prevent the free development of the amazing tongue which one American authority—Mr. Rupert Hughes, wishes to call 'Statesish' or 'Statish.'" He knows—

"The Americans will go on incorporating the slang of their vast polyglot cities (e. g., *guy*, which is the Jewish *goyim*) into their language, and inventing purely artificial words (*sock-dolager*, *rambunctious*, *scollywampus*, *exfluncticate*, and *guyascutis* are examples of those lang-nebbit terrors . . . one or two, such as *scrumptious* and *skedaddle* are now a part of English slang), and cultivating bad grammar (like the Governor of a State who used *has went* in a public oration), and reviving the multiple negatives which were a characteristic, strange to say, of Old English (Mr. Mencken gives an example of a char-lady who asked a friend: 'You *don't* know *nobody* what *don't* want *nothing* done for them, do you?'). Nothing can prevent them—except the common sense they unquestionably possess—from creating a

language which shall be an amalgam of all the slang of emigrants from every European land. But, since English is manifestly destined to become the universal language, they may have to pay a penalty for a policy which, to quote Mr. Rupert Hughes once more, is prompted by the desire to 'put off livery and cease to be the butlers of another people's language.' They will have to learn English in order to communicate with the rest of the world. But we, and other intelligent foreigners, shall not be compelled, heaven be praised for it, to plunge into the *cloaca maxima* of their polyglot speech—we shall be safe in refusing to learn 'Statesish.'"

"TO JAZZ" OR "TO RAG"

RAFTIME and syncopation are two words that have been grievously misused, says Mr. Paul Whiteman whose orchestral leadership in the playing of popular airs is recognized as among the foremost. "Syncopation sounds important," he tells us in the *New York Tribune*. "It gives a

A FINE RHYTHMIC BALANCE OF FIGURES
is achieved by the Indian, Fred Kabotie, in the "Hopi Mask Dance."

sense to the ignorant of participation in the world's scientific knowledge." But he pulls us up:

"Every community has its own ragtime pests. These are the fellows that are killing American music and standing in the way of your development."

"Syncopation no longer rules American music. Syncopation, of which ragtime is the most familiar form, as we use it in the United States, is an African inheritance. It has descended to us, on one hand, direct from Africa, and on the other, through Spain and Spanish-American civilization. . . ."

"Syncopation still exists in American music; in fact, you can not hear more than a very few bars of any popular composition without its cropping up. But to-day it is no longer a necessary thing. It has been retained much as an ornament. It gives to all American music much of its peculiar character. But if you listen close and look sharp you will note that few dances of to-day depend wholly on syncopation. The fox trot is being danced (this is in 1922) to the rhythm 1 and 2, 3 and 4, which is not syncopation. It is the rhythm of the old Greek poetic dactyl, older than Christianity."

The "rag" and the "jazz" are different, and we're glad to be enlightened:

"Strictly speaking, to rag a tune means that you destroy its rhythm and tempo and substitute for the one a 2-4 or 4-4 time and a syncopated rhythm. To do this properly calls for a good ear, a good knowledge of primitive harmony and for quite a little experience with a set of ulterior musical laws as scientific as those which put up a building or write a sonnet. You may not know their science, because only the ear may be called into play. But remember that when you begin to rag a tune you follow some other man's methods—something you have heard some other fellow do. If you don't follow, you are a great and original genius, far too big a man for us in the Whiteman orchestra. Possibly the sculptor is just being born to-day who will make your statue before which future generations will stand bareheaded."

RELIGION-AND-SOCIAL-SERVICE

CONAN DOYLE'S HEAVEN

AS AN EVANGELIST OF SPIRITUALISM, the creator of "Sherlock Holmes" appears to most editors not quite so convincing as he is in his famous detective stories, yet all of them pay him the tribute of believing him sincere, if mistaken, in his new theology. Sir Arthur Conan Doyle, who is in this country on a lecture tour, is satisfied that through the agencies of the departed he has proved immortality and a paradise beyond, which, tho it differs in detail from most conceptions of heaven, seems to be comforting to those whose faith requires the prop of definite proof.

The devout Christian, observes the *Brooklyn Eagle*, "needs no proof of immortality. The Easter celebration . . . contains all the evidence which he needs to prove to him that death is merely transition." The eagerness with which thousands listen to Sir Oliver Lodge and Conan Doyle is evidence, however, that "multitudes, perhaps a majority, lack the Christian faith, and hunger, like those of Judea, for a sign." Spiritualist manifestations are the "sign," believes the English author, and he declares in published interviews that the Spiritualist movement "is the most serious attempt ever made to place religion upon the basis of definite proof, which is all that earnest minds desire. It is the one great final antidote for materialism, which is the cause of most of our recent world troubles." And within fifty years, he maintains, it "will sweep the world and take the place of the religion of to-day—a religion which has long been decaying and is becoming a mere formality."

In proof of the Spiritualist theory, Sir Arthur declares that he has seen and communicated with his dead mother, and a son killed in the war, and that he has heard an angel voice joining in the singing of "Onward Christian Soldiers" in the nursery of the Doyle home. Other evidences include, he says, photographs of the "etheric," or astral, body; a substance called ectoplasm, which is supposed to issue from the body of the medium and take on the shape of a departed one, and the familiar rappings and knockings, which he regards as signals from the next world. "I believe," he said in his first lecture in Carnegie Hall, New York, "that when God gives consolation of this kind it is right to pass it on to the human race." In a second lecture Sir Arthur said that he "could see no future for Spiritualism in any one church, whether it be known as the Spiritualistic Church or otherwise. No church is our enemy. We recognize no enemy. We have something to give to all churches—not only Christian

churches. We have the same thing for the Buddhist and the Mohammedans."

Heaven is described by Conan Doyle, we read in newspaper reports, as the land of fulfilled ideals, the place where the disharmony and worry of this life are not, where the old resume young manhood and womanhood, and where children grow to maturity. Buildings and towns are there, and all our domestic animals; but everything is on a higher plane, where there is neither unhappiness nor wrong. In his creed there is no such place as hell.

Venturing no opinion on the subject, the *New York Daily News* does think that "when hard-headed scientists like Sir Conan Doyle and Sir Oliver Lodge assert that they have seen and talked with their dead sons, their statements call for something besides ridicule. We are all in one fashion or another questing after the truth, and there is nothing in the Great Unknown which would answer our questionings more satisfactorily than to have some definite proof of existence after death. This proof has not come to us. It may never come. Some do not want it to come, but there are countless thousands who desire it with all the ardor of their souls." But even if Conan Doyle's proofs seem deficient, the world, remarks the *Cincinnati Times-Star*, "is sufficiently respectful of the man and his views not absolutely to deny that communication with the dead is possible. Science has made too much progress in the past century for peremptory doubt on any subject. That com-

A MODERN PROPHET WHO SEES A NEW VISION.

Sir Arthur Conan Doyle believes that within fifty years Spiritualism "will sweep the world and take the place of the religion of to-day."

munication between this world and the beyond will be established within the next hundred years is no more remarkable a prediction than a prophecy of the 'radio' would have seemed to scientists of a century ago." And the *Rochester Times-Union* bears witness that "it ill behooves any to scoff at seeming impossibilities, for very often they shortly become realities."

However, there is voluminous adverse opinion on the Spiritualist cult, and, in line with other critics, the *Baltimore American* argues that, aside from the séance conversations on which Sir Arthur places great reliance, "there is nothing in his statement of any more so-called practical import than can be had in the well-established beliefs of the day. . . . People of easily stirred imaginations frequently have dreams that are more vivid than the real thing and there is no reason, with a proper setting, that something of the sort may not be brought about in waking hours." He has adopted an old vehicle, about which he has built many

lectures, says the *Norfolk Ledger-Dispatch*, "and he calls it Spiritualism. Spiritualism has already exacted a heavy toll in the United States. Numbers of its converts are in the insane asylums and others are seeking in vain for the joy that once was theirs when they took things pertaining to the curtailed future for granted, and trusted in the God who had created them." However, this disciple of Spiritualism will make some inroads here among church-going people who take their views of religion rather lightly, thinks the *Providence News*. "Their Christian aspirations are usually satisfied by listening to a dull sermon and their knowledge of the Bible is too abstract for definition."

"But he can hope for no success among those who are really Christians by instinct, sincere practise and indestructible faith. His cult will grow, just as does Dowie's, just as do the new fire worshipers of our Northwest, gathering in the unattached minds and the delvers after the impossible. The true Christian teachings will continue to blossom, adding to the wealth of souls saved and extending the power of established religion against the assaults of psychic schools, or well-thinking people with over-developed imagination."

Taking Sir Arthur to task for his statement that Spiritualism will supplant the religion of to-day, the *Baltimore News* remarks that notwithstanding many such assertions, the Church has kept on growing. And, "judging from recent reports, they have never been so active or so well attended as they have been within the last year. In practically all of them the communicants will not believe the less because their faith is 'the substance of things hoped for, the evidence of things not seen.'"

And the average man, says the *Indianapolis Star*, is willing to trust in the Lord that the heavenly environment for his freed soul will be all that it should be. "For this reason the Biblical references to the abode of the departed meet all needs."

"Have the oftentimes unlettered mediums, with their Indian 'controls,' ever offered anything better or more beautiful than this told of the 'new heaven' by John: 'And God shall wipe away all tears from their eyes; and there shall be no more death, neither sorrow, nor crying, neither shall there be any more pain; for the former things have passed away.'"

"Also it is said: 'They shall see His face and His name shall be in their foreheads. And there shall be no night there; and they need no candle, neither light of the sun; for the Lord God giveth them light; and they shall reign forever and ever.'"

"The holy city 'of pure gold, like unto clear glass,' with its wall of jasper, its foundations garnished with all manner of precious stones and its gates of pearl, is a figurative picture, but it means all the glories that St. John the divine could comprehend and no description by spiritualist mediums approaches it. For the city as John leaves it may mean to each man the heaven of his highest dreams. He may picture heaven as endowed with all the glories that he knows or can imagine. There is no limit to its wonders save the limit of his mind. But how infinitely far it goes beyond Conan Doyle's heaven!"

CRIMINALS ON CAUSES OF CRIME

"THE WOMAN TEMPTED ME," is the first recorded complaint, and man has echoed it as ungallantly ever since the Garden of Eden was closed against him. It was reechoed the other day in the Illinois State Penitentiary at Joliet when a young man laid the cause of his downfall against that Eve in modern guise, the "flapper." An older man spoke more closely by the book, perhaps, when he said that environment and association and the lack of proper home training were chiefly responsible for his undoing. There were also several statements that graft on the part of corrupt officials made the path of crime easier to follow, since, if the criminal were moderately successful in his "profession," his case could be "fixt" for a stated amount. The convicts were examined by a committee

appointed by the American Bar Association to study the cause of crime and to learn the preventives and remedies to be applied if the present crime wave is not to become a veritable flood. Headed by Judge Marcus Kavanagh, of Chicago, the committee includes former Governor Charles S. Whitman, of New York; Wade H. Ellis, of Cincinnati and Washington; former Attorney-General William B. Swaney, of Chattanooga; and Charles H. Farnham of St. Paul. After examining a few Chicago experts in criminology, the committee went to Joliet to learn from convicts themselves the chief causes of their undoing, and will come next month to New York.

"Why do men go wrong?" was the question put by the committee to several inmates of the Joliet penitentiary selected because of the intelligent answers they were expected to give. Failure properly to handle first offenders and the mistake of segregating them in the county jails—known to them as "schools of crime"—were the reasons assigned by three convicts.

"The whole trouble as I see it," said a young confidence man, "lies in the fact that youngsters when first arrested are thrown into jail with a lot of old-time criminals. The criminals talk nothing but crime, crime, crime. How they pulled their last job, how they got away, how they beat a case. The first offender's mind is filled with schemes to make easy money and get away with it. Segregation of first offenders, I think, is the thing that is needed most, particularly in county jails." The most potent factor in causing crime, said an old offender who has educated himself behind the bars, is environment and association. "You see it is like this," he said, as Richard C. Burritt reports the law committee's interview in the *Chicago Daily News*:

"When a young man reaches the ages of eighteen to twenty, he begins to realize that there are women in the world. He goes out with some of them. He makes a friend or two who is fast.

"It is a time in his life when he is not making much money and in order to take the girl to cabarets and step around with her he has to get more money. It is an easy step to stealing.

WE DO HOPE SIR ARTHUR HAS MADE
ALLOWANCES FOR LOCAL CONDITIONS.

—Darling in the New York Tribune.

He knows he must make money enough to step around, because if he doesn't the girl will go with some one else.

"When he gets into a life of stealing he finds that there are organized sets or gangs of thieves. He finds that they have their lawyers, that they have professional bondsmen and professional witnesses. He finds that the gang pools its procedure; that when he belongs to the gang that his chances of beating a case are good and he can go on stealing. He observes that the man who works alone easily gets caught and is put away."

"You mention environment and association," interposed a member of the committee. "What is the effect if the man's home life is a good one?"

"I was just going to mention that. I believe," the prisoner

REBUILDING THE MARTYRED CHURCHES

RELIGION IN FRANCE is not imperiled, it seems; nor is the high courage of the French in the face of adversity abated. In spite of all the other huge and pressing demands upon it, the French Government has decided, we are told, to issue bonds amounting in value to 200,000,000 francs to rebuild 3,000 churches destroyed in the war. Carrying the burden of a vast public debt, with little relief from the German reparations upon which they had set so much store, the French are said to have had all they could do to carry the ordinary expenses of government and provide funds for the restoration of their ruined villages, and for the rebuilding of houses in which to shelter the homeless. Yet, says the *Boston Transcript*, this was not enough. It was not sufficient to build their homes and their schools anew. There was yet another call on their funds and their energy:

"The martyred churches—some 3,000 in number—must be built, however hard prest the country was to find funds with which to meet the demands of the ordinary budget. War laid a particularly heavy hand upon the churches in the battle-swept areas. They were a favorite registration and reference point for the artillery; when other landmarks failed, artillery commanders could invariably find a church spire upon which they could adjust their fire, and enable them to prepare an effective 'fire for effect.' What light these churches could throw upon the varying fortunes of war, if they could but tell their full story!

"The war has done much to strengthen the cause of religion in France and increase the prestige of the Church. Priests and prelates by the thousands answered the clarion call of battle, and served and suffered in the trenches side by side with laymen. There was neither Church nor State, but all was France. A grateful nation, as the dawn of peace turns into the full noontide, acknowledges its debt to the Church, and desires to repay that debt by rebuilding these thousands of ruined churches. Nor is it without significance, especially to Americans, that the French have had the initiative to begin themselves to raise funds for this purpose. In as much as they have not waited for the generosity of others to show itself, they merit that generosity all the more."

In some towns and villages of the North and East districts of France, writes a correspondent of the *Boston Pilot* (Catholic), the recent conditions of parish life have been pitiful. Temporary wooden huts which are used for churches and for the housing of the clergy have proved far too small. So, we are told,

"It has been deemed wise that the rebuilding of permanent churches and presbyteries should be taken in hand without delay. There is to be a committee of architects to supervise all the work. This is looked upon as admirable for the artistic quality of the buildings to be undertaken.

"To the student of church architecture the rebuilding of these churches easily recalls one of the greatest periods in the history of all architecture. It was in France that some of the greatest architecture of all time, the great Gothic cathedrals and churches of the Middle Ages, reared their stately heads in a sublime era of building, and they have been subjects of close study and interest for countless persons."

The rebuilt churches will not go begging for congregations, we are told, for, on the whole, the war seems to have had a salutary effect on the religious situation in France. Closer contacts are said to have healed many former prejudices and to have ended the old religious conflicts. The truth is, writes Paul Concoeur in the *Paris Etudes*, "that the soil of France has been opened by the plowshare of war; the furrows have been made ready; sturdy workmen have begun to cast in the good seed. The spirit of sacrifice must render that seed fertile."

Copyrighted by the Keystone View Company.

WHAT FRENCH FAITH AND COURAGE HAVE ACHIEVED.

The beautiful Rheims Cathedral, marred and badly damaged during the war by German shells, is restored, and the event is marked by public thanksgiving.

went on, "that a majority of men would not go wrong if they had a good home life. Some do, of course, but I had none myself. My people died when I was little and I came up in the underworld. I had to educate myself in the penitentiary. As a matter of fact, I wouldn't be here if I had had six hundred and fifty dollars."

"Why not?" asked Wade Ellis of Washington, D. C., a member of the committee.

"I could have squared the case for that. I was told some one in the State's attorney's office would have handled it for that."

"Why, is that done?" Judge Kavanagh asked.

"It has always been done."

No simple and easy solution of the crime problem is indicated by the testimony of the Joliet penitentiary convicts, comments the Chicago paper editorially, but it thinks that this fact will not oppress or disappoint persons competent to deal with the matter. To realize the problem in all its magnitude is "the beginning of practical wisdom."

"Meantime the criminal code can be modernized, better juries obtained, needless delays avoided by firmness and independence on the part of the trial judges, and hair-splitting technicalities can be frowned upon by the courts of appeal and review.

"Much can be done by the mere application of common sense and civic courage. And politics can be kept out of the courtroom, prosecutors' offices and jury commissions."

THE GOLDEN RULE OF HEALTH—EAT SOUP DAILY

Here is a game the kids acclaim
 With vigor, vim and zest
 Their pep and force derived, of course,
 From "Ox Tail" at its best.

—and thereby hangs a tale

Campbell's is Ox Tail Soup at its best. Not merely a deliciously satisfying food but a recognized health-builder as well. It brings you, in a tasty dish, the native vigor of meaty, marrowy ox joints; the beneficial properties of fresh vegetables and herbs; the strength-building qualities of barley.

Campbell's Ox Tail Soup

A rich, nourishing stock made from medium-sized ox tails, combined with diced Chantenay carrots and golden turnips, tomato puree, sliced ox tail joints, celery, parsley, barley, a little leek, and a touch of flavoring to bring out the natural savor of this delicious combination. Order Ox Tail today.

CURRENT - POETRY

Unsolicited contributions to this department cannot be returned.

OUR department seems rather English this week. Just so our English cousins provide us more good poetry along conservative lines than we furnish ourselves. So much of our energy goes into free verse which our readers only half approve. Even Shakespeare is not an outworn theme. *The Cornhill Magazine* (London) gives us this which recalls the old-time favorite pictures that assembled in one group the figures of some novelist's or poet's creation:

SHAKESPEARE

By E. W.

In the mysterious twilight of the Past,
Among dim meadows and dark-shining streams,
I went, and through oak forests, till at last
I came up to the high-walled hill of Dreams.
Thick turreted, with roofs innumerable
Of faded red, and secret windows shut
With shutters green, where stories wonderful
Were acted. Roofs, signs, rooms and oriels jut
With gaping gargoyles over the steep streets,
Cobbled with cobbles white, all up and down.
Wise, witty, quaint and ripe with diverse sweets
Are the good folk of this enchanted Town.
Some fools there are, some villains, and some sad,
'Tis true, and cripples, and poor withered jades;
But in an honest glass, good, mad and bad,
All walk and talk here like real men and maids,
Transformed to something strange, immortal,
sage,
By the wise King who set them on his Stage.

HERE is a new adventure treated with a whimsical touch that both in deed and word might be rightly thought of as "American" only we get so many of our high adventures from suggestions given out freely abroad as the *New Witness* (London) does this:

THE BOOKWORM

(Experts now accompany parties daily round the chief London museums and galleries.)

By GEOFFREY DEARMER

Not even judges, in the name of waste
(That sacred name) decry these daily sessions
When costly critics, that is, men of taste,
Take parties round our national possessions;
Imparting all that knowledge can impart
And quickening the sluggish soul and heart.

Now, under expert guides and guidance you can
Improve your mind on art, beasts, birds and cities—
Raphael, the titmouse, Titian and the toucan, "
The great auk, Gainsborough, Greece—O, really
it is
Impossible to speak without bravado
Of everything from Leeds to Leonardo!

Now, I think (these considered cogitations
Are surely wonderful and well conceived,
For only by avoiding dissipations
And thinking hard can great thoughts be achieved)
That this reform should be to books applied.
With me, of course, appointed as chief guide.

Then I will take the best and brightest parties
All round our bookshops. I will advertise
(Provided that my salary at the start is
Substantial, with the promise of a rise)
High Hill-air Belloc and low-lying Wells
Our Keynes and Caines, our deep ethereal Dells.

I'll recommend the best. I will not rob
Poor poets of their due. I will not heed
The claims of popularity. My job
Will be to serve not those who write but read:
To boost the best of charming books and chaste,
And found a literary League of Taste.

A SWEET picture, here, of immemorial life that the London *Nation* brings us:

THE SHEEPFOLD

By ELEANOR FARJEON

High upon the lonely Down
I came upon a shepherd's town,
A sort of kraal it seemed to be
Within a wattled boundary.
Dividing it, the herd had made
A waving man-high palisade
Of the black-headed rush that grows
Rank on the flats where Arun flows.
Within the outer camp was stored
The sheep's provision, a rude hoard
Of mangolds with their saffron stain,
Heaped near a blue and scarlet wain
Which bore the fairest yellow straw
That ever summer's thrashing saw.
The second closure, scattered deep
With that clean gold, confined the sheep,
Some heavy still, some past their throes,
And by these dams the lambs pushed low,
Nuzzling their mothers' dugs; but most
Of those the shepherd yet could boast
Were harboured in the wattle-sheds
Which he had built to keep their beds
From wet and frost. Hard by, his wheeled
Hut stood, and on the open field
Signs of the gipsy life he led;
Less kindly was he housed and fed
Than his own sheep, for whom his plans
Seemed to be nature's more than man's.
Till April he will live up there
With bleating mothers in his care,
The solo wise ruler on that Down
Of his well-ordered little town.
Yet nothing, wattle, straw, or reed,
Or root, that serves his flock at need,
But might have served the earliest sheep
Which on these hills once had their keep;
And nothing does this shepherd know
Or do, not known—how long ago?—
And done, by the first herd whose dams
Upon the high Down dropped their lambs.

JAMES STEPHENS is, perhaps, one of the most considerable figures in English letters to-day. He is original and independent, and he sometimes gets into trouble. He won't with these lines of his in the *Nation* and the *Athenæum* (London).

THE PIT OF BLISS

(To CLEMENT FRANCE)

By JAMES STEPHENS

When I was young I dared to sing
Of everything and anything—
Of joy and wo and fate and God,
Of dreaming cloud and teeming sod,
Of hill that thrust an amber spear
Into the sunset, and the sheer
Precipice that shakes the soul
To its black gape—I sang the whole
Of God and man, nor sought to know
Man or God or joy or wo;
And, tho an older wight I be,
My soul hath still such ecstasy
That, on a pulse, I sing and sing
Of everything and anything.

There is a light shines in the head;
It is not gold, it is not red;
But, as the lightning's blinding light,
It is a stare of silver white
That one surmise would fancy blue:
On that mind-blinding hue I gaze
An instant, and am in a maze
Of thinking—could one think it so?
It is no feeling that I know—
An hurricane of knowing that
Could whelm the soul that was not pat
To flinch and lose the deadly thing

And sing, and sing again, and sing
Of everything and anything.
An eagle whirling up the sky,
Sunblind, dizzy, urging high,
And higher beating yet a wing
Until he can no longer cling,
Or hold, or do a thing, but fall
And sink and whirl and scream through all
The dizzy, heaven-hell of pit,
In mile-a-minute flight from it
That he had dared—From height of height
So the poet takes his flight
And tumble in the pit of bliss;
And in the roar of that abyss,
And falling, he will sing and sing
Of everything and anything.

What is knowing—but to see:
What is feeling—'tis to be:
What is love—but more and more
To see and be; to be a pour
And avalanche of being, till
The being ceases and is still
For every motion; what is joy—
Being, past all earthly cloy
And intermixture; being spun
Of itself is being won:
That is joy, and this is God
To be that in cloud and clod,
And in cloud and clod to sing
Of everything and anything.

If the sun never sets on British dominions so also the East winds never cease to blow, and *Punch* finds a beneficent ministry in them that we of other geographical alignment do not know so well:

EAST WINDS

ENGLAND AND INDIA

By H. B.

The folk who live in the West Country that is
warm and wet and slow,
They speak no good of the singing wind that
blows from the open East,
And they will have it a treacherous wind, bearing
sickness and wo,
Fretting and fevering man and beast;
But to me the wind of the East is sib for the sake
of long ago.

For ever the East wind I have known was a wind
that blew from sea,
Whether the grey North Sea of home or the
blaze of Bengal Bay,
And ever it stood for a sandy coast and the spin-
drift flying free,
And the moon's rise and the breaking
day;
And the West Coast folk may say their fill, but the
East is the wind for me.

For ever the East wind I have known brought
merry days and clear,
Lifting the rain-wrack out of the sky at the end
of a Scottish June,
Or thundering over the Indian plains in the falling
of the year
At the flying heels of the black mon-
soon—
A wind that spoke like a pibroch, that struck like
a pointed spear.

* * * * *

Excellent good the West Country, be it Devon or
Malabar,
But the warm West winds are hung with rain
and laden and sad with cloud,
Robbing the days of the gallant sun and the nights
of moon and star;
So the East winds, the living and proud,
Shall be my choice, now as of yore, and the coasts
where East winds are.

Barrett Specification Roofs

Bonded for
20 and 10
Years

Barrett Specification 20-year Bonded Roof on Corlett School, Cleveland, Ohio. Arch.: W. R. McCormack, Gen'l. Cont.: C. N. Griffin Co., Rfr.: The Rudolph & Son Co., Cleveland, Ohio.

Cleveland's New School Buildings

TO house its army of 122,000 public school pupils, the City of Cleveland has provided many splendid new buildings. Architecturally, they are masterpieces—models of convenience, comfort, safety. And in line with standard practice the country over, most of these schools are covered with Barrett Specification Bonded Roofs.

One reason for the popularity of these roofs is, of course, their unequalled economy—moderate cost, long service, and no upkeep. But another reason, and a very important one, is their high fire resisting qualities.

When burning brands fall on the slag or gravel surface of a Barrett Specification Roof, they burn themselves out without doing serious damage. If a fire inside the building weakens the roof-deck, the Barrett Specification Roof has the necessary tensile strength to support

itself over a large area, thus effectively blanketing the fire.

The degree of fire protection afforded by a roof is not determined by the character of any one ingredient of the roofing material, but by the ability of the completed roof to resist fires that attack it, whether from the inside or the outside of the building. Barrett Specification Roofs are given base rating by the National Board of Fire Underwriters.

There are two types of Barrett Specification Bonded Roofs—Type "AA" bonded for 20 years; and Type "A" for 10 years.

Before specifying or closing contract for a Barrett Specification Bonded Roof, be sure to read carefully all the stipulations in the Specification.

government now or hereafter maintaining sovereignty over the territory where the acts were committed."

The implication here is that if we had recognized the Soviet Government in Moscow there would have been an easy way out; indeed, that there may be an easy way out if we recognize that government before Semenoff escapes custody. He could then be handed over to Russia and his fate would hardly be a matter of guesswork.

Among our soldiers and former soldiers there is a strong sentiment for the punishment of Semenoff that the Administration may not choose to defy. That sentiment will be very intolerant of any stretching of international law technicalities for the protection of a man who is regarded as a murderer.

NOW IT CAN BE TOLD, BUT ISN'T

WHAT ARE EUROPEAN CHILDREN being taught about the Great War? The answer to that question, if we could find the

answer, has seemed to Mr. William G. Shepherd more than likely to show "whether there will ever be another war." Hence an investigation, whose results he gives us in an article in *Our World*. Says Mr. Shepherd:

In Germany school children in various districts have different history books. In one district the book will contain all the old allusions to the Kaiser and the greatness of his family. In another district all of this has been cut out. There is such a discrepancy between the various books that the explanations of the school officials are highly entertaining. I sought out Dr. Becker, secretary of the Prussian ministry of education. He is an avowed Republican.

"There are two things that we are not teaching our children," he said. "One subject that is forbidden is the Kaiser and his dynasty. The other is the war."

"But there are history books that tell of the Kaiser," I said.

"Yes," he smiled, "but let me explain. You see, books cost a great deal of money. The old histories used to glorify the Kaiser. We still have many copies of these old books on hand. We can not afford to throw them away. But we have issued orders to all teachers that they must not ask the children to study the Kaiser and his dynasty. That part of the book is skipt over in every school in Prussia. But we have gone further than this. Whenever a publisher issues a new edition of a school-book, he cuts out every reference to the old dynasty. We have given orders to all the publishers of school-books that this must be done. The editing is carefully done, and whenever a child is given a new history book in the Prussian schools, you may be sure that every bit of Kaiser-worship and king-worship has been cut out of it."

"Has anything new been put in its place?"

"No. Editing does not cost so much, but the addition of material is a difficult thing."

"But are the children being taught nothing about the war?"

"Not a single word," said Dr. Becker. "The teachers are not allowed to discuss the war. Their history books do not contain a single word about the war."

"Is this done purposely?" I asked.

"Yes," he explained. "It's politics. You see there are six different parties in Prussia. Each different party has a different idea about the causes of the war, the events and the mistakes. As soon as the ministries of education start to prepare a story of the war for the school children, some leader of a party arises and says that the story is wrong, in some detail. Then we have to drop the whole thing and start over again. We must find some story that will suit all the parties, including the Socialists

and the extremists on both sides. It is an impossible thing to do, and we have quit trying.

"Our latest plan is to have a chronology of the war appear in the school-books so that the children may learn the dates of various important events. We have four experts working on this now, but while they agree on dates, they can not agree in describing what happened on those dates. Something about the inwardness of the war is bound to creep into any arrangement of dates, and so we are in as much trouble with our new plan as we were with our previous efforts. We must try to satisfy the parents of the children as well as the party leaders," continued Dr. Becker. "Parents are giving their version of the war to their children at home, and if our school-books give a different explanation from that believed by the parents, we will be in trouble.

"The schools are not as they used to be in the Kaiser's time. Then the government decided what the children should be taught, and that was the end of it. To-day, in every school, the children have their own organization, with a spokesman, who has a right to criticize the teacher on any occasion, or even

go over the teacher's head, if necessary, to higher authorities. The parents have taken an interest in the schools and in what their children are being taught, and a parent may go either to a leader of the party in his district and make a complaint, which will reach us with a roar in due time, or he may complain to the school officials themselves."

I suggested that it must have been necessary to tell the children something about the revolution which changed the form of government in Germany.

"Well," hesitated Dr. Becker, "whenever that question comes up, we find it possible to refer to the attempted revolution of 1848 in Germany with which the children are familiar. We are able to point out that the revolution of 1918 was a sequence of 1848. There is a great deal in common in both revolutions, and sometimes we are able to show how the 1918 revolution was a sequence of the revolution in which the grandparents of our pupils were engaged.

"Certain democratic principles that caused the 1848 affair also produced the revolution of two years ago. The war gave these principles a chance to

manifest themselves. That is as far as we can go in telling the children about the recent affairs in Germany."

What, meanwhile, are French school children being taught about the war? For an answer to this question, Mr. Shepherd went to Paris and sought out the minister of Public Instruction, who, tho too cautious to make a statement, himself, detailed a subordinate to talk:

"When peace came," said this official, "the school-teachers everywhere in France felt free to ignore the old military regulations and to tell their pupils in the class-rooms just what had happened during the previous four years. There were not text-books with which the teachers could work; so many of them began giving little lectures to their pupils.

"But the department of education found itself in trouble immediately. Parents deluged us with complaints. They said their children were being taught lies about the war. Socialist workmen said their children were being instructed in imperialism. Caillaux's followers said that teachers were lying about the origin and purpose of the war. Parents of the upper classes said their children were being taught Socialism in their study of the war. It was a trying time for us. We saw that something must be done; so we issued orders that teachers were not to try to teach their pupils about the war until proper text-books had been issued.

"Ever since then we have been looking for proper text-books.

Copyrighted by Keystone View Co.

"WASN'T THERE ANY WAR?"

German school-books avoid all mention of the World War, but they can't fool these Berlin school children.

Re-roof for the last time-

Nail 'em over the old shingles!

THERE are thousands of acres of old, worn shingles, like these, on the house-tops of America. No doubt they have given service, but their period of service is over. Perhaps there are some right over your head at this moment and you are even now considering re-roofing.

But don't tear them off. They are still valuable.

Re-roof the Johns-Manville way. Lay Johns-Manville Asbestos Shingles, artistic and everlasting, right over your old roof.

Count the advantages

1. The old roof underneath the new and permanent one will always be an additional protection and insulation.

2. You save the cost, labor and time of tearing off the old roof.

3. No muss or dirt around the house of littered, broken shingles.

4. Johns-Manville Asbestos Shingles are unconditionally fire-proof. They are given highest ratings by Underwriters' Laboratories, Inc.

5. They make a roof of artistic beauty, in soft tones of gray, brown or red, whichever you prefer.

6. You need *never* re-roof again, because Asbestos Shingles are practically indestructible. They should last as long as the structure they cover and protect.

See your dealer or send to us for further information. The coupon in the corner may help you.

JOHNS-MANVILLE, Inc.

Address _____

Mr. Citizen

Do you realize the close personal interest you have in electric light and power?

Your interest is not confined alone to an unconscious sense of well-being as you see this agency turning the machinery of your factory, lighting your office, and doing the hundreds of helpful and scientific things in your home and town. It naturally and inevitably extends to the question of the financial stability and physical efficiency of your local electric light and power company.

You depend upon this physical efficiency for your light and power, but it is possible only when financial stability is present. In turn, therefore, the soundness of these financial and physical qualities depends upon you, and other citizens like you, for the support necessary to enable the company to meet the enormous growing demands for more service.

So great is this self-interest, and so rapidly is it becoming generally realized, that already more than 1,600,000 people have invested in electric light and power company securities. Wherever there are large numbers of these "customer owners" the ideal form of "public ownership" exists.

Such investors not only show faith in their own community by financially supporting the electric light and power company which serves it, but they keep their money within the community, helping build it, and make more prosperous conditions for all. In addition, this tangible evidence of faith tends to attract outside capital for the industrial and commercial up-building of the community generally.

A greater and better community can mean only greater and better opportunities for citizens. Therein is found your self-interest.

NATIONAL ELECTRIC LIGHT ASSOCIATION

PERSONAL GLIMPSES

Continued

But we can not find them. The text-book writers tell as many different stories as the teachers used to tell.

"You see," he continued, "the whole difficulty lies in the fact that we have seven influential parties in France.

"It was necessary for us to find text-books that would contain versions of the war that would satisfy members of all these parties. Well, that is impossible. We can not do it. Parents belong to one or another of these parties, and they raise so much trouble when their own version of the war is not told to their children that we have finally decided that the fathers and mothers of France must be the modern history teachers of France until the war has become more distant and party feelings lie down."

He explained how text-books are selected in France. A superior council of the ministry of education passes on all books which are submitted by text-book writers. The books which are approved are put on a list which is sent to all the schools of France. From this list the school officials in the various districts of France may choose the books which they consider best adapted for the local schools.

"At first," continued the official, "the text-book writers deluged the superior council with books about the war. The members of the council found themselves disagreeing about the facts stated in these books. Very soon the complaints of the parents began to pour in on us, and we decided that, if the council itself could not agree, neither could teachers or parents."

"When do you think you will be able to begin studying the history of the war in your schools?" I asked.

"Not until this generation dies," he answered. "You see everybody is in politics or has some political leaning. No text-book writer or school-teacher is free of political bias. He sees everything through the eyes of his own politics and beliefs. Whatever he wants to believe looks like the truth to him; whatever he doesn't want to believe looks false. And there we have the difficulty."

Leaving Paris, Mr. Shepherd went to London, where he called upon Mr. Richards, who has charge of the English school inspectors, and asked him what English school children were being taught about the war.

"We have an Anglo-Saxon dread," he said, "of permitting the government to control the schools. All school government in England is local. The government does not control the publication of school text-books. Any schoolmaster or member of a school board may go to any publisher and purchase any book he wishes and introduce it into the local school.

"The only thing the national government does is to inspect and advise. Our inspectors move about among all the schools constantly, and, if they find anything amiss—subjects being wrongly considered or improper books being used—they make recommendations which, in time reach the local authorities. And then the proper changes are usually made. The local authorities rarely disagree with the national school inspectors."

In a glass case in Mr. Richard's office were rows of text-books. He went to this

case and took out a dozen or more small books.

"I won't say that text-books on the Great War are not being written and even put into the schools in some localities," he said. "But the inspectors have an infallible test for these books. If the books do not meet the test, they are usually withdrawn from the school."

"What is the test?" I asked.

"You see, all these books are written anonymously. No reliable and well-known text-book writers have attempted to write any text-book of the war. All the school histories that have appeared, with a very few exceptions, have been thrown together for greedy publishers, by hack writers. The paper is poor, as you will notice, the illustrations are unspeakably poor, and the statements of facts are absolutely unreliable.

"Every one of these unsigned anonymous text-books found by our inspectors in use in the schoolrooms is immediately thrown out. The result is that children in England are not learning the history of the war in our schools."

"What about geography?" I asked.

"Well, the teachers are presenting geography in a hit-or-miss way. The map-makers are not taking any chances on making maps for schoolroom use which may be right to-day but wrong to-morrow.

"As a usual thing the teachers use colored crayons and draw the new borders and the new countries in the old maps."

"And there you are!" gasps Mr. Shepherd. Altho in Germany, France and England every child must learn to read. "the printing-press is paralyzed and the historian is palsied when it comes to the task of telling the new generation about the war."

"PASSAPASSAPASSAPASSAPASSAPASSA"

A LITTLE, frock-coated, short-bearded, smiling old gentleman from France has appeared in London with the cheapest known remedy for "what ails you." Merely say over and over again very rapidly the French words for "going, going, going," and, sure enough, it goes—or at all events so an article by Hammen Swaffer in the *London Graphic* assures us, which we merely quote, of course, as a matter of news. Mr. Coué, the healer—the "teacher of self-healing" would be a more exact designation—is a retired chemist of Nancy, we are told, and makes no claim to be a worker of miracles. As the writer explains,

If you are suffering you walk on the platform where he is lecturing—and he lectures without payment and without price—and he tells you to say "*Ça passe*," repeatedly, until you feel better. It only means "Going"; but he has used the words so often, in French, that he sticks to them; and his patients say "*Ça passe*" so quickly that it sounds like:

"Passapassapassapassapassapassapassa."

How stupidly simple! How ridiculous! But there are undoubted cases—hundreds of them—where he has cured.

I saw him cure three blind men the other day. They take all things to St. Dunstan's to cheer the blind men up. Great singers go, preachers whose voices, speaking of God, sound like a great organ in a cathe-

"This will protect you against ignition trouble!"

YOU would not think of starting off on a motor trip without a spare tire, or a full gasoline tank. Neither would you drive in the rain without chains or with the top down.

Then why start off without protection against trouble in the most vital part of the power plant—its very nerve center, the ignition system?

At any time a plug may become fouled, a porcelain cracked, an oil-soaked wire shorted—or some one of the many elusive minor defects may crop up—all meaning trouble and delay.

In the mountains, or on a lonely road, far from a garage—no matter where you drive—you will be protected against ignition trouble if you have an

Airco IGNITION GAUGE

The Watchdog of the Ignition System

For All Internal Combustion Engines

Instantly spots the plug that's missing

- Enables anyone to locate the slightest defect anywhere in the ignition system.
- Unerringly detects short circuits, breaks and leaks in the high-tension wires.
- Handy size—not cumbersome—fits the vest pocket. Small enough to reach the most inaccessible part of the ignition system.
- Blunt contact cap cannot slip off plug or wire while testing.
- Cannot get out of order—no wires to connect—no shocks—no danger.
- Directions printed indelibly on the shell.
- The Airco Ignition Gauge has a hard rubber shell enclosing a tube of Neon—a gas which flashes orange-red when electrified. These flashes are visible through a window in the shell. The nature of the flashes tells what and where the trouble is.
- Be sure you get the Airco—the original ignition gauge—you can buy it at your dealer's or fill in and mail the coupon.

AIR REDUCTION SALES CO.

The name Airco on this ignition gauge signifies that it embodies all the high standards characteristic of all the other products of the Air Reduction Sales Company, pioneers in commercializing the elements of the air and large manufacturers of oxygen, acetylene, apparatus, and specially designed machines for the oxyacetylene welding and cutting industry. It is most logical that an instrument relying solely for its functioning on Neon—a rare gas of the air—should be built by an organization of such specialized experience.

The Power That Makes Steel

Prosperity manifests itself invariably in an increased demand for steel. From farm implements and machinery to pleasure cars and the fine tools of expert industry, little that is important in American life can be done without the use of steel.

Coal furnishes the power that transforms iron ore into the vital and necessary steel. It is estimated that the iron and steel industries of America consume approximately 100,000,000 tons of bituminous coal each year. Three-quarters of a ton are required to produce one ton of iron ingots and four tons are consumed in making one of finished steel.

From our 92 mines in the four great coal producing states, The Consolidation Coal Company supplies a large volume of bituminous coal precisely suited to the needs of steel production.

Consolidation Coal of high heat content and greatest possible cleanliness appeals to the industrial manager with an eye for economy.

PERSONAL GLIMPSSES

Continued

dral, comedians whose noses are red and whose jokes might, perhaps, be blue, did not the forlornness of the men without any eyes remind them. So Coué went on his mission of mercy; and as they explained it, in words, to the men who could not see, he cured three cases—cases of blind men who were suffering from temporary pain.

There was a man called Clarke, with a "wonky" knee. "Passapassapassapassa" went on, for a minute or two. "It's decidedly less tender," Clarke shouted. "That fellow had better be careful," said another blind man, "or he'll lose his pension."

Everybody laughed, and then Roylance was cured of stomach-ache. It was "Passapassapassa" out of existence. Then Wawne, whose country had not only taken both his eyes, but one of his legs, said the stump of the leg that was gone was always aching. He, too, blundered back into the eternal darkness of his life, feeling better.

Coué told them of a woman who had not seen through one eye for twenty years, and whom, in a few minutes, he had persuaded to see; and he told the blind men of a wealthy stockbroker who had stammered all his life and who, the day after he had met Coué last week, stammered no longer, and told 600 people in fluent French that he could talk as well as any one.

Yes, the cure is just, "*Ça passe, ça passe, ça passe.*" Coué has brought down the science of curing many ills—he says that it will not cure cancer, but that it will remove the pain—to a simple formula. When you are lying in bed, in the morning, you say twenty times to yourself:

"Every day in every way I am getting better and better."

A few days ago he used the words, "in every respect," but it now is changed to "in every way," no doubt because you can say it even more easily. You say it to yourself, opening your mouth just wide enough so that you can hear yourself speak. I use his own words, as he spoke to me, "You must not think of anything in particular but keep on repeating it every night and every morning. Pay attention to what you are saying, just like you recite litanies in church. Little by little, it will penetrate into your mind and you will get well. If you think it you are well." That is how simple it is.

There is no quackery in this, we are solemnly told; it is simply an affair of "making your conscious Jekyll overcome your subconscious Hyde." And there is no commercialism about it, either. Says the writer:

For this silly, simple, stupid, effective remedy Coué charges nothing. When I have printed it, the secret is given away. He stands up, in his short frock-coat, and with his pleasing little smile, before an audience, and they go away knowing nearly as much as he does.

Thousands throng to meet him and thousands are turned away. They come on their crutches and in their chairs. They are carried in sitting, hunching themselves with pain and lying down; they go away, feeling better than they were before.

At the institute in Grosvenor Gardens, which Coué's first visit founded, there is no charge except that the payment of three shillings goes to meet expenses. Rent has to be paid and the printing of bills, and post-

age stamps. Otherwise, this remedy is free to all who care to call; and the dozen English men and women who have studied with Coué at Nancy are now curing the sick in England.

And yet the little Frenchman in the frock-coat has told us nothing new. Couéism is a part of every cure and of every remedy. But—Coué has reduced the science of "Cure yourself" to eleven words. "I am growing richer and richer every day," implanted at the back of the mind, has made many millionaires; "I am growing holier and holier every day, by God's grace," has made many saints. Faith can remove mountains; hope can conquer continents; auto-suggestion can make weak men strong.

OUR MOVIES REMAKING JAPAN

"IRASSHAI! Irasshai" — "Welcome! Welcome!"—cries the smiling girl usher at a Japanese moving-picture show, and tea is served while you wait for the cherry-blossomed curtain to go up on Mary Pickford, Charlie Chaplin, or "Doug" Fairbanks. A delightful Jap, by name Sadao Imada, discusses all this in *Asia*, and if his English is a bit peculiar, well, so much the better. The editor of *Asia* had neither the heart nor the unwisdom to alter a word, as any such revision "would destroy the charm and the fine spirit and feeling of the article." It is in a style of his own, accordingly, that Mr. Imada proceeds:

I have been harboured from long since the wish that of to write these observation about movie, of which now thus starting. In Japan the film fan already have seen Charlie Chaplin's "Kid," Douglas Fairbanks's "Three Musketeers", and many other latest and well-known productions of America. Almost all leading news papers of Tokio have their sole column for movie; and American moving picture magazines are prevailing no less than any other periodicals of United States.

Think these facts! In every city and town all over Japan, except those pictures which made in Japan, American pictures unholding their shadows by day and night. In other words, Japan is immersing in the wave of American picture; it is not exaggeration a bit.

And now Japan of present, is being yet on the road to rebuild her new civilization; and she is revealing the appearance of most queer to be seen; her tradition melted with the shaver of foreign tides, and devastating in whirlpool. As a whole, outwardly and inwardly, Japan is now suspending in the state of chaos. Every traveller could perceive it at a glance, when who has set their first step on the soil of "rising sun".

Any-how as the nation of the civilized world, we require the environment that of fine and beautiful, but on this point, we Japanese living far beyond of it, we are breathing in the surrounding that of most uncomfortable.

Out of this seetheing eurldolone, what sort of civilization will lined up? It can not be clearly taken in view yet. But the fact is true, to compete or to live in shoulder by shoulder among the civilized nations of world, Japan can not be loitered in the atmosphere that of samurai and daimyo. Efficiency is forcing her to follow along the line of Europe and American civilization. Every material devised in Europe and America imported and still coming.

Old things substituted by new ones, and

Think now, of saving 1/3 your fuel next winter

AT THIS time of the year, dealers have plenty of time to spend with you, helping you decide upon the size and type of Sunbeam Furnace that will heat your home thoroughly for the least amount of money.

Besides, Sunbeam prices are now lower than ever before, so, this is the season to see a Sunbeam dealer.

He will explain how the Sunbeam Furnace can heat a given number of rooms more evenly, more healthfully and with one-third less fuel than stoves or fireplaces.

The Sunbeam is made on a quantity-production basis by one of the oldest and largest furnace manufacturers in the country; it is for this reason that it can be sold at such a surprisingly low cost.

All parts are accurately fitted by a process which makes them leak-proof and they are made so much over-size that a Sunbeam will practically never wear out.

The Sunbeam burns any kind of fuel. It quickly takes the chill off your house in the brisk days of early fall; it maintains an even temperature of warm, moist air in every room; even in below-zero weather. A Sunbeam will warm the most isolated room in the house so that you can dress in comfort on the coldest winter morning.

It usually takes only one working day to install a Sunbeam Pipeless Furnace; and there is no muss or dirt. Its economy of fuel will be apparent from the first day.

Think now, of saving one-third your fuel next winter. And think of the wet, disagreeable days still to come this spring. Why wait for winter to save fuel; why not begin at once?

"Here Is the Secret of My Good Cooking"

"I bought an oil stove equipped with the Patented KEROGAS Burner and get the same good, uniform results I used to get with my gas range—and at less cost."

The Right Heat When You Want It

The Patented KEROGAS Burner mixes kerosene with air, turns the oil into gas and gives a double flame concentrated on the cooking utensils. Have it high or low—intense or simmering just by the turn of a little control wheel.

You cook at least cost because every particle of fuel is used. Kerosene is cheap and then with the Kerogas Burner, only 1 gallon of oil is used to 400 gallons of air.

The Patented KEROGAS Burner is very simple—made from one piece of brass—rust proof, leak proof. Lasts for years. Be sure that the oil stove you buy is equipped with it.

The Kerogas Oven gives wonderful results in baking and roasting. Heats quickly and uniformly. See it at your dealer's.

that new one effects on the other things it concern. For instance if some one purchased a piano it naturally will attract the need of a room which furnished in the style of European to harmonize it. Foreign material make by itself gives change to the things around or concern it. It is the material. And through books and magazines or every kind of art, new vision for life well be awaken and planted in the mind of Japanese, and it will give the effect or change on their way of living.

As Mr. Imato tells us, "morally and physically Japan is the country of import yet," for Europe and America "sway upon everything of Japan," but he recognizes that "this influx" is "not yet well digested and refined, the change is never superficial and no more than stuffy mixture."

To adjust, digest and refine or contract the environment which is now landing on such situation and tendency, we must relish the brain with more stress, and must enrich or improve our minds to stand it. For this purpose, we must learn more about of societies of other countries, from which we are chewing the nourishments of to be necessarily for the grown up of our civilization. And whereupon, the need of mental communication is most imperative than that of material's. From this point of view I am luring by the significance of movie, as I must admit its merits.

As the medium of mental communication, we can count on book, periodical, art and anything which convey the means of information. But it would be most effective on that purpose, that if we can found ourselves in the country itself, of which we want to know. Because we can see very environment in which those books, arts, and everything are going lively. But this chance is the thing of rare blessing. And then every body naturally be take in mind the ability of movie.

It would be sounds odd, if I say, as, there are American colony in Japan. But the fact is true. Any movie center of Japanese cities is in its mean a colony of America. In these parts America is living. Where, we can see the sky scrapers of New York, quaint and simple town of New England, and grand view of nature of Colorado. We can hit the trail with cow boy, also can enjoy the part in a gorgeous hall with swell folks of society, and can feel the thrilling sensations in the "fish alley" or the China town of San Francisco.

We can laugh, anger, and tear with American people at our movie theatres. Of course I know that there are many people in America, who don't want to know, that, there are such fact as through movie understand America by some of people. But I do not intending here a bit, to go touch on any discussion which concern to the quality of movie as an art. But yet, I want to admire American picture as an art and amusement. I am always highly appreciating of its cleanness and healthfulness and yet having the strong value of entertainment. And am always envy for such community, in which such healthy amusement is required and going.

But it would be undeniable, that the moving picture bring America wherever it goes, it unhold the vivid scenes of the land

of liverty before the presenee of people everywhere on globe. It is most vital and lively interpretation of New World. The message of celloid therfore unoverlookable. It is the nerve and blood of America that of covering all parts of globe.

As in America, the movie is the leading amusement or diversion in Japan. And since Japanese picture can not stand yet for foreign film, almost all pictures are supplying from United States. And the picture of Hollywood found every kind of people as its audience in Japan. But its most absorbing fan will be found largely among the younger generation.

There are such boy among my acquaintances, as who like movie rather passionately, as a result of it, some kind of Americanization became apparent. It is his most pet topic of discussion, as, efficiency. And on the everything he argue on the basis that of he think is America, and always comment on the everything of his country harshly. He is utterly dociled by America of what he thinks she is.

Thus the moving-pictures, by developing an intense interest in things American, tends to develop a spirit of progress in the rising generation in Japan. Says Mr. Imato:

Since they younger people of her are awaking for the unadequatness of their custom and efficiency, for the century they are landing, and therefore they are feeling unreasoness of their standard of moral it is still controlling upon their way of living, which had been back-boning the feudal age. Then better things and reasons will be find by them in the society of the beyond of Pacific.

It can be say that the moving picture is a refrection of the country in which it is making. In American moving picture America is being mirriored. In which we can peep the moral, custom and ideal and everything which currenting and going.

So it is one of good referenees to Japanese people, now who are on the exigent state to reconstraet the structure that of her civilization. It will enrich their minds not least extent, and its effect will visible on the way of their living.

There is such facts, as Japanese tailor learn the cutting and any suggestion from movie, or its customers order their cloths minding what size of clothes was appealed to their tastes and suggest the tailor hoping to realize it. My friend who is an architect often attend to movie theatre to enrich his vision and to learn.

Thus American moving picture are appealing to every kind of audiences, with various meanings in Japan. After all the magie of celloid is now playing on Japan, whose organic body as a whole now on the busiest curreney to echange into fine state as civilization, as she is now persuading by her friendly nations with agreeing her good achievement on material side.

We Japanese people must wipe away the unfair reputation, as soon as possible of what we are now owing. We are inspiring by America not least degree. We owe very much to her. And it is the thing of blessing for Japan, that her people are enjoying the movie of America. It is by itself telling the progress of amiable feeling towards America is going and latenting among Japanese people. And therefore American moving picture having the mission of peace in its signifiance, also.

There are in our country many American haters, but I want here to demnstrate the sentiment of friendly feeling to United States, which now prevailing among we younger generation of Japan.

Teeth You Envy

Are brushed in this new way

Millions of people daily now combat the film on teeth. This method is fast spreading all the world over, largely by dental advice.

You see the results in every circle. Teeth once dingy now glisten as they should. Teeth once concealed now show in smiles.

This is to offer a ten-day test to prove the benefits to you.

That cloudy film

A dingy film accumulates on teeth. When fresh it is viscous—you can feel it. Film clings to teeth, gets between the teeth and stays. It forms the basis of cloudy coats.

Film is what discolors—not the teeth. Tartar is based on film. Film holds food substance which ferments and forms acid. It holds the acid in contact with the teeth to cause decay.

Millions of germs breed in it. They, with tartar, are the chief cause of pyorrhea. Thus most tooth troubles are now traced to film, and very few escape them.

Must be combated

Film has formed a great tooth problem. No ordinary tooth paste can effectively combat it. So dental science

has for years sought ways to fight this film.

Two ways have now been found. Able authorities have proved them by many careful tests. A new tooth paste has been perfected, to comply with modern requirements. And these two film combatants are embodied in it.

This tooth paste is Pepsodent, now employed by forty races, largely by dental advice.

Other tooth enemies

Starch is another tooth enemy. It gums the teeth, gets between the teeth, and often ferments and forms acid.

Nature puts a starch digestant in the saliva to digest those starch deposits, but with modern diet it is often too weak.

Pepsodent multiplies that starch digestant with every application. It also multiplies the alkalinity of the saliva. That is Nature's neutralizer for acids which cause decay.

Thus Pepsodent brings effects which modern authorities desire. They are bringing to millions a new dental era. Now we ask you to watch those effects for a few days and learn what they mean to you.

The facts are most important to you. Cut out the coupon now.

THE "ROOSEVELTIAN" LADY ASTOR

"I SAID A MOUTHFUL," quoted Lady Astor on the occasion of her first public address in New York, for, despite her membership in the British House of Commons, she is as jolly an American as when she was Miss Langhorne of Virginia. On the ship, coming over, the quartermaster called her "a regular guy," and reporters seem to have got very much the same impression. According to the *New York Evening Post*,

"You look like a lot of white trash," she shouted from the rail of the steamer to her sister, Mrs. Charles Dana Gibson, and a deputation of Women Voters' League members who went to the pier to greet her. "You just ought to see my new coat."

It was Nancy Langhorne speaking, and no mistake. The new coat, incidentally, attracted the attention of a dozen women reporters, who journeyed down the bay at daylight to greet the world's foremost woman in politics. It was a furry affair of black broadtail with a collar of gray chinchilla.

"And I bought it just for the occasion," explained Lady Astor, with a twinkle. "At home I dress like Cinderella."

Viscount Astor came with her. At her request he remained at her side while the photographers cranked and the interviewers plied her with questions. And he seemed to enjoy it.

There is something Rooseveltian about Lady Astor. She is ready for any question that comes her way. She is more than ready. Knowing what she was in for, she took the precaution to interview herself before landing and to supply the results to the press in the form of a two-page type-written statement on things in general.

Reporters and photographers swarmed aboard the steamer after leaving Quarantine. But Lady Astor was ready for them. Some one made the mistake of hailing her as the "leader of the woman's movement."

"That's nonsense," she broke in. "I have been very much overrated. I am just an ordinary woman. I am only a symbol. If an ordinary woman can do what I have done, what can not the others do?"

Lady Astor talked like that—in short, crisp sentences, always coming back at her questioners as quickly as they could think up things to ask her about. On only one subject was she determined to remain silent—Margot Asquith. She would not talk about that.

When one insistent reporter, unwilling to take the hint, returned to inquire what she thought about Margot's views on Prohibition, Lady Astor fixt him with her clear blue eyes and said: "Man, you ought to go back to Texas." She guessed the place he came from by his accent.

Speaking of accents, Lady Astor is proud of the fact that she hasn't acquired a full-grown English accent after all these years.

"I still talk like a nigger," she said—tho, if the truth must be told, she didn't talk quite like that.

Whatever else may be thought of Lady Astor during her stay here, it can be set down right now that she won the hearts of the women reporters who went down the bay to meet her.

They found her a "darling." And a sort of a Russian blouse much decorated with Bulgarian embroidery, which she wore under her new coat, caught the feminine fancy quite as much as did the soft, black velvet hat which adorned her slender, girlish head.

Lady Astor was alone when the vanguard of reporters and photographers discovered her.

"Help! Where's my husband? Steward, find my husband at once," she shouted, as the firing squad closed in.

Viscount Astor was found lurking somewhere in the background, and arm in arm with his Lady, led the way to the boat deck. Here, with the Statue of Liberty as a background, Lady Astor was photographed and photographed and photographed, now with her coat on, now with her coat off, now with the Viscount by her side, now all by her lonesome—whatever the camera sharpshooters commanded her to do was done. Through it all Lady Astor laughed and joked and chided the photographers.

"You think I look foolish," she told them, "but you ought to see how funny you look yourself."

In the midst of it she sighted a gray-haired sailor.

"Come on, Petty," she called, "get into the picture. I love sailors."

Bashfully the tar complied, taking up his stand opposite to the Viscount while the cameras whirled.

"What's your name?" he was asked.

"Murphy," came the reply. "Quartermaster Murphy, and this is my sixty-seventh trip. Get that down."

Lady Astor laughed.

Later on, when interviewed by a squad of newspaper men, she gave her views on various matters, among them Prohibition. It is not yet a political issue in England, she said.

"I have been told tho," she went on, "that the wets are prepared to spend \$50,000 to keep me out of Plymouth. I say, let them come on. We need the money."

To another question she said she did not advocate the formation of a woman's party.

"No," she snapt, "we've suffered too much from men's parties, haven't we? There isn't any such thing as the woman's point of view."

"Women are just as individual as men," she assured the nearest woman reporter—who, incidentally, came all the way from Philadelphia to ask Lady Astor what she thought of that city. "The woman's point of view is just as variegated as the man's point of view, and that's a veritable whirligig, isn't it?"

"How about Lloyd George?" some one asked.

"Oh, he's still got his head above water," was her answer, "and"—this with a sly wink—"it's a head, too."

Women's dress? It was "unfortunate."

"Nothing," she declared, "lets women down more than to go about half naked. There is no use talking about equality so long as we use our liberty to expose our hideousness."

There was much more talk—as to her six children, whom she called "mongrels," being more American than English; as to flappers, whose parents, she thought, ought to take them in hand; as to the South, which she was glad to hear was beginning to wake up; as to a score of different things.

And then, as the liner was being warped into her pier, Lady Astor turned the guns on her besiegers.

"Here," she exclaimed, gripping the arm of her neighbor, ex-Gov. James Goodrich of Indiana, back from a visit to Russia, "why don't you reporters interview this man? He's done something. He's seen things. He can give you a real story. And yet you come to me, just an ordinary woman. Why," she concluded, "you are a lot of half-wits."

In its account of Lady Astor's address at the Town Hall—her first on reaching New York—the *Post* tells us:

On the platform Lady Astor displayed the same quick wit and

sly jesting which some of her colleagues in the House of Commons know to their sorrow. She praised the members of Parliament, tho, even if they did greet her as a pirate instead of as the political pilgrim from Plymouth, which she felt herself to be. "They bore their shock with dauntless decency," she said, "for it was almost enough to have broken up the House."

When Lady Astor had finished her speech, Mary Garret Hay presented her with a bouquet matching the city colors, and said jokingly that she wasn't "the Mayor of New York—yet."

"I hope it would not seem tactless of me," said Lady Astor, with the smile which the audience had already learned to interpret, "but I wish to goodness the presenter was the Mayor of New York."

This remark brought forth a din of approval that shamed ordinary applause to silence, and redoubled itself as the speaker followed up her smile with, "I see you know what I mean." Again there was a big demonstration, but Lady Astor was not yet content. She had another delicate dart in her sheaf, and she launched it with a full appreciation of its barbed edges.

"And that's a saying a 'mouthful,'" she concluded, and turned and left the platform.

Lady Astor was accompanied on the platform by her husband, Viscount Astor, and Vincent Astor. She said her husband was "the one who started her off on this downward path—from the fireside to public life," and declared that if she has helped the cause of women, "he is the one to thank, not me." "He doesn't think you can right wrongs with philanthropy," she said, again referring to Viscount Astor; "he realizes that you must go to the bottom of the causes of wrongs and not simply gild them up." He is, she said, "a strange and remarkable man."

After relating with much gusto her experiences in the House of Commons, Lady Astor discuss the more general aspects of woman in politics. There was one point, she declared, at which she agreed with Schopenhauer, namely, when he remarked of woman, "The race is to her more than the individual." She added:

"I feel, somehow, we do care about the race as a whole; our very nature makes us take a forward vision; there is no reason why women should look back—mercifully we have no political past; we have all the mistakes of sex legislation, with its appalling failures, to guide us.

"We should know what to avoid, it is no use blaming the men—we made them what they are—and now it is up to us to try and make ourselves—the makers of men—a little more responsible in the future. We realize that no one sex can govern alone. I believe that one of the reasons why civilization has failed so lamentably is that it has had a one-sided government. Don't let us make the mistake of ever allowing that to happen again.

"I can conceive of nothing worse than a man-governed world, she declared earnestly—"except a woman-governed world—but I can see the combination of the two going forward and making civilization more worthy of the name of civilization based on Christianity, not force. A civilization based on justice and mercy. I feel

men have a greater sense of justice and we of mercy. They must borrow our mercy and we must use their justice. We are new brooms; let us see that we sweep the right rooms."

Lady Astor advised women to enter local politics, saying that it is a "fine apprenticeship to central government," and declaring that women are up against unseen forces, "generations and generations of prejudice." To overcome this prejudice of men, who, she said, have "without knowing it, westernized the harem mind of the East," "woman must go on being his guide, his mother, and his better half. But we must prove to him that we are a necessary half not only in private but in political life."

"The best way that we can do that is to show them our ambitions are not personal. Let them see that we desire a better, safer, and a cleaner world for our children and their children and we realize that only by doing our bit, by facing unclean things with cleanliness, by facing wrongs with right, by going fearlessly into all things that may be disagreeable, that we will somehow make it a little better world.

"I don't know that we are going to do this—I don't say that women will change the world, but I do say that they can if they want, and I, coming in from the Old World, which has seen a devastating war, can not face the future without this hope—that the women of all countries will do their duty and raise a generation of men and women who will look upon war and all that leads to it with as much horror as we now look upon a cold-blooded murder. All of the women of England want to do away with war.

"If we want this new world, we can only get it by striving for it; the real struggle will be within ourselves, to put out of our consciousness, of our hearts and of our thoughts all that makes for war, hate, envy, greed, pride, force, and material ambition."

"Our Nancy," as they still call Lady Astor in Virginia, is the subject of a biographical sketch contributed to the Richmond Times-Despatch by Mr. Harry Tucker, who observes:

Many of the middle-aged gallants of to-day remember the Langhorne girls, of whom "Our Nancy" was one of the sprightliest. They could ride and hunt and swim and row with the best of them. They were leaders in their set, and they all came into the public eye more or less. They set the styles, and whatever the Langhorne girls achieved, their followers, a big crowd, tried. Some won, but most of them failed to keep along with the leaders. They all became famous. Yet it was up to "Our Nancy" to reach the apex.

Nannie Langhorne took her seat in the House of Commons on December 1, 1919, following a picturesque and exciting and withal entertaining campaign in the Plymouth District. All America and all England watched that whirlwind campaign. The newspapers pictured it as "charming and classy." The seat which she won was vacated by her husband, Major Waldorf Astor, when he was elevated to be Viscount Astor upon the death of his father, William Waldorf Astor, of Hever Castle and New York City.

Her great wealth, drawn largely from Virginia and New York real estate, and her Virginia birth, gave the famous British hecklers plenty of opportunity to intrude themselves upon her otherwise peaceful stumping tours. But, held up by that old spirit which is a well-known feature of her

Exceptionally Low Cost by Building Now

Today, when all building costs are low, greater savings are effected in Truscon Standard Buildings than in other constructions. In fact these all-steel buildings are at exceptionally low prices, due to the recent rock-bottom cost of steel.

1. Lower first cost is only one of the definite savings effected by Truscon Standard Buildings.
2. Their quick erection with minimum labor starts your building earnings promptly.
3. Their low cost reduces interest charges and taxes; their permanence saves on insurance and upkeep.
4. Easily dismantled, they are re-erected in new locations without loss.

Fireproof, daylighted, well ventilated, Truscon Standard Buildings make ideal factories, warehouses, foundries, service garages, filling stations, shops, etc. They are furnished in all sizes, with pitched, monitor or sawtooth roof.

Buy Them Now at Rock-bottom Prices. Write or Wire for Information, Catalog, Etc.

This Gold Seal Identifies America's Most Popular Floor-Covering

THESE little corner glimpses, printed here in but two colors, can give you only the slightest hint of the real charm of ^{Gold Seal} Congoleum Art-Rugs. To fully appreciate their beauty and variety of coloring and design you must see the rugs themselves.

Look for the famous Gold Seal Guarantee, which stores that sell ^{Gold Seal} Congoleum Art-Rugs usually display in their windows. This Gold Seal is your protection against imitation floor-coverings. Also be sure to look for it on the goods when you buy.

Patterns for Every Room

There are patterns suitable for every room in the house—simple tile designs for kitchen and bathroom, restful color combinations for bedroom, dining room and living room. You will be charmed by their beauty and coloring—amazed at their very low prices.

Waterproof—Sanitary—Need No Fastening

And Congoleum Art-Rugs are so easy to clean and so practical. A light mopping makes them bright and spotless in a twinkling. They hug the floor, *without fastening of any kind.*

Note the New Reduced Prices

6 x 9 feet	\$ 8.10	The rugs illustrated are	1½ x 3 feet	\$.50
7½ x 9 feet	10.10	made only in the four large	3 x 3 feet	1.00
9 x 10½ feet	14.15	sizes. The small rugs are	3 x 4½ feet	1.50
9 x 12 feet	16.20	made in other designs to	3 x 6 feet	2.00
		harmonize with them.		

Owing to freight rates, prices in the South, west of the Mississippi and in Canada are higher than those quoted.

Attractive designs and colorings, durability, ease-of-cleaning and amazing economy of price—small wonder that Congoleum ^{Gold Seal} Art-Rugs are America's most popular floor-covering!

Too bad!

But that won't help
your next car. *What will?*

YOU give your car every care it should have, perhaps—save one. You may always thoughtlessly say, "Give me a quart of oil."

Queer, unexpected knocks come. Repair bills seem high and frequent. Operating troubles multiply. The repair man simply can't seem to keep the engine sweet. You expected to keep the car five seasons. But the engine already shows signs of age.

All around you are men who *don't* turn cars in every season or two—who *aren't* constantly face-to-face with unexpected repair bills—who climb long hills easily and quietly even when the car is old.

They are the men who fondle their cars a bit, keep them up well. And they are particularly careful about lubrication.

Have you ever noticed how many of them are enthusiasts on Gargoyle Mobiloil?

Now for Economy

People are learning that they have a right to expect more from their lubrication. More automobile

Mobiloil

Make the chart your guide

owners will learn the lesson this year than ever before. More will wake up to the fact that incorrect lubrication doubles engine repair bills. Instead of saying "Give me a quart of oil" they will ask for the correct grade of Gar-goyle Mobiloil.

If your car is not listed in the partial chart shown here, ask the dealer. He has the complete list of recommendations—covering every car built.

Not a gasoline by-product

Nine out of ten lubricating oils on the market are simply by-products in the manufacture of gasoline.

Gargoyle Mobiloil is *not* a by-product.

It is produced by lubrication specialists who are recognized the world over as leaders in lubricating practice. Gargoyle Mobiloil is manufactured from crude oil chosen for its *lubricating* qualities—not for its gasoline content. Gargoyle Mobiloil is manufactured by processes designed to bring out the highest *lubricating* value—not the greatest gallonage of gasoline.

Chart of Recommendations

(Abbreviated Edition)

THE correct grades of Gargoyle Mobiloil for engine lubrication of both passenger and commercial cars are specified in the Chart below.

How to Read the Chart:

A	means	Gargoyle Mobiloil "A"
B	means	Gargoyle Mobiloil "B"
BB	means	Gargoyle Mobiloil "BB"
E	means	Gargoyle Mobiloil "E"
Arc	means	Gargoyle Mobiloil Arctic

Where different grades are recommended for summer and winter use, the winter recommendation should be followed during the entire period when freezing temperatures may be experienced.

This Chart of Recommendations is compiled by the Vacuum Oil Company's Board of Automotive Engineers, and represents our professional advice on correct automobile lubrication.

[illegible]

Warning:

Don't be misled by some similar sounding name. Look on the container for the correct name *Mobiloil* (not Mobile) and for the red Gargoyle.

Domestic Branches:

[illegible]

Transmission and Differential:

For their correct lubrication, use Gargoyle Mobiloil "C," "CC" or Mobilubricant as recommended by complete Chart available at all dealers.

PERSONAL GLIMPSES

Continued

the Chicago *Journal* reminds us—one in 1874, the other in 1888.

In 1874 he was a member of the American team which toured England, playing both baseball and cricket. The team knew little or nothing of cricket, but their terrific batting offset their other playing defects and they won every cricket game played, including a victory over the famous Marylebone All-English eleven by the score of 107 to 105 runs.

In 1888 he toured the world with the National League players' party, which included John K. Tener, now president of the National League; A. G. Spalding, John M. Ward, Ed Hanlon and many other noted players of the day.

After Anson's retirement from baseball he opened a billiard hall in Chicago, and later entered the political field. He was elected City Clerk for one term from 1905 to 1907, but failed of reelection.

In 1909-10 he managed a semiprofessional team and toured the country, but all these ventures were financial failures. He was more successful in a vaudeville monologue act in which he appeared in later years.

A great joker was Anson. According to the *Boston Post*,

When "Pop" had been a good many years with the old Chicagos, several baseball writers thought he had been there too long. In their daily stories they called him "Old Man" Anson and boldly hinted that he should give way to a younger and more active man; this despite the fact that Anson still was hitting .300 and driving in many runs.

One afternoon on the ball field, imagine the surprise of the crowd when a figure was seen to take a position near the first sack, this figure wearing the usual habiliments of the ball player, but being facially disguised behind a heavy full beard.

It was Anson, and he had donned the make-up in deference to the old man idea. Not during the afternoon would Anson lay aside the false whiskers, and the chuckling tellers of the story say that the star slugger, even then a veteran, altho playing for years afterward, slammed out three hits that afternoon and trotted gleefully around the bases, his false whiskers whistling in the breeze.

A story "Pop" always loved to tell when Billy Sunday was around, says the *Post*, was one about Ed Williamson, a star of the old Chicago White Sox:

"Ed," said Pop, "was along with the Chicago club when the two teams, piloted by Al Spalding, made the tour of the world. The team crossed from England to France in a steamer during one of the worst storms that ever visited the English Channel. Things got so bad that even the captain of the ship surrendered in despair. Ed grabbed two life-preservers, strapped them around him and then offered up this prayer:

"O Lord, I will lead a different life if you will spare this ship and our lives."

"He did," continued Pop. "The ship arrived safely in port and Ed went back to Chicago, gave up baseball and started a saloon."

As to "Pop's" racial origin, accounts

Their wedding anniversary made happy because he remembered

AND flowers expressed for him what words alone could never do.

Do you remember? Do you place a red ink ring around that day on the calendar which is your wedding anniversary, somebody's birthday or some special day to remember and

"Say it with Flowers"

A graceful, thoughtful tribute is a gift of flowers to those dear to you.

And flowers so beautifully express you. They are always in good taste, always right, always timely and always so welcome. The man who counts is the man who remembers.

Through the Florists' Telegraph Delivery Service, flowers may be delivered within a few hours to any address in the United States or Canada

Are you a sensitive person?

NATURALLY, you are.

Every person of culture and refinement possesses those finer sensibilities that mark the gentleman and gentlewoman.

And particularly are such people sensitive about the little personal things that so quickly identify you as a desirable associate—socially or in business.

Attention to the condition of your breath ought to be as systematic a part of your daily toilet routine as the washing of your face and hands. Yet how many, many men and women neglect this most important item!

The reason is a perfectly natural one. Halitosis (or unpleasant breath, as the scientific term has it) is an insidious affliction that you may have and still be entirely ignorant of.

Your mirror can't tell you. Usually you can't tell it yourself. And the subject is too delicate for your friends—maybe even your wife or husband—to care to mention to you. So you may unconsciously offend your friends and those you come in intimate contact with day by day.

Halitosis (unpleasant breath) is usually temporary, due to some local condition. Again it may be chronic, due to some organic disorder which a doctor or dentist should diagnose and correct.

When halitosis is temporary it may easily be overcome by the use of Listerine, the well-known liquid antiseptic, used regularly as a gargle and mouth wash.

Listerine possesses unusually effective properties as an antiseptic. It quickly halts food fermentation in the mouth and dispels the unpleasant halitosis incident to such a condition.

Provide yourself with a bottle today and relieve yourself of that uncomfortable uncertainty as to whether your breath is sweet, fresh and clean—Lambert Pharmacal Company, Saint Louis, Missouri.

For
HALITOSIS
use
LISTERINE

vary. Some call him Swedish, others of English and Irish descent, a view held by the great player himself. Says the *Post*:

For his aggressiveness some baseball writers nicknamed him the "Swede." Anson was not at all pleased when he noted the reference in the sporting pages one day, and he immediately looked up the sporting editor of one of the Philadelphia dailies.

"How did you happen to call me a 'Swede'?" demanded Anson, peeved, but fighting to hold himself in control.

"Well, aren't you?" inquired the scribe, slowly.

"No, I'm not," declared Anson, indignantly. "In fact, there isn't a drop of Swedish blood in me. My folks came from England and Ireland."

The sporting editor paused a moment and then remarked slowly and with sarcasm: "My dear Captain Anson, I am very sorry I made such a mistake. There is so much Scandinavian blood in Old England's veins, if I were you really I wouldn't disclose the fact I was a Swede."

Anson spun on his heel and beat it for the door. Afterward he admitted arguing with the umpire was much easier.

However, there was no question as to his Americanism.

When the old Chicago White Stockings visited Boston once in the early eighties with Captain Pop Anson at their head, a Bostonian took the famous ball player for a walk one morning before going with him to the old Walpole Street grounds.

They finally arrived over on Massachusetts Avenue where they could look across the Charles to Cambridge.

"See that noble river?" asked the Bostonian. "This is the place where the British crossed over in boats for the attack on Bunker Hill. Lord Howe was in the foremost boat. Isn't it wonderful to think about?"

"Sure," answered Pop. "How I wish I could have been there."

"On the heights of Bunker Hill with Prescott and Warren?" asked the Bostonian.

"No," said Pop, "along with that fellow Lord Howe doing service for my country."

"Why!" exclaimed the shocked Bostonian. "Would you have fought for the British?"

"Nix, nix," grinned Anson. "But I could have rocked the boat."

No Cause for Anxiety.—Father had been cleaning the bedroom windows outside, when little Muriel came in from the garden, and said, "Mother, did you hear the ladder fall down just now?"

"No," replied the mother.

"Well," said the child, "it fell down and broke three flower-pots. I told daddy you'd be cross."

"Oh, dear," said mother; "I hope your daddy hasn't hurt himself!"

"I don't think he has yet," said little Muriel; "he's still hanging on to the window-sill."—*Exchange.*

What Well-Bred People Do.—Have you ever seen a "Fire-Fly" Rose Comb R. I. Red? Like well-bred people, they have risen to the emergency and rank first as winter layers as well as first in the show rooms.—*From a Poultry Farm Advertisement.*

A machine, capable of adjustment to any human stroke, governed by a falling weight (not a spring) with perfect "follow-thru" and exactly-measured force expended in each stroke.

The Serious Business of Making Good Golf Balls

Bedded in concrete on the grounds of Fort Dunlop, Birmingham, England, is a patented driving machine—one of the many devices used in maintaining and improving the qualities of Dunlop golf balls.

The ground in front of the driving machine is measured off in a manner similar to the field of a long-range gun. Accurate experiments, many times repeated, have given Dunlop engineers invaluable data on all the important things that affect the flight of golf balls—depth of markings, resiliencies of core and winding, arc-of-flight tendencies, distance factors and shape-retaining qualities.

Improved processes and long experience in the manufacture of golf balls have put into the Dunlop many extra items of value. In price, the best grade of Dunlops is only slightly in excess of domestic brands and is less than most imported balls. The Dunlop Warwick (really, much superior to the average ball) sells for 70c.

Dunlops can be obtained thru your usual source of supply. If you have any difficulty in obtaining them, we will appreciate it as a favor if you will write us direct. We'll do what we can to see that your needs are supplied.

DUNLOP TIRE & RUBBER CORPORATION OF AMERICA

GOLF BALL SALES DEPARTMENT

17 East 42nd St. New York, N. Y.

Actual trajectories are compared from time to time, in physical laboratory, determining the height of the ball at 5 positions during its flight. The carry and deviation of the ball (in feet) as well as its "run" after striking the ground are also measured.

BIRDS - BEASTS - AND - TREES

CLOVER, OLDEST HORSE IN THE WORLD, PENSIONED

WHILE NEW YORK AND LONDON sportsmen, veterinarians, and horse lovers generally are speculating whether Clover is entitled to his fifty-one years of life, Clover himself cares not at all. A few days ago it looked as if he might have to be killed, because his owner could not afford to keep him; but one morning Clover woke to find himself famous, not only for his admirable character, maintained through his years of race-track and church activities, but as actually the oldest horse in the world. And now all his troubles are over, for he has been receiving gifts of money and offers of homes or of maintenance from many sources. An eminent veterinarian even promises him many more years in which to enjoy his good fortune and his fame. It all began from a little story in the *New York World*, from which we quote:

Clover, thought to be the oldest horse in the world, will be fifty-one in July, but if some kind animal lover does not go to his aid he may meet an unmerited end. Any one with a soft spot in his heart for this old-timer will earn the undying gratitude both of his master, the Rev. Dr. U. Myers of St. Matthew's Episcopal Lutheran Church of Catawissa, Pa., and Clover.

Clover, formerly a trotting racer, is of Hambletonian stock. When the horse was fifteen years old his master died, and he was then sold to the Rev. Dr. Myers, with whom he has been "one of the family" for over thirty-five years.

But now Dr. Myers is too old to preach and he has been retired on a pension of a little more than a dollar a day. To save expense the church members have urged him to kill his old horse, but the doctor and his wife have loyally sworn to "share their last crust with Clover."

Still, it is hard even for the old couple to make ends meet themselves, so it is asked of some horse lover to send a little contribution to help along the devoted trio.

A few days later a representative of the *World* went to Catawissa to see Pastor Myers, who greeted him with tears in his eyes, and, says the writer:

The aged clergyman found it almost incredible that the simple story of his faithful horse should arouse such a furore of interest,

sympathy and prompt offers of pensioning for Clover. He held a handful of letters with cheeks in many of them. He told the story of Clover and how he came, sickly and a cripple, into his hands to grow in strength and soon to be identified, as he soberly pulled the pastoral buggy, as a famed racing pacer of the Blue Grass, a winner of many track contests in his earlier days.

Blood kept its promise in Clover. For twice the ordinary span of horse life he has loyally served his ministerial master just as he loyally and well strove to keep faith and win victory in the unreligious activities of his racing youth.

He has a certain sporting look, even yet. He stood shaggy and a bit croaky yesterday, for his half-century legs that carried him a mile in the blue grass country when Jay Eye See wasn't foaled, never were mates. One of them is an inch shorter than the other. Oddly enough Clover is not lame, because the hoof of the shorter leg is longer and equalizes its length to that of the longer foreleg. He stands sixteen hands and weighs about 1,200 pounds, and his condition shows the good care his loving master has given him in spite of the narrowness of income which finally brought the appeal for Clover's keep to *The World*.

There is "a look of eagles" about the great horse, some one truly wrote, and Clover has the look of one who was of the eagles in his youth. His sporting history was never suspected by

Pastor Myers when in 1887 he decided that he needed a horse and buggy to get about and fully perform his pastoral duties. His cousin, E. J. Walker, of Philadelphia, had bought the horse just previously, but Clover, not then so called, promised ill. He was sick, his ribs stuck out and he evidently needed building up and a quiet life, and not hard work, for which Walker needed a horse. He sold him to Pastor Myers, the latter paying \$100 on condition of delivery of the horse in good condition at Catawissa.

Mr. Myers is the kindest and gentlest of beings, and from the Mayor to the terrible example of Catawissa everybody loves him. He probably decided to buy the horse mostly because the horse then seemed badly to need a good friend. He found one then and there, and the name Clover too. He grew strong and plump and forgot the fifteen years which the local veterinarian told Pastor Myers was the horse's age then, in 1887.

Clover demurely trotted about the countryside, drawing the pastor's buggy for six years before his sporting past was suspected. Then one day he was in a blacksmith shop being shod. A stranger in town with a fine team stopt at the shop. Clover caught his eye and he went to the clergyman's horse, carefully

Copyrighted by Press Pub. Co., "New York World."

CLOVER CARRIES HIS YEARS AND HONORS LIGHTLY.

At fifty-one years of age, he is rated the oldest horse in the world. In his youth he was a racing pacer, but for thirty-five years he has lived with his master, the Rev. Dr. Uriah Myers, who appears with him here. "Some one," says Heywood Broun, "has been reading 'Back to Methuselah' to that horse."

The Small Car Deserves a Good Tire

The 30 × 3½ Clincher Cord at \$12⁵⁰

You would doubtless like to have cord tires on your car, if you could be sure you could afford them and that they were really as good as the cords made for larger cars.

One of the first things the Seiberling organization determined to do was to satisfy you on both points.

Mr. Seiberling, after many years of cord-tire production—resulting in the world's largest cord-tire business—was satisfied that a high-grade 30 x 3½ Clincher Cord could be built and sold at a price which would put it within reach of the average owner of a small car, and which would at the same time relieve any doubt as to whether it really was a better investment than a good fabric tire.

Such a tire has now been produced. It has equally as good materials and construction advantages as the larger size (straight-side) Seiberling Cords.

This Seiberling Clincher Cord has very strong features to recommend it to the owner of a small car.

The tough durable rubber of the tread is continuous from bead to bead, preventing tread-separation, assuring side-wall resistance to ruts, gravel and other rough going. And it is also strong at the shoulder, where most small clincher cords have been weak.

The On-Air cure process gives uniform tension throughout (no wrinkles or buckles from pinching in the mold) and better distribution of tension in the finished tire.

It has one tread design (anti-skid) for all wheels, making tires interchangeable. It is semi-flat, giving better traction and longer wearing qualities.

Seiberling Cords and Tubes are now on sale by Seiberling Dealers. Write for name and address of one nearest to you.

TO TIRE DEALERS:

Seiberling Cords and Tubes are distributed through regular retail channels. We desire to establish connections with good business men who agree with us that high-grade products, a policy of selected and not closely competitive distribution, and service to the user form the right basis for a lasting and mutually profitable relationship. Write or wire Seiberling Rubber Company, Akron, Ohio.

SEIBERLING RUBBER COMPANY, AKRON, OHIO

SEIBERLING CORDS

"CORDS ONLY": Seiberling Tires are Cords only. All Tires, Tubes and other products carrying the Seiberling name and trade-mark are of one grade only—as good as we can make them.

SEIBERLING TUBES: Seiberling Tubes, also are of "one grade only, as good as we can make it". They are heavy, large tubes, of long-lived "pure gum, floating stock", and should last as long as the casing itself.

The Magnificent Trio

JUST as the mighty *Olympic* provides a standard of luxury known throughout the world as utmost in ocean comfort, so now a trio of White Star ships in our Cherbourg-Southampton service advance trans-Atlantic passenger travel to an even higher plane.

Majestic
(56,000 tons)

The new *Majestic*
(56,000 tons)—
World's Newest
and Largest
Liner.

The *Olympic*
(46,500 tons)—
The Ship Mag-
nificent.

BIRDS, BEASTS AND TREES

Continued

inspected him, exclaimed with astonishment and gratification and then put his arm around the neck of Clover, patted him and called him a "good old boy."

As to the horse's age, Henry Fairfield Osborn, President of the Museum of Natural History and author of "The Evolution of the Horse," was inclined to be skeptical, and he said:

A horse could not live to that age. All horses between thirty and thirty-five lose all their teeth, and a horse must have teeth to live.

There might be exceptions, of course, for if a horse could grow a new set of teeth he might easily live to be 100 years old.

However, a different opinion was expressed by Cornish Bowden, an authority on horses and a London veterinary surgeon, who said:

It is quite possible for horses to live to an age of fifty-one. Shortly after the Northwest Rebellion I bought an old charger in Canada. I had him until he was well on into the thirties—in fact, he must have been thirty-seven or thirty-eight. When I sold my ranch I intended to do away with him, but he was such a good horse that several neighbors wanted him, so I spared his life. For all I know he lived on for several years longer, to do useful service.

The house surgeon of the Royal Veterinary College, London, which is the foremost institution of its kind in England, said:

To my knowledge the age of fifty-one constitutes the world's record for the life span of any horse. The oldest I can recall is a pony in the Midlands which lived to be thirty-nine and was at work until thirty-eight. Race-horses are usually past their prime after six years, altho hunters and working horses are regarded as in their prime up to twelve years.

Experts at Aldrich's famous sales market, London, said Pastor Myers's horse had won his right to be exhibited in a zoo, for they had never heard of any horse approaching his age.

Finally, because the story of Clover had aroused international interest and because doubt had been expressed by scientists and horsemen whether it were possible for a horse to attain such an age as was claimed for Clover, the *World* sent Dr. R. W. McCully, who is considered one of the foremost veterinarians in the country, to examine Clover and give his opinion on the subject. We quote from Dr. McCully's report in part:

Clover has the oldest mouth I have ever examined. I have seen horses, twenty-five, twenty-seven, thirty years old, but he is the oldest. He is an old, old horse.

Everything about him points to advanced age; his mane, the hair in his tail, his swayback and the atrophy of the muscles of his neck and shoulders.

The Rev. Dr. Uriah Myers told me today that he has owned Clover thirty-five years and before that the horse was raced as a trotter and used as a workhorse more than ten years. In those days it was not

Stormtight

FOR USE ON ANY ROOF IN ANY WEATHER

The National Roof Protector

Use It On Your Worst Roof First!

Your old, badly worn roof need not be pulled off. It furnishes an ideal base for Stormtight, which will make it as good as new—leakproof for many years.

Every new roof of tin, paper composition or canvas needs the national roof protector Stormtight to keep it leakproof.

Stop Leaks BEFORE They Start

Don't wait for trouble. Don't depend on the thin film of roof paint which soon cracks and so is too expensive. Protect your roof with a thick, impervious, durable one-piece covering of Stormtight without seams or nail holes where leaks usually start. Its price is moderate—its use always saves money.

For residences, outhouses, garages, factories, etc. You can brush it on.

Buy of your dealer in all quantities, in large or small lots. Or write us at once and we will see that you are supplied.

Write for "Leakproof Roofs" and testimonials covering many years.

the custom to race a trotter until he was at least five.

I can well believe the horse is fifty-one years old. He has the oldest face of a horse I ever have seen.

I first examined the horse's mouth, then his legs and hoofs, as tho I were passing on a thoroughbred. I found his general condition good. He is sound in wind and has wonderfully clean legs. There is a luster to his coat that is remarkable in an animal so old. His only blemish is a cataract on the right eye. This is not necessarily traceable to advanced age.

I believe constant care, careful feeding and regular but not too strenuous exercise are responsible for Clover's long life. No horse in the best appointed racing stable in this country is fed better or more carefully selected food. Dr. Myers, for all that he is a man of the cloth, is a good horseman, too.

Clover's ration, twice daily, consists of one scoop of bran, one of middlings and two of a mixture of oats, clover and molasses, topped off with three ears of corn. It takes him a long time to eat this, as he masticates slowly.

It is hard to tell the exact age of a horse by his teeth after the fifteenth year. However, the contour of the mouth changes with age. In a young horse the teeth meet at an obtuse angle, but as the animal grows older the angle becomes more and more acute. Judging by this, Clover has the oldest mouth I ever saw. His incisors are as long as a man's forefinger and straight in the jawbone. The most surprising thing is that the teeth are in as good condition as those of a ten-year-old horse. His molars are perfect and in this lies the secret of his health.

Another thing much in his favor is a big, deep mouth. As a rule, horses with little fish mouths are little good.

There is no doubt in my mind that this horse is of standard bred trotting family. His head, particularly, resembles that of Rysdyk's Hambletonian. Even tho age has left its mark on the head, which is turning gray, there is the look of the good horse about him.

Clover is a bay gelding, 16 hands, weighing about 1,100 pounds. He stands squarely on his feet, altho his nigh foreleg is about a half inch longer than the other; however, this is a natural conformation. This has no effect on his gait, for he walks without the slightest indication of lameness.

He is remarkably spry and playful. When I examined him in his box to-day I was astonished at the quickness of his movements. He lies down and gets up with ease, a sign that he is still many years from his end. One of the first symptoms of marked old age in a horse is the difficulty of lying down and getting up again.

The horse never has been worked hard, but Dr. Myers tells me he has driven him fifty-four miles in seven hours with perfect ease; also that Clover has trotted a mile in 2.22 and paced a mile in 2.17, many years ago, of course. Last year his greatest effort was carrying Dr. Myers and his wife to the Bloomsburg Fair and back, a distance of about ten miles, but his owner believes he could do fifteen miles a day without any physical strain.

When a horse reaches an age that makes it notable many are ready and eager to question it, basing their contention on records that few horses live 35 years. There is no reason why there should not be an exception, why a freak should not crop up now and then, any more than that no man should live to be 100 years old.

THE tour ideal of Yellowstone Park

IN Gardiner-OUT Cody

IF you miss Gardiner Gateway and Cody Road you do not see Yellowstone! See them both on the *complete* tour of the park—on a Burlington-Northern Pacific Planned Vacation.

Enter at Gardiner; tour the park, then leave over Cody Road—words cannot describe it! No side trip, no extra cost for Cody Road and Buffalo Bill country.

Also, for low price of round trip ticket to Yellowstone alone, you can go to Colorado, Denver—with side trip to Rocky Mountain (Estes) Park; then—the Pike's Peak region.

Vacation costs are down

This year your dollar goes farther; you can now afford to see the wondrous West.

BIRDS, BEASTS AND TREES

Continued

It was established to my satisfaction that
Dr. Myers has had the horse Clover in his
possession for 35 years. Even with lack of
proof of his age, he is an exceptionally old
horse.

Heywood Brown makes the following
contribution to the subject:

Scientists who are perplexed at the ex-
traordinary age of Clover, now in his fifty-
second year, seem to have overlooked the
most rational explanation. Somebody has
been reading "Back to Methuselah" to
that horse.

Arthur Brisbane, in the New York
American, touches ironically upon an angle
of the story overlooked by other commen-
tators:

Much interest is shown in the horse.
Thus far, nobody has seemed much excited
about the Rev. Dr. Myers, too old to
preach, and, after a life in the pulpit, re-
tired on a trifle over \$1 a day. A horse
more than fifty years old is unusual, there-
fore interesting. A clergyman more than
seventy years old, retired with not enough
to live on, is not unusual, therefore not
interesting.

THE FAMILY CIRCLE OF THE SAW-WHET OWL

OUT popped the little round head and
blazing yellow eyes of an owl, in
answer to the knocking of the callers.
Its house was a giant Douglas fir, weather-
beaten and decaying, but with a likely-
looking cavity that drew the attention of
the naturalists. When they knocked, they
had expected to see the flash of the bril-
liant red wings of a mother flicker, and
they were doubly surprised when they
realized that their hostess had no ear
tufts. What could she be? Not a screech
owl, because that little pal of theirs had
ear tufts and was gray, while their new
friend had none and was brown. They
pondered over the owl family, and at last
it dawned upon them that they had dis-
covered a saw-whet owl. After twenty
years of roaming over Colorado moun-
tains, hills and valleys, finding no hint of
the presence of this species, they had sup-
posed it was a myth so far as that State
was concerned. The men were Robert B.
Roekwell and Clark Blickensderfer, and
the result of their intimacy with the saw-
whet owl family is set forth in *Natural
History* (New York). The owl, sitting
there in the entrance to the cavity barely
five feet from them, very much awake
and equally unafraid, made a comical
picture, reminding them of a tiny gladiator,
challenging them with her great yellow
eyes to mortal combat, and the writer says:

She sat perfectly still, watching us closely
with an expression on her funny little face
(if the term is permissible) of mingled sur-
prise and indignation. Not until we
started noisily to climb the stump did she

deign to move, and then she launched herself awkwardly into the air and with rapid, weak, and irregular wing-beats fluttered to the lower limbs of an overhanging evergreen a few feet away, and from there watched subsequent proceedings with a lively tho silent interest.

We begrudged the moments spent in climbing the seven feet of stump to the entrance of the nest, and when we did get a peep, we found to our disgust that the cavity was too deep for us to see the bottom and too small to admit our arms, so to our regret we had to cut away part of the rotting wood. When this was done, we hauled triumphantly forth one of the scrawniest, most wo-begone little creatures imaginable, with great homely "nose," heavy, awkward feet, and a puny body covered with soiled whitish down. Its eyes were not yet open, and the feeble neck seemed unable to carry the weight of its abnormally large head and beak, so that it lay flat in our hands, apparently quite helpless, but uttering frequently a soft, musical little "cheep" not unlike that of a freshly hatched chick. After examining it for a moment we replaced it in the nest and then discovered that the cavity also contained three very dirty, blood-stained eggs, which had originally been white, and which were apparently about ready to hatch. After descending the tree, we watched the parent bird for some minutes at a distance of not more than a dozen feet. During this time she repeatedly flew from the dense shade of the pine, where she first sought refuge, to the nest, but at our least movement of approach she would pop out of the cavity and flutter back to the sheltering pine. At last we regretfully departed for fear the eggs might chill. We had left the stump but a few feet behind when the little mother fluttered back to care for her treasures.

A week later we called again to get better acquainted, and found the old stump lying prostrate. Three bedraggled little corpses told an eloquent tale of another forest tragedy, but the bereaved mother was nowhere to be found. To this day—and that was on June 11, 1917—we have a creepy feeling that we were in some unexplained way criminally responsible for the catastrophe.

The second meeting of the writers with these owls was fully as surprising as the first. They were taking a bird-study trip with some thirty others in the Wildeat Point country, about twenty-five miles south of Denver. Their path led directly under a large dead yellow pine, and, the account reads:

We happened to be the last of the party and as we passed this tree, we made our discovery—the round, fluffy head of a saw-whet snugly framed in an old woodpecker hole about ten feet above our heads. We called the entire party back to where we stood in full sight of the owl and told them to locate a bird within a few feet of them. Thirty pairs of excited eyes, after several minutes' search, failed to locate the bird, and when she was pointed out to the party, bedlam broke loose (a large proportion of the party were ladies).

In spite of all the noise the brave little mother gazed forth calmly from her retreat, and not until the ascent of the tree was begun did she seek safety in flight. She fluttered to a pine tree near by with rapid but rather awkward wing-beats, with the crowd in wild pursuit. Once in the deep shadows of the pine, she ap-

BIRDS, BEASTS AND TREES

Continued

parently overcame her fear and permitted us to come within a few feet of her. One of the party almost touched her with his hand before she again took flight and disappeared in a thicket of firs where we were unable to locate her.

Three days later, on May 12, 1918, we returned to the nest site without the crowd. As before, the mother bird greeted us at the entrance to her home. We climbed the tree and carefully cut out a piece below the entrance hole to permit a good view of the interior. An examination of the nesting cavity, which was about ten inches deep, revealed four soiled white eggs lying on an accumulation of chips, bits of rotting wood, and other debris, without any evidence of an attempt at lining the nest. The eggs were apparently far advanced in incubation, so, after carefully nailing the piece of the trunk back into place, we hurried away to give the mother an opportunity to return to her eggs.

The location of this nest was so unusual as to be worthy of comment. All authorities agree that this species is essentially a bird of the deep forest; that the nests are invariably located in shady spots in heavy timber and usually close to running water or swampy ground. The tree in which this nest was located was on an exposed slope commanding a wide view of the adjacent country. The surrounding timber was sparse; the nesting cavity faced directly south into the bright sunlight and was unshaded except for a single overhanging dead branch; and the immediate surroundings were very dry. The nearest stream was fully half a mile distant, and there was not even a trickle of spring water closer at hand. Taking everything into consideration, the nesting site differed altogether from the typical locations described by the various authorities on the subject.

On June 5 we again returned, and to our delight found four tiny birdlings apparently only a few days old, identical in appearance with the one we had seen the preceding year. We were immediately impressed with the striking difference in size of the four babies, the largest being fully twice the size of the smallest. This substantiated the statements of various writers that the eggs of this species are laid at intervals of two or three days and that incubation begins as soon as the first egg is deposited. We had fully intended to photograph the little fellows, but when we removed them from the nest, they seemed so weak and frail, and showed such evident discomfort in the hot sun, that we lost heart and hurriedly replaced them in the nest without taking the coveted pictures.

Our fourth visit on June 16 was especially interesting. The youngsters had begun to take an active interest in life, and photographing them was rather strenuous work. The hot sun seemed to wilt them, unaccustomed as they were to its rays after days spent in their dark retreat. They could keep their eyes open only a few moments at a time, and when exposed to the sun's rays for any length of time, they closed their eyes, opened their beaks, and panted violently, making anything but fast, instantaneous photography impossible.

On June 23 the birds were fully one-half the size of the parents; the general color was much more brownish (the white down having almost disappeared), the wing

The Famous Cruisette

*A Noteworthy Achievement
In Economical Luxury*

COMPARE the Cruisette with any other boat of anything like equal size on the market. You will admit it is the best built—best engined—and the cheapest boat you can buy.

A Standardized craft—33 feet long, 40 horsepower—with the essentials of seaworthiness, reliability, comfort and roominess that the purchaser has a right to expect.

Let us send you comments of satisfied owners. You will be interested to read of the efficiency and general adaptability of this wonderful little craft.

NEW YORK OFFICE: 11 Pine Street

coverts were well feathered, and the flight feathers were just beginning to grow.

On June 30 we were greatly surprised at the marked change in their appearance. The white down had entirely disappeared; the wings and tail, while short, were fully feathered out; the prominent, light-colored "V" between the eyes was very conspicuous; the entire plumage was of pure chocolate color (altogether different from the color and markings of the parent); and the birds were almost as large as their mother. This was the stage of their growth we had been waiting for, so we placed them in a roomy box and carried them triumphantly home where they could be more closely studied.

At each of their trips, they had been greeted by the parent bird at the entrance of her nest, and, while she did not show any evidence of fear or excitement, it was plain that she did not relish the company of her callers, and she left the nest a little sooner at each succeeding visit. But she did not go far, for, the naturalists continue:

While we had the young ones out of the nest, she made no demonstration, altho a careful search would usually reveal her in a shady spot near by intently watching us. So far as we could tell, we did not see the male bird at all. In any event we did not see both parents at the same time. After our first visit we were unable to approach the old bird closer than fifteen or twenty feet.

The only evidence of food about the nest were remains of mice, and we were unable to find any disgorged "owl pellets," which are the best index of an owl's food. There were no bird feathers about the nest, and in fact no feathers at all in the nest cavity, altho the entire abdomen and part of the breast of the female were entirely devoid of feathers.

The young birds, from beginning to end, showed no fear of us whatever, and did not make any attempt to escape, even when fully fledged. They were very awkward, often falling off the branches where we placed them and (until well grown) frequently tipping forward on to their beaks in a most ludicrous fashion. We handled them freely with bare hands and they made no attempt to use their strong, sharp claws which, even in the very early stages would have made formidable weapons, had the birds been inclined to use them upon us. The attitude of both young and adult, except in rare instances, was decidedly lacking in animation, spirit, and aggressiveness, in sharp contrast to that of other species of owls. They seemed rather to enjoy gentle stroking and would cuddle down in the palm of one's hand in a very confiding manner. As the young grew older, they were much less affected by heat and bright light; and the parent to our amazement would gaze with unblinking eyes directly into the sun's rays reflected from a mirror (used to throw light upon the object) for minutes at a time. During all of our visits we did not hear the parent utter a sound, and unfortunately we were unable to spend a night near the nest to enjoy their peculiar night "song" from which their name is derived.

The young birds from the first took kindly to their captivity, showing comparatively little fear, and maintaining their characteristic lack of animation. They readily accepted a change of diet from the mice they had undoubtedly subsisted upon while in the nest to one of small bits of beef and an occasional meal of liver.

FIRESTONE CORDS

Firestone Cord values have given users a new high standard of mileage and service. For 1922 Firestone Cords have been selected by sixty-seven of the foremost American car makers as standard equipment. They lead in popularity too among taxicab and motor transport companies who buy on the strictest mileage basis.

30 x 3½, \$17.50
32 x 4, 32.49
33 x 4½, 42.85
33 x 5, 52.15

They Come Firestone Equipped

IT is evidence of the recognition accorded Firestone quality that on most of America's fine cars Firestone Tires are standard equipment.

Significant, too, is the fact that when these cars come Firestone equipped they usually stay Firestone equipped. Quality once so definitely learned is not likely to be forgotten; value so apparent makes a lasting impression.

The reason for such marked preference is Firestone mileage. It makes these tires the choice likewise of leading taxicab companies and motor transport operators—who carefully check mileage costs.

In short the men who know tire values best endorse Firestones—a valid reason why you should select Firestones for your car.

Most Miles per Dollar

\$11.65

30x3½ extra size non-skid, the best known tire in the light car class. Higher in quality than ever and now being produced on a scale that permits its being sold at the lowest price on record. The same unusual value in 30x3 size at \$9.85.

Firestone

\$9.99

Oldfield "999"—guaranteed—a full size 30x3½ anti-skid tire. Built with four-ply long staple fabric. In 30x3 size at \$8.99. Prices that cannot be equalled for a reputable, well-known tire of trustworthy quality. Sold by Firestone dealers.

RED, THE RECORD-BREAKING HOWLER MONKEY

IT was an ominous day. Red, the supposedly "delicate" howler monkey, who had been reared with the greatest care, was left in the charge of two little girls who were very fond of him. A boy came along bearing gifts in the form of a frankfurter, roll, and sauerkraut, and Red partook heartily of the first and last. Later on he was favored by a parking attendant with a copious drink of sarsaparilla. As if this were not enough, in the evening, all too late, the cook discovered that Red had wrecked the frosted decoration of a lemon-meringue pie and had also entered deeply into the foundation of the pie itself, not scorning the crust. But strange to

the 15th of September, 1920. From that time, says Miss Ditmars:

The baby took grudgingly to a diet of powdered barley and evaporated milk. It required frequent feeding, but Mrs. Emerson delivered her little charge at the Zoological Park in good health, and with it gave specific directions for its care.

During its first day in the Park, my father kept the little fellow in his office and fed it four times. He noted that the baby looked very miserable as it sat with drooping shoulders, and with big round eyes gazed mournfully from its cage. To send this tender little waif to the Monkey House, where the keepers were all day very busy with a series of about a hundred specimens, many of them dangerous,

Courtesy New York Zoological Park.

RED TAKES A SUN BATH.

The howler monkey does not howl—he roars like a big-cat animal. This one from British Guiana has lived longer in captivity than any other. Full-grown howlers weigh twenty-five pounds and measure nearly five feet, body and tail. Their make-up is "weird and grotesque."

say, Red was none the worse for his dietary carousing, and his owners were led to think that the difficulty of rearing howler monkeys has been due to mental rather than physical trouble. For from zoological records in both Europe and America it appears that the South American howling monkeys are "impossible" as captives. They partake sparingly of food and pine away after two or three months of exhibition. The longest-lived was a howler in the London zoo who lived thirteen months. In New York the few that had ever arrived lived only two or three months. Therefore, so far as known at present, the record for rearing a howler monkey has been broken by Gladys M. Ditmars, daughter of R. L. Ditmars of the New York Zoological Park, who at the time of writing an article for the *Zoological Society Bulletin* (New York) had brought Red safely through a period of fourteen months.

Red was first found clinging to the body of his mother, who had been shot for scientific investigation by some one at the Society's Tropical Research Station at Kartabo, British Guiana. A few plaintive sounds had revealed his presence, and the waif was adopted by the wife of one of the zoologists. It was estimated that the infant monkey must have been born about

seemed out of the question. Here was a rare and interesting baby, of a notoriously delicate kind, and something out of the ordinary course had to be done. Director Hornaday was consulted, and at once his decision was to turn the care of the new arrival over to me.

The fiery hue of the little stranger at once suggested a name, so we called him "Red." As we drove up home to Searsdale with Red buttoned in my fur coat, his big shiny eyes set in a jet black face frequently glanced up at me in interrogation. That was his last day in a cage. He has been free ever since, and is absolutely different in habits from any other monkey we have ever had at home—and we have reared a number of interesting kinds.

To start properly, I gave the newcomer a warm bath and noted the following facts: Red's estimated age was three months. His total length, including body and tail, was 15 inches. The general color of skin was very dark brown, except the face, hands and feet, which were black. His back was covered with thick, silky hair, ranging from brown to rusty red. His tail and stomach region were devoid of hair. The eyes were very large and intelligent, and at first were of a bluish hue. A month later they turned to very dark brown. The teeth were extremely small, regular and white, with no indication of canine enlargement. Two fingers in the right hand had been broken and stiffened in knitting. There were indications of a break of the vertebrae in the terminal

The Equal of the Finest Hickory

AS EVERYBODY knows, a good hickory is growing scarcer. The Bristol Steel Golf Shaft is equal to the finest hickory shaft in every detail. In actual practice it has met every test. Many of the best professionals have given it their endorsement.

Because it is lighter than hickory the weight of the club is lower, thus making a more perfectly balanced club. Climatic conditions will not affect it. Unquestionably it is stronger and more durable.

NOTICE—Basic and Supplementary Patents covering Steel Golf Shafts are controlled exclusively by us.

This Go-Getter In Selling

Will Increase the Business
of Any Business

Add the New Multigraph to your sales force. Put it at the right hand of your Sales Manager and let it help him plug for sales.

It Gets 'Em!

One user of the New Multigraph writes—"With the Multigraph we reach our entire market, make sales and keep our customers sold afterwards. Another, "We open new accounts, increase old ones and regain lost business with the Multigraph."

It Pays for Itself by Selling

It earns its way in businesses, large and small, because it not only sells on its own account but it backs up the salesmen, follows up their calls, and pulls the tough sales over.

Easy to Operate

It typewrites bulletins, circulars, form letters of all kinds, notices, mailing cards, anything and everything that should be typewritten, faster than twenty typewriters. And it saves the operating costs of nineteen of them.

\$10.00 a Month

Your order and \$30.00 will place the New Multigraph in your office, and \$10.00 a month pays the balance of \$120.00. If you want the printing ink attachment, which equips the New Multigraph to do simple printing jobs, the cost is but \$35.00 additional. Now is the time to start the Multigraph working for you. Sign the coupon below. Mail it, with your check for the down payment, today. You have never had a better investment offered you.

American Multigraph Sales Co.
1804 East 40th St., Cleveland, O.

On receipt of the \$30.00 enclosed (\$147.00 if you want to pay cash), please ship me the New Multigraph, complete with the Multigraph Typesetter. I agree to sign your regular contract when presented, which calls for monthly payments of \$10.00 and interest, until the balance of \$120.00 has been paid. (If you want the Two-Roll Printing Ink Attachment in addition to the above equipment, enclose \$37.00, initial payment. Your monthly payments will then be \$12.34 and interest until a balance of \$148.00 has been paid.) (Above prices in U.S. only.)

Send me further complete information about the New Multigraph. (Note: Check this paragraph if you would like to know more about the New Multigraph before ordering. We urge you, however, to order now, as the demand for this New Multigraph makes prompt action desirable.)

BIRDS, BEASTS AND TREES

Continued

half of the tail. All these injuries probably occurred in the fall from the tree.

As Red had appeared to do well on the diet selected by Mrs. Emerson, we followed about the same schedule. Sufficient of the prepared barley to make three meals was thoroughly boiled each morning. With each morning and evening meal we gave him about a wineglassful of milk, slightly warmed; and this he greatly relished.

After about a month he tired of the barley, and also refused strained oatmeal, rice,

Courtesy New York Zoological Park.

A TAIL TO BE PROUD OF.

Red can coil his tail around an object, throw the end over like a half-hitch, and make an absolutely secure loop.

and, in fact, all the standard cereals. It seemed altogether wrong to give this interesting baby heavier foods than milk or cereal. In order to get him to eat at all it was necessary to cut bits of banana, apple or cooked raisins and mix them with the barley. Infant tho he was, he screamed and reached for the banana and apple, and neither appeared to harm him. As he grew tired of the cereal, the milk was increased to three small glasses per day. He grew voraciously fond of it, and after a meal his outline would be distinctly changed, his little round stomach being shiny with distension.

In March, 1921, there were signs of trouble. Red was now approximately six months old, and had grown two inches, but was not developing satisfactorily. There were indications of rickets, or what among monkeys is called "cage paralysis." This comes from a softening of the bones and is due to a lack of lime and bone nourishment.

My father and I discuss the matter

Kardexing Records Saved Wages of Three Girls

Your present cards or ledger sheets go in Kardex.

ONE girl handles a big collection check-up system that required four girls with big, bulky books. Inaccuracies and time-wasting are stopped. Statements get out eleven days earlier.

60,000 users in 300 lines of business have Kardexed their inventory, sales, advertising, production, payroll, ledger, credits, stock or other records—Used their original cards or new Kardex forms.

and decided to substitute meat broths for the cereal; and here we made a discovery. Red was ravenously interested, and in feeding him some of the broth a bit of meat was caught in the spoon. His manifestation of joy over this fragment of meat surpassed all former interests in other foods. He reached frantically into the bowl for more, and then I decided to make a bold experiment. I had a piece of beef broiled for him and he devoured every shred of it, mumbling and grunting in a fashion that he exhibited only when especially pleased.

Truly, the development of the howler is rapid! Here was an infant half a year old, but seventeen inches long (his mother measured fifty inches) and demanding meat. I have always noted the fondness of most monkeys for meat, and believe they actually need it in their diet, but never before have realized its necessity to an animal so young.

The symptoms of rickets had advanced to such a stage that Red was unable to do more than grovel along the floor. Neither arms nor legs had sufficient strength to raise his body. The meat experiment convinced Miss Ditmars that Red must no longer be treated as an infant, and so his diet was completely changed. He was given everything wholesome that he would eat, and he refused practically nothing except the monotonous cereals of his short baby days. He ate all kinds of vegetables and all kinds of meat, but his favorite food was spaghetti, and this he delighted to hold in two writhing handfuls, devouring it strand by strand. He was fed three times a day, having a small high-chair and tray beside the family table, and with each meal he drank about a wineglassful of milk. Miss Ditmars continues:

Upon this formidable diet (which has continued up to the present time without elimination) Red passed through a transformation covering a period of about three months. His weak legs soon showed an inclination to support his body in wobbling fashion, and within six weeks more he was up and walking. His eyes grew darker and more expressive, and his tail became thickly coated with reddish hair. The hair of the body grew long and wavy, and acquired a golden sheen. All indications confirmed our discovery of a successful diet for the howler—plenty of meat and a variety of vegetables.

To my mind there is yet another important factor in the treatment of these delicate little people of the jungle, which receives too little thought, and that is their mental condition. I believe that many monkeys may be mentally ill and in that case, the offered diet is of little avail. Red has been practically a member of our family. He has been taught cleanly habits, and has the run of the house. He has his favorite nooks and spots where he sprawls for a morning sun bath. A wicker basket with some bits of blanket serve as his bed, and when he is tired he hops in and takes a nap. He is satisfactorily nourished and also mentally well, and we are convinced that under these conditions the howler is not a "delicate" species.

As is probably the case with all howlers, our specimen is absolutely unable to endure cold. I believe that if Red were exposed to a temperature as low as forty degrees

Here, You're at Your Best no matter what you wish to do

By A TRAVELER

A "Southern California Summer" is an experience that you, perhaps, have yet to enjoy. I have enjoyed many since I first heard of their almost unbelievable attractions. Ninety nights in June, July and August *under blankets* is the rule.

A friend once amazed me with that statement. I had never been to California. But I travel widely, and once went there—to see for myself.

I've spent seven summers there since then.

In no other land are there so many different diversions and strange sights. And nowhere else, it seems, do you *feel* as you do here.

You're at your best in golf and every other sport. It's in the air. And there's interesting change wherever you may turn.

Lunch on a great desert like Sahara. Dinner that evening in a famous restaurant in one of the world's large cities. The same evening, a visit to the seashore.

4,000 miles of paved highways, smooth as city streets, to take you to these places.

You fish in mountain lakes or streams, rest at mountain camps, ride horseback over wild trails, bathe at a seashore resort at the foot of a mountain range.

Such is this great summer playground from end to end.

Stupendous hundred-mile views are everywhere on clear days from many points.

And all these diversions within a radius of a hundred-mile drive over perfect roads.

Add these attractions to an ideal summer climate—warm days and nights that are *really cool* and you have not an imaginary summer wonderland, as this may seem, but one *in fact*.

Southern California is America's ideal summer as well as winter resort. Average mean temperature: June, 66 degrees; July, 70 degrees; August, 71 degrees; September, 69 degrees.—The 44-year record of the U. S. Weather Bureau.

Summer? An amazing summerland—you'll never spend a more delightful, restful, interesting summer anywhere. Best of all, you'll have this *complete change!* And in that feature is the *real value* of vacations.

Ask any railroad ticket office for further information, or mail coupon below.

Special, low-rate, round trip fares beginning May 15th—No more War Tax.

Plan now for this summer. Let the family have this great change and great trip.

he would soon perish. He detests the winter, and if the temperature of our living-rooms goes even a few degrees below seventy, he crawls under cushions to hide or squeezes close to the radiators, his arms upraised in order to expose his breast to the heat. If he is cold he will not eat, and during the present winter we have knitted him a woolen jacket, which he greatly enjoys and in which he bravely goes exploring the house in the early morning, before the heating boiler has been looked after, and the radiators, which have been chilled by bedroom windows being open, have attained the heat of the daytime.

As this article is intended to present points of information that may be new in the study of monkeys, it is important to cite a few observations of our howler's habits. One thing we have discovered which may be valuable as a scientific record, and that is, the surprising tendency of our specimen to give off through the pores of the skin and the hair the reddish color-pigment which gives this species its name. When this little animal is given a bath, the water becomes deeply stained within a few minutes with the same peculiar, reddish color as his hair, and he emerges from the bath as if distinctly bleached, the long hair of the back being almost yellow. Within a week he "colors" again. This dye action of the hair is more strikingly illustrated by the small blanket in which he is wrapped at night. At times this becomes as deeply tinted as if stained with iron rust. We have saved portions of the blanket for analysis. The strange dye-giving tendency of the hair may explain the great difference in color observed among wild howling monkeys, some of which are dark red, some pale rusty red, and others actually yellow. It may be that the exposure of some individuals to heavy rains in the jungle, while others have been sheltered, has resulted in these color variations.

Our howler has a fair vocabulary of distinct sounds. He seldom utters his deep-toned and weird roars unless he is hunting some one and is in doubt as to just where he is. When he unexpectedly discovers a member of the family in one of the rooms quietly reading, he enters the room uttering low short grunts or barks, sounds difficult to describe. Climbing up on the chair and settling in one's lap, he croons in soft fashion and makes gurgling sounds, produced by gently expelling air against the roof of the mouth. He has a habit of pleading, with prolonged whining sounds, to have his back scratched, or to be noticed; and when frightened he utters an altogether unique, sharp bark, repeated several times. The exhaust whistles on automobiles passing the house will often cause him to glance toward the windows and utter these barking sounds.

Red is horribly afraid of a human sneeze, we are told; just why is not known, as his vocabulary contains no such sound. If any one sneezes, Red gives a quick glance at the nearest window, and then rushes for shelter. He usually hides under a heavy chair, then slowly emerges, glancing cautiously toward all windows in the room. He shows no fear of the one who sneezes, but seems to consider the sneeze as an emphatic warning to take to cover. All

—just say

Blue-jay
to your druggist
Stops Pain Instantly

The simplest way to end a corn is Blue-jay. A touch stops the pain instantly. Then the corn loosens and comes out. Made in two forms—a colorless, clear liquid (one drop does it!) and in extra thin plasters. Use whichever form you prefer, plasters or the liquid—the action is the same. Safe, gentle. Made in a world-famed laboratory. Sold by all druggists.

Free: Write Bauer & Black, Chicago, Dept., 25, for valuable book, "Correct Care of the Feet."

his fears appear to come from imaginary things outside the windows. He is afraid of nothing in the house. He lords it over the cat and dog; the cat is a particularly large, lazy animal, and if any one makes a move to "shoo" her out of the way, Red rushes at the cat with growls and barks to help. He has been severely cuffed by the cat for pulling her tail and deliberately pawing over her dinner while she was eating, but he has no fear of her. Red is absolutely regular in his habits, and Miss Ditmars says:

He is tucked in his blanket by the last member of the family retiring for the night, and makes no move to venture out again. He seldom wakes until he hears some one stirring in the morning, when his plaintive cry is heard at the door of the room where he sleeps, as he demands freedom for the day, and breakfast. Early morning is his noisiest time, for the howler appears to usher in the morning with many yawns, each accompanied by a noisy intake of breath, followed by a roar that ends in a squeal. His morning toilet includes much scratching of head and sides, and usually the latter half of his marvelously prehensile tail, and then follows an astonishing exhibition by the tail itself. This dexterous appendage can be curved over any portion of his back, and the tip works precisely like the human forefinger in scratching any portion of his body.

While Red has been with us for over fourteen months, he has never broken anything in the house. He solemnly inspects many objects, but makes no attempt to pick up anything unless it is very small, and even then he never carries it away. He has never knocked over a vase or a glass. This is remarkable in comparison with most species of monkeys, which if liberated will literally wreck the contents of a room in a very short time. Yet Red is not morose and loves to play. He delights in being rolled on his back, and wrestles with one's hands amid an accompaniment of explosive grunts and growls, his ample mouth wide-spread in an unmistakable grin.

After fourteen months of our care, Red is now twenty-six inches long (more than half grown), and is developing strong canine teeth. Later on he may become a problem, but at present we are determined to maintain him as a member of the household. Since we received him, he has never been entirely separated from the family. He has traveled thousands of miles by motor and Pullman cars, and he has slumbered in many hotels where no rules have yet been formulated to bar red howlers from the premises.

Howling monkeys as a species have some particular points of interest. They attain a considerable size—weighing over twenty-five pounds—and they attain a length, including body and tail, of nearly five feet. Their make-up is weird and grotesque; they are described as "savage" and deliberate in motion; and unlike most monkeys, they give voice to deep, throaty sounds. This is made possible by the expansion of the hyoid bone into a large "sound box" in the throat, which swells to great proportions as the animal roars—for that is the correct word. How the name "howling" monkey ever originated is

There's Personality in a Gilbert Clock

THIS beautiful Gilbert Normandy Chime Clock is more than a timepiece. Its soft, melodious, two-tone chime, joyfully proclaiming each passing hour and half-hour, adds the finishing touch of harmony to the happy home circle.

The rich mahogany case, exquisitely made and hand-rubbed to a softly-glowing, satin polish, reveals the handiwork of a master designer and conceals the fine Gilbert movement, which tells the tale of fleeting time with unfailing accuracy.

Every Gilbert Clock is a triumph of beauty and precision. Generations of faithful, honest workers have built into these masterpieces of refinement and dependability their own sterling qualities of character and service.

Gilbert Normandy Chime models now cost little more than an ordinary gong clock. The prices range from \$18.00 upward.

If not sold by your dealer, write us

PYORRHOCIDE POWDER

keeps the gums healthy

Pyorrhea

starts with tender, bleeding gums

Pyorrhoea is a disease of the gums which, if not checked, will cause the teeth to loosen and fall out. Or they may have to be extracted to free the system from the pyorrhea germs.

The sure way to check pyorrhoea—or better still, to prevent it—is to see your dentist frequently and use Pyorrhoeide Powder regularly.

The value of Pyorrhoeide Powder has been proved by dental clinics devoted exclusively to pyorrhea research and treatment.

Use Pyorrhoeide Powder for healthy gums and clean, white teeth. Dentists everywhere prescribe it. The

economical dollar package contains six months' supply.

Sold by druggists and dental supply houses.

BIRDS, BEASTS AND TREES

Continued

rather a puzzle. These animals growl, in a tone well worthy of a big-eat animal. Red in his baby days roared tremendously, and the sounds were utterly out of proportion to his size.

THE "BREAKING" OF PERFORMING ANIMALS

THE trainer repeatedly thrust his iron hook into the tenderest parts of the elephant's hide in his efforts to teach the animal to lie down.

"Why do you do that?" asked a man who had been watching.

"To make him lay down."

"But it's brutal."

"Well, ain't he a brute?"

"I know," persisted the man, "but you should do it some other way."

"Mister," said the trainer in a tone of finality, "there ain't any other way. You can't break animals with a feather duster."

And that sums up the evidence that has been collected for the hearings of a committee of the British House of Commons that for some time has been conducting an inquiry into the treatment of animals trained to perform. The interests of the trainers are defended by a powerful trade union, the Variety Artists' Federation, but from convictions in the courts and from sworn statements by eye-witnesses, given often at the risk of loss of employment and in one case of personal danger, an array of facts that needs no comment has been gathered. A "minute percentage" of the whole is tersely set down in the London *Nation* and *Athenaeum*:

A showman was convicted for keeping a bear in a cage "only big enough for a terrier," and another for goading with a spike and dosing with whisky a sick elephant which fell down twice before performance and subsequently died. Another was convicted for piercing a dromedary until the blood ran down its legs, and for whipping a bull covered with scalds and sores. Bears have been taught to dance by keeping them on a sheet of hot iron while music was played. Another trainer was convicted for spiking and hooking her elephants under the tail and behind the ears until the blood poured down, and another witness testified on oath to seeing elephants driven to the top of a chute by hot irons. A trainer was seen to thrust a pronged pole repeatedly into a lion's open mouth, which was "a mass of sores." Trainers have been prosecuted for jabbing broken lions about the eyes, nose, and mouth to make them into "wild beasts of the forest," in other words to pander to the depraved appetites of the Roman arena-hungry audience. A trainer was seen to train his bear by hitting it continually across the snout with a log of wood. He told the witness it was necessary to keep this up daily for six months until the bear "knew his master." Another witness swore to a lion being kept five days without food or drink between the trainings with trident and whip. A trainer was convicted for keeping his bears under the stage all day long in boxes in which they could not

stand upright nor move from side to side. They were never released from them except to come on the stage. A trainer told a witness that he hung up his dog every day by the hind legs from a trapeze to teach him a balancing trick. Another witness declared on oath that she saw a dog trained to stand on its forepaws by being beaten with a thin wire rod on the belly. A trainer was seen by a witness to begin savagely beating his baboon for no obvious cause. When questioned, he said it was to "keep him under." Another trainer was convicted for thrusting a stick into a bear's nostrils for "discipline." The cases of merciless and gratuitous flogging for the same reason are endless. Thus do men become worse than wild beasts in order to teach beasts to parody the more inept actions of men.

Sjamboks, tridents, spiked collars, saddles, and elubs (for lions), steel spikes, electric cages (for making tigers jump and roar with make-believe ferocity), wire whips, are the normal properties for training stage animals. One method of grinding down a bear's spirit into the abject submission necessary for training purposes is very ingenious. The animal is lassoed and a "choke" collar attached. When he is helpless, a hole is punched through one nostril and a metal ring clamped to it. The bear rips it out, and a second ring is inserted in the other nostril. If this is torn out, the hole for the ring is made in the septum of the nostrils, and if that fails, through each ear. There is a case on record of a bear so recalcitrant to education that he tore the ring out five times and saved himself thus from the amenities of further discipline. An eye-witness relates how a tiger was trained. First noosing and lassoing; then a heavy collar with rope attached. He is now ready for the trainer, who enters the cage with revolver, whip, and steel fork. The beast springs—and the men holding the rope outside the cage haul sharp on to it at the top of the parabola, bringing him down with a crash on the floor. The trainer then goes for him, pounding his nose with the butt end of the whip and jabbing with the fork, until he is forced to rest from exhaustion. The process is continued—spring, fall, pounding—until the spirit is eudgelled out of him. The way he was then forced up into an iron seat is too disgusting to repeat. Enough that at the end of his first day's training he literally fainted, and was only got on to his feet again "with an uncertain step of locomotor ataxia" by being doused with bucket after bucket of water. A fortnight of this and his tigerhood departed. A broken, slavish shadow of a once burning mettle was ready for the arena.

But this actual training of animals is only the fiery part of their ordeal. There are two other forms of agony that they must endure. On the one hand, says the writer:

There is the performance—the routine of imbecilities which is the goal of their torments, the mental disgrace of their audience, and their own unremitting strain, bewilderment, and constant terror of the consequences of failure in feats even more unnatural to them than bounding on all fours and eating and drinking without hands is to men and women. The psychological rack of satisfying their trainers up to a compulsory pitch beyond the orbit of their natural intelligence is on its own plane as severe as the physical martyrdom endured to achieve it. On the other side, the conditions of stage traveling and accommodation make it inevitable that they should be confined in boxes, packing-eases

Holeproof Hosiery

BIRDS, BEASTS AND TREES

Continued

and eages, cramped very often to their own lengths, where they lie from rehearsal to rehearsal or performance to performance in darkness and damp, and without respite, exercise, variety, or interest of any kind. As animals are often trained through starvation, a refinement of pain is distilled from the hours of listless waiting.

There are people with heads even softer than their hearts who maintain an analogy between the trickiness of their own pet creatures and the vulgar grotesqueries of performing animals. They forget that the latter are professionals, machines for extracting money for mountebanks; that they must not on any account fail; that speed and efficiency must go together, and force and terror are the only agents that will make them. A performing animal that is not drilled down to the final obedience of mechanical response is a contradiction in terms. One marvels at the magnanimity of these miserable beasts—that they so seldom turn and rend their persecutors—until one sees it is not that, but the last abasement of craven terror. It takes some terrorism to make an elephant groan like a man in anguish, a bear shut its eyes and cover up its face, and a tiger whimper.

HOW LEONARD, THE FAWN, WAS SAVED FROM THE HOUNDS

THE long-drawn-out baying of the hounds and an occasional shot had been coming all day long across the bay. On their own side of the bay, too, high up in the wooded hills, the children could hear the dogs at chase, and their hearts were heavy with fear for the hunted things of the woods. Outside the little log cabin, their faces raised to the hills, the children were listening shiveringly. The baying of the hounds alternated with the crash of the underbrush where they were running, men coming close behind. Some dogs were skirting the top of a hill. All at once their baying became a series of whimpering barks. They were for the moment off the scent. And then a very strange thing happened, and the story of it is told in "The Wild Heart," by Emma-Lindsay Squier (Cosmopolitan Book Corporation, New York), who writes:

Down the hill, with such flying leaps that he scarcely touched the earth, came a little deer, a fawn, heading straight for the cabin. Was he mad with fear that he sought the home of humans? Or did he know by that unexplainable power which animals have that we were friends, that we would protect his life with ours—did he, I wonder? For he cleared the four-foot fence with a bound and trotted up to us, then stood trembling, his soft eyes glazed with fright, white foam at the corners of his mouth.

This is not a fiction story; I am telling it as it happened.

The little fawn thrust his hot, dry nose against my hand, and when Brother and I, recovering from our petrified amazement, put our arms around his velvety neck, he did not shrink away, but prest against us as if mutely begging protection.

If you have never had a wild creature throw itself upon your mercy, if you have

Corns

Lift Right Off

Drop a little "Freezone" on a touchy corn or callus for a few nights. Instantly it stops aching, then shortly you lift it right off. Doesn't hurt a bit.

You can lift off every hard corn, soft corn, corn between the toes, and the "hard-skin" calluses on bottom of feet. Just get a bottle of "Freezone" at any drug store, anywhere.

never known the feeling of a soft, brown deer body prest against yours in pleading and in confidence, you can not realize the wild thrill of ecstasy that went through us.

"His name is Leonard!" I found breath to say, my face against the velvety neck of the little deer.

But Brother, being a man in embryo, was thinking of sterner things. The hounds would shortly find the scent of the deer. If they came baying down the hill, the fawn would take fright and dart away before the children could stop him. What were they to do? The short, whimpering barks of the dogs had already changed to the long, triumphant eadence of the hound in full cry. They would come down the hill, the hunters would claim Leonard as their game, and then—but at that moment the idea came to the boy. "Meat!" he whispered tensely, and cryptic as it may sound, the little girl understood perfectly. Miss Squier continues:

Brother outlined a plan of action in a few brief words while the baby deer, with knees wobbling sadly, turned terror-haunted eyes up the hill, his delicate nostrils quivering, yet made no move to leave us.

It took my best efforts to lead the little fawn into the shelter of the brooder-house. The scent was foreign to anything he had known before, and the darkness terrified him anew. He could not have known that safety lay within that strange place, but he did know—of that I am sure—that he could trust himself with me, for he came, hesitatingly, urged always by my voice and my hands gently caressing him. He went with me, even through the door, into the semi-darkness of the frame brooder-house, and tho when I swung the door shut he nervously leapt away from my side, it was to return an instant later, as if begging my pardon for his involuntary action.

Brother, in the meantime, had dashed into the kitchen and emerged as quickly with a juicy steak—it was to have been cooked for dinner that night—which he hacked into chunks with his jackknife as he raced up the hill.

With my eyes against a crack I could see him panting upward to the point where Leonard had emerged from the underbrush of the woods.

And scarcely had he arrived when a lean hound, with lolling tongue and nose to the ground, burst from the shrubbery, uttering a long-drawn-out bay. The little deer beside me shook in every limb, and I was trembling, too, as if it were I, not Leonard, whom the dogs were trailing. We crouched there in the darkness, the wild thing of the woods and the child who loved the wild things of the woods, and in those tense moments I felt the heart of the baby deer pounding against my body. Can you wonder why now, when I see the body of a deer killed in the hunt, I can not congratulate the hunter on his prowess? I know how the deer at bay stood still and trembled! I know how his soft, brown eyes grew wide with helpless terror. I know how his heart pounded suffocatingly. And I can not be glad for the hunter; I am only sorry that he does not understand. And up on the hill Brother was acting his part in the drama. When the first lean hound swung into sight, he deftly tossed a chunk of red, juicy meat in his pathway. The dog ignored the first piece, so intent was he on the fresh scent of the deer. But another chunk aimed just ahead of him was a temptation not to be

FILLING STATIONS ARE ALWAYS BUSY -- BOWSER

The Perfect Heat for Small Homes

A good deal of money can be saved by installing CLOW GASTEAM radiation—the cost of excavating a cellar, building a chimney, and complicated piping.

Buy It on Easy Terms

The installation can be purchased on easy terms, from your contractor, loan association, building supply dealers, etc.

Your home will have real steam heat—admittedly the best—and the value of your property will be enhanced. But you will never have the nuisance of coal, with its ashes and dirt, and the necessity of tending a furnace.

The Healthful Heat

The heat will be healthful, with just the right amount of humidity. And you will find it economical, because you pay for fuel only as you use it.

CLOW GASTEAM radiation is successfully used for the heating of small homes as far north as northeastern New York. It is also used for other kinds of buildings—stores, offices, churches, schools, and so on.

CLOW GASTEAM, the modern heating system, furnishes steam heat without coal, using gas for fuel. Where other heating systems take moisture from the air, resulting in many forms of illness, CLOW GASTEAM adds moisture to the air.

Self-Contained Units

Each radiator is a steam heating plant in itself—automatically regulated. And each radiator is complete in itself—you can use one or more as you desire.

A Clow representative awaits your request to show you a list of satisfied CLOW GASTEAM users in your vicinity. He will also demonstrate with figures CLOW GASTEAM's fundamental economy.

Send today for the CLOW GASTEAM Catalog

withstood, and he gobbled it up, pausing a second in his chase. Another dog followed him out of the underbrush, finding the first piece of meat Brother had thrown.

It did not take long for the two hounds to finish off the entire steak so obligingly tossed to them by the small boy almost hidden in a clump of tall ferns. And when it was gone, Leonard was safe, for the dogs, with the smell of fresh meat in their nostrils, had lost the lighter scent of the little deer's flying hoofs, and they sniffed shamefacedly and with befuddled yappings, until the hunters came cursing down the hill and crashing into the open, to berate the dogs soundly for having lost the game—as they supposed—in the woods.

They could not know that the little boy in the clump of ferns, looking on so innocently, was responsible for the hounds' failure, nor that their game was at that instant held tightly in the arms of a little girl who was shaking with excitement as well as with fear, lest something happen to betray the refuge's hiding-place.

But nothing did. The men stamped back into the woods, taking the hounds with them, and that day at least we heard no more baying on the hill.

The children were afraid to let Leonard go back to the woods until the deer season was over or until he was of a size better able to care for himself. A pen was contrived of wire netting with the brooder house as shelter for nights. There they kept Leonard a willing prisoner, while the hounds bayed on the hills and shots echoed across the water. In time they released the deer, first with a collar and a rope, and then with nothing to hold him. He followed the children like a dog, trotting beside them with dainty, mincing steps, and he soon learned his name, and would come bounding out to them when they called. They fed him things his ancestors probably never tasted—cookies, apples, lettuce leaves and candy. But best of all delicacies was chewing-gum. When it was first offered him, Leonard accepted it daintily, and chewed it, with an actual expression of surprise coming into his brown eyes. He chewed and chewed. Perhaps he thought it was a new variety of end. At any rate, he gave it his hearty indorsement, and after that he would nose in Brother's pockets to find the stick of gum that was always there for him. Leonard seemed perfectly content to forget the ways of the woods for those of civilization, until, the story goes on:

One night I woke to find Brother's hand tugging at mine. He was whispering to me that something was outside Leonard's pen—perhaps it was a bear or a wildcat trying to get at him.

Foolish children we may have been, but we were not cowardly. It never occurred to us to rouse the grown-ups. Leonard was our friend and our responsibility. From my window the two of us crept out on the roof, white night-gowned figures, shaking with cold and excitement. From the roof we dropt easily to the railing of the picket fence at the back of the cabin and from there to the ground.

The Truth About The Drug Menace

The Drug Octopus is rapidly reaching out in all directions, in every stratum of society, from the palace on Fifth Avenue or Beacon Hill to the slums of State Street or the Barbary Coast. Dr. Royal S. Copeland, Health Commissioner of the City of New York, said: "It is safe to say that in all New York one person in thirty is a victim. During one month one drug store sold 500 ounces of cocaine, enough to send 2,500 people to hell." The entire appalling situation is discussed for you authoritatively, clearly, carefully and interestingly in a remarkable book entitled

HABITS THAT HANDICAP

By Charles B. Towns

The author is one of the most successful fighters in the United States against this devastating blight of drugs on our civilization. Dr. Richard C. Cabot, M.D., himself an eminent physician, says of Mr. Towns, the author: "I do not hesitate to say that he knows more about the alleviation and cure of drug addictions than any doctor that I have ever seen."

"Habits That Handicap" contains amazing facts and figures, facts of which physicians, social workers, clergymen, nurses, educators, heads of families dare not remain ignorant if they have at heart the betterment of the race.

To Win Friends, Fame, and Fortune

Why do some deserving men fail in business? Why are some handsome, well-educated men unpopular in social life? What is the real secret of achieving personal success?

These and hundreds of other pertinent questions on the tip of your tongue are answered by that popular inspirational writer, H. Aldington Bruce, in his invigorating and fascinating new book—

SELF-DEVELOPMENT

A wonderfully clear-cut analysis, in plain, conversational English, of certain mental actions and reactions, every page radiating encouragement and helpfulness for ambitious men and women.

It explains how you may develop will power, memory, poise, and personality; elaborates on the simple methods all must adopt—and which are easy to adopt—to achieve marked success in social and business life; visualizes the insidious pitfalls that must be avoided—and which are easy to avoid after he points them out.

All that Mr. Bruce advises will appeal to you. You'll know he's right! And everyone who takes his advice will be better able to win friends, fame, and fortune and to get all the good out of life that life has to offer.

"Gives an illuminating explanation of real success and the courses to follow in its attainment."—*Deseret News, Salt Lake City*.

"Any young man who refuses to be stimulated and inspired through reading a book like this needs to alter his viewpoint in life."—*Star, Toronto*.

12 mo. Cloth. 342 pp. \$1.50 net; postpaid, \$1.62

Funk & Wagnalls Company, 354 Fourth Ave., New York

All we could distinguish was a dark form against the wire netting, a shape that moved restlessly, now away from the pen, now back to it.

As our eyes became accustomed to the darkness, we saw that Leonard was in the pen outside the brooder-house, and we questioned each other silently. Surely no deer would come thus to meet an enemy animal that wanted to destroy.

And then, as if in answer to our question, the clouds parted and a pale moon turned the darkness into half-shadowed light. With the sudden effulgence came the weird gleam of four eyes turned in our direction—for our scent had carried to sensitive nostrils. Brother and I, for an instant, caught each other's hands and gasped.

Then two of the luminous lights vanished, as the slim animal outside the pen sprang away in great bounds that carried her into the shadows beyond our ken—but not before we had recognized the slim, fleeing form of a doe. We knew it was Leonard's mother, who had found her baby.

Because we loved him so, we tried to pretend, the next day, that the deer we had seen was not Leonard's mother—that it was merely a friend from the woods who had come down by moonlight to pay a nocturnal call. In our hearts, tho, we knew better. Leonard all the day was restless; he pricked his ears continually as if waiting for a voice from the forest. We could scarcely coax him out of his distraught mood, even with a double ration of the chewing-gum he loved so well.

The next night sleep was impossible. Tho we heard nothing, we knew, somehow, that outside Leonard's pen was a slim brown body prest close against the wire netting. We rose, at last, and crept out over the roof and down to the ground. The doe was there, as we had foreseen. At our approach she bounded away with only the faintest rustle of leaves and snapping of twigs to mark her progress. But knowing that she would not go far—that she would come back to her baby—Brother and I went quickly forward and opened the door of the pen.

Leonard came to us and thrust his nose against my hand. We knelt on the ground, putting our arms around him, pressing our faces against his soft, brown neck, telling him with tears behind our whispered words that he must go with his mother, that the danger season was passed, and that he was free to go back to his kindred.

We stole away, but Leonard followed us, as if asking where we went and why he was not to go with us. For the first time we pushed him away from us, tho you can not know what it meant to us to do it. He stood still then, as if wondering, perhaps a little hurt, and we, not daring to look back, ran for the fence, clambered upon it, and gained the roof.

Once there, we could not resist watching a bit, and it was not long before the two luminous eyes gleamed from the underbrush. Then we saw a shapely, dark body come slowly into the open, and Leonard, with light, springing bounds, had rushed to meet his mother. For an instant we saw again the glowing orbs of two pairs of eyes. Then the lights vanished.

Two dark bodies moved side by side into the blackness of the woods; we heard the light crackle of underbrush; and then silence.

Silently we crept into our beds, and long afterward I heard Brother's choking whisper coming through the darkness—my own face was buried in the pillow:

"I know—Leonard's going to miss—his—his—gum—"

Bumperless and Chainless—Helpless!

THE big truck skids on the slippery road; the uncontrolled and unprotected motor car slides ahead, its wheels revolving helplessly: the juggernaut of a truck slews into it—the inevitable crash—smashed radiator, broken lamps, crumpled fenders.

Weed Tire Chains would have given control to both vehicles, and a Twinbar Spring Bumper would have protected the motor car.

The scientific design of the Twinbar Spring Bumper, with the powerful, resilient steel bars reinforcing each other, enables it to cushion any blow short of absolute destruction without injury to the car.

The contact twin bars do not merely receive the impact and communicate it to the car. They absorb it—make it harmless.

The Twinbar Spring Bumper, front and rear, gives you real protection. It is the cheapest insurance you can buy.

Twinbar Spring Bumpers are protection recognized by insurance companies for which they will substantially discount their collision insurance charges. In many instances the saving on the first year's premium thus involved pays for the bumper.

Equip your car with Twinbar Spring Bumpers *before* you have a collision. Do it now.

Made by the makers of Weed Spring-Bar Bumpers and Weed Tire Chains, the Twinbar Spring Bumper commands the same confidence, and carries with it the same assurance of quality

INVESTMENTS AND FINANCE

NEW USES FOR COPPER INDICATE A BETTER MARKET

THERE has been a slump in copper production ever since the war demand ceased. Copper, as *Financial America* notes editorially, "is no longer sought in enormous quantities to build up the ammunition dumps of European armies." Our foreign sales of copper last year, we are reminded, "were about one-third less than in 1913 and 1914." The market comment in the daily papers reveals no optimism regarding any increase in European consumption during the next six months; but "domestic demand is stronger than foreign" and there is general improvement of late weeks in copper consumption. Copper mines which have long been closed are opening again. *Financial America* explains it by saying that "peace and limitation of armaments have freed this metal for much greater usefulness than it has ever before known." Producers are "seeking new outlets by creating new demands." In particular, a concern like the Anaconda Company, which recently absorbed the American Brass Company, is now producing copper roofing. Other copper products, we read, are to be produced on a large scale. Remembering the copper tea-kettle and washboiler of his boyhood, the editor observes: "If the entry of the big copper mining company into the manufacture and sale of copper-finished products brings copper within reach of 1922 incomes it will restore one of the substantial benefits that gave peace of mind to our ancestors." In the opinion of the writer—

The large capital invested in copper mining and smelting makes it probable that the copper industry has entered building material competition to remain. It must find buyers or scrap a part of its large and costly equipment. The Anaconda Company alone has an investment of 169 million dollars. Our mines produced more than half a million tons a year and developed nearly double that capacity for our war need. The copper mines proved a strong national asset for defense. We provide most of Europe with crude copper. But the industry has been weak in exports of finished products. The electrical industries, however, absorb much of the copper output and export a fair share of their production.

Crude products of the copper smelting and refining industry alone in 1919 were valued at 632 million dollars. The value of partly or wholly finished copper and copper alloy products was 487 million dollars. There were then more than 1,150 establishments in smelting, refining and making copper products.

Yet conditions forced these large industries last year to run at a much diminished rate. Thousands of workers were idle in consequence. Our copper-mining production averaged about 18 per cent. of that of the monthly average of 1913 during the last eight months of 1921.

THE WESTWARD TURNING TIDE OF AMERICAN MANUFACTURING

AMERICAN manufacturing had its beginnings, as did pretty much everything American, along the Atlantic seaboard, particularly in the New England and Middle Atlantic States; but there is evidence enough now that manufacturing industries are slowly moving from our Atlantic frontage toward the great interior which produces the bulk of our raw materials and most of the fuel used in manufacturing. So reflects a writer for the National City Bank of New York in the current issue of the bank's *Trade Record*. The recently published Federal census of manufactures shows that the area occupying the Atlantic frontage from Maine to Florida, New England, the Middle States, the District of Columbia, Maryland, Virginia, North and South Carolina, Georgia and Florida produced in 1919, the last year of record, less than one-half of the manufactures of the country, as against more than two-thirds a half century earlier. Or, as the bank's publication states it statistically, "the 17 States of the Atlantic frontage supplied 68 per cent. of the manufactures recorded by the census of 1870; 64 per cent. in 1880; 56 per cent. in 1900; and 49.7 per cent. in the census of 1920. The total outturn of the manufacturing establishments of the Atlantic frontage in 1919 was eleven times as much in value as fifty years earlier, while the outturn of the other parts of the country was 22 times as much as a half century earlier." It is noted that this western movement of manufacturing seems to be chiefly into the Mississippi Valley, "which produces most of the cotton and wool and iron and copper and lead and timber of the country," and much of its fuel. The States adjacent to the Great Lakes have also shared in this westward move. Our attention is called to certain other facts as follows:

Illinois, with its great iron and steel manufacturing establishments and plentiful coal supplies, increases its output of manufactures from \$1,120,000,000 in the census of 1900 to \$5,425,000,000 in the census of 1920.

Michigan, with its great automobile manufacturing industry, advances from \$320,000,000 in the 1900 census to \$3,466,000,000, or ten times as much in 1920 as in 1900.

Indiana, with the aid of its natural gas fuel, increases its outturn of manufactures from \$337,000,000 in 1900 to \$1,899,000,000 in the 1920 record.

Ohio, which combines the copper and iron of Michigan and Minnesota with its own coal and labor, advances from \$749,000,000 in the 1900 census to \$5,100,000,000 in that of 1920.

New York, which still shows a bigger total of manufactures than any other State, advances from \$1,872,000,000 in

Journal of Commerce reports the Interstate Commerce Commission announcement that the class I railroads made a net operating profit of $4\frac{1}{2}$ per cent. on their estimated valuation for February. While this is still far from the 6 per cent. mark, it is looked on in railroad circles as distinctly encouraging. The 170 roads reporting showed a net income of \$43,614,238 for February, which means a return, when the few remaining roads have reported, of at least \$45,000,000. "Compared with the showing of February, 1921, the returns for the month are striking. The same 170 roads piled up a deficit of \$6,348,390 on operations in February, 1921." The financial editor already quoted is inclined to attribute this improved earnings condition partly to the recently introduced economies and partly to "the gradual restoration of sounder business" conditions which "is tending to improve the traffic prospects of the roads as a whole."

AMERICAN CAPITAL BUYING CANADA

AN important consideration in the revived tariff discussions in Canada is the rapidly growing proportion of Canadian business and manufacturing owned by American capital. The Trade and Commerce Department of the Dominion has just published an analysis showing that 34 per cent. of the capital of Canadian manufacturing establishments is owned by citizens of the United States; 56 per cent. by Canadians; 9 per cent. by persons living in Great Britain; and 1 per cent. by residents of other countries. Since it has taken about two years to prepare these figures and as the invasion of American capital has been going on apace, says a Toronto correspondent of the *New York World*, Canadian business authorities believe "that at the present time Americans own at least 50 per cent. of the total manufacturing capital employed in the Dominion." The immediate object of the publication of these figures, we are told, was to induce British capitalists to pay more attention to Canada. Aside from the attempt to attract British capital, no remedy is being suggested for the situation; indeed, many would deny that any remedy is needed. That is—

Canada must have fresh capital, and it would be foreign to the present century's spirit of speed to suggest that she should wait and save up her own capital for further exploitation and development. When all Governments in Canada, from the Federal to municipal, have acquired the habit of going to New York to float loans, who shall blame the private promoter for doing likewise?

Nevertheless here and there a voice is being raised calling upon the Government to float future loans at home, and also warning private enterprise that the present tendency in financing abroad has its danger. Immigrants assimilate, but foreign capital remains foreign and takes an eternal toll.

Some of the American branch factories have come into Canada as a result of the

Remington Portable

ONE year ago last November, the Remington Portable Typewriter appeared on the market and, ever since, the demand has been greater than we could supply.

Unusual!—in these times—but there's a good reason.

The Remington Portable is the outstanding success among portable typewriters. Everybody needs a portable machine and the Remington Portable exactly and completely supplies this universal need.

Compact—fits in a case only four inches high. *Convenient*—can be used anywhere—even on your lap. *Complete*—has the standard keyboard, with four rows of keys and no shifting for figures—has the automatic ribbon reverse—has every feature to which you are accustomed on the big machines.

RADIO!

The first complete home study course in the world's most fascinating subject—Radio.

Through the Radio School of America you can now get a complete and intensely practical Radio course at an extremely low price.

All the information that it has taken experimenters years to discover is presented to you in simple, readable form so that you can easily master it.

The course has been carefully written by the foremost radio experts. It tells just what Radio is and how it works. It explains how to build your own receiving set—and how to use it properly. It tells you all about the different parts and accessories—and how much they cost. How to operate every style of radio-outfit. How to locate trouble and remedy it—in fact everything you should know about Radio.

The entire course, in ten installments, giving you a complete Radio education, is offered at the minimum price of only \$10.00.

In order to introduce it we are offering the first section of the course at only \$1.00.

This section is very complete in itself and gives you a world of practical information about every phase of Radio.

Send for it today—only

\$1.00

THIS—FIRST—SECTION, at a cost of \$1.00 covers the following subjects:

Essential Parts
The Antenna
Detail of Parts
Tuner, Detector and Phone
Details of Construction
Instructions for Wiring
Directions for Operating
Cost of Building
Symbols
Estimated Cost of Antenna
Questions and Answers
Radio Terms Defined
The Crystal
Testing Trouble in Sets
Locating Signals
Grounding Switch
Care of Head Sets
Useful Information
Slide Tuning Coil Set
Materials Needed

INVESTMENTS AND FINANCE

Continued

tariff, others as a result of mergers. Sometimes a Canadian business in a tight corner has turned to American capital or management for help; sometimes the American industry has taken the initiative. The Canadian writer goes on to show the extent to which American capital has taken over certain industries in Canada:

One is not surprised to learn that the motor-car industry is largely in American hands. Of its capital 61 per cent. is American, 39 per cent. Canadian, not a dollar British. Motor-car accessories is 93 per cent. American.

It is more surprising to learn that the large and indigenous meat-packing industry was 41 per cent. owned in the United States. The proportion to-day is larger.

In the rubber industry 50 per cent. of the stocks and bonds representing ownership is American, 40 per cent. Canadian, 2 per cent. British, 8 per cent. other countries.

In railway-car construction 54 per cent. is American, 46 per cent. Canadian.

In petroleum refining 53.1 per cent. is American, 46.7 per cent. Canadian, one-fifth of 1 per cent. British.

In lumbering, oldest and most profitable of Canadian industries, Canadians retain only 61 per cent., Americans hold 27 per cent., and British 11 per cent.

In pulp and paper concerns Canadians own 68 per cent., Americans 24 per cent., British 4, and other countries 4.

In electrical apparatus 49 per cent. is American, 36 per cent. Canadian, 12 per cent. British, 3 per cent. other countries.

And so on through the whole list. One estimate is that there is from \$700,000,000 to \$800,000,000 of American capital invested in Canadian industry. Some might put the figure at an even billion.

SWITZERLAND'S EMBARRASSING RICHES

MR. H. G. WELLS once set out to prove the fallacy of the proverb, "In the country of the blind the one-eyed man is king," by telling of the wretched plight of an adventurer into an Andean valley inhabited by a blind tribe. Switzerland offers a similar proof that it does not make for happiness to be the only solvent country in a continent of near-bankrupts. Alone among the European nations, we read in a Paris letter to *The Wall Street Journal*, "Switzerland has the distinction of a currency a gold parity, tho Sweden is running close." But, it seems, "she is as unhappy as any country in Europe, with the exception of Russia." The foreign tourist and the foreign buyer alike stay away because Switzerland "is too expensive to live in and too expensive to buy in." Things are said to be so bad "that Swiss manufacturers actually find it worth their while to migrate, lock, stock and barrel, to southern Germany and eastern France." Prospects for this year are far from bright, according to *The Wall Street Journal's* correspondent. "Save for a few orders from countries with undepreciated cur-

rencies like Japan, and certain South American states, there is no sign of better trade abroad." The cost of living remains high. In fact, it is about where it was a year ago. As Swiss money gets dearer, and German and Austrian currencies get cheaper, the competition of cheaply made foreign goods becomes more and more overpowering. "Thus the country stands isolated and cold-shouldered. There is a two-thirds gold reserve behind its notes, and actually gold is reappearing in common currency. But it is the gold which is its curse." The tale of 1921 now being published "makes sad reading":

In weight the export trade is little more than half that of 1913. Sales of silk goods have declined by 50% and of embroideries by 77%. The value of watch parts exported for the first nine months of the last year was 126,000,000 francs only, against 244,000,000 the year before. There is a noteworthy slump also in sales of machinery, cotton goods, straw goods, condensed milk, and even anilin dyes. Germany, Poland, Italy, Austria and the Balkan States, which were Switzerland's best customers, are wholly unable to purchase in large quantities, save the cheapest of Swiss products, and where Swiss articles come into competition with similar articles produced by these countries where wages are much lower, they have no chance.

The farmer is suffering equally with the manufacturer. During the war he made good money, since the country was thrown on its own resources, but when prices began to decline the farmer found he could no longer sell his live stock abroad, owing to the exchanges. An epidemic of foot-and-mouth disease combined with increase in agricultural wages to accentuate his distress, and soon he suffered from decline in the demand for milk from chocolate and condensed milk manufacturers, owing to their difficulty in maintaining sales abroad. Finally cattle and meat began to come into the country under favor of the exchanges. For a similar reason the wine-growers began to feel the competition of foreign wines.

German and French competition with Swiss articles in Switzerland itself grew so formidable that in the end Parliament had to abandon the traditional policy of a low tariff and the rates were raised and various imports were forbidden or restricted. It was hoped thus to preserve the home market for home producers, to check unemployment and to obtain more revenue for the Treasury. But the new rates had the effect of stopping the decline in prices also and thus prolonging the difficulties obstructing the export trade. Nor did they reduce unemployment.

Last January the "out-of-works" registered 97,000 out of a population of less than 4,000,000, having increased during the month by 7,500. In the metal industries alone there were nearly 30,000 men out of work, and in the cheap watch and jewelry trade 26,000. A further 50,000 people were working half-time, making 147,000 victims of the depression.

Government finances show a mounting deficit from year to year. It has been expensive to demobilize the Army, to keep down food prices and to relieve unemployment, and ever since 1914 the history of the state-owned railways has been one of "successive deficits despite repeated increase of rates."

How Large is Your Lawn?

Many people are surprised at the big saving they can make by caring for their lawns with power mowers. Even those with medium sized lawns can now afford to use a power mower.

The Ideal Junior for Medium Sized Lawns

The Ideal Junior is a small, moderate priced power mower, designed and built especially for lawns where there is too much grass to care for conveniently with hand mower, yet where the lawn is hardly large enough to warrant the purchase of a large machine.

It is a real pleasure to operate these small mowers, and many men who previously had to hire two or three men to keep their grass cut, now do the work with one of these Junior Mowers.

Of course the Ideal Junior is also well adapted to work in cemeteries and for trimming and close cutting in large parks. The Junior Mower will nicely care for 4 or 5 acres of lawn, and will cut as much grass per day as 3 or 4 hard-working men with hand mowers.

The 30" Ideal for Extra Large Lawns

The 30" Ideal Power Mower is the best known and most widely used power lawn mower on the market. From coast to coast and in many foreign countries these machines are used by large estates, public parks, schools, colleges, golf clubs, cemeteries, ball parks, hospitals, etc.

They are wonderful labor-savers and keep the lawn in finest possible condition.

If you have a medium sized lawn or a large lawn to care for write us about these machines. You will be agreeably surprised at the moderate prices we can quote.

If you want our suggestion, tell us something about your lawn, its size, amount of shrubbery, etc. At least write us for our book which tells you how to give your lawn better care at less cost.

Rodd Floors of California Redwood Blocks

Clean—Odorless—Stay Smooth

THE usual objections to wood block floors include the pungent odor of coal tar and creosote, stickiness when warm and a tendency to shrink under heat and to swell and buckle when they're wet.

These objections are absolutely eliminated in Rodd Floors of California Redwood Blocks which are permeated during the growth of the wood with a *natural*, odorless preservative. Redwood blocks are absolutely free from pungent, artificial preservatives.

Redwood contains no pitch or resin—is not sticky.

Rodd Floors stay flat. Every Redwood Block is air seasoned, then kiln dried by the patented Leaver process. The floors are light in color, easy to keep clean and absolutely water tight.

While generally used in mills, foundries and factories, the cleanliness of Rodd Floors and their lack of odor makes them available for stores, offices, hospitals, schools, libraries, creameries, food warehouses, textile mills, etc., where the odor, the stickiness or the danger of swelling and buckling rules out other types of wood block floors.

This FREE BOOK solves your HOT WATER problems

Ask yourself these questions: "Can we always have hot water at the moment we need it—in as large or small a quantity as we need?" "Does our hot water system depend upon memory for its operation?" "How much time and work is required to maintain it?" "Must we handle coal and ashes or light a heating device?" "How much do we pay per gallon of water heated?" Do the answers satisfy you?

If not, write for the interesting free book shown above. Tells about a hot water system of latest type that supplies hot water instantly, day or night, in the quantity you want, at a cost of about one cent for every ten gallons; requires no attention; lasts for years; is entirely automatic; not subject to the vagaries or forgetfulness of the human element.

We will gladly send you a copy FREE; also name of local dealer who will demonstrate the system. Write today.

SERGEANT YORK AND HIS PEOPLE

By Sam K. Cowan

THIS is not a war book, but a true, vivid and inspiring record of the making of a real American.

The story which Mr. Cowan has so graphically told is an enthralling one of mountain life in Tennessee from the days of the "Long Hunter" down to today. Here are given for the first time the full facts about Alvin York, his ancestry, his surroundings, his home life, his handicaps, and all the influences which so shaped his character that, when put to the supreme test, he was enabled to perform what Marshal Foch declared to be the World War's greatest individual achievement.

12mo. Cloth. With 16 full-page illustrations. Price, \$2.00 net, at bookstores. By mail from the publishers, \$2.12.

FUNK & WAGNALLS COMPANY, Publishers
354-360 Fourth Avenue New York, N. Y.

CURRENT EVENTS

FOREIGN

April 19.—One man and two women are killed and many wounded in rioting in Belfast, while in Dublin there is much firing in the streets.

April 20.—The Russian reply to the Allied proposals at the Genoa Conference for the restoration of order in Russia and establishment of economic relations with Allied nations proposes a Russian international loan, recognizes the pre-war Czarist debt, rejects the Allied war claims against Russia and makes some concessions in regard to private property rights.

Asked to choose between annulling their treaty with Russia or withdrawing from further joint consideration of the Russian problem at Genoa, the German delegates to the Conference elect to withdraw from the Russian discussions and to hold to the treaty.

The Irish labor party issues a manifesto calling for a one-day strike on April 24 in protest against the disorders by the republican malecontents and demanding the formation of a coalition government under the Dail Eireann.

Four hundred carloads of ammunition and high explosives exploded April 18 at Monastir, Serbia, it is reported in a dispatch from Belgrade, and more than 400 soldiers were killed, many thousands were wounded and much of the city was destroyed.

Serbian and Montenegrin irregulars attack the American Industrial School at Danilograd, Montenegro, and steal 10,000 francs and other property. The Jugo-Slavian Government expresses regret to the American Red Cross, and makes reimbursement for the theft.

April 21.—A new economic treaty has been concluded between Soviet Russia and the Far Eastern Republic of Siberia, it is announced from Moscow.

General Chang Tso-Lin, Governor of Manchuria, takes possession of Peking and Tientsin in an effort, he announces, to unify and pacify the Chinese.

April 22.—Irish Republican soldiers prevent Michael Collins, head of the Irish Free State Provisional Government, from delivering a lecture from a public platform at Listowel, and he delivers it from a private residence.

April 23.—An agreement is reported to have been reached between the military leaders and the Republican Free State forces in Ireland.

The financial commission of the Genoa Conference suggests for the reconstruction of Europe that all European currencies should be placed on a gold basis and that external loans should be floated at once in the countries where it is impossible to balance the national budget.

A German-Finnish agreement regulating urgent economic questions between the two countries has been signed, according to an announcement from Berlin.

April 24.—Louis Barthou, head of the French delegation to the Genoa Conference, proposes a probational armed peace of Europe under Allied military control in place of the "pact of confidence" suggested by Premier Lloyd George.

The one-day strike carried out by the Irish labor party in protest against the

The Cyclopedia of Practical Quotations

by J. K. Hoyt

This famous standard reference work contains over 30,000 choice quotations embracing a most comprehensive field of subjects, with 86,000 lines of concordance occupying 1,200 large clearly printed pages. A monumental work of highest utility!

Invaluable To All Who Speak, Read or Write

Public speakers, readers, authors, preachers, lawyers, teachers, students, newspaper and advertisement writers, men and women with a large personal correspondence—all will find this an indispensable aid in verifying the accuracy of a quotation and in finding the exact expression needed to add the desired degree of force to a sentence, clause or paragraph.

IMPORTANT FEATURES

QUALITY AND QUANTITY. It aims to embrace every familiar phrase and sentence that has general currency in the English language. The thoroughness of the work can be judged from the number of quotations found under a few representative topics taken at random. Music 102, Nature 96, Woman 164, Wit 52, etc. While profuse in numbers, the quotations are of the most useful quality.

ACCURACY AND PRECISION. It aims to reproduce the quotations in the exact wording and spelling of the originals. The book, chapter, section, and even the very line of every quotation can be quickly verified and the connection in which it occurs ascertained.

FACTS ABOUT AUTHORS. The name of the author or source of every quotation is given. In the Appendix a complete list is given of all the authors quoted, with the full name, the nativity, a few words to characterize each, such as "statesman," "poet," "historian," the date of birth, and, if dead, the date of death.

FOREIGN QUOTATIONS. Some of the most important features of the work are the more than 130 pages of quotations from foreign writers, Latin law maxims, and an extensive list of French and Latin mottoes. All foreign quotations are always followed by their English translations.

MANY REFERENCE HELPS. Three distinct reference keys are afforded for finding familiar or unfamiliar quotations. Every help is given for making the quotations instantly accessible. The three distinct reference keys which are afforded for finding quotations in English are: (1) the topics; (2) the entry of each significant word in the concordance, and (3) the name of the author, with the number of pages containing his quotations. Foreign quotations can be found under: (1) the topic; (2) the author; (3) some word in the original, or (4) some word in the translation. The quotations are classified under subjects. There are a thousand topics.

Highly Commended

Hon. Horace Porter, Former U. S. Ambassador to France: "A work which will commend itself to all scholars. No library will be complete without it."

Hon. Joseph H. Choate, Former U. S. Minister to England: "I have always found this cyclopedia the most complete and useful book of the kind ever published."

New York Times: "By long odds the best book of quotations."

Boston Post: "The only standard book of quotations."

military disorders closes with three large demonstrations approving labor's protest against militarism.

April 25.—Richard Washburn Child, American Ambassador to Italy, notifies the Genoa Conference that the United States reserves all rights on the repayment of war debts due from Russia, according to a dispatch from Genoa.

Edouard Benes, Czecho-Slovakian Foreign Minister, submits to the Genoa Conference a plan for the stabilization of Europe which calls for settlement of boundary questions first, followed by a non-aggression pact, and pledges among nations not to carry on political agitation or economic pressure on foreign soil.

The Russian Soviet Government formally notifies Poland that Russia considers that Poland has violated the Riga peace treaty with Russia by participating in negotiations at Genoa questioning Russia's right to negotiate treaties.

Brigadier-General Adamson, commanding the Irish Free State headquarters at Athlone, is murdered by mutineers.

DOMESTIC

April 19.—President Harding informs Senator James E. Watson, of Indiana, that he will veto the bonus bill unless it contains some provision for raising the necessary funds.

Three people are killed by a terrific wind-storm which sweeps through Chicago.

The annual appropriation bill for the State and Justice Departments, carrying \$28,700,000, an increase of \$2,300,000 over the measure passed by the House, is passed by the Senate.

April 20.—Allied Governments have been advised by the State Department that the American Debt Refunding Commission is prepared to negotiate for conversion of the various debts owed by them, amounting to \$11,000,000,000, into long-time securities, it is announced from Washington.

A "profound improvement" in business conditions over those of a year ago is shown throughout the country in the statistics of commercial and industrial movements during March, according to the monthly survey of the Department of Commerce.

April 21.—The Federal Government makes \$1,000,000 available for the control of flood waters of the Mississippi River, now at its highest stage in ten years.

President Harding signs the Langley bill authorizing an additional appropriation of \$17,000,000 for hospital facilities for disabled former service men.

April 24.—Twenty-three union coal miners are placed on trial at Charles Town, W. Va., for alleged sedition, as the result of the disorders in the coal-mining area which culminated in the "battle of Blair Mountain" last summer.

The arrest of every person over twelve years old in the Mill Creek neighborhood of Clay County, Kentucky, is ordered by Circuit Judge Hiram J. Johnson in an effort to break up lawlessness arising out of the arrest of moonshiners.

April 25.—Twenty-three deaths are reported as a result of rainstorms and resultant floods which sweep over north, central and southwest Texas and inundate Fort Worth.

LEE Puncture Proof Tires

From the Isolation Hospital, City of Milwaukee Board of Health comes the following: "We have used Lee Puncture-proof tires for the last four years—used the first Puncture-proof cords in Milwaukee. We have never been laid up on account of punctures and have always received exceptional mileage."

LEE
LEES
Smile
at
Miles

IN emergency service---for ambulances, physicians, fire departments, merchandise deliveries---in every duty where tire reliability means life, safety, profit---Lee Puncture-proof pneumatics are indispensable. They are guaranteed against puncture.

To the tourist, the business man, the woman who drives---to anyone to whom punctures and blowouts are a delay and a nuisance, Lee Puncture-proof tires are the most desirable pneumatics on the market.

Those who do not feel the need of this added protection can secure the same reliable, uniform Lee quality in our Regular Fabric or Cord Tires---and in Lee G. S. (Government Specification) Grey Tubes.

Because of the greater scope of the Lee Line of Pneumatics, buying from a Lee Dealer is equivalent to having tires made to order for your particular service.

Look for "Lee Tires" in your Telephone Book.

THE ▽ SPICE ▽ OF ▽ LIFE

All Clear Now.—"Money is the root of all evil." That is the reason we all try to dig it up.—*Columbia Jester*.

His Scattered Acquaintance.—SHE—"What were you doing after the accident?"
HE—"Seraping up an acquaintance."—*Widor*.

Tough One.—"Do you call that a beefsteak? It makes me laugh!"
"I'm glad to hear it, sir. Most people swear."—*Kasper (Stockholm)*.

Up-to-the-Minute.—"Are your new neighbors modern people?"
"Modern? Say, they sent in last night to borrow our radio set!"—*Buffalo Express*.

Local Color.—POET—I am out here to get local color for a pastoral poem.
FARMER—I reckon you're gettin' it, mister. I painted that settee only this mornin'.—*Boston Transcript*.

Yes, but Don't Bank on It.—Efficiency is the art of spending nine-tenths of your time making out reports that somebody thinks he is going to read but never does.—*Kansas Industrialist*.

Everybody's Doing It.—Lots of folks that laugh because it takes 5,000,000 rubles to buy a pair of shoes in Russia are saving cigar coupons over here to get a grand piano.—*Life*.

Sad Give-Away.—MRS. HIBROW—"Did the earl you had to dinner last night bring his coronet?"
MRS. NEWRICH—"I didn't even know he could play one."—*Passing Show*.

The Simple Life.—FIRST CANNIBAL—"Our chief has hay fever."
SECOND CANNIBAL—"What brought it on?"
FIRST CANNIBAL—"He ate a grass widow."—*Journal American Medical Association*.

Try This.—"Waiter, here's a half-crown for you."
"Thank you, sir. Did you wish to reserve a table?"
"No. In a few minutes I shall come in with two ladies, and I want you to tell us that every table is engaged."—*London Passing Show*.

Never Again.—A philanthropic lady visited an asylum not long ago and displayed great interest in the inmates. One old man particularly gained her compassion. "And how long have you been here, my man?" she inquired.
"Twelve years," was the answer.
"Do they treat you well?"
"Yes."
After addressing a few more questions to him the visitor passed on. She noticed a smile broadening on the face of her attendant, and, on asking the cause, heard with consternation that the old man was none other than the medical superintendent. She hurried back to make apologies. How successful she was may be gathered from these words: "I am sorry, doctor. I will never be governed by appearances again."—*Presbyterian Banner*.

Moonshine Visibility Test.—One moon—pretty good; two moons—the real stuff; no moon—wood alcohol.—*Life*.

Of Course, Unintentional.—JOE—"Sweets to the sweet?"
SEPHINE—"Oh, thank you; may I pass you the nuts?"—*Goblin*.

A Great Hit Missed.—STAGE MANAGER—"All ready, run up the curtain."
STAGE HAND—"Say, what do you think I am, a squirrel?"—*Froth*.

Sing Singers.—TEACHER (to class in Natural History)—"What kind of birds are frequently kept in captivity?"
TOMMY—"Jail birds."—*Christian Sun*.

Larger Exemption Helps.—"I wonder why Bill married."
"So as to have some one to help him live within his income; he couldn't do it alone."—*New York Morning Telegraph*.

Might Be Called Gossip.—MRS. JAMESON—"Do you believe that awful story they tell about her?"
MRS. JOHNSON—"Of course I do! What is it?"—*Kasper (Stockholm)*.

Meteorological.—FIRST GENTLEMAN—"Did you get home last night before the storm?"
SECOND GENTLEMAN—"That was when it started."—*London Mail*.

Force of Habit.—WAITER—"Sir, when you eat here, you need not dust off the plate."
CUSTOMER—"Beg pardon, force of habit. I'm an umpire."—*Lemon Punch*.

Others Might as Well.—"Personally, you know, I am very fond of hunting. But then, you see, I belong to the society for the protection of animals. However, I found a way out of my difficulty. When hunting, I use blank cartridges."—*Paris La Baionnette*.

Musical Note.—A very deaf old lady, walking along the street, saw an Italian turning a peanut roaster. She stood looking at it awhile, shook her head and said: "No, I shan't give you any money for such music as that. I can't hear any of the tunes, and besides it smells as if there were something burning inside!"—*The Congregationalist*.

Mother's Gentle Hand.—The little boy in this story from "Touche a Tout" was evidently a firm believer in the old adage, "Of two evils choose the less." Turning a corner at full speed he collided with the minister.
"Where are you running to, my little man?" asked the minister, when he had regained his breath.
"Home!" panted the boy. "Ma's going to spank me."
"What!" gasped the astonished minister. "Are you eager to have your mother spank you that you run home so fast?"
"No," shouted the boy over his shoulder, as he resumed his homeward flight, "but if I don't get there before pa, he'll do it!"—*Pittsburgh Christian Advocate*.

3.5 CENTS FOR SHEET
METAL WORK

2.9 CENTS FOR ROOFING

1.2 CENTS FOR HARDWARE

= 100 cents

Make Your House Repair-Proof

Avoiding those incessant, costly repairs is merely a matter of using materials that will successfully resist the unceasing action of weather, water and wear — in roofing, plumbing, sheet metal work and hardware.

No matter how much you spend to paint, plate, dip or galvanize substitute metals, they are *certain* to rust, and to rust quickly. Then follow repairs — and more repairs — and the still costlier replacements.

Use Copper and Brass in the first place and save all this trouble and expense.

Copper and Brass do not rust. They are in reality much cheaper than substitutes. You don't have to repair or replace anything made of the Ever-lasting Metals.

Copper and Brass save you many times their slightly higher original cost, for they provide enduring, expense-proof service, not for a few months but for the whole life of the house.

Copper and Brass are cheaper because
you pay for them only ONCE

COPPER AND BRASS
RESEARCH ASSOCIATION
25 Broadway, New York

It Costs Only a Trifle

to keep the least expensive units in your house from becoming a costly nuisance—

Only 3½ mills more on the dollar
for Brass to take the worry out of your plumbing.

Only ½ mill more on the dollar
for Copper leaders, Copper gutters, Copper flashing and Copper valleys to avoid the constant repairing and replacing of metals that rust.

Only 7 10ths of a mill more on the dollar
for enduring Copper, Brass or Bronze hardware that wears forever and not just for a few years.

Only 2 and 8 10ths cents more on the dollar
for a Copper roof that spares you forever from leaks and water-soaked interiors, a roof that needs no paint, no patching, no repairs.

Smart Body Styles Put New CHANDLER SIX Into Exclusive Car Class

BUYERS who know motor car values have welcomed in the new Chandler Six lasting style and assured mechanical supremacy.

Such a superlative degree of motor car aristocracy was never before available at a cost so low.

Everywhere the smart style and superb bodies of this latest Chandler proclaim it the season's most fashionable car.

The briefest ride in a Chandler Six will prove its inherent smoothness and comfort, qualities that will still further be emphasized by the rough roads and tough hills of the long tour.

The new Chandler is available in every model essential to the demands of utility, the caprice of taste, or the whim of pleasure.

That Slim Gray Pamphlet

"At best!" exclaimed the Chief Draftsman, "it can't be finished inside of ten days."

"You see," explained the Consulting Engineer to the famous sugar magnate who had called in person to demand greater speed, "we stopped work on the Refinery plans and put every draftsman onto that rush Cuban job of yours."

"Draftsmen! That's your lookout, not mine," declared the President testily. "Both plants must be modernized before the new crop comes in. Every tenth of a cent a pound in production cost means thousands a day."

"I've done everything possible. You can't get the trained draftsmen we need—"

"But you don't need college professors to figure a few hangers," cut in the President. "Didn't you answer my wire ten days ago and say 'Plans all ready but hangers'?"

"But figuring types and dimensions of 10,000 hangers is some job," said the Chief Draftsman.

"Just have the plans brought in so he can see what it means," said the Consulting Engineer.

Two minutes later a keen looking youth laid a roll of tracings on the table and with them a sheaf of neatly written pages. "Here's the list of hangers on that job," he said hesitatingly.

"List of hangers!"—"Where did you get it?"—"Who worked it out?"—"What kind of hangers?"—

"This looks—like—really looks like a complete schedule," said the Consulting Engineer as he turned the sheets headed—Pipe Rings—Wall Coil Hangers—Saddle Hangers—Pipe Rolls. "Who did this?"

"I did," said the boy nervously. "Took them right out of a slim gray pamphlet."

"Pamphlet—what pamphlet?"

"Why, the hanger book."

"There's no book you can get this kind of data from," said the Chief Draftsman, turning to the Consulting Engineer. "It's a matter of careful calculation by experienced men."

"Just a minute, gentlemen," interrupted the sugar magnate. "Boy, you mean a volume—not a pamphlet. Where did you get it?"

"I got it out of the Chief's waste basket," he replied, drawing the slim, gray pamphlet from his pocket and handing it to his questioner.

"My waste basket?" exclaimed the Chief Draftsman.

"Excuse me again, gentlemen," interrupted the sugar magnate. "I'm overdue at my office. Please 'phone me in half an hour if this lad's schedule checks with your plans. I'll bet a hundred to one it does. Companies like Grinnell don't print booklets like this unless they've got something valuable to say. Good morning."

* * * *

Half an hour later the Consulting Engineer told him over the 'phone the figures checked and that blueprints and specifications would be issued for bids the next day, and added, "We are specifying Grinnell Adjustable Hangers. Their use should cut the time of installing two weeks."

Cut out the coupon. Send it in today. Or simply write and ask for the Hanger Booklet. Address Grinnell Company, Inc., 274 W. Exchange St., Providence, R. I.

Entered as second-class matter, March 24, 1890, at the Post-office at New York, N. Y., under the act of March 3, 1879.

Entered as second-class matter at the Post-office Department, Ottawa, Canada.

\$10,000 reward for a Palmer student's imagination

THE first prize of \$10,000 in the Chicago Daily News scenario contest was awarded to Miss Winifred Kimball, of Apalachicola, Florida. It is the biggest prize ever offered for a scenario.

The contest was open to everybody. Nearly 30,000 entered, many professional scenarists competing. Miss Kimball, an amateur heretofore unknown to the screen, wrote "Broken Chains," the scenario adjudged best.

Miss Kimball is an enthusiastic student of the Palmer Course and Service. Of the Palmer Plan she writes:

"There is something unique in the kindly interest that the Palmer institution evinces toward its students. I feel that much of my success is due to its practical instructions. I have advantaged greatly from the fundamental wisdom of its criticisms and teachings."

A second prize of \$1,000 was won by Mrs. Anna Mezquida, of San Francisco, also a Palmer student. Seven other students of the Palmer Plan won \$500 prizes.

Until the Palmer Photoplay Corporation discovered and developed their gifts in its nation-wide search for screen imagination, these prize winners were unknown to the motion picture industry.

That search goes on and on. Through a questionnaire test which reveals creative imagination if it exists, more hidden talent will yet be uncovered. The test is offered free to you in this page.

* * *

This is the kind of story that needs little

PALMER PHOTOPLAY Corporation
Dept. of Education, 124 W. 4th St., Los Angeles, Cal.

PLEASE send me, without cost or obligation on my part, your questionnaire. I will answer the questions in it and return it to you for analysis. If I pass the test, I am to receive further information about your Course and Service.

who wins first prize of \$10,000
in Chicago Daily News scenario
contest.

elaboration. The awards speak for themselves. The Chicago Daily News put its great influence and resources behind the motion picture industry, which desperately needs fresh imagination for scenarios. Thirty-one cash prizes amounting to \$30,000 were offered. Thirty thousand professional and amateur writers competed. Their manuscripts were identified to the judges not by author's name, but by number.

The judges—among whom were David Wark Griffith, the famous producer, Samuel Goldwyn, whose studios will produce the first prize scenario, Norma Talmadge and Charles Chaplin, screen stars, and Rupert Hughes, celebrated author and scenarist—selected "Broken Chains" as the best of the 30,000 scenarios entered.

To a southern girl who lives in a little village of 3,000 population, that selection meant a check for \$10,000, and a career.

To the Palmer Photoplay Corporation, the incident is just one more gratifying record of a Palmer student's brilliant success.

A public that makes its own scenarios

In its issue of April 1, announcing the prize winners, the Daily News quoted the judges as agreeing that—

"—it proves beyond all doubt that the American public can supply its own art industry, 'the movies,' with plenty of impressive plots drawn from real life."

That is the message which the Palmer Photoplay Corporation emphasizes in its nation-wide search for creative imagination. As the accredited agent of the motion picture industry for getting the stories without which production of motion pictures cannot go on, the Palmer organization seeks to enlist the country's Imagination for the fascinating and well paid profession of scenario writing. Here, in the inspiring story told on this page, is proof that Imagination exists in unexpected places; evidence that it can be inspired to produce, and trained in the screen technique, by the Palmer Home Course and Service in photoplay writing.

A free test of your imagination

Imagination is the indispensable gift of the scenarist. It exists in men and women who never suspect its presence. The problem of the motion picture industry is to discover it, and train it to serve the screen.

By a remarkable questionnaire, the Palmer Photoplay Corporation is enabled to test the imaginative faculties of any person who will send for it and answer its questions. The test is free. The results of careful analysis by our Examining Board will be given you. We shall be frank. If your questionnaire indicates that you do not possess the gifts required for screen writing, we shall advise you to think no more of writing for the screen. But if you have those gifts we shall accept you, should you so elect, for enrollment in the Palmer Course and Service.

The opportunity is immense, the rewards are limitless. Will you take this free confidential test in your own home, and determine whether it is worth your while to try for the big things—as Miss Kimball did?

The questionnaire will be sent to you promptly and without obligation, if you clip the coupon. Do it now before you forget.

The crime you commit against your body tissues

Each year more than 100,000 men and women still young pay the penalty for this wrong habit of eating

VEAL cutlets, boiled potatoes, buttered peas, gelatin salad, mince pie and coffee—all good foods. Recognized by thousands of American families as a satisfactory dinner.

And yet this dinner unless supplemented with certain vital food factors, is a crime against your body tissues. Because thousands of men and women do not supplement this diet with these factors they undermine their health and succumb to diseases which prove fatal.

It was easy for primitive man to secure an abundance of vitamin and other necessary food factors from his fresh meats and green leafy vegetables. But our modern diet—constantly refined and modified—too often lacks these vital elements.

A protective food—not a medicine

Yet each one of us can make good this lack. By adding Fleischmann's Yeast to their daily diet, men and women all over the country are securing for themselves the health and vigor that is their birthright.

As a result many are being freed from minor ailments, are building up increased resistance to disease; and

best of all are feeling a vigor and energy they have not known for years.

They have better appetite and their digestion is greatly improved. They also find that waste matter is eliminated regularly and naturally as a result of supplementing their diet with Fleischmann's Yeast.

Fleischmann's Yeast is a fresh food. It contains in a natural form the elements your body tissues crave. It is rich in the water-soluble vitamin, for yeast is its richest known source. In addition Fleischmann's Yeast contains a number of important mineral salts and other food factors essential to health.

What laxatives can never do

Doctors are agreed that laxatives never remove the cause of the trouble. Indeed one physician says that one of its chief causes is probably the indiscriminate use of cathartics. Fleischmann's Yeast as a food is just the natural corrective you need.

A noted doctor says fresh yeast should be much more frequently given in cases of intestinal disturbance especially if constipation is present.

Hundreds of men and women who have long been in bondage to laxatives are now free. The addition of Fleischmann's Yeast

to their daily diet has restored normal action of the intestines.

The ways they like to eat it

Many like to nibble Fleischmann's Yeast from the cake a little at a time. Some prefer it spread on crackers or bread. Others take it in boiling hot water, still others like it in milk, fruit-juices, coffee or cocoa. It is very nourishing with malted milk drinks. You will grow to like its distinctive flavor just as you grew to like the taste of olives or oysters.

The vitamin which Fleischmann's Yeast contains in such abundance improves the appetite, stimulates and strengthens digestion. Because Fleischmann's Yeast is a food it does for you naturally and permanently what habit-forming drugs do only artificially and temporarily. One cake of Fleischmann's Yeast gives you ten times the amount of yeast-vitamin found in most of the so-called yeast-vitamin preparations to which drugs of various kinds have been added. Be sure you get Fleischmann's fresh yeast. Do not be misled by substitutes.

Begin today by eating Fleischmann's Yeast—2 or 3 cakes regularly each day. *Place a standing order with your grocer. 200,000 grocers carry Fleischmann's Yeast. If your grocer is not among them, write to the Fleischmann agency in your nearest city—they will supply you.*

Send for free booklet telling the fascinating story of "The New Importance of Yeast in Diet"—what it has done for others—what it can do for you. Address THE FLEISCHMANN COMPANY, Dept. 1806, 701 Washington St., New York, N. Y.

The Literary Digest School and College Directory

"THE GATES OF THE FUTURE
STAND WIDE OPEN"

FOR INSTITUTIONS WHICH BUILD CHARACTER THROUGH EDUCATION AND TRAIN FOR RESPONSIBILITIES OF LIFE THE NEED IS EVER GREAT

LITERARY DIGEST readers seeking private institutions of learning will find in our pages between May 13th and September 9th, the following Classified Directory containing the names and addresses of some distinctive residential schools; vocational, professional, special schools; colleges, and supervised camps. Advertisements describing these institutions will be found in the first issue of each month from May to September.

You are invited to write for information to any of the institutions in which you are interested. We list only such schools as we believe are under highly trained and public-spirited executives. Our School Advisory Department continues to serve, as it has for many years, our readers and the schools without fees or obligation. It is necessary for inquirers to give specific information that may aid us in giving prompt service.

Just Published
SERGEANT YORK AND HIS PEOPLE

By Sam K. Cowan

THIS is not a war book, but a true, vivid and inspiring record of the making of a real American.

The story which Mr. Cowan has so graphically told is an enthralling one of mountain life in Tennessee from the days of the "Long Hunter" down to today. Here are given for the first time the full facts about Alvin York, his ancestry, his surroundings, his home life, his handicaps, and all the influences which so shaped his character that, when put to the supreme test, he was enabled to perform what Marshal Foch declared to be the World War's greatest individual achievement.

12mo. Cloth. With 16 full-page illustrations. Price, \$2.00 net, at bookstores. By mail from the publishers, \$2.12.

FUNK & WAGNALLS COMPANY, Publishers
 354-360 Fourth Avenue New York, N. Y.

STANDARD DICTIONARY superiority quickly becomes plain to the man or woman who investigates.

Do You Suffer From WEAK LUNGS?

If so, do you know that nine times out of ten, weak lungs mean straight, out-and-out tuberculosis? Many things formerly considered merely as forerunners of tuberculosis are now known to mean that the disease already has a foothold. Do you wish to know how signs of tuberculosis may be detected before it gets a firm hold upon you? Are you anxious to know how to protect your dear ones? How to win back health? How to apply curative measures to your own case and acquire the confidence, ease of mind, and satisfaction that come only when you feel the tide of success turning overwhelmingly in your favor? Then read this remarkably helpful new book, just off the press, entitled

LESSONS ON TUBERCULOSIS AND CONSUMPTION

by Charles E. Atkinson, M.D.

The author is a physician of high standing who has given years of study to the subject. Having himself made the fight, Dr. Atkinson knows the invalid's viewpoint, and writes for him, from his long experience, in plain, non-technical language.

In these 16 lessons, printed from clear, distinct type and compressed into one handy volume, you will find almost every conceivable aspect of lung tuberculosis fully, clearly, and accurately discussed in a practical and compelling manner. You will not meet with broad, vague generalities or wearisome theories, but will find a veritable mine of information on hundreds of vital, relevant topics, all treated with extraordinary completeness. In addition, you will find many questions that have a vital interest, but to which you have failed to obtain an answer from other sources, here answered authoritatively and convincingly. Absolutely trustworthy and highly endorsed, this book is literally filled with just the information you need to recognize the first danger signals, to shield your family and friends, and to guide you safely to and through the gateway of health.

12mo. Cloth, 460 pages, 16 pages of illustrations. At all Booksellers, \$2.50 net; by mail, \$2.62.

FUNK & WAGNALLS COMPANY, 354-360 Fourth Ave., New York

From the Old Bay State To the Golden Gate

At each side of the United States is an ever watchful sentinel. In Boston it is the Old State House. At San Francisco it is the Golden Gate. History and exploration between the two points hold much for the inquiring mind. You can travel, sitting in your easy chair, covering all points, North, South, East and West—out of the old, into the new; moving with the speed of thought.

Use the
RAND McNALLY
 Official
 Auto Trails Maps
 on your
 automobile trips

They show the marked automobile roads, explain the markers, give the road mileage, locate the better garages, hotels and service stations and contain city maps showing routes through the larger cities. Also many other features which are valuable to the traveler.

The RAND McNALLY Official Auto Trails Maps are the guide to the best and shortest roads. They make speed and economy possible. The entire United States is covered by the maps, which are published in districts, each covering an extensive touring area.

PRICE 35c EACH
 Sold Everywhere

Send for illustrated booklet, "The Blazed Trails." Valuable to every motorist

RAND McNALLY & COMPANY gives you transportation where you will, with Maps and Atlases. You get to know remote places, you see the wonders of nature, you learn of man's progress. You hear the whirring spindles of New England; see the flash of the axe in Michigan; scent the orange blossoms of California; wander care-free in exotic New Orleans—all in an evening.

There is a place for **RAND McNALLY** Maps and Atlases in every home and business house. Under the evening lamp or at the office desk, they bring remarkable information that is accurate, new, practical and instructive. There is no better game for the whole family than exploring, the **RAND McNALLY** way.

All the world is covered. The new countries are shown in the 1922 editions. Old atlases, good as they may once have been, are obsolete today. For a birdseye view of the changed world, you need a **RAND McNALLY** Atlas.

THE DOVE FROM GENOA'S ARK

WITHOUT A PACT OF PEACE, Lloyd George told the correspondents, "Genoa will have accomplished nothing," and in the lifetime of this generation Europe will again "welter in blood." What is at stake, comments the *New York Globe*, "is not the fate of Russia, of Germany, of France, or of England, but the fate of European civilization." Moreover, to quote the British Prime Minister again, "whether America will or not, she will inevitably be brought in, as the last war brought America in." To safeguard the world against this disaster Lloyd George proposes an agreement among all the thirty or more nations represented at Genoa to refrain from all acts of aggression for a period of ten years. The French Cabinet agrees to this Pan-European non-aggression pact, dispatches tell us, with the single reservation that all France's rights under the Versailles Treaty shall be respected. Walter Rathenau, Germany's Foreign Minister and head of the German delegation to Genoa, informs the press that "Germany will support loyally Lloyd George's plan for a pact of non-aggression"; and he adds enthusiastically: "The proposed pact will constitute one of the greatest acts ever taken on behalf of humanity. It will make the Genoa Conference the greatest in the history of the world."

The Lloyd George plan, several American editors explain, represents a wider application of the principle embodied in the Washington Conference's Four-Power Treaty. If it is consummated, notes the *Philadelphia Evening Bulletin*, it "will immediately remove the cause for most of Europe's armaments." Mr. Tchitcherine, leader of the Russian delegation, points out that "only by a policy of peace can the nations balance their budgets." And a European correspondent of the *New York Tribune* reports that Marshal Foch is among the supporters of the British Premier's plan. "It is quite certain that in Europe there is a strong popular demand both for peace and for a lightening of the burden of armaments, a burden which is even heavier, and far more crushing, than before the war," says the *Springfield Repub-*

lican, which notes that "even in Paris" the idea of a ten-year truce is growing in popular favor. The *Manchester (N. H.) Union* even suggests that sentiment in Western Europe is moving in the direction of a European federation; and in an Associated Press dispatch from Genoa we read:

"ARE WE DOWNHEARTED?"

That Lloyd George refuses to be discouraged by the perils that beset his peace program is evidenced by this picture, taken at Genoa.

"It is understood that Lloyd George has a profound ambition to make his non-aggression pact the precursor of a broad movement to bring all the peoples of Europe, including Russia and Germany, closer together, perhaps, as the first step toward some form of European federation.

"It is learned, also, that one of the drafts contains the proposition that the members of the Little Entente mutually shall agree to organize a kind of flying army corps, which will act as international policeman to protect the frontiers and punish violations of the non-aggression agreement. It is understood that the idea emanated from Roumania, but several delegates gave it as their opinion that there seemed little chance of its being incorporated."

Those who would wreck this pact are classed by one correspondent with "the men who sank the *Lusitania*." While the proposed agreement would not end international aggression absolutely, remarks the *Chicago Evening Post*, "it would put the aggressor overwhelmingly in the wrong." In an editorial headed "A Dove from the Genoa Ark," this Chicago paper goes on to say:

"Thus, for instance, it would not greatly affect the actions of the Bolsheviks if they signed it, since being in the wrong is their chosen be-all and end-all; but it would separate them more clearly from the mutually self-respecting Government. It would tend to form a coalition against their aggression, just as the Pacific Treaty tends to form a coalition against any possible Japanese aggression in the islands of the western ocean. . . .

"We suppose, after all, that this newest peace treaty is still in the trial-balloon stage. But it is high statesmanship, and non-aggressive America should give it a sympathetic send-off."

A round-robin agreement against aggression would be a great step toward European recovery, agrees the *New York World*, which remarks that "the real difficulty of such a treaty is to assure France that she does not surrender all right to enforce

her claims against Germany." As the *New York Evening Post* sees it, "Lloyd George's non-aggression agreement is popular all round, and the peace of Europe is assured." Concerning France's attitude it goes on to say:

"Only on the hypothesis that France is bound to say No every time Lloyd George says Yes was there any reason for supposing that France would object to the British Premier's proposal of a ten-year pledge of non-aggression. France and her good friends in Central Europe have everything to gain by such an arrangement. France and the new or enlarged nations in Central Europe have the frontiers they want; and a pact of non-aggression means a guaranty of those frontiers. There is thus removed that mischievous factor which roused hostility to the Genoa Conference before it met and which made trouble after it met: the suggestion, prest in some quarters, that

of protection to Germany, Russia and Hungary, putting them to some extent on a parity with the other European states. But a more complete parity could be effected by admitting them into the league. The process of admission is simple. Bulgaria and Austria, former members of the Teuton alliance, have already been taken in.

"If the Lloyd George plan involved nothing more than a second oath on a second altar to the principle of stabilized boundaries a good deal of the zeal behind it would be beyond explanation. It appears, however, from hints dropt at Genoa that the aggression which the suggested compact would be most useful in restraining is 'aggression' for the purpose of enforcing the Versailles Treaty. Such 'aggression' can not be halted by the league because it does not constitute war and is authorized by the same convention which created the league. Viewed in this light the non-aggression compact is not so much an attempt to supplement the league covenant as to break down the reparation section of the Versailles Treaty. It seeks to destroy the one genuine sanction behind the peace settlement with Germany."

Other American editors and many foreign correspondents remind us that the question of boundaries looms ominously in the background of any European peace pact. Lloyd George himself said recently of Europe's contested frontiers:

"Every one of those lines involves in itself the possibility of a terrible conflict in Europe. Sometimes the complications are the result of the terrible muddle of races, which you have surging like a caldron in the center which has not settled down.

"You have this racial lava surging right through the center of Europe, and unless you settle the line there which will be accepted by everybody, there are interminable possibilities of future conflicts that will embroil the whole world."

This problem, it seems, must be met before any ten-year truce can be confidently pledged. In a Genoa dispatch to the *New York Times*, Edwin L. James tells us that Lloyd George is now wrestling with this question of boundaries; and he goes on to say:

"It is doubtful if any living man could have tackled a more difficult problem. There are border disputes between Russia and the Baltic States, between Russia and Poland, between Russia and Roumania, between Poland and Czecho-Slovakia, between Austria and Hungary, between Jugo-Slavia and Italy, and numerous other disputes. Just to give an idea of the job—Poland and Lithuania have been quarreling for two years over the Vilna lines, and the best efforts of the Supreme Council and the League of Nations have not brought a settlement. Mr. Lloyd George purposes to try and settle all these frontiers at Genoa. When they are fixt then the nations will be asked to sign a non-aggression compact, or a promise to observe those lines.

"Whether the British chief can get the other nations to go deeply into these nationalistic questions remains to be seen, but he intends to try. Sir Edward Grigg, his private secretary, told me to-night that all the reported drafts of the non-aggression compact were manufactured, and that no draft existed for the reason that it would not be written until the frontier problems had been considered. He said it was Mr. Lloyd George's opinion that a peace compact would be worthless without frontier agreements.

"The British Premier has undertaken perhaps the most tangled political task in the world. Any one who has followed the history of Besarabia and is familiar with the Russian claims against Roumanian occupation of that territory can get a grasp of what the proposal means. There is absolutely no limit to its complications. Can he do it? Can the little Welshman repair the weaknesses of the Treaty of Versailles? Can he quiet the racial lava running from the Baltic to the Black Sea? He has precious little real help in the undertaking, for brotherly love is a scarce commodity in the world to-day."

Editorially *The Times* characterizes this dispatch as "bad news," because "any serious attempt to rearrange Europe's disputed boundaries would start a dozen new wars." Another *Times* correspondent, however, suggests that the problem might be solved by leaving the present actual possessors in temporary control of disputed territory while vesting the legal sovereignty for the time being in the League of Nations until the disputes are satisfactorily settled.

the conference should take up the question of boundaries, which meant the rewriting of the Versailles Treaty and other treaties.

"We assume that accompanying a non-aggression agreement there will be some machinery for its supervision. It will not be the military sanctions that France has asked for without really expecting to get them, but it will be a united European moral sanction behind the *status quo*. The machinery for the purpose may yet turn out to be the League of Nations. That explains the news from Paris that even Marshal Foch is sympathetic to Lloyd George's proposal."

But there are American editors who doubt the practicability of this program. "Can a red Russian live peacefully side by side with the capitalistic nations of Europe?" asks the *Washington Post*. And the *New York Tribune* finds the proposed pact "superfluous or vicious." To quote *The Tribune* further:

"What is the real purpose of the non-aggression treaty which Lloyd George is urging on the Genoa Conference? All the European Powers except Germany, Russia and Hungary are already protected by a non-aggression compact. This compact, contained in the League of Nations covenant, goes much further than the Genoa proposal does. It pledges the signatories not only to refrain from aggression, but to preserve against such aggression the territorial integrity and political independence of any threatened state. Here is a full-blown guaranty of stabilization. What is the use of supplementing it with a far more limited and purely negative one?

"It may be said that the Genoa project is intended as a measure

FOUR MONTHS OF "RECUPERATION"

WHEN THE YEAR OPENED, all the authorities—government officials, bankers, financial experts, newspaper editors—raised their voices to tell a hopeful nation that 1922 was to be, in Secretary Hoover's words, "a year of recuperation." A third of the year has gone, during which time the nation has been traveling the road to normalcy. Have these four months justified the optimistic forecasts of the new year prophets? Yes, says Wall Street, where "million dollar days" have followed one another in quick succession and the "bulls" have had it their own way in a remarkable upward movement affecting practically the whole list of securities. But while the barometric nature of Wall Street happenings is acknowledged,

our careful authorities on business are far from admitting that one Wall Street spring boom guarantees a summer of prosperity. During April and the early days of May business authorities have been recasting their views on the prospects of returning good times, and their conclusions based on facts are worth noting. Secretary Hoover believes now, as he did four months ago, "that we have some time since gone by the worst part of the depression; that we are on the road to recovery." Associated Press reports gathered from all over the country are said to show general improvement in the industrial situation, particularly over conditions as they existed in the winter months. Department of Commerce business figures

available up to April 18, we read in *Commerce Reports*, "show a profound improvement over the conditions a year ago," two outstanding features being "the increases in iron and steel activity and the big increase in construction."

Discussions of business conditions in the daily press, as recorded a few weeks ago in THE LITERARY DIGEST, have laid great stress on the improved lot of the farmer. Mr. Eugene Meyer, Jr., head of the War Finance Corporation, which has been helping so successfully to finance the farmer during the past winter, has just returned from a trip of observation through our agricultural States. He reports to President Harding "that the severe and indeed unprecedented depression which dealt such a hard blow to the agricultural interests is in some sections of the country already a thing of the past; that in other sections it is rapidly passing, and that everywhere hope and confidence are taking the place of despair which six months ago was so widely prevalent." Mr. Archer Wall Douglas, of the Chamber of Commerce of the United States, who has also been traveling through the country districts, similarly reports that "the cheerfulness of the countryside is wide-spread, tho not vociferous." The Secretary of the National Association of Credit Men is a third traveler who comes from the chief agricultural States to tell us that those regions have gathered "energy and confidence from the rise in prices of farm products and this is reflected in retail and wholesale lines." "Prosperity in the Middle West," comments the

New York *Tribune* editorially, "is the most reassuring among the many indications of the return of general prosperity." Several authorities, including Mr. John Moody, head of Moody's Investors' Service, report a high degree of prosperity on the Pacific Coast. The improved buying power of the farmer takes first place among the evidences of really better times, in the opinion of such important financial institutions as the National City Bank and Mechanics and Metals National Bank of New York and the First National Bank of Boston. Officials of the Republic National Bank and National Bank of Commerce of St. Louis report good conditions in the lower Mississippi Valley.

But the Irving National Bank of New York's April *Mid-Month*

Review prefers to lay chief stress on the revival of activity in basic productive industry: "The recovery in iron and steel has broadened, many copper mines have resumed, the movement of freight is far heavier than a year ago, industrial employment, despite the coal and textile strikes, continues steadily on the upgrade, foreign trade is much better than in several months and building construction shows phenomenal expansion." The outstanding evidences of improvement noted by W. S. Cousins in his weekly review of business are "the greater activity in the steel industry and the improved railroad outlook, the advance in foreign exchange, the gradual stabilization of commodity prices and the revival of building construction." The Harvard Economic Service sees a country-wide improvement during the opening months of the year and it expects "that the upward trend of business will continue," saying:

"The basis for this expectation is not that business must improve because it has been bad. Rather, an analysis of the fundamental economic situation—increases of wholesale prices gradually predominating over decreases, moderate manufacturing output compared with freight movement, low money rates, and a strong security market—reveals powerful forces making for business expansion."

It is such evidence that leads a business man's paper like *The Manufacturers Record* (Baltimore) to voice the change in the popular attitude. It sees "the light of prosperity breaking over

the land." Slowly, it observes, "the psychology of disaster has been changed into the buoyant psychology of enterprise and initiative." With the year one-third gone—

"More than one hundred million of the most virile, active, optimistic, aggressive, upbuilding people of the world, having about one-half of the world's producing power, with more than one-half of the world's coal and many other things in proportion, have grown weary of pessimism and stagnation and are now bending their activities to constructive work.

"They have seen the advance in the stock market, following an advance in farm products, and now they see a marked betterment in iron and steel and other products. They see hundreds of millions, even billions, pouring into construction work such as highways, streets, office buildings, hotels, schools, churches, and dwellings, and they know this spells PROSPERITY in capital letters."

But there is such a thing as being too optimistic. Over and over we are being told by most eminent authorities that growing prosperity does not by any means necessarily mean a boom, and that recuperation is likely to be slower than many of us have hoped and that there are a number of unfavorable factors which must be taken into consideration. There are "ifs" and "buts." For instance, the Federal Reserve Board itself in its review of financial and business conditions for April sees industry in much better shape and "every reason to expect business to improve steadily tho perhaps slowly." "But for labor disturbances," the Board continues, "the industrial outlook would be pronounced definitely good, with evident promise of improvement even in those directions such as foreign trade in which heretofore prospects have been unsatisfactory." And there is another "but"—"with world conditions as they are to-day there is no likelihood of an immediate boom movement." An unofficial body of observers like the National Industrial Conference Board notes that wage reductions are less frequent and that wage levels are still most irregular:

"This lack of adjustment and the general feeling that with wage reductions for coal miners and railroad workers imminent, fuel and transportation costs will be lower, and consequently manufacturing costs and prices of goods less, is causing some hesitancy among manufacturers and tends to retard operating activity."

The great wholesale markets, we read on the market page of the *New York Times*, are still in large measure marking time. The writer explains that:

"Against the natural trend toward normal conditions are arrayed the labor disturbances, the threat of a reactionary tariff, the instability of values and the reduced purchasing power of so large an element of the population, to say nothing of the still unsettled financial condition of nearly every foreign country. Progress is being made, but it is slower than it should be. The demand is still for lower levels of value, while producers are insisting that they can not make both ends meet at present prices."

"Business is distinctly on the upward trend," we read in the *May Credit Monthly*, organ of the National Association of Credit

Men. On the basis of its reports, the "improvement in business as a whole is due to the increased activity of the construction industry which comprehends not only building in its narrower sense but construction of railroad equipment. But *The Credit Monthly's* correspondents in various parts of the country are aware of hindrances to more rapid betterment. They are said to agree that the things that are holding us back are "the low price of farm products, general depression, lack of export demand, strikes, the coal situation, unemployment, weather, and freight rates."

The improvement of trade in recent months "has been of a fitful sort," as the Alexander Hamilton Institute sees it. This

New York business service organization lists certain favorable and unfavorable factors affecting business. The three favorable factors seem so potent at the present time "that trade revival during the next twelve months seems assured, regardless of whatever unfavorable influences may develop." They are:

- "1. A healthy mercantile situation.
- "2. A promising agricultural outlook.
- "3. A surplus of banking funds sufficient to finance an expansion of trade activity this fall and throughout 1923."

The third factor, namely the plentiful supply of banking funds, seems to this judge the most important, for while "unfavorable developments may retard trade revival," the "existence of surplus funds insures an upward trend." The factors which are retarding improvement and "are ad-

versely affecting business confidence at the present time" are set down as follows in the Institute's *Monthly Letter* for May:

- "1. Continued inflation in Germany.
- "2. The prospect of currency deflation and price declines in England, France and Italy.
- "3. Overbuilt manufacturing plants in the United States.
- "4. Possibility of lower construction costs in larger projects.
- "5. The Fordney-McCumber Tariff Bill.
- "6. The soldiers' bonus bill.
- "7. Allied debts."

At the end of April *Bradstreet's* preferred to use the word "irregular" to characterize the state of trade, elaborating as follows:

"Generally speaking, cold weather with killing frosts, injurious to fruits and early vegetables, or heavy rains, with floods in many of the country's streams, and poor country roads are still credited with retarding retail trade, farm work and crops, while the circles of disturbance proceeding from the coal, textile and other labor troubles are obstacles to what would otherwise be the best industrial situation in nearly two years.

"Despite these drawbacks, at least three basic industries, building, iron and steel and automobiles and accessories, are active, the first preeminently so, while iron prices are all stronger; lumber is firmer, with orders far exceeding output; there is an unquestionably more optimistic tone in jobbing trade, which is fully fair; mail-order houses are moving more goods, and collections make the best showing since late last fall."

Dun's Review found "decisive gains in business in April": "previous irregularities and unsatisfactory phases have by no

means been eliminated, yet there is now more uniformity to commercial dispatches and it is clearly evident that major movements are in the right direction." According to *The Wall Street Journal*, "reports received by New York bankers from correspondents in other cities indicate that while business improvement is 'spotty,' buying is gaining momentum," and a real business boom is looked for later in the year.

Some of the bank bulletins issued around the first of the month are cautious about summing up the situation. In New York the American Exchange National Bank sees some of the industries and trades which have been lagging behind being "picked up and carried along by the broadening current" of improvement, but "no marked acceleration of the general movement." Careful study of the situation seems to the Guaranty Trust Company to warrant only a confident outlook rather than expectation of a 'boom.'" Another large New York bank, the National Bank of Commerce, notes that "important gains are shown in basic industries simultaneously with a disappointing spring retail trade in many parts of the country." The writer for this bank explains that:

"The set-back in retail trade is the direct consequence of two factors. Buying by farmers, long at a low level because of unprofitable prices for farm products, has not shown much improvement, as farmers have very little money, and their buying power can not expand materially before autumn even if the current year's crops are good. They are wisely using their credit to buy fertilizer, tools and other necessities of their business. Buying by workers in cities has declined heavily—the cumulative effect of prolonged unemployment. It now seems likely that retail trade will continue at not far from its present levels or better until the normal mid-summer dullness occurs. If gains in basic industries prove permanent the autumn offers promise of expanding retail operations on a stable basis.

"The progress of the nation toward normal business has not stopped; operations have merely shifted to a new field."

Outside of New York we find the Cleveland Trust Company aware of six conditions, which taken together mean that business is recovering:

- "1. Prices of staple raw materials are advancing.
- "2. The production of iron and steel is increasing.
- "3. The prices of stocks and bonds are rising.
- "4. The volume of unemployment is diminishing.
- "5. Interest rates are falling.
- "6. The amount of building construction is growing."

But this, we are told, does not mean that the recovery is to be rapid, or anything that could fairly be called a boom: "it would be reasonable to expect the present recovery to continue irregularly during the present year, and to reach by the end of the year a condition that might be described as statistically normal, but which would be considered something less than that by most business men."

The Cleveland Federal Reserve Bank's business review for April is even more cautious, saying: "while the business outlook is growing better almost daily, we must remember that it must

necessarily proceed at a slow pace." The Philadelphia Reserve Bank finds business improving in April as compared with the preceding three months, but a "normally active market not yet reached." In St. Louis the Federal Reserve Bank reports betterment in April not universal, and several important lines of business showing a decided slowing down. In the same city, the Liberty Central Trust Company was unable to say last month that there has been any great impetus toward normal conditions in mercantile business this spring. It records the curious fact "that the two principal mail-order houses in March sales records have run in opposite directions. One shows a decrease from 1921 and the other an advance." But these Missouri bankers are far from disappointed because progress seems so slow:

"It is not right or proper to look for 'booms' at this stage; the period of feverish prosperity, with its after effects, is past, and in its place we should look for something less spectacular but far more substantial. That it is approaching but slowly is in itself a favorable omen."

With this a writer on business still farther West thoroughly agrees. We read in the *Seattle Business Chronicle*:

"Overconfidence resulting in premature expansion could easily destroy much of what has been accomplished so far.

"Business is like unto a sick man who is convalescing—he must be most circumspect in his exertions and discriminatingly cautious in his diet. The dictionary definition of the verb convalesce is, 'to gather strength; to recover health and strength, especially, gradually, after sickness or weakness, to get better.' Let us drive home the thought by quoting the

definition of the noun convalescence: 'recovery, especially gradual recovery, of health and strength after disease; state of a body renewing its vigor after sickness or weakness; the time between the subsidence of a disease and complete restoration to health.'

"If we do not forget in the enthusiasm of returning strength that we are still 'convalescing,' and if we do not disregard the obvious limitations of 'convalescence,' it will not be long before we are well—but beware of 'backsets.'"

In line with these Western reflections comes a conservative and thoughtful statement from the *New York Journal of Commerce*. As this organ of business sees it, business is, indeed, getting better, but it "has been making its advance by main strength and quite against the current of events." Our indisposition to finance trade with Europe, the unsettling effect of tariff discussion, and "threats of bonus and heavier taxation" all have their effect. And "in addition to the easily adjustable evils which grow out of administrative weakness or legislative perversity is the general fact that industrial readjustment is still with us in an acute form." So, as *The Journal of Commerce* concludes:

"Business is better, no doubt, but its improvement is not what is being so often painted. It is not such as to warrant further advances in the general run of stocks and bonds. Least of all will much greater prosperity come unless there is decisive action on the part of our public men to bring about a fairer and better condition of taxation and foreign trade and to reduce the burden of taxation."

General Wu Pei-Fu.

CHINA TORN BY A STRUGGLE FOR UNITY

THERE IS NO ANALOGY between the civil war now raging in China and our own Civil War, altho the immediate struggle is sectional, for the cables say that instead of there being a secessionist movement, all the contending factions favor union. There is no likeness to the upheaval in Russia, either, for no economic revolution is involved. Nor can the situation be compared to the clashes in the Balkans, for the Chinese are not divided by racial animosities or territorial disputes. "Perhaps Ireland," the *Philadelphia North American* goes on to suggest, "comes nearest to presenting a parallel, for there, as in China, the battling factions all proclaim that their ideal is unity." There is one difference, however: In China, poison gas, artillery, tanks, machine-guns and airplanes claim their victims along a modern front a hundred miles long. The statement that two thousand dead and wounded were found after the first serious battle near Peking leads the *New York World* to remark that "civil war in China is not the joke it once was." Moreover, predicts *The World*, "now that China has taken over scientific methods of warfare there will come a change in her attitude toward the world—and a change in the world's attitude toward her." "It is quite possible," in fact, in the opinion of the *New York Globe*, "that a storm is brewing in China that will shake the whole Asiatic world."

China, say foreign correspondents, is in the worst political plight of recent years; war-lords on every side are defying the Peking Government. The outstanding personalities in the present rebellion, it is said, are Hsu Shih-Chang, President of the Chinese Republic; Liang Shih-Yi, Premier of the Peking Government; Dr. Sun Yat-Sen, President of the Southern Chinese Republic in Canton; General Chang Tso-Lin, war-lord of Manchuria, in Mukden; and Wu Pei-Fu, Inspector-General of Liang-hu in Hankow. As the *North American* explains the events leading up to the present:

"Following the overthrow of the ancient Manchu dynasty in 1911, a Republic was established, but democracy and representative institutions prove an ill-fitting garb for a people devoid of any practical sense of nationalism. Yuan Shih-Kai, the first President, had been a leading statesman under the Empire; he set up a virtual dictatorship, and at the time of his death was contemplating a reversion to the monarchial system. During the World War the Government fell under control of reactionary and militaristic leaders who found it profitable to admit Japan

to a dominating position in the country's affairs. In 1917 they dissolved the Parliament, and since then have maintained an oligarchic rule in Peking by military means and with political support from the Japanese.

"This Government, tho incompetent and insecure, was the obvious legatee of national authority, and was duly recognized by the nations of the world, including the United States. But there was wide-spread opposition to it, especially on the ground of its subservience to Japan, and eventually the more democratic and progressive elements of the South established at Canton a Government which they assert is really representative. Its President is Dr. Sun Yat-Sen, father of the Chinese Republic, and its Foreign Minister, Dr. Wu Ting Fang, former ambassador at Washington; they and their chief supporters are enlightened men and ardent friends of the United States.

"The principal cause of the strife in China, therefore, is the rivalry between these two Governments; each of them declares that it alone can speak for the nation, but in fact each wields only a sectional and indefinite power. Probably that at Canton is more representative, but that at Peking has the technical advantage of world recognition."

"The fundamental difference between the Peking and Canton Governments," points out the *San Francisco Argonaut*, "appears to be the familiar one of conservatism and progressivism. The dominant ideals of the Peking group are those of old China; the ideals of the Canton group have been affected largely by contact of their leaders, notably Wu Ting Fang, with the Western world." Dr. Sun Yat-Sen and Chang Tso-Lin are reported to have formed an alliance, with the object of catching Wu Pei-Fu in the jaws of a military nut-cracker and crushing him and his army. Continues *The Argonaut*:

"If this shall really happen the result would be the return of Sun Yat-Sen to Peking under Chang Tso-Lin's protection and his reestablishment with his parliament in the capital from which he was expelled some years ago. An alliance of Sun Yat-Sen and Chang Tso-Lin would imply the end of the weak and trembling Peking Government, which has existed only by sufferance of Chang Tso-Lin.

"With Sun Yat-Sen as President, and the powerful and adroit Chang Tso-Lin supporting him, China would be in the way of having a stable Government."

General Wu Pei-Fu, declares the *Newark News*, was the father of the national convention scheme for unifying the country and forming a stabilized Government, "and he was on the road to success when Chang Tso-Lin stole his thunder." Hence the

bitter fighting near Peking. According to the New York Tribune:

"The three chief figures in the Chinese disorders are all fighting for the same thing—the unification of China. Their chief differences lie in who shall be the leader and what methods of unification shall be adopted. None of the trio desires to secede from the empire, but only to control all of it. Sun Yat-Sen is popular among the literati of China because of his progressiveness and idealism, but the educated are all too few to make his control far-reaching.

"Chang Tso-Lin has had a rapid rise to power, in large measure the result of his successful tactics in getting money from Peking. He has repeatedly drawn large appropriations to be used ostensibly for the suppression of banditry in Manchuria and for the protection of the Russian frontier, but again and again these sums have been used to strengthen his own army.

"Wu Pei-Fu is dominant in the nine central provinces, and his annihilation of the Szechuan army several months ago makes him almost immune from attack on the west. But he is handicapped by shortage of both men and money, whereas Chang, on the Manchurian front, has made heavy raids on the Peking purse, and Sun Yat-Sen has been able to find adequate funds. Wu controls the most prosperous and most populous part of China and unquestionably is the most popular leader in the north, but attacks from two sides are bound to prove embarrassing to his defense.

"He has the support of more than 250,000,000 persons, whereas the population of Chang's three barren provinces is not more than 20,000,000. Sun dominates an area in which the population is nearly 100,000,000. This makes Wu, on the surface at least, the most powerful leader in China, but his handicaps are greater than those of his adversaries."

General Chang Tso-Lin's purpose, as revealed to the American Minister to China, is to call a convention of political and military leaders to form a new Government, revise the Constitution, summon Parliament and elect a president acceptable to all factions. It is the contention of the Peking Government, however, that all these changes are unnecessary, as the present Government was legally constituted. As the New York Evening Post sees the situation:

"The real issue is between Wu Pei-Fu and Chang Tso-Lin, in their conflict for control of the Peking Government and of Shantung and Anhwei Provinces by means of the railroad from the capital to Shanghai. Chang, an ex-bandit with an unsavory reputation for violence and corruption, is suspected of playing the Japanese game, either by agreement or under pressure of the threat of Japanese troops in his Manchurian provinces and around his capital of Mukden. Wu Pei-Fu, while he has used some high-handed methods in requisitioning means to support his army in central China and keep order in his Yangtze provinces, has more support from the student and merchant classes and the name of being a sincere Chinese patriot, with liberal tendencies and a desire for a Government in accord with the needs and aspirations of the people.

"Reports of an alliance between Chang in the north and Sun Yat-Sen in the south are really beside the point. Such reports are read without a realistic sense of the immensity of China. In actuality they mean something like what the situation would be if the Governor of Massachusetts and the Governor of Texas formed an alliance against the Governor of Tennessee—with only one railroad through Washington between Massachusetts

and Tennessee and no complete railroad at all between Tennessee and Texas."

"For the moment, of course, all this agitation plays into the hands of the aggressive party in Japan," notes the New York Times; "it affords a convenient excuse for delay in letting go of Shantung; and it gives the world a picture of disorganized China, who can not be helped so long as she does not help herself." "The Japanese," agrees the New York Globe, "are watching the fighting, and perhaps getting ready to intervene if a Japanese skin is abraded or a Japanese pocket is picked by any one of the contending soldiers." And if the present disturbance keeps up, points out the Baltimore American, "much of the work of the Washington Conference will have been in vain." In the opinion of the Newark News:

"If the war is maintained for any length of time, no one can expect Japan soon to turn over to battling China the control of the Tsingtau-Tsinanfu Railroad and withdraw her forces from Shantung, in accordance with the agreement reached at Washington. Neither will it be possible for China to arrange while fighting is going on for the financing of the deal that would bring the trans-Shantung line under her control and ownership.

"Should President Hsu Shih-Chang be forced out, along with his supporters, and should no other Government be firmly established within a period of six months, then the commissions provided for at the Washington Conference to go to China next fall and arrange for initiating the reforms agreed upon may as well stay at home. There is danger that the

whole program adopted to bring about peace in the Far East will be of no avail unless the war can soon be brought to an end."

Peking is reported cut off from South China to-day as effectively as it was in 1900, during the Boxer uprising, altho the way to the sea is kept open by British, French, Japanese and American soldiers. There are also a number of American naval vessels northeast of Tien-tsin.

There is little confidence among American editors that order will be brought out of chaos in China, for, as the Baltimore American puts it, "the military governors themselves are collectively more powerful than the Government at Peking. Moreover, they are all jealous and suspicious of each other, and contemptuous of any movement designed to pacify and subordinate them." As the Cleveland Plain Dealer surveys the situation:

"Chinese unification seems very far from realization. After north China has enjoyed its civil war, and after Chang or Wu has been declared the victor, there will still be forbidding obstacles in the path of north Chinese readjustment on a solid basis. And even with north China pacified and unified there remains the big and fundamental problem of bringing together the seemingly irreconcilable north and south."

Yet as Walter Littlefield writes in the New York Times:

"Even if civil war should for a time prevail, even resulting in a change of Government in Peking, there is little in the situation to cause despair. For it was the people who brought about the revolution of 1911-12, and since then the people have learned a great deal about self-government, and when the proper time comes will put that knowledge to use."

SHE HAS CUT THE RUNNING TIME FOUR DAYS BETWEEN NEW YORK AND RIO DE JANEIRO.

The *American Legion*, one of the four fast new 21,000-ton, 535-foot Shipping Board steamers operated by the Munson Line between New York, Rio de Janeiro, Montevideo, and Buenos Aires in competition with the "V-fleet" of the British Lamport & Holt Line. "So long as the American Government is operating ships it is going to keep the flag flying and these splendid accommodations going to South America," says Chairman Lasker.

THE FIGHT FOR THE RIO ROUTE

MORE OF A SKIRMISH than a real fight came off in the brief rate-war between the American and the British lines running from New York to Brazil and the Argentine. Day after day came the militant newspaper headlines—"SHIP BOARD SLASHES FARES IN RATE-WAR"; "LASKER'S CHALLENGE STUNS BRITISH LINES"; "SHIP BOARD DIRECTS RATE-WAR AND WILL BATTLE IN ALL SEAS"; "LASKER IN RATE-WAR TO FINISH"—only to end quietly in the announcement of an agreement between the two companies concerned to settle their rate controversy by a quiet conference. The real winner in this maritime battle would seem to be the consumer, the traveler between North and South America. Now, as the *Brooklyn Eagle* observes, it will be "Cheaper 'Rolling Down to Rio!'" First the British Lamport & Holt Line cuts its New York-Rio fare from \$415 to \$315. The American Munson Line, operating fine new oil-burning Shipping Board vessels, meets this cut and betters it to \$295. The pre-war rate, by the way, was \$160. So much for the rate-cutting, which is complicated by various "differentials," and has been the subject of rather technical controversy.

But the big thing, as Chairman Lasker of the Shipping Board and several of our editors see it, is that here was a real test of the ability of our new merchant marine to hold its own in the face of foreign competition. Chairman Lasker called the British rate cut "unfriendly," and predicted that it would usher in "a test fight in all the oceans as to whether America is to continue expanding its merchant marine and maintaining it." In Rooseveltian phrase he exclaims: "Our hat is in the ring, and we are going to stick as long as necessary to insure the dominance of American-flag ships between North and South America!" The *Manchester Union* believes that "a test of the sort has been looked for and that a fight may be beginning which will spread to all the Seven Seas." This particular rate-war was soon settled, but, says the *Grand Rapids Herald*, "it will serve to notify Great Britain and the rest of the world that there is now an American merchant marine and at the same time should convince Americans of the necessity for its expansion." More is involved, agrees the *New York Herald*, "than the great bulk and value of the carrying trade between this country and the lower continent." It is a matter of "the maritime prestige of this nation on the Western Hemisphere." As we read:

"Aside and apart from the South American commerce with the United States, which soon after the war ran well beyond a billion dollars a year, if there is one place where the American flag ought

to be kept flying over a busy and splendid merchant marine it is here in our western seas between North America and South America. It may never be possible to do the business at a profit made out of the traffic itself so long as wages on our ships are so much higher than wages on British and other foreign ships are, food and repair bills so much heavier, and general expenses so much more burdensome.

"The *New York Herald* can not see how American ships can compete with British and other foreign ships on such uneven terms unless the United States Government pays the difference in one form or another. But the test is well worth making in the South American trade if anywhere, and while we are making that test it behooves the United States Shipping Board to sail into the South American ports the biggest, fastest and finest ships of all the merchant fleets that show their colors in those waters."

But in the correspondence over the rate cuts, a spokesman for the Lamport & Holt Company asserted that at present "the South American berth is over-tonnaged," 80 per cent. of all the passenger accommodations offered in this trade by both lines going vacant. Everywhere there is surplus tonnage, remarks the *New York Journal of Commerce*, which concludes that there must be some routes and some classes of business in which it will not be "possible to force the trade into American ships." And the *Baltimore Sun*, in another Atlantic seaport city, observes that while such rate-wars may keep the traffic for American ships, they are "not likely to reduce the Shipping Board's deficit." It judges from recent utterances in the British press that if Mr. Lasker were to go ahead with his idea of trying "to assure American domination of the passenger traffic on all oceans" he might have on his hands "a war of competition with the whole British Government, world-wide in scope, accompanied by reprisals, retaliations, atrocities and all the other accompaniments of war, particularly gigantic expense." The *Sun* suggests a connection between the rate-cutting incident and the ship subsidy controversy, particularly as affecting the taxpayer:

"Of America's legal right to grab the trade of Great Britain or any other nation there is no doubt. But tho all things are lawful, all things are not expedient. It is clear that there are a great many ramifications of this subsidy question which have not yet been thoroughly considered. Congress should consider them before acting on the subsidy. And it should always keep in mind the effect on the taxpayer. If a subsidy of \$30,000,000 is required under existing conditions in order to make profitable the operation of the American fleet, a vastly greater subsidy will be required if these costly competitive wars are entered into. The taxpayer must bear the burden, and altho the glamour of the idea of America dominating the seas may make him forget that fact for the moment, it will not do so permanently."

WEST VIRGINIA'S TREASON TRIALS

Treason, an overt act of betrayal, treachery, or breach of allegiance or obedience toward the Government; levying war against the States, or giving their enemies aid and comfort.—(Standard Dictionary.)

SUCH IS THE MOST SERIOUS CHARGE—the first to be brought since the Homestead, Pa., riots of thirty years ago—on which several hundred West Virginia United Mine Worker officials and miners are to be tried in the little red court-house at Charles Town, W. Va., where John Brown was sentenced to die some sixty years ago for the same offense. The charge is not a Federal one, but is founded on an accusation of treason against the State of West Virginia. There are other charges against the miners, ranging from assault to conspiracy and murder—the outgrowth of the miners' armed march in August and September, 1921, from Marmet, Kanawha County, through Boone and Logan counties to Mingo, which the Governor of West Virginia had declared under martial law. There are twenty-four test cases, and more than five hundred to follow if convictions are obtained in these. "Nothing like it is recalled in history," writes Roy P. Roberts in the *Charleston (W. Va.) Gazette*.

It is the contention of the State attorneys that the march of the miners last year, and the assistance given them by officials of the United Mine Workers, amounted to "levying war against the State"; murder, they say, was in the killing of three deputy sheriffs and mine guards. The district officers of the union, backed by the international organization of miners, are in charge of the defense. They hold that the uprising was in no sense an act of war either against the State or the people of West Virginia, but that it was a revolt against the acts of West Virginia coal operators in taking over the political power into their hands, and their suppression of free speech, free assemblage, and the liberties guaranteed American citizens by the Constitution.

The specific provisions in the indictment against the miners and their officials as summarized by Circuit Judge Woods, before whom the men are being tried, are as follows:

"First—That the defendants, with their confederates, intended to invade Logan and Mingo counties, and by force, violence, murder and open warfare to deprive the people residing in said counties and members and citizens of the State of West Virginia of the protection afforded them by the laws of the State of West Virginia.

"Second—To destroy and nullify by force of arms, violence, murder and open warfare, martial law in said Mingo County, and the military occupation in said county, which martial law had been duly proclaimed by the Governor of the State of West Virginia.

"Third—To release from imprisonment persons who had been duly and legally arrested and incarcerated in the jails of Mingo County for violation of the law and violation of the martial law proclamation of the Governor.

"Fourth—To take possession of the counties of Logan and Mingo in the said State and to prevent the execution of the laws of the said State in said counties and to deprive the people of said counties of the protection afforded by the laws of the said State.

"Fifth—Especially to destroy and nullify martial law in said Mingo County, and to nullify the proclamation of the Chief Executive of the State.

"Sixth—The release of prisoners duly held in jail in Mingo County as also stated in the first count."

Certainly, asserts the *New York Times*,

"Such a demonstration of wild disorder and sedition could not be allowed to pass without action by the courts to vindicate the law. Examples must be made of the leaders of the mob and of those who conspired against the peace of the State. How shall insurrection be defended? How shall alleged wrongs be redressed by defying the police of the State? Can a labor organization be a law unto itself? What provocation and mitigation, if any, were there for such a rising, for such destruction of property, for such license and disorder and the taking of life?"

"That armed march of miners was rebellion, and men convicted of rebellion deserve punishment," admits the *Newark News*, "but those who marched claimed the desire to liberate 'the slaves of the non-union coal regions' from a rule which has no place in free America." "Moreover," adds *The News*, "it may seriously be questioned whether the march ever would have started had there not been reasonable ground that the State Government was allied with the coal operators." "There was much violence in West Virginia," notes the *Norfolk Virginian Pilot*, "but no one believes that even the guiltiest of the guilty parties were guilty of intent to overthrow the State in the

WEST VIRGINIA'S RELIC OF THE MIDDLE AGES.

—Fitzpatrick in the *St. Louis Post-Dispatch*.

way that is suggested by the word 'treason.' Why, therefore, resort to such extraordinary prosecutions, when outraged law could be avenged far more simply—and less theatrically?" "When you charge treason," notes the *New York Evening Post*, "you must have an act so flagrant, so wanton, so menacing to the national existence as to convey in the very charge a sense of dreadful odium." Continues this paper:

"Treason to a State is hard to conceive at best, and infinitely hard in the case of a State with the notorious recent history of West Virginia. It has been a State which had been derelict in exercising its duty to enforce order. It has left the maintenance of 'order' to armed detectives in the employ of the mining companies or to deputy sheriffs, who too often have been in the pay of the operators. With so long a record of violence on both sides it is rather late in the day for West Virginia to awake to its injured dignity and invoke the charge of treason."

The West Virginia State code, points out the chief counsel for the miners and officials, prohibits the employment of deputy sheriffs by private persons.

The *New York Evening Mail* is another of many papers which "can not see on what grounds the miners are being prosecuted for treason." Says this paper:

"If the miners have been violent, let them be prosecuted for violence, and for violence let them be punished. If they have conspired together to commit a crime, let them be prosecuted for conspiracy, and for conspiracy let them be punished. Neither conspiracy nor violence is, however, treason."

"In bringing the charge of treason before the Court," maintains the *New York Evening World*, "the prosecution lays itself open to the suspicion that it is merely endeavoring to intensify the hostility of the two factions, and so win support for extreme measures against future efforts of the mine unions to exercise their rights. The very seriousness of the crime charged against the miners is an impeachment of the good faith of the prosecution."

FOREIGN - COMMENT

RUSSIA AS "A LAND OF OPPORTUNITY"

EVERYBODY WANTS TO HELP RUSSIA, and to help himself in the operation, is the remark frequently heard among Soviet sympathizers, who smile at the "graciousness" with which European statesmen now comport themselves in dealing with the "unspeakable Bolshevik." But "business is business," they say, among the nations of the world as among individuals, and it is "time this principle should be recognized." Meanwhile, Genoa dispatches advise us of the proposals for an Allied agreement with Russia, in which it is said that the French contribution is devoted to projects for restoring Russia's agricultural and industrial activities, while that of Great Britain is concerned chiefly with credits for Russia. France insists on the full payment of Russia's war debts and the return of private property to foreigners, according to press dispatches, while Great Britain favors a reduction in Russia's war debt and will be satisfied if Russia grants former foreign owners the use of their property instead of restoring them to actual ownership. Genoa correspondents relate further that the British proposals indicate that Great Britain has a fund of £25,000,000 available for development in Russia, which could be placed at the disposal of Englishmen interested in that country. The same informants aver that Belgium and Japan possess large amounts of capital for development in Russia, that Italy could help through her cooperative agricultural organizations, and that other countries could send technical experts to Russia.

Meanwhile we read in the official organ of The Friends of Soviet Russia, *Soviet Russia* (New York) that Russia to-day is as the United States was after the Civil War, "a land of opportunity" and a modern Horace Greeley might say: "Go to Russia, young man, and grow up with the country." Of the land's wonderful riches, we are told that—

"In the Urals, for instance, every foot of ground literally covers some hidden wealth: coal, iron, copper, gold, platinum, graphite, quartz, limestone, asbestos, salt. The wealth of Siberia has hardly even been investigated. In many localities there are enormous deposits of copper, mountains of coal, silver and gold, excellent iron ore—just waiting for human hands and capital to develop them. It would take too long to describe in detail the mineral wealth of the South of Russia, of the Caucasus with its oil wells, of the North with its timber. There are unlimited opportunities for agriculture and for cattle and sheep raising, both in European Russia and in Siberia.

"It may seem strange to speak of profits, opportunities, growing up with the country, in a land ruled by Communists, where

the first phase of a social revolution has been accomplished. But there can be no doubt that both the leaders and the rank and file of the Russian Communist Party are reconciled to the necessity of postponing the introduction of complete communism and calling in the aid of private initiative to restore Russia's productive capacity. Discussing the desirability of interesting the large merchant in the new economic policy, Lenin recently said:

"He (the merchant) is a type as far removed from communism as earth is from heaven. . . . But this is just one of those contradictions which in actual life lead from petty peasant economy through state capitalism to Socialism; individual interest raises production. At all costs, no matter how severe may be the pains of the transition period, poverty, hunger, collapse, we shall not fail in spirit and we shall carry our work to a victorious end."

Meanwhile Russian business leaders and students of economics, who are now perforce sojourning in England and France, keep a close eye on the economic situation in Russia through the reports issued by the Soviet Government and through their own sources of information. The results of their investigations they make known through two monthly reviews, one of which, the *Zapisky Ekonomicheskago Obshchestva* (*The Journal of the Economic Association*) is published in London, and another,

the *Ekonomicheskia Zapisky* (*La Revue Economique*) is issued in Paris. The whole question of Russia's economic condition they divide into three sections, agricultural, mining and metallurgical, and cotton and wool industry.

RUSSIA'S AGRICULTURAL CONDITION

According to the official Soviet statistics, we read in *La Revue Economique*, the decrease in the area under crops in European Russia amounted in 1920 to 44 per cent. as compared with pre-war conditions. From an elaborate article by Professor Zagorsky in the *Sovremennia Zapisky* we learn that in 1921 the reduction of the acreage cultivated attained 56 per cent., and thus the ground was prepared for the famine that broke out in the autumn of the same year. To this must be added a menacing decline in the yields of this last year, which amounted in 1921 to 48 per cent. Stock, fertilizers and agricultural implements needed for the cultivation of land are lacking and cultivation is carried on in a primitive way. The production of the agricultural implements in Russia has fallen to 6 per cent. of the pre-war output. The number of the implements imported has undergone nearly the same decrease so that now only a small part of worn-out tools can be replaced by new ones. According to the

Economicheskaja Gizn, the official Bolshevik Review, continues *La Revue Economique*, in January, 1918, there were twenty-five million horses in Russia, while now they are not more than twelve million, which means a decrease of 52 per cent. The decrease in the number of cattle in the course of the last few years, says the Bolshevik *Narodnoie Khoziaistvo*, was smaller than the decrease of area under crops, but the fall in the number of the young horned cattle has reached a limit, beyond which continuation is bound to disorganize cattle-breeding to its very foundation. As to the decrease in the number of pigs, it will continue until a general improvement is achieved in the cultivation of the fields and in cattle and sheep breeding.

The foregoing figures incline *La Revue Economique* to refrain from rosy expectations about the future cultivation of the land

in Russia, for it says "the area under crops will undergo a further reduction of some 25 per cent. as compared with the past year, and the result will be a famine not less terrible than Russia is suffering at present." This organ reflects in sadness that while Russia's annual export of grain before the war amounted to half a billion of poods (a pood equals 36.07 lb.), she now requires 200,000,000 poods from the outside to save her agriculture from utter disorganization and millions from starvation.

THE MINING AND METALLURGICAL INDUSTRY

La Revue Economique turns then to statistics of mines and metals reported in the Bolshevik *Pravda* from the records of the Supreme Economic Council. These figures show that the total output of the Soviet industries in 1920 is valued at 584 million golden rubles, which represents 10 per cent. of the production in 1912 (the latter was valued at 5,738 million rubles). In the first six months of 1921 the output rose to 368 million golden rubles, that is to say 13 per cent. of the pre-war production. Thus the Russian industries do not amount now to one one-seventh of the pre-war industries. Not all the industries suffered in the equal measure. The metallurgical industry suffered the most.

In 1920 the total productions of pig-iron went down to 7 million poods, while in 1921 even this figure was not attained. This means that pig-iron is now at 3 per cent. of pre-war production. Russia has fallen back to the time of the Czar Peter the Great, when the output of the smelting plants was equal to that of to-day.

The mining industry is in a much better position. The output of coal in the Donietz basin was equal in 1920 to 16 per cent. of pre-war production, while in 1921 it rose to 17 per cent. From the Soviet *Isriestia* we learn, however, that this increase was due to the improvement in the supply of the miners with food. Well fed and provided for, they worked, but now, as the famine has badly affected the Soviet Government food reserves, their rations are being considerably reduced. So they desert the shafts to earn their daily bread somewhere outside the Donietz coal fields. This explains the fact that in January and February, 1922, a considerable reduction in the output of coal is reported by the Soviet press. "It would not be safe," says the London *Zapisky Ekonomicheskago Obschestva*, to draw optimistic conclusions as far as the future of the Donietz basin is concerned. The latter is being ruined by the using of the coal forming the supporting pillars. Also, there is the working of the surface crop of coal, which, owing to the poor quality of the mineral, has never been used before. So this journal declares it would be "absolutely impossible to regard these entirely unscientific methods as guaranties of the maintenance of the increase of output reached in 1921."

As to oil, it is in a far better condition than any other industry in Russia, says *La Revue Economique*, and this is due to the fact that the oil industry is the "least subject to disorganization from mismanagement and, moreover, to the exclusive attention paid by the Soviet Government to the oil fields." Still the 1920 output of the Russian oil wells, we read, did not exceed 36 per cent. of the pre-war production, while in 1921 it was about 39 per cent. We learn further that the technic of the oil industry has badly suffered in the last year and that therefore, it can be hardly expected that in 1922 the Soviet authorities will succeed to keep the output of the oil up to the figures attained in 1921. All in all *La Revue Economique* believes that Russia will have to face this year at least the same shortage in coal and oil as in 1921. The slightest decline in the food supply is bound, however, to render conditions still worse.

COTTON AND WOOLEN INDUSTRY

The cotton industry, says the *Zapisky Ekonomicheskago Obschestva*, held one of the most important places among the various branches of Russian production. Its speedy growth during the nineteenth century supplied one of the most brilliant pages of the industrial history of Russia. Both before and during the war the Russian cotton industry was steadily growing so fast that it became able completely to satisfy the demand of the home market. But now this industry has practically ceased to exist. It is "hardly breathing," as the Soviet commissary Rykoff has said, and this review adds gloomily: "One sees ahead a period of slow extinction with unavoidable alternating rises and falls, followed by a fatal paralysis." Out of 64 cotton factories, which in 1921 supplied records to the Soviet authorities, 51 were idle, owing to the lack of fuel, to the shortage of foodstuffs, to the workmen being on leave, as well for many other reasons. We are told that the output of the factories does not amount to 5 per cent. of the pre-war average production. On the other hand the cultivation of cotton, on the creation and development of which so much effort has been spent, has been reduced almost to nothing. Beside the catastrophical reduction of the area under cotton, this review advises us that the very existence of cotton cultivation is now threatened with complete destruction. The fact is that, in peace time, the yield reached on the average 70-80 poods per dessiatin, while now, owing to a whole series of

adverse conditions it does not exceed from 40-50 poods. At the same time the quality of the cotton produced has "considerably deteriorated."

The woolen industry is not much better off than the cotton industry. The output of the yarn and of the finished products does not amount to one one-twelfth of what it used to be before the war, and "out of 56 woolen factories which have supplied information in 1921, 35 were idle." The technic of the production is said to be thoroughly disorganized.

While it is too early to draw any definite conclusions as to the success or failure of the new trade policy taken by the Soviet Russian Government, nevertheless, the *Zapisky Ekonomicheskago Obschestva* believes that we may arrive at the following conclusions: "(1) In 1921 the productivity of labor has risen, altho not to any marked extent. (2) The output of goods, however, in a great many cases, has not only failed to increase, but has even actually diminished. (3) The establishment of an economic autonomy of certain concerns, to attain which attempts were made to organize Government Trusts, has not materialized." Thus, according to this review, no changes have taken place in the organization of the Russian economics that would inspire any optimistic prospects as to the future. To this, according to *La Revue Economique*, must be added the desperate disorganization of Russian finance, and it tells us that "the Soviet Government budget for 1921 attained 22 trillions paper rubles, while the income derived from the taxes gave from 10 to 14 per cent. of this sum. The rest was covered by emission." It is evident that "no improvement is possible under those conditions," says this journal, which adds that the other diffi-

A JAPANESE VIEW OF GENOA

FAILURE AT GENOA is inevitable because the United States is not sharing in the Conference, we have been warned by German semi-official utterances and editorial statements. Now we discover a similar judgment among the Japanese press, and the Tokyo *Kokumin* laments that because of Uncle Sam's absence from Genoa the prospect of international

WAITING HIS CUE.

UNCLE SAM: "I'll do nothing until the password, 'Money,' is used. Then I'll let the iron curtain down."

THE AMERICAN HEN IN THE EUROPEAN BARNYARD.

"I'll let the hens that laid these eggs hatch them."

—Wahre Jakob (Stuttgart.)

culty is with the transport conditions. The disorganization of the rolling stock is shown in the following figures: 62 per cent. of the total number of locomotives are out of order and can not be used. Of the remaining locomotives more than 15 per cent. are idle owing to fuel shortage, and *La Revue Economique* does not expect any improvement in transport conditions in 1922.

cooperation is "shrouded in murkiness and gloom." The lack of the spirit of mutual assistance among the nations of the world, particularly among those which are important factors in the international situation, distresses this journal deeply. At the time of the opening of the Paris Conference, it remembers that the spirit of the brotherhood of men and the omnipotence of internationalism was much in evidence, but, alas, it says, this was "only a superficial phenomenon, and in reality nationalism was already supplanting internationalism." It is true that the Washington Conference was held for the limitation of naval armaments and for deliberation on different questions of high import, but "it did nothing in the way of solving financial and economic questions," which this newspaper considers the great need of the hour. We read then:

"Minor points apart, the American people are traditionally disinclined to be deeply involved in the affairs of Europe, so that it is quite natural that they should be averse from the participation of their country in the Conference. Further, the United States Government is apprehensive of the contingency of inviting the attack of the Senate and creating difficult political questions as the result of the participation on the one hand and, on the other, is strongly disinclined to attend any conference wherein Russia takes her part. The anxiety whether Britain, France, Italy and other countries will propose the cancellation of their debts to the United States at the Conference is also attributable to the opposition given out by the American people to the participation."

In the present condition of Europe, the *Kokumin* goes on to say, it is "utterly impossible" for the leaders of the various countries to devise ways and means to resuscitate their finance and economics through an international conference from which the United States is absent. To complicate matters still more there is "the occasional friction between the English and the French."

THE PASSING OF OLD EUROPE

POLITICAL EUROPE in the old sense exists no more, except nominally, for the political man has "yielded the symbols of his office to the industrial man." So we are assured by the *London Saturday Review*, which says that the shifting of the balance of power is now to be observed not between states, but within states, and that nothing is more remarkable than that the politician, whether at home or abroad, is finding that his political formularies are out of date. No one pays the slightest attention to them, according to this weekly, which tells us that as we leave the old political order in Europe we enter on the new—the era of "an economic Christendom." President Wilson is called the "last of the international politicians" and Mr. Lloyd George, the "last Prime Minister of England," for tho the office of Prime Minister may be retained, it is without its old meaning and its old significance. The sovereignty of England, centralized in a parliament at Westminster, has "silently but effectively passed away." Instead of "sovereignty," there are now "sovereignities," we read, and the great industrial corporations of employers and employed, the great professional organizations in England as in every European state, have obtained a status, which, if not recognized in constitutional law, is nevertheless effective. This weekly proceeds:

"In other connections we have noticed this. We have remarked how the executive of this realm has negotiated with Trade Unions, with the British Medical Association, with Federations of Employers, on a level of equality and respect. Parliament and the King's Government have recognized that they are no longer supreme. The phenomenon is not confined to these shores. In France, in Germany and America, the same symptoms of change are to be observed. The Peace Conference at Versailles found itself incapable of grappling with the problems it sought to settle. The men who composed it, influenced by the criteria of an epoch which no longer exists, thought politically. Despite the apparent humanity of many of the generalizations which they laid down and which they applied to the hitherto unrecognized nations of the earth, the vessels which they made broke in their hands. Again and again they assembled together in Herculean efforts to repair their work. It was of no avail. In city after city they gathered themselves together and discuss the outworn creed of politics. And now they have arrived at Genoa—and they discuss politics no more. Here is illustrated at once the importance of Genoa, and its unimportance. Its unimportance lies in this—that its members do not adequately realize that they belong to a generation which has passed away. Their minds can not be adjusted to the new conditions of the world. Its importance, on the other hand, is that it marks, nevertheless, the last of three historical epochs."

We are then asked to recall how the states of Europe grew into being and developed. The Catholic Church inherited from the Roman Empire the idea of European unity, it is remarked, and the conception was already breaking up "when Luther appeared and lent, by the veriest accident, the weight of his religious protest against the domination of the Vatican, to the

growing national consciousness." The birth of the nations from one point of view was merely a religious phenomenon, it is said, but the notion of unity was so overpowering that it influenced the philosophy of politics, and the oneness of the state grew out of the oneness of the church. We read then:

"The monarch of each nation inherited within his own borders the complete and unquestioned authority both of the Popes and of the Emperors of Christendom. What had taken place in Europe then began to work itself out in each separate nation. There was a protest against uniformity and the protest took on a spiritual shape. The claim for liberty of conscience and freedom of thought was a claim variously made by Protestants and Jesuits, by Puritans and by the Nonconformists of every school against rulers of a different faith from theirs. The various Churches were the precursors of the modern Trades Union asserting their claims to liberty and self-government against an all-comprehending central authority. Gradually there were eliminated from the province of the state matters which were considered to be not appropriately political. By the assertion of religious independence, freedom of thought, of conscience and of expression of opinion were gained as conquests from the central power. The whole life of the community ceased to express itself through the single channel of the state. Then the conquests were reduced to a political philosophy. A theory of politics began to work itself into reasoned expression, culminating in the principles of the French Revolution. By the eighteenth century the religious man had become the political man. The last hundred years have been years in which the political thinker has dominated Europe. His influence wanes. Genoa seeks to inaugurate an economic Christendom. It begins, unhappily by imitating the errors of the two great eras which have preceded it."

In even a cursory survey of the two earlier epochs in the

history above referred to, *The Saturday Review* notes one peculiarity common to both, and that is "how willingly men have died for phrases." Thus it reminds us that—

"The great councils which have endeavored to lay down the dogmas and propositions to which every good Christian should, subscribe have immersed the world time and time again in dissensions and in blood. Of the early ecumenical councils we have inherited only the bare transcript of the resolutions. We must be aghast at their futility and their hollowness. Yet sanctions were established and machinery was improvised to enforce their general application. It was imagined in the early Middle Ages that peace on earth and good-will toward men would be established by the universal acceptance of a few generalizations. The idealists of the early Christian era assembled successively at Constantinople, at Ancyra, and at Antioch. They discuss for days and weeks at Ephesus and at Ferrara. At Constance, at Pisa, at Seleucia, at Nice, delegates from the whole Christian world deliberated on the canons which were to bring salvation to mankind. Each time it was thought that at last a prescription had been discovered for uniting the world and removing the causes of its differences. The revolutionaries of France fell into similar errors. It was for generalization after generalization that men fought and died. Again, after the Versailles Conference the same phenomenon is observable. Generalizations were like bombs which burst in the hands of those who did not understand them. Every single gathering of the nations since that time has been characterized by the same errors."

THE SIREN VOICE OF THE CITY.

—The Bulletin (Sydney, N. S. W.)

JAPANESE UNREST DOWN ON THE FARM

LABOR TROUBLES in Japan were confined to industrial centers until recently, we are told, but now the unrest of the worker has spread to the farm, and the Japanese press note with concern that year by year the disputes between land-owners and tenant-farmers have grown to such number that they are a matter of discussion in the Diet. In 1921, the Tokyo *Chuo* informs us, there were 1255 cases of tenant-farmers disputes, which is three times as many as in 1920, when there were 408 cases. Out of the total for 1921 it appears that 937 cases resulted from "natural disasters," but the merely human causes of trouble between the owner and the worker of the land are in themselves many and various. Chiefly, however, this newspaper seizes upon the change in the ideas of the people as responsible for present serious difficulties, and it relates:

"In the past, the relations between land-owners and tenants were those of masters and servants. Farmers had been simple of mind and honest from olden times. They did not complain much, but obeyed their masters, the land-owners, implicitly. But as they saw the conditions of disputes of the industrial laborers, they have come to realize that they were not altogether expected to obey the land-owners. They began to insist upon their rights and to see that their positions were elevated."

Another cause, and it is a matter of perturbation in other countries than Japan, is the flocking of the people to the cities, and the abandonment of the fields for the lure of lights, company and amusement. This daily recalls that Japan's economic prosperity during the war helped to create the so-called "narikin" or "war-born rich," and we read:

"The country people began to realize that they should not stay buried in the agricultural fields, but should go to cities to show what they could do in the way of realizing their ambitions in life. Consequently, agricultural villages have lacked labor, which in turn induced quarrels between tenant-farmers and land-owners. If the problem of tenant-farmers' disputes is to be solved, this point should be carefully noted.

"Mr. Tokonami's suggestions that agricultural people should be provided with means of amusements so as to let them stay at home in their farms are good by themselves. Some steps to that end should be taken. Also the education of the children of coun-

try districts should be improved. But more important than all that, is to see that the economic questions are solved. To that end, a tenant-farming law may be necessary as an instrument. But the Department of Agriculture and Commerce has not as yet drafted the law, nor is it likely that the draft will be completed within a year or so. To be sure, such a law can not be drafted in a hurry. But in view of the ever-increasing troubles of tenant-farmers, the Government authorities should do their best to see that a solution of the problem is arrived at quickly."

BULGARIAN COMPLAINTS—Sheer selfishness on the part of England and France, who think only of themselves and their own rivalries, is the reason assigned by Bulgarian newspapers for "neglect of Bulgaria and her supreme interests at the late Near East Conference in Paris." The Sofia *Pobeda* avers that England yielded on the question of restoring Turkish sovereignty in Asia Minor and consented to the evacuation of Greek troops in that region in exchange for France's concession on the question of the autonomy of Thrace, which France opposed stubbornly to the last moment. This newspaper complains bitterly that the Near East Conference took no heed of the will of the various nationals inhabiting Thrace, nor of the plain provisions of the Treaty of Neuilly, relative to Bulgaria's free outlet to the Aegean Sea. Says the Sofia *Radical*:

"The Turko-Greek conflict raised the question of the protection of ethnic minorities. The result was that the conferees became aware of the very simple truth, that no matter what boundary lines are traced in the Near East, there will always be ethnic minorities in these states. Therefore, it is necessary to arrange for their protection by some independent and impartial organization. The Turks demanded for the great masses of their nationals in foreign territory such protection as was promised by the Peace Treaty of Paris to all other minorities. The three Foreign Ministers lately met at Paris, decided to entrust this responsibility to the League of Nations which is already charged with the protection of the minorities in Western Europe.

"Hitherto such protection has only been window-dressing, and it behooves the League of Nations to get down to a basis of real action. There are millions of subject populations in the Balkans and the Near East who have neither the right to instruct their children nor have them say their prayers in their mother tongue."

SCIENCE - AND - INVENTION

THE ELECTRICAL COTTON-PICKER

THIS MACHINE, said to have been suggested to the inventor by the way in which cows lick the cotton out of the boll to get at the seeds, is described in the "Nature and Science" department of *St. Nicholas* (New York), by Miss M. Tevis. Her narrative is a remarkable one, and she begins it with the conventional fairy-tale formula. Once upon a time, she writes, a trespassing cow broke her way into a cotton-field at harvest-time and began feasting on the snowy contents of the opened bolls. She had found out for herself what it took men a long while to discover, that the seeds are nutritious. Doubtless many cows have made the same discovery. But this particular cow happened to be seen by a man with an observant eye and an inventive brain. She goes on:

"Just as multitudes of men, before James Watt came along and set his wits to work upon the problem, had sat cozily by the fire watching the lid of the tea-kettle bobbing up and down without dreaming of putting the imprisoned giant, Steam, to work at more important things, so, until Mr. L. C. Stuckenberg, a Memphis inventor, saw it, the sight of trespassing cows licking cotton out of the bolls meant nothing to the chance observers. As it happened, he had long been working on the problem involved in substituting some form of mechanical labor for hand labor in the arduous task of cotton-picking. He was struck by the neatness and dispatch with which the cow extracted the cotton; and in thinking it over, he realized that this was owing to the nature of the cow's tongue, which, as every country boy knows, is quite rough, being covered with projections composed of horny cuticle, so that its surface is very much like that of a rasp.

"But tho this observation gave him the initial idea for his invention, it took some fourteen years of patient experiment and endeavor before he brought it to completion. As it now stands, it consists essentially of two revolving brushes (which pluck the cotton lightly, but cleanly, from the open seed-pod, or boll, as it is called), of a suction system, and of a set of electric motors, together with an electric generator and a switchboard, or 'panel-board.'

"It is the brushes, of course, which play the part of the rough and flexible tongue of the cow. They are enclosed in a small metal frame about as big as your two fists, and they revolve toward each other. When these are placed in contact with the cotton they instantly pull it free, without collecting any part of the boll or leaves of the plant, as a human picker is only too apt to do.

"Connected with the revolving brushes are flexible tubes known as 'picker-tubes,' which carry the cotton by means of suction to the collecting-bags, just as the dust and fluff picked up by a vacuum-cleaner are carried to a collecting-bag."

Just before the cotton drops into the bag, it is cleaned by fanning with a blower. Each machine is mounted on a tractor whose

engine provides the electric power to run the eight motors. One of these, which drives the brushes, is suspended about half-way down the suction-tube, while another provides the suction power and also operates the blower. Miss Tevis goes on to give us these further details:

"Each machine can pick eight rows in one passage through the field, and the man who operates it needs only a little training, such as can be acquired in a few days, in order to pick four hundred pounds or more a day; whereas the hand-picker averages only from seventy to one hundred and fifty pounds a day, according to his strength, speed and skill.

"This greater rapidity in harvesting is particularly important in the case of cotton, since it is a crop which ripens gradually, instead of all at one time, like grain. There are three crops of the cotton, in fact, and the process of ripening requires some two months.

"For this reason the 'floating labor,' as we term the great hordes of seasonal laborers who follow the grain crops from south to north, is not available, and the cotton-planter must depend on his hired hands, or on local labor, at best. The great disadvantage of this is that much of the cotton deteriorates in quality because of exposure to wind and dust, sun and rain. Weather-beaten cotton tends to lose its immaculate whiteness and smooth and even fluffiness, becoming soiled and matted together. Hence it brings a lower

price than that which is picked as soon as the bolls have opened.

"Hand-picking also tends to mat the fibers into lumps; and because of this, the fibers are often 'gin-cut,' which again lowers the quality, since the longer the fiber, the better it is for spinning purposes, other things being equal.

"It is estimated by good authorities that only one-third of the cotton raised at present is harvested in prime condition, the remainder of the crop being more or less injured by delay in picking and by the admixture of dirt, leaves, and other foreign material, which hand-picking involves.

"In view of these improvements, there is small wonder that enthusiasts are already predicting that the electrical picker will revolutionize the industry."

The old saying that "a child can work it" might be used, Miss Tevis remarks, if it were not for the fact that we do not let the children work as was formerly permitted. The picture opposite shows in a striking way the difference between the hand-picked and machine-picked cotton. Another point is that the machine-picked product yields more of the "cotton-lint," or cleaned fiber, than that picked by hand. A successful demonstration of the machine was recently made near Little Rock, Ark.

THE ELECTRICAL COTTON-PICKER AT WORK.

"Each machine can pick eight rows in one passage through the field, and the man who operates it needs only a little training, such as can be acquired in a few days, in order to pick four hundred pounds or more a day; whereas the hand-picker averages only from seventy to one hundred and fifty pounds a day."

FAMINE PREDICTED FOR NEXT YEAR

WILL 1923 BE A YEAR of wide-spread famine? Sir William Beveridge has recently made a remarkable prediction of severe crop failure, and British scientists are now pondering over his prophesy. Computations that Sir William has made indicate that there are four different weather cycles that affect crops. All of these combine in a maximum unfavorable phase indicating heavy and harmful deluges during the period from February to September, 1923, the growing season of next year. We quote from Science Service's *Science News Bulletin* (Washington) as follows:

"The prediction is based on the variation in wheat prices in Europe during the last three hundred years. Sir William using the periodgram method of computation, finds that the maximum price from 1500 to 1869 came at intervals of about $15\frac{1}{3}$ years. This abnormality, his statistical analysis shows, is due to four weather cycles, temporarily operating together. One of 4.37 years corresponds to one that has been identified in sunspots. Another of 5.11 years has been found in temperature and rainfall records. Two others, that are less definite, those of 2.74 and 3.71 years, seem to have been identified in meteorological or astronomical data.

"The year 1923 is destined to repeat something like the experiences of 1315, the year of the worst and most general harvest failure known in European history," says Sir William Beveridge, "in the excessively improbable event of my arithmetical analysis being complete and accurate in every particular."

"The leading scientific weekly magazine of England, *Nature*, believes the prediction well-founded. 'On the face of it, the evidence seems sound, and the reasoning careful and critical,' this magazine says editorially. 'To the crowd, if not to the man of science, the fulfilment of a prophecy always seems to give more adequate support to a theory than any number of agreements with past events, and the year 1923 may be awaited with an interest mingled with anxiety.'

"Officials of the U. S. Weather Bureau declare that they have not yet made investigations into Sir William Beveridge's predictions. Prof. H. L. Moore of Columbia University of New York recently made a statistical analysis by the periodgram method of prices from 1882 to 1918, and found a marked maximum at eight years in the cycles of a number of crops and corresponding cycles in the production of the raw materials of industry."

On the other hand, a sharp attack on the cyclic theory of business depressions, which holds that alternating periods of prosperity and the reverse recur in the industrial world, has been made in a recent address on "Some Economic Hallucinations," by Theodore H. Price, editor of *Commerce and Finance*. According to Mr. Price,

advocates of the theory insist that "because we have been successful for a time, we must then be unsuccessful for a while." He declares, as quoted by a reviewer in *The Iron Age* (New York), that people often bring on hard times by vociferously insisting that they are due. The "agonizing deflation" through which we have recently passed he largely attributes to the power of highly placed personages to make their prophecies come true. We read further:

"Mr. Price uses extreme language in stating the theory, and he is to some extent right if we grant that it is adhered to rigidly and that at certain definite times there will be business depression. Such a conviction will unquestionably have a depressing influence and help to end prosperity. Some people certainly have made the theory of cycles mechanical and have followed it too far. In Ohio for many years Farmer Benner issued prophecies based on the cycle theory and won a fame that endured for a considerable time, but finally ended in a crash. Despite the fact that Benner often made a hit in his prophecies, he sometimes failed in part, and in 1907 failed completely, when he not only did not foresee the panic of that year but predicted great prosperity.

"It is true that business history shows periods of prosperity and depression which have come with a measure of regularity, and it certainly can not be maintained that all belief in the recurrence of depression in the industrial world is due to hallucinations. Human nature being what it is, every period of prosperity has brought transgression of economic laws, and the broken laws would not be denied their penalty. Great harm has been done, however, by gloomy forebodings. Much can be accomplished by not looking for depression at any time and to ameliorate conditions when prosperity wanes. Much has been accomplished by the Federal Reserve Bank, with its adjustment to credit requirements, and other ways of meeting financial stress and unemployment will be found.

"Mr. Price also calls an hallucination the belief that the world is poorer as a result of the war. He claims that nearly all of the products of human energy are consumed or wear out in seven years, whether we are at peace or war, and hence that we are not poorer on account of the war.

"He overlooks the tremendous energy wasted by war, which if applied to the aims of peace would have accomplished results of great value. There was also tremendous loss in efficiency during the war and for several years after, that has not been recovered and probably will not be in a long time.

"Mr. Price stands on better ground when he opposes the belief that we can not prosper unless we continue for all time to sell more than we buy, collecting the difference between the accounts in cash.

"We must both buy and sell, and so long as the buying and selling are profitable, the balance of trade is not the all-important consideration."

JUST AS THE COW DID IT.

The revolving brushes plucking the cotton from the pod. When the inventor saw a cow licking the cotton out of the bolls to get the seeds, he realized that this was owing to the nature of the cow's tongue, which is rough as a rasp, so he just merely made a machine that would do the same thing. It took him fourteen years.

WHICH IS BETTER DONE?

Cotton picked electrically (at the left) and by (hand at the right).

THE UNMAPPED UNITED STATES

READERS WHO BELIEVE that the whole area of the United States has been adequately mapped on a standard scale by the Government, with the possible exception of a few unimportant or inaccessible sections, will be surprised at the statement made by F. E. Bonner, assistant chief engineer of the Forest Service, made in *The Engineering News-Record* (New York), that less than one-tenth of the country is thus mapped. Maps all told cover about 43 per cent. of it, but fully half of this work is so old that it is of little value. Moreover, the existing maps do not always fit together, even when adjacent,

"From information collected by the Board it appears that the opinion among technical map users—including engineers, surveyors and educators—is strongly in favor of changing the scales to the inch system. An inquiry directed to nearly 1,000 individuals throughout the country representative of the various classes of map users disclosed that 76 per cent. believed the change should be made. This expression of opinion included 83 chief engineers of railroads, of whom 53 voted in favor of the inch-scale. The deans of engineering colleges voted in favor of it 42 to 14. State highway engineers 31 to 15, State foresters 22 to 2, city engineers 61 to 13, county engineers 94 to 15, members of the American Society of Civil Engineers 50 to 61."

A special investigation among men in the lumber industry showed that about 90 per cent. of them think the present scale system a nuisance which should be discarded. Twenty-two States are cooperating in the mapping of areas within their borders, Mr. Bonner tells us. In ten of these the cooperating official has been reported adverse to the change, as against three who favor it. This argument against the change seems discounted, he thinks, by the fact that a large majority of State highway and forestry departments prefer the proposed scale. He continues:

"Strong efforts are now being concentrated in support of legislation by which Congress will authorize a meritorious expansion of the mapping program, which will cost in the aggregate about \$40,000,000. This great expenditure can be justified only by the usefulness of the finished maps. The voice of the map users is unmistakably in favor of the proposed change of the scale, and

the Government should be responsive to the opinion of those for whom the service is rendered, and who provide the resources to make the accomplishment possible."

GROW TWO KINDS OF APPLES—One variety of apples grown alone, whether one tree or a whole orchard, does not produce as large a yield as when two varieties are planted side by side, according to recent investigations made by the Washington State Experiment Station. This has been proven in various orchards in the Pacific Northwest, we are told in *Science Service's Science News Bulletin* (Washington), and several commercial growers have discovered it when they planted orchards of one variety to meet market demands. We read:

"The cause for the low yield of inferior fruit is the same as inbreeding with animals and marriage of relatives. In such cases we know the offspring to be inferior physically and often mentally, while with apples there is often a total failure of the blossom to set fruit. It has been known for many years that many varieties of cultivated plants are self-sterile; that is, will not produce fruit when the flowers are fertilized with pollen of the same variety. The investigations carried on in many orchards under varying climatic conditions, show that 'self-sterility' is more common among varieties of apples than is self-fertility.' In this connection it is interesting and of commercial importance to note that the size, shape, quality and color of the apples are not changed by the blossoms being fertilized with pollen of other varieties. In addition, most of the common commercial varieties in the Pacific Northwest have been found to overlap in their time of blossoming, so that almost any combination of varieties may be planted in the same orchard with satisfactory results. The experiment cited gives the records on eighty different varieties grown in the same locality, so that it seems safe to assume that in other sections the most common varieties may be planted together and have cross-pollination insured."

for they are on three different scales. The present standard scale is that of one to 62,500, which is nearly an inch to a mile; and it is now proposed to change this to an exact mile-inch relation, which of course is not precisely decimal. Mr. Bonner reports that most, altho not all, users are in favor of the scale. Probably most citizens will say, "Select some scale, no matter what, and map every inch of the country speedily." Mr. Bonner puts the case in this wise:

"Suppose a civil engineer building a bridge should find himself confronted with this problem: The bridge, which is to cost about \$100,000, has progressed 20 per cent. toward completion when the taxpayers demand that the roadway width should be changed to 16 from 12 feet, originally planned, in order to correct the mistake of not providing for a double-track bridge. Would the engineer dare ignore the demand and proceed with the original design? Quite probably not. Yet the proper decision on a parallel problem has been agitating the Federal Board of Surveys and Maps at Washington.

"The question concerns the scale of the standard topographic maps of the United States. All engineers are familiar with the topographic quadrangles published by the Geological Survey. These maps are printed on a scale of 0.9864 miles to the inch with some on smaller scales. No one seems to know why such a scale system was selected in the first place, and strong sentiment on the Board of Surveys and Maps is inclined toward a change to the inch-to-the-mile scale system.

"The chief objection to the present scale is simply that it is meaningless and a source of much inconvenience. The inch is used as the unit of measurement on the map, and preferably it should represent an integral number of feet or miles.

Among the Government organizations themselves no standard practise prevails at present. Of the principal mapping agencies represented on the Board of Surveys and Maps, five employ mostly decimal scales, while nine use scales on the inch-to-the-mile system.

DO WE EAT TOO MUCH SALT?

JUST ENOUGH OF ANYTHING is doubtless preferable to too much. It is, however, difficult to agree on the boundary this side of excess. That we habitually go beyond it in the case of common salt is at least the opinion of H. L. Harris, who contributes an article on "The Value of a Salt-Free Diet" to *Good Health* (Battle Creek, Mich.). Mr. Harris backs up his opinion with quotations from many authorities. The death-rate from heart disease and kidney disease has increased enormously, he says, during the last fifteen or twenty years; and this increase has been much larger in the United States than in England. The reason for this may well be, he believes, that England objects to heavily salted foods. Her hams and bacon are preserved with borax, and her butter with boric acid. He first quotes Moras as saying in his "Avoid the Over-Use of Table Salt":

"Salt ages people. Salt favors deposits in blood-vessels and joints. Salt robs the hearts of marrow of the tissue-cells. Salt is an enemy to good digestion and assimilation. Salt is the most prolific cause of stomach, bowel, kidney, nerve, vital and sexual impairments. It aggravates catarrh and rheumatism. In any but the 'normal' amount found in foods, table salt is slightly or decidedly injurious in proportion to the excess taken, tho the system becomes accustomed to it as it does to tea, coffee, tobacco, vinegar, and sweets.

"The average eater consumes at least ten to twenty times more than the system requires in each twenty-four hours. This necessarily keeps the tissues and fluids over-salt, as butter is. Salt 'draws' water and creates thirst; but the 'water' that it draws from your blood and flesh takes some essential living proteid constituents along; whereas the water which you drink, to substitute that which salt abstracts, is 'dead' water.

"Another reason still why salt is bad is that its habit perverts your taste. Use practically no table salt, except a very little in the cooking, and see how instinctively your tongue will 'search' each 'bite' for its own distinctive taste, which it will rediscover and relish after a week's attention to proper eating."

Dr. H. O. Beeson is then quoted as declaring:

"Prescott, in his history of Mexico, says of the Tlascalans that they had been imprisoned on a high mountain plateau for fifty years by the allied tribes about them, during which time they had not been allowed to visit the lowlands to procure salt, and that after fifty years of salt deprivation, he found them strong, courageous and enduring.

"The amount of salt that can be used without producing harm can not be determined by the sense of taste alone. It must conform to the physiological needs and must not exceed the limits of cell integrity.

"What is our consumption of salt per capita per diem? I have been unable to find in medical literature any statement of the average amount used by the American people. Charles Archard states that the average consumption of the French people is 300 grains.

"All physiologists agree that 95 per cent. of the salt ingested is eliminated unchanged within twenty-four hours. Then, of

the 300 grains eaten daily by the average American, 285 grains are cast out of the body as foreign material.

"A sufficient amount of salt to be used daily is 15 to 30 grains to meet all the demands of nutrition, and any in excess of this is not only useless but distinctly detrimental."

Another authority, Dr. Leva, argues:

"We know that carnivorous animals, in order to thrive, require no addition of salt whatever to their food, and on the other hand we are acquainted with nations living in a state of nature who live only on animal food (flesh and milk), and either do not know common salt at all or else altogether disdain it. With civilized man the amount of salt supplied depends more on training and habit than on any real need for it, and, as a large number of observations on health and diseased individuals have taught us, may be greatly reduced without harm."

A CAR BONFIRE

NEARLY TWO THOUSAND old elevated railroad cars were scrapped and burned in Boston recently, we learn from an article in *The Electric Railway Journal* (New York). According to this paper it had been a frequent comment of visitors to Boston that more old-style street cars were in evidence there than in any other city of the country. But the last two years of trustee management, with a fare unit adequate to write off obsolete equipment, has changed all that. The writer goes on:

"From July 1, 1919, to December 31, 1921, 1,850 old cars of the Boston Elevated Railway have been scrapped and consigned to the flames of a gigantic funeral pyre at the Forest Hills yard. Rolling stock of modern type has replaced these old cars.

"Under the strict regulations of the Massachusetts laws and the supervision of the commission, a street railway may not scrap any physical property without writing it off out of earnings. This necessarily involves the use of an actual cash depreciation charge against earnings, and few of the companies have been financially able to charge off the value of obsolete cars. Consequently they have had to keep them. It is only within the last two years that the Boston Elevated has been able to rid itself of the burden of depreciated and inefficient rolling stock.

"Most of these old cars had seen twenty-five years of service, and not a few of them three decades. Some were originally horse-cars, which were spliced together and equipped with motors when electricity displaced the straining steeds of the '80's. Among the cars destroyed were fifty of the first wooden rapid transit cars used on the elevated lines.

"The surface cars destroyed were single and double-truck box-cars, 25 and 30 feet types respectively, also a number of single and double-truck open cars. In their stead center-entrance multiple-unit cars, operated singly and in trains of two and three units, are now in service. The company also has put a number of standard one-man safety cars in use in the suburbs.

"Before being sent to the Forest Hills yard, the cars to be destroyed are stripped of everything of any possible value, all copper and brass trimmings being removed. After the conflagration the ashes are raked for iron and metal scrap, which is stored until a favorable opportunity for sale occurs."

BURYING A DEAD SHIP

REINFORCED CONCRETE AS MATERIAL for building ships was dealt a severe blow recently, says *Popular Mechanics* (Chicago, May), when the Shipping Board towed the concrete tanker *Selma* from the wharfs at Galveston, and literally buried it at considerable expense, to get rid of it and stop wharfage charges. The story runs:

"The vessel, which is reported to have cost nearly \$2,000,000, ran into the rock jetties at Tampico, Mexico, about a year ago, and ripped a big hole in the bottom of the hull. The tanker was raised with compressed air and towed to Galveston. There, shipbuilders decided that it would not be practicable to repair the damage. The rods which reinforced the concrete were

PAPER PIPING

THE USE OF PAPER on a commercial scale for the manufacture of water-piping and the like by an improved process has been proposed by a French inventor, M. Dalery, we are told by the *Scientific American* (New York). The paper or light pasteboard is wound directly upon the shaft of a machine, using a tank containing an adhesive substance. The last layers are impregnated with tar, then the pipe is given a covering of bitumen as for gas and water-pipes. We read further in more detail:

"Suitable measures are taken to produce a large-diameter portion at the end of each pipe section, into which is fitted the smaller end of the succeeding section, then the joint is made tight by a tar treatment and by winding the joint with a strip of three-inch tarred fabric.

"Tests were made with the new piping in order to set forth the three principal characteristics which are required; that is, tightness, strength against interior pressure and good preservation. As concerns the tightness of the piping, several sections were mounted in the vertical position and the bottom was well stopt up, water being placed in the pipe and allowed to stand for 21 days. At the end of this time there was no trace of leakage to the outside of the pipe, so that this test appears conclusive.

"To ascertain the strength of the pipe when subjected to internal pressure, a section of pipe was stopt up by plugs and was placed in connection with a source of hydraulic pressure by a tube passing through one of the plugs, while a pressure gage was mounted on a tube passing through the other plug. The pipe burst at a pressure of 20 atmospheres, which was a very good result. But the joints did not prove to be very strong, and would only support four atmospheres. This, however, is a detail and is, of course, subject to improvement.

"Tests were next carried out as regards the preservation of the piping, but as the element of time is here concerned, these were, of course, more difficult to execute in a satisfactory manner. The sections were immersed in a water-tank, and at the end of 3½ months a considerable disaggregation was observed, due to the fact that the adhesive compound had dissolved in the water. It would seem, however, that this difficulty could be easily remedied by the choice of a suitable waterproof adhesive substance. Besides, the result was largely due to the entrance of water by capillary action through the end of the pipe, which had not been well protected, and on the other hand, when in normal use the end of the pipe is not subject to this action. Other tests with the pipe laid in the ground showed very good results as to preservation. On the whole, it appears very probable that piping made of paper can be manufactured as a practical article, at least for numerous purposes. Machines must be found to wind the paper in a very tight manner. Such machines already exist, and it will suffice to adapt them to the present use. A method of this kind appears to be very promising, especially in view of the high price of metal.

"For temporary plants it is evident that such piping might render great services at a small cost. The almost unbreakable nature of this article is a point to be considered, together with its light weight, in the question of transportation. Some of its uses which are more obvious might be mentioned, namely, as piping which is not buried in the ground and is therefore not subject to damage for this reason; then it could be used as a protection for metal pipes against cold, and especially as a steam pipe covering. Electric cables could also be protected in some cases. In short, the method is one that deserves careful consideration and thorough investigation."

BURIED TO SAVE BERTH CHARGES.

The wrecked concrete tanker *Selma*, tied up at a Galveston wharf, after having been raised by compressed air. The bracing of the forward deck was to strengthen it to resist the air pressure. The vessel sank upon the mud beside the wharf, and remained there nearly a year.

projecting through the hull, and it would have been difficult to get the craft in position upon the drydock for repair. So the *Selma* was allowed to sink upon the mud at a wharf where it lay for nearly a year, at charges of about \$1,500 a month.

"The task of getting rid of a steamship, especially one with a big hole in its hull and ready to sink in the nearest deep water, seems simple at first sight. However, the Shipping Board had considerable difficulty in disposing of the *Selma*. It was first offered for sale, and nobody wanted it. Then it was proposed that it be towed out and beached near the Galveston jetties, for use as a fishing pier. The Federal engineering department objected on the ground that the hulk might set in motion currents which would undermine the jetties. The proposal of taking the ship to sea, and allowing it to sink, was abandoned because it was feared that it would sink before it could be towed far enough not to become a menace to navigation.

"The ship drew about 24 feet of water when lifted as high as it was possible, and for that reason the only spots along that section of the coast that it could reach were considered to be navigable waters which must not be obstructed. The Gulf is so shallow around Galveston that the vessel could not be brought within a mile of the beach.

"The problem was solved by dredging a channel from the deep water of the government channel into Galveston and out into the sand flats at one side of it. This channel was cut 30 feet deep for 400 feet, the *Selma* was raised by compressed air, run into this channel, and allowed to settle to the bottom. Its decks and upper works are still above water, but the currents will soon refill the channel, and the tanker will be lying in sand with only a few feet of water around it. If the vessel is ever desired for use again, it will be necessary to dig it out."

RADIO • DEPARTMENT

THE JINN IN THE RADIO BOTTLE

AT THE TIME last winter when the hitherto mild and sporadic interest in radio suddenly burst forth into a popular enthusiasm, the manufacturers of "vacuum tubes" (triodes) were making about 5,000 of these strange little implements monthly. Of a sudden they discovered that this rate of production was leaving them miles behind the demand.

With all possible expeditiousness, they began to speed up manufacture. In January, they managed to make 40,000 tubes. By no means enough. Production must again be doubled—and redoubled. It was announced that in April the number of tubes produced would approximate 150,000. In May, the output is to reach 175,000; and the forecast for June calls for 200,000—a forty-fold increase over the production of December of last year.

The reason, as even the novice scarcely needs to be told, is that every one who advances beyond the very first stage of radio listening must have at least one triode in his radio receiving apparatus. The outfit that has only a crystal detector can reach out at best only fifteen or twenty miles, and there is no way in which its messages can be amplified so that a "loud-speaker" can be used.

If you wish to listen to the more distant broadcasting stations, or to make the speech or concert audible to the entire family at once, you must turn to the vacuum tube; not one tube alone, but several, if you are to have a really high-grade radio receiving outfit. One tube to act as detector, and two or three others as amplifiers—and the world is yours. The difference between the crystal-detector receiver and the multiplex triode outfit is the difference between the old one-cylinder automobile and the modern "double-six."

And the thing that does the trick is just a harmless looking little electric light bulb with a small metal plate or cylinder and a little coil of wire or mesh of wire in addition to the usual filament. If you ask how these apparently not very significant additions make such a difference, you are told that the "grid does it." It is further explained that the "grid" in question is a little coil or mesh of wire; that it is so named because it was originally made like a tiny grid; and that it operates by permitting a certain number of electrons to fly through its perforations from the lighted filament to the metal plate on the other side of the grid.

Sometimes the grid permits such a flow of electrons, and sometimes it intercepts them, or even draws electrons in the reverse

direction from the plate. Everything depends upon the balance of electric currents; and the electrical engineers themselves are not quite agreed as to some of the phenomena; but they all acknowledge that the "grid does it," and that modern radio, as we know it, would not exist without the "triode," as they name this grid-bearing vacuum tube. The triode is the only

really efficient detector in the radio-receiving apparatus, and the only available amplifier, to make long-distance telephony possible; and also—mystifying as that may seem—the essential worker in producing and modulating the oscillating current that generates the radio waves at the broadcasting station. If ever there was a true tale of magic, it is the story of the little grid, that was added to the two-electrode vacuum tubes to make it a triode.

And so it seems fitting that when the story is related of the way in which the wonder-working grid came to be put into the electric light bulb, as Mr. James H. Collins relates it in *Popular Radio* (New York), it should be under the title of "The Genius Who Put the Jinn in the Radio Bottle." And here is the story as Mr. Collins tells it:

"You remember the bottle drawn up in his net by the poor fisherman in the 'Arabian Nights.' It held a jinn, or demon, sealed up and cast into the sea by King Solomon. The jinn began to speak to the fisherman, and finally persuaded him to open the bottle and let him out.

"There is a speaking jinn in the glass bottle that makes radio telephony possible—the vacuum tube or audion or triode. And thereby hangs a tale.

"One summer night, more than twenty years ago, a scientific fisherman was casting his net of investigation into the then little-explored sea of wireless phenomena. And he caught a jinn. Or rather, the jinn spoke to the scientist, not from a bottle, but from a Welsbach gas burner. He was a free jinn, probably having escaped King Solomon. For the first time since he was created with the universe, he spoke to Man, that cosmic infant, and asked to be sealed in a bottle.

"And the man sealed him up and set him at work.

"The man was Dr. Lee de Forest, and the place a room in Chicago where he was conducting some night experiments in wireless. De Forest is a parson's son, and a parson's grandson. Born in 1873, at Council Bluffs, Iowa, raised in Talladega, Alabama, where his father was president of Talladega College, educated at the Sheffield Scientific School, Yale University, after serving with the Yale battery during the Spanish-American War, he went to Chicago and got a job in the Western Electric

THE INVENTOR OF THE AUDION BULB.

Dr. Lee De Forest is here seen testing out another invention, the portable wireless telephone, whose current comes from any ordinary electric light socket.

Company's experimental telephone laboratory. There he became interested in wireless telegraphy, and in 1900 quit his job to make independent experiments.

"On that summer night he had a new type of electrolytic detector rigged up. His receiving apparatus was placed on a table beneath a Welsbach gas light. In a closet about ten feet away he had a spark coil with which oscillations were made to test his receiving apparatus. The spark coil was operated by a switch closed with a string running across the floor from the table to the closet. Presently De Forest noticed that every time he pulled the string and closed the switch, the light from the gas mantle increased very perceptibly, dropping back to normal when the spark coil was thrown off.

"This unexpected behavior of the gas light, which was no part of his apparatus, diverted his attention, and set him thinking. Had he discovered a new form of detector of Hertzian waves of extraordinary sensitiveness? Something in the oscillations from the spark coil affected the gas flame every time the switch was closed—until he closed the door of the closet. Then

"Then he turned to the incandescent lamp and found the same detector phenomenon in the more attenuated heated gas surrounding its filament. By a brilliant series of experiments, first with one filament or electrode, then two, and finally the famous 'third electrode' or 'grid,' he developed and patented the 'audion' in 1907.

"Since then the device has been developed in unforeseen directions, and applied to so many different purposes that the jinn in the bottle has been found a true magician."

COLLEGE LECTURES BY RADIO

EDUCATIONAL INSTITUTIONS have been quick to realize the value of broadcasting from their particular standpoint. We read of (or, if our artificial ears are sharp enough, listen to) messages from various colleges of the Middle West, including the Universities of Wisconsin, Iowa, and

Nebraska; and it is announced that the Washington Square Division of the New York University plans a broadcasting station from which lecture courses on virtually all the subjects offered at the university will be sent out. "Classes in Spanish, French, Latin, or any foreign language, lectures on economics, law, mathematics, psychology, etc., will soon be running in competition with other attractions that the air has to offer," if the expectations of a writer in the *New York World* are verified.

Dean Lough of the extramural division of the University is quoted as saying that, in addition to this use of radio, the facilities of the new art are to be invoked through the installation of "loud-speakers" in various university class-rooms, so that lectures may be conducted simultaneously before different audiences by one professor. The equipment to be used is the same that transmitted President Harding's speech on Armistice Day. "We expect to conduct classes at Washington Square College and have the voice transmitted to the Wall Street division, University Heights or the Medical College," Dean Lough is quoted as saying.

Meantime report comes from Boston of the actual inauguration of a course of lectures by radiophone to be given by members of the faculty of Tufts College, the opening

lecture being given by Dean Charles Ernest Fay, Wade professor of modern languages and dean of the graduate school. After stating that the opening lecture of this course, by Dean Fay, will tell of the aims of the enterprise, *The Christian Science Monitor* (Boston) gives a detailed list of subjects to be covered, ranging from economics to engineering and from athletics to the drama; and adds this explication of the general purpose of the enterprise:

"In the initial statement it is made clear that the lectures will be of a popular nature and not beyond the understanding of the thousands of young men and boys, between the ages of 15 and 25, who are especially interested in wireless.

"Those in charge of the new course at Tufts say that by the use of the sound amplifier it will be possible for many persons to hear the same lecture from one receiving apparatus. But the most notable advantage of the Tufts Wireless College plan seems to be personal relation between the professor and his students. Under the present system it is impossible for any student to ask a question of the lecturer and receive a reply, but it is not beyond the range of possibility that the professors will set aside one or more lectures to the answering of questions that have been submitted by mail.

TUFTS COLLEGE "WIRELESS" FACULTY BROADCASTING LECTURES.

the phenomena stopt. He had found a detector, not of electrical waves, but of sound waves.

"A year or more passed before De Forest had opportunity to investigate this phenomenon further. The jinn had spoken, but only in the dumb sign language. De Forest went into the gas flame to bring him out and make him talk in a telephone receiver, if possible. He placed two needles of steel, and later platinum, in the incandescent flame, with a gap between, and connected them to a dry battery and telephone receiver. Contrary to his expectations, there was no appreciable current between the two needles in the flame. But when he tried the same experiment with a Bunsen burner he found a point in the outside envelope of the flame where current did pass, making a soft fluttering whisper in the telephone receiver. When one electrode was connected to an antenna and the other grounded in the earth, he heard for the first time signals which clearly represented the sound of the transmitting spark.

"Because a gas flame had obvious inconveniences, he then sought some other means of obtaining the necessary heated gas and heated electrodes. Experiments with the electric arc showed that it was a detector of the same type, but exceedingly irregular and noisy in the telephone receiver—in fact, the impatient jinn now spoke domineeringly, in deafening tones.

IT INSURES THE SECRECY OF TELEPHONE CONVERSATIONS: THE "SUPER-PHONE."

"In discussing the new method of teaching, a number of the Tufts faculty admitted that it was frankly an experiment. 'Whether we shall meet any demand on the part of the public by giving these lectures remains to be seen,' he said. 'A very large part of the radio broadcasting now is being done purely as a public service. Tufts College seeks to serve the public in every possible way and several members of the College faculty have volunteered to undertake this work without remuneration. The possibilities are manifold, and it is only a matter of a short time, in my opinion, when information of all kinds will be transmitted by radio.'"

THE SUPERPHONE

NEW METHODS IN APPLIED SCIENCE seldom supplant older methods, however effectively they may supplement them. The horse has not been supplanted by the automobile; nor is there the slightest probability that the wire telegraph and telephone will be supplanted by wireless. Already, however, radio communication opens up new fields, as in broadcasting, that the older method could not enter; and now it appears that "wired-wireless," or "line-radio" is likely to prove a valuable coadjutor of the ordinary telephone. Mr. R. D. Duncan, Jr., chief engineer of the research laboratory of the Signal Corps, United States Army, has invented an apparatus which is dubbed the "super-phone," with the aid of which the principle that Major-General Squier discovered may be utilized in a way to improve the general telephone service; in particular, making it possible that several conversations may be carried on over the same wire simultaneously, each conversation in strict privacy, with no possibility that any one will "listen in." The portable apparatus, weighing only about forty pounds, with which this is accomplished, is described by Mr. S. R. Winters in *Radio News* (New York):

"The 'superphone' is a complete transmitting and receiving outfit, and as an attachment to an existing telephone line, the operator is not bothered with the details of its mechanism. The physical circuit between two subscribers is established by simply connecting the accessory unit to the common telephone system. By the mere pressing of an electric button a switch, which is closed automatically, throws the normal telephone into the circuit of the 'superphone.' A communication may then be transmitted in secrecy. The conversation having been completed, the receiver is placed on the hook and normal conditions are restored. The shifting from the transmission to the receiving of messages is negotiated with ease and rapidity, somewhat contrary to the procedure involved in the use of the common radiotelephone. Hence the label on the new invention, 'Line-Radio Duplex Transmitter and Receiver.' The compact outfit readily lends itself to use in both radiotelephony and radiotelegraphy.

"The high-frequency generator employed includes three electron vacuum tubes, supplemented with amplifying and recti-

fying units. The vacuum tubes are standard equipment of the Signal Corps. Opportunities are afforded for operating the 'superphone' from both filaments and plates from 110 volts of direct current. The source of plate voltage is encased in a wooden box when rugged service in the field is anticipated.

"High-frequency alternating currents, the supporting vehicle for 'line radio' or 'wired wireless,' is employed in the operation of this telephone or telegraph attachment. These currents are modulated at the transmitting end by speaking into a microphone. The communication is finally conveyed to an ordinary telephone receiver. Multiplex-telephony is possible where more than one of the 'superphones' is accessible, thus offering opportunity for the transmission of a great number of conversations simultaneously over a single line without interference, one with another. When these portable outfits are employed in open overhead telephone or telegraph lines, the transmission of audible communications may be negotiated for a distance of 100 miles.

"The power consumed in the operation of the apparatus is negligible. Conversations can be flung for a considerable distance with the consumption of only one-tenth of a watt of current, which is one-five-hundredth of the electricity required in lighting a common electric lamp. Speech thus conveyed is said to be more distinct than ordinary conversations over the telephone.

"Perhaps it is permissible for one to contemplate the uses of this invention. The Secretary of State, in present or future cabinets, when transmitting an important document of State to the President, may employ this vehicle of communication, where privacy is insured for the contents of the message. Brokerages in New York City may negotiate their transactions in stocks and bonds, where the element of speculation demands privacy of communication, by use of the 'superphone.' Banking establishments, removed from their branch institutions, can conduct business in secrecy by the application of this invention. Military strategists, with the element of future wars never entirely removed, may possibly safeguard their battle-field operations from the enemy by drafting the services of the latest offspring of 'wired wireless' or 'line radio.'"

MUST HAVE LICENSE EVEN FOR BUZZER SET—

"Some confusion seems to exist," says Mr. Jack Binns, in the *New York Tribune*, "as to whether a radio fan can have a transmitting set, consisting of a buzzer, without obtaining a license from the Federal authorities. It is due to argument that the feeble oscillations produced by a buzzer spark will not cover very great distances and therefore will not interfere with regular radio stations. It is against the law to use such a set without a license."

Every novice should understand that in order to secure a transmitting license, it will be necessary to learn the telegraph (Continental) code. The applicant must be able to send messages, and to receive ten words per minute. It is within the possibilities that this regulation will be officially changed in the not distant future, in view of the rapid strides of radiotelephony. But at present such is the law.

LETTERS - AND - ART

LITERATURE DRAMA MUSIC FINE-ARTS EDUCATION CULTURE

DRAMATIZED LITERARY THIEVERY

COULD ONE BY THE NAME OF JENKINS ever be a great poet? The frivolous Mr. Broun, who writes irresponsibly about plays, doesn't think one could. So when a play tells us that one Jenkins wrote immortal poems which one Blayds spent a lifetime in passing off as his own and acquiring the reputation of a great national figure, Mr. Broun

"In the second act he has died, and in the midst of the heirs' feverish eagerness to allot his fortune, his spinster daughter, whose devotion to him has caused her to sacrifice love and marriage, announces a matter that shocks and stupefies the Blayds and the Blayds-Conways. The poet has admitted to her on his deathbed that in his youth he stole from a dying comrade-poet all the works of literature that he has published as his own in later life.

"So that the fortune is, in fact, an illegitimate one."

Some of the upright critics deplore Mr. Milne's honeyed conservation of dishonesty, discovers Mr. Percy Hammond in his reconsidered account of the play in the *New York Tribune*. This is the season of strict scrutiny of the theater's moralities and the present playwright's ironies naturally go over some heads. Mr. Hammond proceeds:

"It is believed in the sterner studios that his indulgent attitude toward falsehood is unseemly, and that instead of permitting it to triumph in the end he should stretch it on the sour cross of expiation. Here is Mr. Milne, they say, one of the nicest of the playwrights, condoning one of the meanest of the crimes. He inverts all the nobler axioms, and by so doing makes probity, in literature at least, a foolish institution. 'The Lie is mighty and will prevail,' he seems to sing, however ironically. All you have to do to render yourself and yours rejoiceful is to steal your deceased friend's eternal lays and publish them under your own name. Why, Mr. Milne asks, take the long journey to the classic spas of Aganippe and Hippocrene when you have a sick pal who is a good poet? Is it not well to wait until he dies and then embezzle for your own use his heavenly rhymes and stanzas? Yes, is the reply, as the curtain falls on 'The Truth About Blayds,' with every one happy and comfortable, as Mr. Pinero used to recommend in more virtuous dramas.

"The advantage of *Oliver Blayds's* adroit pilferings are many and praiseworthy as enumerated and inferred by Mr. Milne at the Booth. In the first place *Blayds* was only twenty when his roommate died, leaving a treasure of unpublished rhymes and cantos. *Blayds* himself was a hesitant pilgrim on the hard way to Helicon, but he knew that he never would get there without assistance. What, then, could be more imaginative and poetic than the temptation that beguiled him? The seven-leagued boots and the helmet of invisibility were at hand, ready for donning. So he put them bravely on and took the short road to riches and distinction. His name, signed to his friend Jenkins's anthems and madrigals, became celebrated and he grew intimate with Tennyson, Swinburne and other reputable bards. He met the queen. They still tell in the memoirs of the times how *Blayds's* boots squeaked on that occasion, and that he said 'damn' in the imperial presence. Even Whistler was fond of him, and Robert Browning was a crony. For seventy years, until he reached the age of ninety, he lived his glorious lie. What sport it must have been to publish the dead Jenkins's 'Ode to Truth,' attribute it to *Blayds*, and receive for it the prodigious royalties common to odes. The only rift in his lute was a volume of verse printed in 1863, which he wrote himself, and which was lambasted by the critics. But the crowning reward of his spurious career came at its conclusion. Old *Blayds*, the counterfeit—prosperous, well-beloved, renowned and ninety, shrived himself luxuriously (to his daughter), like a true sybarite of sin, and died immediately thereafter with a clean conscience. A shrewd and crafty dealer to the very end, his confession cost him nothing but a tomb in the Abbey."

CONFRONTED BY HIS PAST.

Blayds, at the end of a long life and many honors, thinks of the boy on whose genius he has fattened, and confesses to his daughter.

sees something to be said for the successful faker. "The Truth About Blayds," one of the season's successes, is treated more seriously than that by the run of critics. In the *New York World* the play is described as "a family argument, brighter than the usual one, centered upon whether the family of *Blayds* shall adhere to what is honorably the honorable course, or, yielding to its mercenary propensities, accept the dishonorable. Money talks, and the idealistic capitulation is abrupt, ending the play." The situation which precipitates the argument is here briefly put:

"In case this piece runs all summer at the Booth, G. P. Heggie is assured a season of ease not duplicated by a star on Broadway. He occupies the stage twenty minutes in the first act, a ninety-year-old English poet, propped up with a half dozen pillows, and riding in a wheel-chair. After being congratulated on his ninetieth birthday anniversary, drinking one glass of port wine, spinning a couple of yarns, and being kissed by his grandchildren, he is wheeled off again and does not reappear.

There is more fault found with the play than just its morality. A lot of time is taken up in the second act by the daughter's lament over her fruitless life. She had given up marriage to play the devoted to her famous father who turns out only infamous. Mr. Broun in *The World* is moved to write in this vein.

"It is perhaps not entirely unreasonable that she should be

allowed to mourn about a husband whom she never had, because, after all, there was a man whom she loved and might have married. We felt, however, that it was too much when her musings went on to include a mythical daughter, not as a mere plaintive possibility but as a tangible tot of most endearing memory.

"Children are too much of a gamble to make it permissible for a person to go on so emotionally about one that never was. We should have liked very much to have been permitted to step into the play at that particular moment as one of the characters. 'Madame,' our line would have been, 'you might have found that child a perfect nuisance. There is no sense in your carrying on this way about "your little girl" unless you know what she would have been like. Pleasant and agreeable children are all right, but the others are terrible. No matter how egotistic you may be, you ought to be willing to admit that your chance of happiness through a little girl was no better than even money. Please stop crying and wipe your nose.'

"None of the characters on the stage said anything of the sort. As a matter of fact, it hardly seemed as if *Isabel* was talking to them. As we remember the scene, Miss Alexandra Carlisle advanced to the footlights and directed her emotions point-blank at the audience.

"In the last act the decrepit woman of thirty-eight went and married the man she loved after all. It took a lot of coaxing, and that scene is no model of dramatic effectiveness either. Mr. Milne, who knew all along that his heroine would marry (or rather, announce her intention, which amounts to the same thing in a play), had no right to ask us to take her outburst so seriously."

With the daughter's scene thus disposed of we return to Mr. Hammond's analysis of the selfish reasonings of other members of the family.

"The pompous and sycophantic brother-in-law presents more convincingly the case for silence. His principal contention is that since Jenkins is dead, what difference does it make to Jenkins? Besides, the chances are that, signed by such a prosy patronym, Jenkins's works would never have attained renown. Jenkins should find a sufficient reward in the fact that his contributions to art beautify the earth; and being a true poet, he should, like the rose, care not whose name is affixed to them. It is pointed out that after all *Blayds* deserves considerable consideration. He got the poems published. Then there is the immoral influence of an exposure, the emphasis of a success founded upon imposture, and its perturbing results when the British book-lover learns that his favorite author could not write. So it is decided to tear up the letter to the *London Times*, and let sleeping *Blayds* lie. Thus it ends—Jenkins is happy, whatever he is; *Blayds*, having squared himself after seventy years, is likewise. The conscientious *Miss Blayds* finds comfort in the arms of her old lover, a knowing book reviewer; and *Blayds's* officious son-in-law is ecstatic as he begins *Blayds's* biography in two volumes and an index. The grandson, young *Blayds-Conway*, is enabled to pursue his career in politics, as he should be, since it was he who suggested brightly that old *Blayds's* story was a senile deathbed hallucination. All are content, excepting, perhaps, Westminster Abbey. *Blayds's* interment in that populous mausoleum was prevented by *Miss Blayds* when she learned that her father was undeserving of so holy a sarcophagus. After it is over you may feel that it was not just to beryave the Abbey of *Blayds's* ashes. As his son-in-law complained: 'It was the Abbey's right' to honor itself by entertaining his remains in the poets' corner.

"The questionable ethics of 'The Truth About *Blayds*' suggests another peril of the censorship. Mr. A. H. Woods, for instance, being a fanatic in veracity, might see in its meaning a menace to virtue, and cry for its suppression. Censors are noted for strange adventures in integrity. The drama is being warned to soft pedal on the rough stuff for a while lest it get the hair shirt of supervision. So it might be well for Mr. Brady and Mr. Pollock to give Mr. Milne a tip to renovate his work with a miserable ending—*Blayds* in hell and his family en route."

AMERICA AND FRANCE SPANKED BY MENCKEN

THE YOUNG INTELLECTUAL is coming home again after a year or two of Paris, and his confidences are not reassuring as to himself, tho his aim, of course, is to depress you about Paris. Simply catch him after he has tried a year or two there, recommends his high priest, Mr. H. L. Menck-

THE LEGEND STRONGER THAN TRUTH.

Under the portrait of the old impostor the family argue the necessity of keeping up the fiction. The grandson argues that the old man's confession was an hallucination.

ken. "Set before him an honest bottle of bootleg gin, then listen to his depressing confidences." What Mr. Mencken's tenure or experiences in France have been can only be inferred from the acid of his reprobation. His despair must be immense, for if he bade the Young Intellectual make his adventure of Paris in hope of finding it improved over his day, he welcomes the wanderer home with worse dubieties about his own land. Nowhere, in fact, suits Mr. Mencken, not even the closed and classical past, and in the same article where we now quote him, he tears to tatters the gracious draperies of ancient Greece. It seems to puzzle him that France has a lure for people of supposed genius. "When a Young Intellectual flees from American Kultur he almost always goes to Paris—at least at the start," explains this *causeur* of the *Baltimore Sun*. "So does his brother of England. The Italians, Belgians, Dutch, Scandinavians, Spaniards and Swiss all envy the French. So even do the Germans." The Prussians imitate them heavily. The South Americans regard them almost as gods." Here seem to be

enumerated about all the people who count in the scheme of modern culture. Only Mr. Mencken appears to have found out the French, and if what he says is all true, the evidences of his perspicacity would seem to entitle him to the high position to which the Young Intellectuals of this land have elevated him. His belief is that "it must be plain on calm examination that the average Frenchman is anything but a noble fellow, and that his country has defects which almost match the defects of the United States." Mr. Mencken is American by birth, but

freest, most expansive life possible to man since the Renaissance—and here is life made so narrow, so sordid, so ignoble and so unimaginative that it is comfortable, save in brilliant interludes, only to blockheads and bounders."

Turning then to the defects of the Frenchman, which we are told "almost match the defects of the United States," we find this specimen of Mr. Mencken's generalizations:

"Let us glance, very briefly, at the two qualities with which he is accredited in practically all discussions of him—the qualities which are supposed to set him off from all other modern men—to wit, his great gallantry and his high talent for the fine arts. Does he actually possess either? He does not. The Frenchman, in point of fact, is almost completely devoid of gallantry; what is constantly mistaken for it is his popinjay strutting. He is a romantic but wholly incompetent soldier, panicky in defeat and hysterical in victory. During the late war, despite the enormous advantages that he enjoyed, he was kept at the business only by the laborious efforts of the English, and since the peace the same English have had to restrain his savagery. Enumerate all of the qualities that belong to a first-rate soldier—daring, pertinacity, patience, hard endurance, clear-headedness, chivalry, generosity, resourcefulness—and you will find that the Frenchman has but one of them—daring. Accept him as the *beau idéal* of the military character, and you confess at once that his peers are to be found among the gunmen of West Virginia.

"As for his love of the arts, it is surely not believed in by any sane American who has gone to Paris and kept sober."

MISS FARRAR'S OPERATIC FAREWELL

GERALDINE FARRAR went out of the Metropolitan in a blaze of glory. Her farewells extended over a couple of weeks as she appeared in each of her favorite rôles, and her devotees were not wanting in enthusiasm at each of them. Appearing in *Zaza* on the last afternoon of the opera season, her ovation was a fitting eclipse of all previous ones. Newspaper comment has been generally laudatory, mingled with regret that an artiste like her should quit her public at the climax of her operatic powers. The *Tribune's* critic, almost alone, speaks in measured terms. "If her departure has been more spectacular than that of equally great and greater artists, the evidence is that she desired it should be so, while the others disclosed no such desire." Mr. Krehbiel looks upon no finality as calamitous. If her departure is final, he says, "other artists have gone from us without creating an irreparable loss." Not to be wholly censorious, he admits that "she leaves behind her a record of which all lovers of opera may well be proud, but also one which has its deplorable features." Then by way of record:

"Those who appreciate most intelligently and keenly what her good instincts and fine talents prompted her to do in such operas as 'Königskinder' and 'Madama Butterfly' will regret that other promptings led her to do what she did long ago in 'Romeo et Juliette,' 'Faust,' 'Thais,' and more recently in 'Zaza.' Some of them, while inclined to forgive, will find it hard to forget her utterances in Berlin when Germany provoked the war which has all but left the civilized world in ruins."

The *Times*, also, gives place to measured regrets in Mr. Aldrich's review of the operatic season just closed. He speaks of Miss Farrar's departure as sure to be "lamented and regretted by a large number of her admirers," and then adds:

"There are others who will regret it less; who, tho they have been gratified by her more musical singing in the season just closed, can not shut their ears and their eyes to a general deterioration in her art. They remember, and with pleasure, a number of her beautiful impersonations in the past. It seems like a chapter that ought not to be closed just in the way it is to be. And to this many will add a sense of loss that the place of an American artist is to be taken by a stranger."

The *Herald* editorially speaks of her departure "amid a shower of roses and cheers and tears," "from the scene she has

Copyrighted by Underwood & Underwood.

SHE GAVE THE PUBLIC 100 PER CENT.

of what she was and what she could do. So Geraldine Farrar told her farewell audience.

America irritates him even more than France. Before we set forth what he thinks of France, we give his flashlight on America:

"One thinks first of Hawthorne, Poe, Whitman, the Jubilee Songs, St. Thomas's Church, 'Huckleberry Finn,' 'Jurgen,' crab creole, the Boston Symphony Orchestra (as it was), the Johns Hopkins University (as it was), Dreiser at his best, a few sonnets by Lizette Woodworth Reese, a few essays by William Graham Sumner, fried chicken à la Maryland, Fifth Avenue on an April afternoon, Mount Vernon, the Bronx cocktail, Michelob beer, the colossal exclamation point of the Washington Monument in Washington—and then one thinks of Bryan, Harding, Dr. Frank Crane, Harold Bell Wright, the Rotary Club, the Merchants and Manufacturers' Association, the baseball extras, the meals on Pullman dining-cars, Billy Sunday, the Lord's Day Alliance, Volstead, the Y. M. C. A., union suits, non-alcoholic vermouth, the average university president, the Ku Klux Klan, the general run of evangelical ecclesiastics.

"It is a sour meditation, surely. No wonder so many of the Young Intellectuals, hastily touching their friends, depart precipitately for Paris, Munich and the Italian hilltowns! No wonder it is hard to find a civilized American who is not full of secret regret that the Kaiser did not conquer the country—and secret hopes that the Japs will do it before he has to go to hell! Here is the richest nation ever seen on earth—and perhaps the most barbarous. Here is an accumulation of beauty that is almost without compare—and a mine of ugliness that is apparently inexhaustible. Here are all the material means to the noblest,

long ornamented" as a "fine human tribute to a delightful human being," adding:

"Miss Farrar explained a good part of her popularity the other day when she told a Metropolitan audience that she had always sought to give the public 100 per cent. of what she was and what she could do. That is one of the secrets of Miss Farrar's success. She gave the best of herself to her work. The rewards she has reaped are the rewards of years of patient, untiring study and devotion to her art.

"In bidding farewell to Miss Farrar as an operatic star, New York expresses the hope that there lies before her still greater artistic achievement. And it sends with her its heartfelt wishes for success in whatever field she may choose to utilize her distinguished talents and to display her winning personality."

In the *Herald* also is a reminiscent article by Mr. Henderson, reviewing the salient points of Miss Farrar's career:

"Miss Farrar made her début at the Metropolitan Opera House under the management of Heinrich Conried on November 26, 1906, at the age of 24, singing *Juliette* in Gounod's opera 'Romeo et Juliette.' Her début was a subject for much animated discussion. She came at a time when the public acquaintance with the highest type of singing was far greater than it is now, when taste was much more fastidious and knowledge much more general. In these days Miss Farrar's *Juliette*, as it was sung in 1906, would be regarded as a marvel of beautiful vocal art. We have not had all these years of educational opera for nothing.

"But in 1906 it was deemed inadequate, and there was much talk about the difference between succeeding as *Juliette* in Berlin and here. Some of Miss Farrar's stage business was condemned as being too realistic and it earned for her the undying hostility of some opera-goers. But it is safe to say that if a new *Juliette* were to emerge to-morrow and repeat that business there would be no more than a gentle flutter of amusement. The bedroom drama had not swept the veils of reticence from the stage when Miss Farrar's chamber scene startled the venerable guardians of the public morals in 1906.

"On December 7 Miss Farrar sang her first *Marguerite*, not her of Gounod, but the heroine of Boito's 'Mefistofele.' The devil on that occasion was a perfect gentleman, M. Plancon, and Rousseliere, Mr. Conried's very expensive tenor, was the *Faust*. The production was costly and hopelessly unprofitable. Mr. Conried banished it from his stage until he could secure a more impressive fiend.

"On February 6, 1907, Miss Farrar gave one of the most artistic impersonations she ever disclosed to this public, an impersonation of which few present-day opera-goers have even heard. She sang *Elizabeth* in 'Tannhäuser' with Mme. Fremstad as *Venus*, Mr. Burrian as the erring minstrel and Mr. Van Rooy as *Wolfram*. No better performance of a Wagner drama has been given on the Metropolitan stage since Jean de Reszke retired.

"Miss Farrar's *Elizabeth* was not only one of her best achievements but it was one of the most beautiful and touching impersonations of that character ever given by any artist on any stage. The present reviewer is almost ready to express the opinion that it was the finest creation of Miss Farrar's entire career. Certainly she never surpassed it. And yet this exquisite embodiment of Wagner's ideal woman was permitted to pass into disuse and almost out of the memory of the living.

"On February 11, 1907, the first performance of 'Madama Butterfly' at the Metropolitan took place. The cast embraced Miss Farrar as *Cio-Cio-San*, Mr. Caruso as *Pinkerton*, and Mr. Scotti as *Sharpless*. Others have since been heard as the little Japanese bride, but the rôle became indissolubly associated in the public mind with Miss Farrar.

"Her first *Mimi* in 'La Bohème' was sung on March 15 of the same year. This rôle, which seemed so well suited to her

powers, did not continue long in her active list, and when she sang one act of it in the present season at the performance in aid of the Caruso fund, she had not been heard in it for eleven years. On November 20, 1907, she sang again her *Marguerite* in Boito's 'Mefistofele,' but this time with Mr. Chaliapine, who made his début here.

"Miss Farrar's share in the Mozart festivals at Salzburg had been famous in Europe, but she was not heard in a Mozart opera here till February 12, 1908, when she sang *Zerlina* in 'Don Giovanni.' On February 28 she essayed the rôle of *Violetta* in 'La Traviata,' but with no success. On March 6 she sang the title rôle of Ambroise Thomas's 'Mignon,' but this opera never

Copyrighted by Underwood & Underwood.

LEAVING HER OPERATIC HOME.

With a fervor that recalls our mercurial fathers of Jenny Lind days, the crowd hailed Geraldine as she left the Metropolitan after the last curtain. Find her beneath the flag.

kept a strong hold on the public fancy. On December 3, 1908, Mr. Conried put on what was regarded as a star cast of 'Carmen.' The title rôle was sung by Miss Maria Gay, *Don Jose* by Mr. Caruso, *Escamillo* by the eminent barytone, Jean Noto, who died only a few days ago, and Miss Farrar was the *Micaela*. Probably very few can remember her in that part.

"'Le Nozze di Figaro' was brought forward on January 13, 1909, with Mme. Eames as the *Countess*, Mme. Sembrich as *Susanna* and Miss Farrar as *Cherubino*. This impersonation of Miss Farrar's has disappeared from the stage, together with the opera.

"Miss Farrar's first *Manon* was given on February 3, 1909. She has sung the part often since that, but has never had a monopoly of it. At the New Theatre (now Century) she sang *Charlotte* in Massenet's 'Werther' on November 16, 1909. Her first appearance as *Tosca* took place on November 22 in the same year. She was not regarded as a successful impersonator of the Roman singer, but in the course of time she built up an excellent version of her own, one in which careful treatment of the music was made to signify more than physical activity.

"It was on December 28, 1910, that the American soprano revealed to this public one of the most beautiful portraits in her gallery, namely, the *Goose Girl* in Humperdinck's 'Königskinder.' Those who have admired Miss Farrar's art will cherish their recollections of that assumption. Perhaps less memorable by reason of the elusive character of the opera was her impressionistic delineation of the wife of Blue Beard, *Ariane*, in Dukas's 'Ariane et Barbe Bleu.'

"These are some of the contributions of Miss Farrar's earlier years in the Metropolitan Opera House. But while it is not necessary to prolong the catalog, it would be a pity to omit mention of her *Louise*, especially in Charpentier's fantastic sequel to the first opera, his 'Julien.'

RELIGION-AND-SOCIAL-SERVICE

THE COMING DOCTRINAL STORM

A TREMENDOUS HUBBUB in religious circles is threatened by the so-called Fundamentalists, whose cardinal doctrines, we are told, are the inerrancy of the Bible and the second coming of Christ, and, according to some newspaper articles, a doctrinal storm is to be expected when the Fundamentalists and the more liberal of the Baptist body come together in the convention of that denomination in Indianapolis, in June. Steps to forestall possible schism were taken recently by an informal conference in New York of Baptist liberals and "Fundamentalists," who agreed that it "is within the right of all Baptists to give expression to their own views," and urged "upon all of our brethren that we avoid the censorious spirit."

The tocsin of alarm was first sounded by *The Christian Register* (Unitarian), whose editor, Dr. Albert C. Dieffenbach, confessing himself terrified by the "religious Ku Klux," warns us against the frenzy he believes will seize on the world should the doctrine become widely accepted. The central dogma of the movement, says the Unitarian editor, is the second coming of Christ. "Believe that or die. It is a long, involved system of doctrine on the subject that they have fabricated out of a benighted literalism, and its awfulness, its bloody sweep over the world, surpasses the most gruesome pictures in the Book of Revelation. The other three 'fundamentals' are the supernatural birth of Christ, the vicarious atonement of Christ, and the bodily resurrection of Christ." To support his fear that the "second coming" as preached by the Fundamentalists will stir the world into religious fanaticism, Dr. Dieffenbach quotes from press reports a declaration by Dr. I. M. Haldeman, a prominent New York Baptist minister and a reputed leader of the Fundamentalists:

"Christ is coming with the eye of one who is aroused and indignant, in whose being beats the pulse of a hot anger. . . . He comes forth as one who no longer seeks either friendship or love. . . . His garments are dipped in blood, the blood of others. He descends that he may shed the blood of men. . . . He will enunciate his claim by terror and might. He will write it in the blood of his foes. He comes like the treader of the winepress, and the grapes are the bodies of men. He will tread and trample in his fury till the blood of men shall fill the earth. . . . He will tread and trample them beneath his accusing feet, till their upspurring blood shall make them crimson. He comes to his glory, not as the Saviour meek and lowly, not through the suffrage of willing hearts and the plaudits of a welcoming world, but as a king, an autocrat, a despot, through the gushing blood of a trampled world. And those who follow this emergent, wrathful King of Heaven . . . are represented as armies. They come forth as a body of fighters. They come to assist the Warrior to make war on the earth. In this way the Kingdom is to come, not by the preaching of the Gospel and the all-persuasive power of the Spirit of God."

"There will be no peace in the world until the second coming of Christ," declares Dr. J. C. Masee, another leader of the Fundamentalist movement, who recently went from the Baptist Temple in Brooklyn to Tremont Temple in Boston, reputed to be the largest Baptist church in the world. In a one-minute sermonette appearing in the *Boston Post* Dr. Masee is said to give in a nutshell exactly what the Fundamentalists believe: "I know no Christ but the Christ of the Bible. Of his holy person seven essential facts are set forth therein. These are: His supernatural birth, his sinless life, his vicarious death, his bodily resurrection, his glorious ascension, his present indwelling of and lordship over the believer, and his triumphant return. All these I believe and preach, for this Christ still saves sinners like you

and me." The purpose of the Fundamentalists, says *The Universalist Leader*, which is also seriously perturbed by the movement, is "to reestablish medieval orthodoxy. They hold to the literal inerrancy of the Scriptures, a special creation, total human depravity, the virgin birth, the atonement by blood, the ultimate damnation of most of mankind, and all the other dreary dogmas of the Dark Ages. Chief emphasis is laid upon the second coming, which they declare is right at the doors." The movement works without reference to sect or denomination, according to this paper, which says: "All the so-called Evangelicals are infected with it, and some of them are facing imminent disruption. The Baptists appear to be in the most danger. For some years the Fundamentalist group in that church has held a congress in advance of their annual convention to devise means of getting control of the denominational machinery. There is more than a possibility that they will succeed this year. The Disciples Church is almost equally disturbed. In Chicago the Congregationalists are lined up squarely on the issue, and only great tact on the part of their leaders has prevented an open rupture." *The Christian Century* (Undenominational) also senses coming disaster, remarking that, besides the wrench in the Baptist denomination, "the Congregational and Presbyterian communions are considerably perturbed and the Disciples even more bitterly torn than they, while Methodists and Episcopalians are, up to this date, keeping the controversy in the bounds of fairly good order. . . . The whole Fundamentalist set of doctrines must be met with a challenge that is backed up by a willingness to debate the issues on their merits. . . . It is hoped that before the (Baptist) denomination is tied up in a creedal sack by the Fundamentalists at Indianapolis next June, the men of modern scholarly mind will decide to contest such a destiny in the only way that seems open to them."

The Methodist Church can also be distinctly discerned in this rapidly developing situation, says the *Western Christian Advocate*, of that denomination, without taking sides in the argument. The Fundamentalists "must be considered as those who accept the Bible as the ultimate authority and contend for a literal interpretation of the same. This group is strongly colored by the second coming doctrine. They are greatly agitated over the conviction that the Church is swinging away from the fundamentals of Christianity." Another conflict is gathering in Methodist circles, we are told, around the "doctrinal test" for membership, and, says the *Advocate*: "We predict that by the time the next General Conference arrives it will furnish one of the most outstanding debates of the Conference and create a regrettable division."

However, the Fundamentalist danger is not so great, think some religious journals, as others would have us believe. *The Reformed Church Messenger* "can not believe that even the premillennarian Fundamentalists are such enemies to mankind as *The Christian Register* horrendously portrays," and it refuses, with *The Continent*, to "erupt brickbats and roar out great thundering words of condemnation." The latter, a Presbyterian paper, holds that "faith in a premillennarian return of our Lord to this earth is a perfectly plausible interpretation of teachings not so plainly set forth in the Bible as to preclude diverse opinions, and nobody shall ever be denounced in these columns for believing whatever seems to him most true in respect to this or any other doctrine that may command the allegiance of a sincere Christ-following and Bible-loving soul. When premillennial-

THE HEALTHIEST SPECIMENS OF CHILDHOOD ARE NOT NECESSARILY GROWN ON THE FARM.

Examination of Kansas children shows that malnutrition and defects of sight and hearing exist even where there is plenty of food, sun and fresh air, and that eternal vigilance is the price of health in the country as well as in the city.

ists on their part begin to denounce as recreant and heretical and disloyal and un-Christian those in the Church whose judgment of the Scripture on this point differs from theirs, then *The Continent* takes most decided exception." The cause of the trouble, as *The Presbyterian* sees it, is the development of a company of teachers and preachers in various bodies who "belittle, deny and oppose nearly, if not all, the fundamental facts of historic Christianity." This tendency has increased until "it has become infidelity of a type exceeding that held by Tom Paine and Bob Ingersoll. The influence has become so destructive that there is a general awakening against it and a growing determination to segregate these opposing factions. . . . Regeneration, reformation, and a renewal of testimony to the faith once delivered to the saints is the only safety now, as in the past ages." The time is ripe for a realignment of the Protestant forces, urges *The Lutheran*, declaring that "many sects have held fast to little points on the circumference of the Christian faith and have lost their hold on the great center of Gospel truth. . . . There is need of much earnest searching of Scripture to learn afresh what is clearly revealed. There is need of casting overboard half-truths based on a few pet passages of Scripture to the exclusion of what other passages have to say. . . . The evangelicals must not be indifferent to history and scholarship, but must become masters in this field. They must establish their claim as defenders of the Gospel on more solid ground than sentiment and fervor, and show that they are not averse to growth and progress in sacred knowledge. . . . Here is a case where there can be no real peace until the issue is clearly faced and met."

Delighted itself at the discussion and fearing not the least that harm will result from it, *The Watchman-Examiner* (Baptist) says:

"We had been drifting along paying little attention to doctrinal questions. In high places of leadership among us were men who denied the miraculous birth of Christ, the vicarious atonement of Christ, the resurrection of Christ, and the second coming of Christ. It became somebody's duty to call attention to this frightful state of affairs. It was done, and now everybody is acknowledging that our denomination is strongly conservative and will not stand for a radicalism that denies everything that is fundamental to Christianity.

"We give it as our deliberate opinion that the new emphasis which has been given during the past two years to the 'fundamentals' has been the greatest blessing that has come to our denomination in the past quarter of a century."

UNHEALTHINESS OF THE FARM

THE FARM AS A HEALTH RESORT is not all that it is claimed to be, as a Red Cross nurse recently discovered after she began "selling" the gospel of health in a Kansas rural community. There was plenty to eat, it is true; there was plenty of fresh air and outdoor exercise. But with all the free advantages of nature and a smiling sun there was a large percentage of defective vision, defective teeth, defective hearing, adenoids and diseased tonsils among the children. Unaware of this deplorable result of neglect, folks sniffed when the Red Cross chapter with its left-over war funds decided to establish a public nursing station and the nurse in charge began taking toll. "There's nothing the matter with Kansas," the people said, and they seemed to look on the health evangelist as a disturber of the peace. So there was something of a ruction, writes Charles Moreau Harger in *The Outlook* (New York), when an examination of every child in the public schools—more than 3,000 of them—was begun. Farmers' wives told the nurse she was making a nuisance of herself, and, worst of all, two or three physicians objected to the examination. They said that they frequented the homes of their patients, knew every child in them by its first name, and would know if anything were wrong. However, the nurse had the power to compel inspection, and, with the country physician and a dentist in the party, they weighed, probed, and peeped at every child in 123 country and town schools, and sent in reports to the parents of what they found in their wholesale diagnoses. Where the normal conditions seemed on the surface to be ideal for child health, says the writer,

"The examiners made records of 3,632 children, and they found that 2,317 were defective—over 63 per cent. Of the defectives 836 were underweight, with other defects, and 1,237 were suffering from malnutrition. That is, one-third of the children of this community were undernourished. When the larger towns were eliminated, one with many Mexican children, the percentage of malnutrition showed a decrease, but the rural districts alone had over one-fifth of their children thus affected. Only 878 children (24 per cent.) were normal and without physical defect.

"The survey startled the county, and things began to happen. One result was an indignant protest from some parents who declared that they would see their own physician about it—which was exactly what the nurse wanted. She had the figures to show that this was badly needed, for there were reported 216 cases (7 per cent.) of defective vision; 23 cases (1 per cent.) of

defective hearing; 125 cases (4 per cent.) of adenoids; 819 cases (28 per cent.) of defective tonsils; 1,071 cases (37 per cent.) of defective teeth. What could be better than that the home physician and dentist should get busy?

"The indignant parents found, when they made their professional calls, that the report card was correct, and many were sensible enough to have such care as was needed. For those who did not a follow-up system was used, and endeavor was made to secure the correction of every defect.

"That it paid was demonstrated when the latest re-examination was made and it was found that these defects had been corrected; Eyes, 99; adenoids, 109; tonsils, 215; teeth, 440. More care has been given to the children of the county in the past year than ever in its history—which was precisely the object of the movement."

The fault for the apparent negligence lay in the point of view, found the nurse. The farm is considered to be a health resort, and the doctor is called in only when there is serious illness. So-called minor defects go unattended until they develop into serious ailments, and often are neglected altogether. As the nurse explained it:

"Too little attention is paid by the average farmer to the surroundings of the house, the disposition of sewage, the proper location of a well. It is easy to throw refuse out of the back door—and I have seen homes where this was done. Hog and cattle herds are too near the house. Bathtubs are coming in, but they are too scarce. Every farmer these days can have a modern bathroom and running water in the house, but thousands of wives carry the water from an outside well.

"System is necessary in the formative years of the child. The farm wife seldom has kitchen help; such assistance is almost impossible to obtain on the farm. The babies get loving care, but not scientific care unless there is wise advice. That is why we have held mothers' meetings in the country schoolhouses, and it is wonderful how many young mothers come and freely admit their ignorance of the basic principles of baby-raising. It's their best crop, and yet gets less attention than others."

This story of what one county has done is not set down as a unique example, says Mr. Harger. "The same task is being carried on in many other counties, not only of Kansas, but of other States. It has, however, been so systematized here and is so broad in its plans as to serve as a working model."

BLUE-PENCILING THE DECALOG

"**B**OILING DOWN THE DECALOG," or, as some put it, "blue-penciling the Ten Commandments," as recommended by the Joint Commission on the Book of Common Prayer, may precipitate a hot debate in the triennial convention of the Protestant Episcopal Church at Portland, Ore., next September, but, at any rate, the proposed changes, we are told, have the support of prominent and reputable churchmen. Another of the 250 changes suggested by the commission is the elimination of the word "obey" from the bride's promise in the Episcopal marriage service, and the deletion of that phrase of the bridegroom's, "with all my worldly goods I thee endow." These proposed revisions are generally regarded as of rather startling nature, and the outcome at the triennial convention will be watched, we are told, with intense interest. The abbreviation of the obligatory part of the Decalog to be used in the services is to shorten the services, in line, perhaps, with the opinion of the eastern university president who once said that "very few souls are saved after the first twenty minutes." Be that as it may, it is significant that there should be proposed any changes at all, says the *Philadelphia Public Ledger*, since "the liturgy of a system of religion would naturally be the place where its most intense conservatism would concentrate." It is "evidence that the leaven of vitality works in the forms of this religious organization," and that "thoughtful churchmen recognize the necessity of bringing the forms of religion into contact with the conditions of every-day life."

The full form of the Decalog will still appear in the prayer-book, but the obligatory part will be in larger type, the option of the priest to prevail as to using the rest. The proposed revision leaves the First Commandment unchanged. In the Second it is proposed to omit everything after the words, "Thou shalt not bow down to them nor worship them." The Third is abbreviated to read: "Thou shalt not take the name of the Lord Thy God in vain." The Fourth, in its entirety, will read: "Remember that thou keep holy the Sabbath day." The Fifth reads merely: "Honor thy father and thy mother." The Sixth, Seventh, Eighth and Ninth are unchanged. The Tenth is shortened so as to read: "Thou shalt not covet."

It may be unprogressive and perhaps reactionary to express mild doubts as to the necessity or advisability of this procedure, observes the *Milwaukee Sentinel*, "but it must be admitted, even by the most ardent advocate of brevity, that the Commandments as they are given in the St. James version of the Bible do not occupy so much space that a reading of them, or even committing them to memory, constitutes a long or grievous task." And

"Whether cutting down the number of words in the Commandments would tend to bring them more into popular favor is doubtful. It seems safe to suggest that if a man won't read them and keep them in their present form he will hardly be influenced by reducing them by fifty words or so.

"Perhaps the ends of righteousness and true religion would be as well subserved by turning the energy involved in the movement for abbreviation into a whole-hearted and diligent effort to get people to pay a little more attention to the Commandments as they now stand."

Supposing the argument for brevity to be that children can remember shorter forms better, the *Brooklyn Eagle* argues that "the fear of the Lord is the beginning of wisdom, and in so far as what stimulates that fear is left out of the Decalog, elisions are a real disadvantage. And sentimentally to the devout mind there must be a certain repellency about the notion of cutting the commands of the Almighty for the convenience of us moderns, or for the preservation of the sacrosanctity of modern taste."

Much levity is loosed, of course, on the proposed changes in the marriage ceremony. The word "obey" is a joke anyway, agree many editors, and often the bridegroom's worldly goods are not a subject of solicitude to the bride or any one else. Referring to the changes seriously, the *Syracuse Herald* remarks that "in a marriage partnership of the right kind equality of rights, authority and influence should be the watchword." Those who are truly mated, says the *New York Evening World*, "do not need these ancient formulas to protect them. And those who are not truly mated will not be made a happy couple by promising what they have no intention of performing." Characterizing the deleted phrases as "relics of a feudal state," the *New York Globe* thinks that "their abolition records a remarkable progress—most of it achieved during the century just passed. With this progress has undeniably gone a loosening of the marriage bond, but the new rights of women can not be blamed for this result. Indeed, any reform which puts husband and wife actually on an equality probably tends to strengthen all real and honest marriages. Freedom and self-respect have never yet done harm to woman or man either." However, it is beyond the *New Haven Journal Courier* to account for the reasoning back of the commission's action in deleting phrases which have "never fallen under wide discussion or dignified criticism." On the contrary, continues this paper,

"It may be said almost that the length of time these features of the ritual have been in use attached to them a sacredness which it seems a pity to disturb, while the effect of eliminating them serves no better purpose than to call attention to other possibly archaic but certainly not offensive or disturbing features. There are a sufficient number of occasions where changes have to be made to satisfy the critical judgment of men without inviting the consideration of changes, as in this case, which gratify no real progressive spirit."

—a symbol of quality control

THE TRADEMARK of the American Brass Company identifies copper and brass products in which the highest skill in manufacture is combined with the accumulated knowledge and experience of more than a century.

The largest manufacturers of copper and brass products in the world, our plants are located with definite regard to the convenience of the consumer, making possible a service as prompt as it is dependable.

A single organization is responsible for the whole process of mining, smelting and manufacturing, thereby insuring the utmost in quality at every stage of production from mine to consumer.

CURRENT - POETRY

Unsolicited contributions to this department cannot be returned.

AMONG the May magazines one finds some good verse, but the *Century* quite legitimately claims precedence for carrying the name of Thomas Hardy. His buoyancy and freshness are a challenge to those who have not his years to account for. And the message of his lines was never more apropos than for to-day, perhaps. But then young and old are ever troubling each others heels.

AN ANCIENT TO ANCIENTS

BY THOMAS HARDY

Where once we danced, where once we sang,
Gentlemen,
The floors are suken, cobwebs hang,
And cracks creep; worms have fed upon
The doors. Yea, brighter times were then
Than now, with harps and tabrets gone,
Gentlemen.

Where once we rowed, where once we sailed,
Gentlemen,
And damsels took the tiller, veiled
Against too strong a stare (God wot
Their fancy . . . then or any when!),
Upon that shore we are clean forgot,
Gentlemen.

We have lost somewhat afar and near,
Gentlemen,
The thinning of our ranks each year
Affords a hint we are nigh undone,
That we shall not be ever again
The marked of many, loved of one,
Gentlemen.

In dance the polka met our wish,
Gentlemen,
The paced quadrille, the spry sehottische,
"Sir Roger"; and in opera spheres
The "Girl," the famed "Bohemian,"
And "Trovatore," held the ears,
Gentlemen.

This season's paintings do not please,
Gentlemen,
Like Etty, Mulready, Maclise;
Throbbing romance has waned and wanned;
No wizard wields the witching pen
Of Bulwer, Scott, Dumas, and Sand,
Gentlemen.

The bower we shined to Tennyson,
Gentlemen,
Is roof-wrecked; there damps drip upon
Sagged seats, the creeper-nails are rust;
The spider is sole denizen;
Even she who read those rhymes is dust,
Gentlemen.

We who met sunrise sanguine-souled,
Gentlemen,
Are getting weary. We are old;
These younger press; we feel our rout
Is imminent to Hades' den,
That evening shades are stretching out,
Gentlemen.

And yet, though ours be faltering frames,
Gentlemen,
So were some others' history names,
Who trod their track, light-stepped and fast
As these youth, and not alien
From enterprise, to their long last,
Gentlemen.

Sophocles, Plato, Socrates,
Gentlemen,
Pythagoras, Thucydides,
Herodotus, and Homer, yea,
Clement, Augustine, Origen,
Burnt brighter towards their setting-day,
Gentlemen.

And you, red-lipped and smooth-browed, list,
Gentlemen:
Much is there waits you we have missed;
Much lore we leave you worth the knowing;
Much, much has lain outside our ken.
Nay, rush not; time serves; we are going,
Gentlemen.

McCLURE's in its new incarnation goes back to its elder character and in its verse, like the specimen here presented, is true also to its old form:

THE NEWCOMER

BY ANITA FITCH

Like some small child, with poor bewildered feet,
My Soul may pass into eternity. . . .
Shall those I love be waiting in the dark
With shining lanterns and old thoughts of me?

Like mother lips
Of long agoes,
And village moons
And garden blows,
Would seem their lights!
Sweeter than dream
Of Seraphim
My folks would seem.

To evoke a picture like this is to have old family traditions to draw from, and to assert one's claim to membership in the higher races. It comes gratefully to the diminishing Nordic strains of our day's literary output. *Scribner's* prints this:

THE GRANDFATHER

BY JOHN JAY CHAPMAN

There's a kind of morning prayer
In the air
That recalls the song and praise
Of other days,

And the lilacs all in bloom,
And the sunny breakfast-room—
Open windows to the ground
All around;

Lawns a-glitter with the dew,
Scents from many a field and flower
In that early, quiet hour

Greeted you.
For, in coming down the stairs
You could smell delicious airs,—
The whole country-place seemed theirs;
Were they creeping in to prayers,
Or passing through,
Or visiting the vases freshly set
On the mantel, in the corner cabinet?
Was it lilies, was it pinks or mignonette?
What they were I'll hardly say—
Roses, roses anyway!
I smell them yet.

Just a morn like this, and then
Came the maids (there were no men)
One or two

Decent maids; then jolly children not a few,
And with shuffling of the chairs
They prepared the place for prayers,
Rompng through;

And scarcely grew more tame
When the silent moment came.

For they knew
When Grandpapa appeared
He was little to be feared

By the crew.
And their mothers were in bed.

(For surely for such notions
As family devotions

There's little to be said.)
So the ancient prayers were read
By that brilliant-eyed old man,
Full of reverence, full of grace,
To the children of his clan

In the quaint old country-place
That had nursed the elder race
With its bloom.
And he kneeled where they had kneeled,
And the odors of the field
Filled the room.

HARPER's goes to an Englishman for its most effective poem, and this is one of those little things that the late lamented Austin Dobson used to do so well.

THE PHILOSOPHERS

BY ROBERT GRAVES

Thought has a bias,
Direction a bend,
Space its inhibitions,
Time a dead end.

Is whiteness white?
Oh, then, call it black:
Farthest from the truth
Is yet halfway back.

Effect ordains Cause,
Head swallowing its tail;
Does whale engulf sprat,
Or sprat assume whale?

Contentions weary,
It giddies us to think,
Then kiss, girl, kiss!
Or drink, fellow, drink!

INSTEAD of the verses fitted to the bottom of the page we find a more generous allotment of space in our current magazines and some, even, like the *North American Review*, herewith, let a man have his say twice:

UNFURL THE FLAGS OF APRIL!

BY JOSEPH AUSLANDER

Frail larch shadows glimmer liquidly
Edged with the tremor of bewildered rain;
The pines are stenciled lank and vaporously
In oscillating mist; roots writhe and strain
To one more cool wet grasp of earth: O Spring,
In hollows where the stealthy tumult hums
A vehemence of rich remembering,
Unfurl the flags of April! Beat your drums!

In every corner of the woods and valleys
Trembles the little talk of violets;
Gust after gust leaps out, flaps loose, then rallies;
The reed tastes fire, the white dove tenderly frets;
I walk on the brink of beauty shivering;
Unfurl your flags and beat your drums, O Spring!

SOMEWHERE, I KNOW

BY JOSEPH AUSLANDER

Somewhere, I know, the sky at this bright hour
Is brighter than the long flash of the seas
Flung in a mellow curve against the breeze;
Somewhere, I know, one frail and wistful flower
Breathes to my heart more of the magic power
And pain of loveliness than all the trees
That shower ripe light on a thousand Hesperides
Leaving the stars ecstatic with the shower.

Somewhere, I know, there is an island's link
Of splendor beat and braided to the moon
Like blossom to blossom in an eternal June;
Somewhere, I know, there shines for me the brink
Of ultimate beauty, and may I thither climb
On the pale ladder of one immortal rhyme!

THE miracle of the sensitized plate that catches the light in a fleeting part of a second and produces a picture, is no greater than the miracle of manufacturing that has brought the camera within the reach of everyone.

Production in quantities—vast quantities—alone has made it possible to produce the camera at the price at which it is sold today.

And only production on the same vast scale has made it possible to produce White Owl Cigars at their present price. White Owl is a quality cigar that is offered at an unusually low price, because so many of them are produced that the makers can afford to accept a small margin of profit per cigar.

SERGEANT YORK'S OWN STORY

AS YORK FOUGHT, there was a prayer on his lips, we are told in "Sergeant York and His People," by Sam K. Cowan (Funk and Wagnalls). He "prayed to God to spare him and to have merey on those he was compelled to kill." In his own happy phrase, York's rifle killed "a-plenty," for he hailed from Pall Mall, a tiny village in the mountains of Tennessee, where every boy learns to shoot. It is the land of the "Long Hunters." As Mr. Cowan informs us, a carving on a tree near Pall Mall reads: "D. Boon CILLED a BAR ON Tree in The YEAR 1760."

"Our contemporary ancestors," these mountain people have been called, for their way of life has changed little since the first settlers entered the Appalachian country in pre-Revolutionary times. Says Mr. Cowan:

The mountaineer of to-day is the transplanted colonist of the eighteenth century; he is the backwoodsman of the days of Andrew Jackson; his life has the hospitality, the genuineness and simplicity of the pioneer. It has been said of the residents of the Cumberland Mountains that they are the purest Anglo-Saxons to be found to-day, and not even England can produce so clear a strain.

"Sergeant York and His People" is not a war book. It is a Mountain book. It traces "the molding of a man," as Mr. Cowan puts it, and one notes with curious interest the very striking part that religion played in the molding—religion and another sentiment as strong. When York was drafted,

He sent a note to Gracie, telling her his "little blue card" had come, and he asked her to meet him at the church—which always stands open by the roadside. As they walked toward her home they arranged to meet the next morning at the rock under the birch trees, when she would leave to "carry" the cows to the pasture. It was there she promised to marry him—when he returned from the war.

Men at the store saw Alvin come down from the mountain and he could not escape some banterings over the success or failure of his early morning tryst.

"Jest left it to her," he is said to have frankly confessed; "she can have me for the takin' when I git back."

He and his mother were alone in their home for several hours. When he left he stopt at the Brooks' porch, where relatives and neighbors had assembled. As he walked away he turned, unexpectedly, up the path toward the rock on the mountain-side. It is now known he went there to kneel alone in prayer.

When he came down to the store, to the men waiting for him, he spoke with an assured faith he had not shown before.

"I know, now, that I'll be back," he told them.

But, while this is not a war book, it nevertheless tells the story of York's superb feat of daring and marksmanship at "York's Hill," as the people of

France have named the scene of his exploit in the Argonne Forest. And, naturally, Mr. Cowan tells the story of events leading up to it.

In a small, red, cloth-covered memorandum book, intended for no eyes but his own, Sergeant York wrote the title, "A History of Places Where I Have Been." It became instead a history of Alvin C. York, mountaineer, soldier, and consummate hero, during the World War. The little volume, now broken-backed and worn, was always with him—in camp, aboard the transport, and at the front. Tho careless of grammar, now and then, and sometimes even of spelling, it has the interest that attaches always to a hero's own words.

He reached Camp Gordon, near Atlanta, Ga., on the night of November 16, 1917, and his diary relates:

"I was placed in the 21st training battalion. Then I was called the first morning of my army life to police up in the yard all the old cigarette butts, and I thought that was pretty hard as I didn't smoke. But I did it just the same."

Later on, he wrote:

"I stayed there and done squads right and squads left until the first of February, 1918, and then I was sent to Company G, 328 Inf. S2nd Div."

This, so Mr. Cowan explains, was the famous All-America Division, in which every State in the Union was represented as well as all the Allied countries. How happy York's life at Camp Gordon was may be judged from his notes:

"Well, they gave me a gun and, oh my! that old gun was just full of grease, and I had to clean that old gun for inspection. So I had a hard time to get that old gun clean, and oh, those were trying hours for a boy like me trying to live for God and do his blessed will. . . . Then the Lord would help me to bear my hard tasks.

"So there I was. I was the homesickest boy you ever seen."

This same little red book contains Sergeant York's own story

Copyrighted by Underwood & Underwood, New York.

SERGEANT YORK AND HIS PRESENT COMMANDER.

"She can have me for the takin' when I git back," said York, starting for the war.

CRAFTSMANSHIP IS A CREED HERE, AND ACCURACY A LAW

Even to observers of the finest automotive plants in Europe and America, the new Cadillac manufacturing facilities are a source of wonder and of admiration.

The fact that the site embraces more than 49 acres, and that the buildings provide a floor area of more than 2,500,000 square feet, is in itself sufficiently impressive.

But even the great structural magnitude of the Cadillac plant is surpassed by the orderly production and the exquisitely precise machine-equipment within. Craftsmanship is a creed here, and accuracy a law.

Thousands of the instruments of manufacture, expertly contrived and almost unbelievably exact, were designed especially to meet the requirements of Cadillac.

Every process of construction is pursued with microscopic carefulness. More close, fine measurements are observed on the Cadillac, it is believed, than on any other car.

In appearance, the motif of the vast new Cadillac works is immensity; but its spirit and its greater source of wonderment are minute precision in every smallest dimension and operation on the Cadillac car.

CADILLAC MOTOR CAR COMPANY - DETROIT MICHIGAN
Division of General Motors Corporation

of the exploit Marshal Foch called "the greatest thing accomplished by any private soldier of all the armies of Europe." Wrote the American:

"On the 7th day of October we lay in some little holes on the roadside all day. That night we went out and stayed a little while and came back to our holes, the shells bursting all around us. I saw men just blown up by the big German shells which were bursting all round us.

"So the order came for us to take Hill 223 and 240 the 8th.

"So the morning of the 8th just before daylight, we started for the hill at Chatel Chehery. Before we got there it got light and the Germans sent over a heavy barrage and also gas and we put on our gas-masks and just pressed right on through those shells and got to the top of Hill 223 to where we were to start over at 6:10 A.M.

"They were to give us a barrage. The time came and no barrage, and we had to go without one. So we started over the top at 6:10 A.M. and the Germans were putting their machine guns to working all over the hill in front of us and on our left and right. I was in support and I could see my pals getting picked off until it almost looked like there was none left.

"So 17 of us boys went around on the left flank to see if we couldn't put those guns out of action.

"So when we went around and fell in behind those guns we first saw two Germans with Red Cross bands on their arms.

"Some one of the boys shot at them and they ran back to our right.

"So we all ran after them, and when we jumped across a little stream of water that was there, there was about 15 or 20 Germans jumped up and threw up their hands and said, 'Comrade.' The one in charge of us boys told us not to shoot, they were going to give up anyway.

"By this time the Germans from on the hill was shooting at me. Well I was giving them the best I had.

"The Germans had got their machine guns turned around.

"They killed 6 and wounded 3. That just left 8 and then we got into it right. So we had a hard battle for a little while."

This modest reference to "a hard battle for a little while" covers the affair of one man fighting single-handed against a hundred Germans in machine-gun nests. The story continues:

"I got hold of a German major and he told me if I wouldn't kill any more of them he would make them quit firing.

"So I told him all right. If he would do it now.

"So he blew a little whistle and they quit shooting and came down and gave up. I had about 80 or 90 Germans there.

"They disarmed and we had another line of Germans to go through to get out. So I called for my men and one answered me from behind a big oak tree and the other men were on my right in the brush.

"So I said, 'Let's get these Germans out of here.' One of my men said, 'It's impossible.' So I said, 'No, let's get them out of here.'

"When my men said that this German major said, 'How many have you got?'

"And I said, 'I got a plenty,' and pointed my pistol at him all the time.

"In this battle I was using a rifle or a 45 Colt automatic pistol.

"So I lined the Germans up in a line of twos and I got between the ones in front and I had the German major before me. So I marched them right straight into those other machine guns, and I got them. When I got back to my Major's P. C. I had 132 prisoners.

"So you can see here in this case of mine where God helped me out. I had been living for God and working in church work sometime before I came to the army. I am a witness to the fact that God did help me out of that hard battle for the bushes were shot off all around me and I never got a scratch.

"So you can see that God will be with you if you will only trust Him, and I say He did save me."

Alvin York's supreme reward of heroism is the York Foundation. After a farm had been given him,

He asked that no other gifts be made, but instead the money be contributed to a fund to build simple, primary schools throughout the mountain districts where there were no state or county tax appropriations available for the purpose. Of the fund, not a dollar was to be for his personal use, nor for any effort he might put forth in its behalf.

So again in the form of Sergeant York rose out of the valley, above the mountains, and the sunlight of the nation's approval, fell upon it. Men of prominence volunteered to aid him in his efforts for the children of the mountains, and the result was the incorporation of the York Foundation, a non-profit-sharing organization, that is to build schoolhouses and operate schools. Among the trustees are an ex-Secretary of the United States,

Treasury, bishops of the churches, a state governor, a congressman, bankers, lawyers and business men. The fund is already a substantial one, steadily growing, and success is assured.

In connection with each school is to be land to be tilled by the students as a farm, and besides providing instruction in agriculture, the farm is to aid in the support of the school, and no child of the community is to miss the opportunity to attend through inability to pay the tuition charge. As each unit becomes self-supporting, another school is to be established in a new district.

In this new endeavor Alvin wished to do what he could to shield the boys now at play among the red brush upon the mountainsides from being compelled to say, after they had grown to young manhood, what he himself had been forced to confess: "I'm just an ignorant mountain boy."

THE BREWERS' "YEAR BOOK" FAR FROM DRY

MR. BRYAN lately suggested a law to restrain editors from writing on Prohibition while drunk, as various recent journalistic discussions of the subject showed "unmistakable evidences of tanglefoot," but no protests are heard from Mr. Bryan when the *Kansas City Star* reviews the brewers' "Year Book." Says the *Star*:

That literary gem, the "Year Book of the United States Brewers' Association," which cheers but not inebriates, is again upon our desk. We feared for a while it was lost to us, for the literary market has been off for the "Year Book" recently, but here it is back again, a little reminiscence in mood, but still hopeful and inspiring.

We always liked the "Year Book." Its literary taste is excellent. It can always be counted on to lead off with a quotation from Emerson or John Stuart Mill or De Toqueville. It does not quote Mill's well-known remark, "I always take my glass of half-and-half before going to bed." That would be too obvious, too much like talking shop, and the "Year Book" abhors commercialism. It prefers Mill in his loftier and more philosophical moments, as when he said, "There is a circle around every human being which no government ought to be permitted to overstep." The "Year Book" does our intelligence the compliment to assume that we will recognize that when Mill wrote that he was referring to the Volstead law. And that quotation which the "Year Book" gives up from De Montesquieu, "I shall ever repeat it that mankind are governed not by extremes, but by principles of moderation." The "Year Book" does not coarsely point out that by moderation De Montesquieu meant 4 per cent. beer and light wines. It knows we know that.

After this literary repast the "Year Book" does, it is true, devote a few words—about 150 pages—to a philosophical discussion of Prohibition; call it business if you will, for after all a "Year Book" must live. It says that now that Prohibition is here it experiences a great relief, for now the slate is clean and the country can make a fresh start in the way of writing sane and reasonable regulatory laws for booze. This reminds us a little of Jeff Davis's proclamation after the fall of Richmond. He said that the necessity of defending Richmond having been removed the Confederacy could at last devote all its attention to licking the North, or words to that effect. With Prohibition in effect, it's a great strain off the "Year Book's" mind. It has nothing to do now but bring booze back.

However, the "Year Book" gives us due warning that the brewers will frown upon those hasty enthusiasts who would merely sweep away Prohibition and stop there. As the *Star* observes, the "Year Book" goes on to say,

Sweeping Prohibition away is only the first step, and must be followed by sane and reasonable regulation of the liquor traffic. Whatever else the "Year Book" stands for it stands first for sanity and reason. It would itself, with its own hand, dash a glass of beer from an American citizen's lips if it thought he was taking that drink without due regard for sanity and reason, without a proper understanding of the regulatory powers inherent in the Constitution as modified by the fourth amendment, or without having read Mill on Liberty and De Toqueville on the Spirit of Laws.

That is the position the "Year Book" takes. It stands with Madison and Jefferson and Washington in opposition to the Eighteenth Amendment and the Volstead law, but like Carlyle and Herbert Spencer and the Federalist it wants drinking done thoughtfully. Thus comes the "Year Book" back again, chaste, elevated and severe. It no longer has to fight Prohibition and can give its whole attention to bringing booze back. It is free at last to say what it thinks. It has personal liberty for itself and nothing to do now but get it for the rest of us. No wonder it feels like a boy out of school.

This Machine Makes Ledger Posting Over 75% Automatic—

Burroughs holds its commanding position of leadership in the sale of ledger posting and statement machines because it gives the business man more automatic features in return for his investment.

Each of these features eliminates a certain amount of human labor—saving time and therefore money.

Each eliminates one more chance for human error—preventing a direct loss of money due to the error, or an indirect loss through the time spent in finding and correcting it.

And the more bookkeeping becomes automatic, the more easily and cheaply can you secure your daily figure information.

Burroughs manufactures Adding, Bookkeeping, Calculating and Billing Machines in many styles and sizes to meet the varied figure requirements of business. Priced as low as \$150—small down payments—easy terms.

A Burroughs will save you more time and money on your bookkeeping because it—

Automatically

prints the correct date where you want it with each posting.

Automatically

prints ciphers and punctuation—a remarkable saving considering the fact that about 25 per cent of all commercial figuring is ciphers.

Automatically

extends the new balance with each posting—giving positive proof of correct posting every day.

Automatically

adds debits and subtracts credits.

Automatically

selects proper columns for all entries without attention on the part of the operator.

Automatically

designates totals, sub-totals, subtractions, credit balances, overdrafts and closed accounts—symbols that appear on carbons as well as originals.

Automatically

non-adds folios and other descriptive numbers. Repeats folios and descriptive characters, if desired.

Besides having more automatic features than any other bookkeeping machine the Burroughs has—

full keyboard, descriptive keys, electric drive and many other features that save time and attention on the part of the operator. The combination of these and the automatic features enables the Burroughs Automatic Bookkeeping Machine to more than pay for itself in time-saving alone.

Let a Burroughs man show you one of the many styles of Burroughs machines that will handle your particular job in the easiest and most economical way.

THE FIRST OF THE FLAPPERS

JUST WHEN LADY ASTOR was ridiculing the flapper, there emerged from the printer's a two-volume book which describes not only the first of the flappers but the first of the Lady Astors, and it is hard to say which of them was the more pitilessly ridiculed in her day. The book, "Elizabeth Cady Stanton as Revealed in her Letters, Diary, and Reminiscences" (Harper's), takes us back to the period when "shorts," meaning short skirts with trousers underneath, startled the world. The "Bloomer costume," this innovation was then called, and Mrs. Stanton writes thus of its principal sponsor:

There was one bright woman among the many in our Seneca Falls literary circle to whom I would give more than a passing notice—Mrs. Amelia Bloomer, who represented three novel phases of woman's life. She was assistant postmistress; an editor of a reform paper advocating temperance and woman's rights; and an advocate of the new costume which bore her name.

In 1849 her husband was appointed postmaster, and she became his deputy, was duly sworn in, and, during the administration of Taylor and Fillmore, served in that capacity. When she assumed her duties the improvement in the appearance and conduct of the office was generally acknowledged. A neat little room adjoining the public office became a kind of ladies' exchange, where those coming from different parts of the town could meet to talk over the news of the day, and read the papers and magazines that came to Mrs. Bloomer as editor of the *Lily*. Those who enjoyed the brief reign of a woman in the post-office can readily testify to the void felt by the ladies of the village when Mrs. Bloomer's term expired and a man once more reigned in her stead. However, she still edited the *Lily*, and her office remained a fashionable center for several years.

Altho she wore the bloomer dress, its originator was Elizabeth Smith Miller, the only daughter of Gerrit Smith. In the winter of 1851 Mrs. Miller came to visit me in Seneca Falls, dressed somewhat in the Turkish style—short skirt, full trousers of fine black broadcloth; a Spanish cloak of the same material reaching to the knee; beaver hat and feathers and dark furs; altogether a most becoming costume and exceedingly convenient for walking in all kinds of weather. To see my cousin, with a lamp in one hand and a baby in the other, walk upstairs with ease and grace, while, with flowing robes, I pulled myself up with difficulty, lamp and baby out of the question, readily convinced me that there was sore need of reform in woman's dress, and I promptly donned a similar costume. What incredible freedom I enjoyed for two years! Like a captive set free from his ball and chain, I was always ready for a brisk walk through sleet and snow and rain, to climb a mountain, jump over a fence, work in the garden, in fact, for any necessary locomotion.

Mrs. Bloomer having the *Lily* in which to discuss the merits of the new dress, the press generally took up the question, and much valuable information was elicited on the physiological results of woman's fashionable attire; the crippling effect of tight waists and long skirts, the heavy weight on the hips, and high heels, all combined to throw the spine out of plumb and lay the foundation for all manner of nervous diseases. But, while all agreed that some change was absolutely necessary for the health of women, the press stoutly ridiculed those who were ready to make the experiment.

A few sensible women, in different parts of the country, adopted the costume, and farmers' wives especially proved its convenience. It was also worn by skaters, gymnasts, tourists, and in sanitariums. But, while the few realized its advantages, the many laughed it to scorn, and heaped such ridicule on its wearers that they soon found that the physical freedom enjoyed did not compensate for the persistent persecution and petty annoyances suffered at every turn. To be rudely gazed at in

public and private, to be the conscious subjects of criticism, and to be followed by crowds of boys in the streets, were all, to the very last degree, exasperating. A favorite doggerel that our tormentors chanted, when we appeared in public places, ran thus:

Heigh! ho! in rain and snow,
The bloomer now is all the go.
Twenty tailors take the stitches,
Twenty women wear the breeches.
Heigh! ho! in rain or snow,
The bloomer now is all the go.

The singers were generally invisible behind some fence or attic window. Those who wore the dress can recall countless amusing and annoying experiences. The patience of most of us was exhausted in about two years; but our leader, Mrs. Miller, bravely adhered to the costume for nearly seven years, under the most

trying circumstances. While her father was in Congress, she wore it at many fashionable dinners and receptions in Washington. She was bravely sustained, however, by her husband, Colonel Miller, who never flinched in escorting his wife and her coadjutors, however inartistic their costumes might be. Mrs. Miller was also encouraged by the intense feeling of her father on the question of woman's dress. To him the whole revolution in woman's position turned on her dress. The long skirt was the symbol of her degradation.

Some very distinguished women of that day went in for "shorts," and Mrs. Stanton goes on to say,

The names of those who wore the bloomer costume, besides those already mentioned, were Paulina Wright Davis, Lucy Stone, Susan B. Anthony, Sarah and Angelina Grimke, Mrs. William Burleigh, Celia Burleigh, Amelia Willard, Dr. Harriet N. Austin, Charlotte Beebe Wilbour, Helen Jarvis, Lydia Jenkins, and many patients in sanitariums, whose names I can not recall. Looking back to this experiment, I am not surprized at the hostility of individual men to the dress, as it made it very uncomfortable for them to go anywhere with those who wore it. People would stare, many make rude remarks, boys follow in crowds, with jeers and laughter, so that gentlemen in attendance would feel it their duty to show

fight, unless they had sufficient self-control to pursue the even tenor of their way, as the ladies themselves did, without taking the slightest notice of the commotion created. Colonel Miller went through the ordeal with coolness and dogged determination, to the vexation of his acquaintances, who thought one of the duties of a husband was to prescribe his wife's costume.

Tho we did not realize the success we hoped for by making the dress popular, yet the effort was not lost. We were well aware that the dress was not artistic, and tho we made many changes, our own good taste was never satisfied. After giving up the experiment, we found that the costume in which Diana the Huntress is represented, and that worn on the stage by Ellen Tree in the play of "Ion," would have been more artistic and as convenient. But we, who had made the experiment, were too happy to move about unnoticed and unknown, to risk again the happiness of ourselves and our friends by any further experiments. I have never wondered since that the Chinese women allow their daughters' feet to be encased in iron shoes, or that the Hindoo widows walk calmly to the funeral pyre; for great are the penalties of those who dare resist the behests of the tyrant Custom.

It was a favorite joke of Mrs. Stanton's to address Mrs. Miller as "Julius," and one should bear this in mind while reading the following letter to the inventor of bloomers:

SENECA FALLS, AUGUST 5, 1851.

DEAR JULIUS,—Now I have something to tell poor Julius that will cheer his sad heart. Well, you heard of the proposed festival at Glen Haven. I went to it and had a most pleasant

THE ORIGINAL FLAPPER—1851 MODEL.

This is the costume that shocked our grandfathers. Mrs. Elizabeth Cady Stanton wearing "shorts," as the rig was then called.

A Roofing Record of Interest to You

The oldest roofs in the country, covered with ready-roofing, are all Ruberoid roofs.

This unique distinction which Ruberoid Roll-roofing enjoys is due to two facts. First, Ruberoid was the first ready-roofing on the market and thus was granted unusual opportunity to establish records for longevity. Second, its quality is so high that it was able to take full advantage of the opportunity.

There are many Ruberoid roofs, still in splendid condition, which were laid when Ruberoid was first sold, nearly thirty years ago. Other ready-roofings may last that long. Ruberoid has!

An uncounted number of Ruberoid roofs have withstood fifteen, twenty, and twenty-five years of service, without indicating the limit of their endurance.

We have abundant evidence in substantiation of this, which should be studied by everyone interested in roofing economy and efficiency. A small amount—all that space permits—is shown on this page. We will gladly place the whole story before you on request.

Ruberoid Roll-roofing is furnished in two styles—Smooth-surfaced (grey) and Mineralized (covered with green or red slate). Either gives unexcelled service on the roofs of factories, warehouses, mills, foundries and other industrial buildings.

The better lumber and building-supply dealers throughout the country carry Ruberoid Roll-roofing in stock.

Address

time. I took Amelia, who was in "shorts," and Theodore. There I saw ten ladies in costume—three from Syracuse, four in our party, and the rest residents of Glen Haven. Theodosia Gilbert's get-up pleased me very much. She was dressed in a short green tunic not reaching to the knee, and white linen drilling trousers made *à la masculine*. They all wore white trousers with dresses of various colors. In a word, the "shorts" were the theme of conversation, traets and addresses. Oh, that you had been there! We dined in the open air and had a great many agreeable people at table, so that the conversation was quite brilliant and interesting. At dessert, William Burleigh spoke in high praise of the "shorts" and with great disgust of the "longs." "The long dress is now an offense to my eyes," he said: "and I can not help exclaiming to myself whenever I see a woman trailing bedraggled petticoats through the dust, 'Oh, the dirty creature!'" Warm applause from the delighted listeners. But Mr. Burleigh had with him a Miss B., whom he treated with too great attention. I like fun and frolic, romps and jokes, but sentimental pawings are excessively disgusting to me. Returning to Glen Haven, we reached Skeneateles at seven, and lo and behold, all the town had come out to see us! We had left our carriage and coachman there, and the news had spread through the village that four ladies in "shorts" were to come down in the evening boat; so there the multitude stood—men women, and children. Ossian Dodge with his guitar in a green baize bag and I with my baby in a blue merino cloak took the lead, the three other ladies and two or three odd-looking gentlemen in long hair following. What a spectacle for men and angels as we solemnly proceeded from the boat to our carriages. What would the venerable judge have said could he have witnessed the scene!! I expected to be insulted, but not one word was said. The people had evidently been impelled by an honest curiosity to see—nothing more. But I was glad enough to find myself shut up in a carriage in brisk motion with my blessed baby safe in my lap. Julius, how long will the heathen rage? I have received another awful shot about the short dress, and seven vials of wrath have been poured on my devoted head. I think they were bottled by one of my New York sisters. They have a metropolitan odor. We are very much like the poor fox in the fable, who having cut off his tail and not being able to restore it, found that nothing remained for him to do but to persuade the other foxes to do likewise that he might not be a by-word among his kind. As we have performed this surgical operation on our entire wardrobe, nothing remains for us to do but to induce as many as possible to follow our example. We can have no peace in traveling until we cut off the great national petticoat. God grant that we may be more successful than the fox.

A serious-minded set of women were the flappers of that day—"strong-minded," too, and eager to fight for "women's rights" even tho the fight might involve addressing a State Legislature. In Mrs. Stanton we have a precursor of Lady Astor. When a woman could make herself heard in the Capitol at Albany, it was only a question of time when women would take their place in political life in a far more effectual way. However, it required courage to break the ice:

Women had been willing so long to hold a subordinate position, both in private and public affairs, that a gradually growing feeling of rebellion among them quite exasperated the men, and their manifestations of hostility in public meetings were often as ridiculous as humiliating.

True, those gentlemen were all quite willing that women should join their societies and churches to do the drudgery; to work up the enthusiasm in fairs and revivals, conventions, and flag presentations; to pay a dollar apiece into their treasury for the honor of being members of their various organizations; to beg money for the church; to circulate petitions from door to door; to visit saloons; to pray with or defy rum-sellers; to teach school at half price, and sit round the outskirts of a hall, in teachers' state conventions, like so many wallflowers; but they would not allow them to sit on the platform, address the assembly, or vote for men and measures.

From the year 1850 conventions were held in various States, and their respective legislatures were continually besieged. Appeals, calls for meetings, and petitions were circulated without number. In 1854 I prepared my first speech for the New York legislature. That was a great event in my life. My father felt so nervous when he saw by the *Albany Evening Journal*, that I was to speak at the Capitol, he asked me to stop at Johnstown on my way to Albany. Late one evening, when he was alone in his office, I entered and took my seat on the opposite side of his table, to read my speech to him. On no occasion, before or since, was I ever more embarrassed—an audience of one, and that the one of all others whose approbation I most desired,

whose disapproval I most feared. I knew he condemned the whole movement, and was deeply grieved at the active part I had taken. Hence I was fully aware that I was about to address a wholly unsympathetic audience. However, I began, with a dogged determination to give all the power I could to my manuscript, and not to be discouraged or turned from my purpose by any tender appeals or adverse criticisms. I described the widow in the first hours of her grief, subject to the intrusions of the coarse minions of the law, taking inventory of the household goods, of the old armchair in which her loved one had breathed his last, of the old clock in the corner that told the hour he passed away. I threw all the pathos I could into my voice and language at this point, and, to my intense satisfaction, I saw tears filling my father's eyes. I can not express the exultation I felt, thinking that now he would see, with my eyes, the injustice women suffered under the laws he understood so well.

Feeling that I had touched his heart, I went on with renewed confidence, and, when I had finished, I saw he was thoroughly magnetized. With beating heart I waited for him to break the silence. He was evidently deeply pondering over all he had heard, and did not speak for a long time. I believed I had opened to him a new world of thought. He had listened long to the complaints of women, but from the lips of his own daughter they had come with deeper pathos and power. At last, turning abruptly, he said: "Surely you have had a happy, comfortable life, with all your wants and needs supplied; and yet that speech fills me with self-reproach; for one might naturally ask, how can a young woman, tenderly brought up, who has had no bitter personal experience, feel so keenly the wrongs of her sex? Where did you learn this lesson?" "I learned it here," I replied, "in your office, when a child, listening to the complaints women made to you. They who have sympathy and imagination to make the sorrows of others their own can readily learn all the hard lessons of life from the experience of others." "Well, well!" he said, "you have made your points clear and strong; but I think I can find you even more cruel laws than those you have quoted." He suggested some improvements in my speech, looked up other laws, and it was one o'clock in the morning before we kissed each other good-night. How he felt on the question after that I do not know, as he never said anything in favor of or against it. He gladly gave me any help I needed, from time to time, in looking up the laws, and was very desirous that whatever I gave to the public should be carefully prepared.

The first woman's convention, which met in Albany at this time, was followed by "a kind of protracted meeting" that lasted two weeks, and there were several legislative hearings, to say nothing of meetings in Association Hall. Further:

Being the capital of the State, discussion was aroused at every fireside, while the comments of the press were humorous and varied. Every little country paper had something witty or silly to say about the uprising of the "strong-minded."

Here is a specimen of the way such editors talked at that time. The *Albany Register*, in an article on "Woman's Rights in the Legislature," dated March 7, 1854, says:

"While the feminine propagandists of women's rights confined themselves to the exhibition of short petticoats and long-legged boots, and to the holding of conventions and speechmaking in concert rooms, the people were disposed to be amused by them, as they are by the wit of the clown in the circus, or the performances of Punch and Judy on fair days, or the minstrelsy of gentlemen with blackened faces, on banjos, the tambourine, and bones. But the joke is becoming stale. People are getting cloyed with these performances, and are looking for some healthier and more intellectual amusement. The ludicrous is wearing away, and disgust is taking the place of pleasurable sensations, arising from the novelty of this new phase of hypocrisy and infidel fanaticism.

"People are beginning to inquire how far public sentiment should sanction or tolerate these unsexed women, who would step out from the true sphere of the mother, the wife, and the daughter, and, taking upon themselves the duties and the business of men, stalk into the public gaze, and, by engaging in the politics, the rough controversies and trafficking of the world, upheave existing institutions, and overturn all the social relations of life."

The frivolous objections some women made to our appeals were as exasperating as they were ridiculous. To reply to them politely, at all times, required a divine patience. On one occasion, after addressing the legislature, some of the ladies, in congratulating me, inquired in a deprecating tone, "What do you do with your children." "Ladies," I said, "it takes me no longer to speak than you to listen; what have you done with your children the two hours you have been sitting here?"

The A No. 1 Tire Man of the Town

It takes about 80,000 tire dealers to serve the vast car-owning population of this country. What is your idea of what a tire dealer ought to be?

IN 1920 the makers of United States Tires brought a note of commonsense into the tire business with a message which said—

"Go to a legitimate dealer and get a legitimate tire"

From then on—over a period of two years—the American public was given the frankest picture ever published of the good and bad in tire retailing.

It was surprising how many car-owners were as anxious to find a legitimate tire dealer as we were to tell about him.

* * *

Today, go into any typical American city and you'll locate one or more tire dealers whose business rank is that of the best dry goods or clothing or hardware store.

This wasn't true a few years ago.

Now, when you think of the 12,000,000 automobiles that will soon be running in this country, you can see how legitimate tire merchants are needed.

The makers of United States Tires urge upon everybody—manufacturer and dealer alike—a new kind of competition.

Let us compete for more and more public confidence.

Let us compete for higher and higher quality.

Let us compete for still more dependable public service.

Safe— Efficient

Just one set of teeth, to last the rest of your life. Is it sensible to experiment with them by using gritty, druggy dentifrices that claim to do things only strong chemicals can do?

The reason why more dentists recommend Colgate's than any other dentifrice is that Colgate's *cleans* teeth the right way, *safely* and *thoroughly*—and makes no absurd claims to do the miraculous.

MORE OF CHAUNCEY—BY REQUEST

THE strange sight of a famous actor with a loaded rifle leveled at a six-foot stranger in Kansas City, demanding an apology for saying his play was rotten, must have enlivened the evening in that part of Missouri. It is related in Chauncey M. Depew's "My Memories of Eighty Years" (Scribner's), which overflows with amusing anecdotes, and which we turn to again at the request of a reader who asks for more. One of Mr. Depew's theatrical acquaintances was Richard Mansfield, famous for his hair-trigger temper. Mr. Depew relates:

One of the colored porters in the Wagner Palace Car service, who was always with me on my tours of inspection over the railroad, told me an amusing story of Mr. Mansfield's devotion to his art. He was acting as porter on Mansfield's car, when he was making a tour of the country. This porter was an exceedingly intelligent man. He appreciated Mansfield's achievements and played up to his humor in using him as a foil while always acting. When they were in a station, William never left his car, but remained on guard for the protection of its valuable contents.

After a play at Kansas City, Mansfield came into the car very late and said: "William, where is my manager?"

"Gone to bed, sir, and so have the other members of the company," answered William.

Then in his most impressive way, Mansfield said: "William, they fear me. By the way, were you down at the depot to-night when the audience from the suburbs were returning to take their trains home?"

"Yes, sir," answered William, tho he had not been out of the car.

"Did you hear any remarks about my play?"

"Yes, sir."

"Can you give me an instance?"

"Certainly," replied William; "one gentleman remarked he had been to the theater all his life, but that your acting to-night was the most rotten thing he had ever heard or seen."

"William," shouted Mansfield, "get my Winchester and find that man."

So Mansfield and William went out among the crowds, and when William saw a big, aggressive-looking fellow, whom he thought would stand up and fight, he said: "There he is!"

Mansfield immediately walked up to the man, covered him with his rifle, and shouted: "Hold up your hands, you wretch and take back immediately the insulting remark you made about my play and acting, and apologize."

The man said: "Why Mr. Mansfield, somebody has been lying to you about me. Your performance to-night was the best thing I ever saw in my life."

"Thank you," said Mansfield, shouldering his rifle, and added in the most tragic tones: "William, lead the way back to the car."

Of all his actor friends, Mr. Depew says that none was more delightful either on the stage or in private life than Joseph Jefferson:

He early appealed to me because of his

Rip Van Winkle. I was always devoted to Washington Irving and to the Hudson River. All the traditions which have given a romantic touch to different points on that river came from Irving's pen. In the days of my youth the influence of Irving upon those who were fortunate enough to have been born upon the banks of the Hudson was very great in every way.

As I met Jefferson quite differently, I recall two of his many charming stories. He said he thought at one time that it would be a fine idea to play Rip Van Winkle at the village of Catskill, around which place was located the story of his hero. His manager selected the supernumeraries from among the farmer boys of the neighborhood. At the point of the play where Rip wakes up and finds the lively ghosts of the Hendrick Hudson crew playing bowls in the mountains, he says to each one of them, who all look and are dressed alike: "Are you his brother?"

"No," answered the young farmer who impersonated one of the ghosts, "Mr. Jefferson, I never saw one of these people before." As ghosts are silent, this interruption nearly broke up the performance.

During the Spanish-American War I came on the same train with Mr. Jefferson from Washington. The interest all over the country at that time was the remarkable victory of Admiral Dewey over the Spanish fleet in the harbor of Manila. People wondered how Dewey could sink every Spanish ship and never be hit once himself. Jefferson said in his quaint way: "Everybody, including the Secretary of the Navy and several admirals, asked me how that could have happened. I told them the problem might be one which naval officers could not solve, but it was very simple for an actor. The failure of the Spanish Admiral was entirely due to his not having rehearsed. Success is impossible without frequent rehearsals."

There was a dinner given in New York to celebrate the hundredth anniversary of Washington Irving's birth. I was one of the speakers. In an adjoining room was a company of young and very successful brokers, whose triumphs in the market were the envy of speculative America. While I was speaking they came into the room. When I had finished, the host at the brokers' dinner called me out and said: "We were much interested in your speech. This Irving you talked about must be a remarkable man. What is the dinner about?"

I answered him that it was in celebration of the hundredth anniversary of the birth of Washington Irving.

"Well," he said, pointing to an old gentleman who had sat beside me on the speakers' platform, "it is astonishing how vigorous he looks at that advanced age."

During Thackeray's visit to America, Mr. Depew knew him well, and he tells us.

They had a good story of him at the Century Club, which is our Athenaeum, that when taken there after a lecture, by his friends, they gave him the usual Centurion supper of those days—saddlerock oysters. The saddlerock of that time was nearly as large as a dinner-plate. Thackeray said to his host, "What do you do with this animal?"

The host answered. "We Americans swallow them whole."

Thackeray, always equal to the demand of American hospitality, closed his eyes and swallowed the oyster, and the oyster went down. When he had recovered, he remarked: "I feel as if I had swallowed a live baby."

Had Your Iron Today?

Not Merely Delicious

This Raisin Pie Supplies Quick-Acting Energy to Tired, Hard-Working Men

HELL thank you for its luscious flavor, but more for the refreshment in this incomparably good dessert after his long business day. A man's food is of paramount importance.

Raisins furnish 1560 calories of energizing nutriment per pound. They are 75 per cent. *natural fruit-sugar*, and *this kind* of sugar is in practically predigested form.

So it doesn't tax him, and he is conscious of its nutriment almost immediately. With such refreshment he feels fit—and ready for anything you want to do that evening.

Raisins are rich in food-iron also—good for the blood.

Wise women cater to these needs of men.

Pie is man's ideal dessert and Sun-Maid Raisins from California's sun-bathed valleys make a pie de luxe.

Tender, meaty, thin-skinned fruit-meats. The juice forms a luscious sauce. Add these features to your pie crust and then taste the result.

Here's a recipe if you want one. Try it if you haven't a favorite of your own.

See what *he* says when he tastes pie like this.

Raisin Pie

2 cups Sun-Maid Raisins	2 tablespoonfuls lemon juice
1½ cups boiling water	1 tablespoonful grated lemon rind
½ cup sugar	Juice of 1 orange
2 tablespoonfuls cornstarch	1 tablespoonful grated orange rind
1 cup chopped walnuts	

Cook raisins in boiling water for 5 minutes, pour into it sugar and cornstarch which have been mixed. Cook until thick, remove from fire and add other ingredients. Bake between two crusts. Walnuts may be omitted if desired. All measurements for this recipe are level.

SUN-MAID RAISINS

For Spring Fever

Luscious little raisins full of energy and iron—sold in 5c packages everywhere.

Renew the energy that Spring Fever saps.

Try them. At all stores.

Sun-Maids are selected raisins produced from California's finest table grapes.

The Seeded Sun-Maids, called Muscats, are sterilized and wrapped in wax paper, all ready for your use.

Always ask for Sun-Maid brand and get the finest raisins grown. Raisins are 30 per cent cheaper than formerly—see that you get plenty in your food.

Send coupon for free book containing 100 tested recipes for delicious raisin foods.

NO DISARMAMENT FOR THE WORLD'S YOUNGEST REPUBLIC

GENERAL SEMENOFF, described in the press as a butcher, a bandit, and an undesirable alien, has come to us with a picturesque record, of which perhaps the most eventful chapter concerns his operations against the Far Eastern Republic. Yet the Far Eastern Republic is still

Illustrations from "Asia," the American magazine on the Orient.

ONE OF CHITA'S FIGHTING MEN.

The soldier prices electric light bulbs the Chinese merchants have brought to Siberia.

there. Russia has officially recognized it. And, tho Russian, it is a real republic. Mr. Junius B. Wood, in an article contributed to the *Army and Navy Journal*, tells us:

Soldiering is the best paying steady job in the Far Eastern Republic at present, and about one-third of the adult male population is following it as a means of livelihood. It provides an existence, something which has been extremely uncertain in recent years, and in addition there is a well-defined necessity for an army, which makes military service a patriotic duty. The army is neither well-equipped, comfortably clothed nor sufficiently fed, but it has shown its willingness and ability to fight, which makes it an important factor in the life of the world's youngest republic.

The Far Eastern Republic has an area of about 445,000 square miles, a population of 1,800,000, and an army mustering between 50,000 and 60,000. This is supplemented as the political exigencies or local conditions demand by bands of so-called "Partizans"—a Siberian version of the American Minute Men of '76—who take the family rifle and join the ranks until the emergency has passed. The Republic's military force is extremely flexible, and guerrilla warfare is a conspicuous part of its activities.

In shape the Republic is like a dumbbell, stretching from the Japan Sea to Lake Baikal and sandwiched between the Russian Socialistic Federative Soviet Republic (Soviet Russia), on the north, and Manchuria and Inner Mongolia, on the south. Tho the larger part of Siberia, including Kamchatka, is thus nominally under the control of Moscow, the smaller southern portion, which is governed from Chita, comprises the richest and most populous portion of the continent.

It is a picturesque sight when a regiment of the nondescript army of the Far Eastern Republic marches through the sandy streets of Chita behind the waving red flags. The headquarters military band, which parades all day and whose members play most of the night in the local theaters or summer gardens to eke out a living, blares forth "The Girl I Left Behind Me" or some stirring American march, and the spectacle of the grim, young

faces, the soft crunch of the ragged shoes and magic of the music gives a thrill to the most hardened of spectators.

Discipline is not meticulous, but it is strict. Martial law is enforced through the republic, and soldiers do the policing. Any person on the streets after midnight is sure to be stopped by a sentry and sent to the headquarters, where he will remain until daylight unless he can give a satisfactory account of himself. Such a precaution is necessary with the present vast floating population of the country. Vodka is forbidden and, tho contraband, is smuggled past the guards: intoxication in the army is rare and severely punished.

The system of commissars, or peoples' control, prevails in the army as in all the public service. A civilian commissar is attached to each battalion. In camp, each soldier has an equal voice in running the affairs of his military unit and is supposed to prefer his complaints to the commissar. However, the commanding officer is the deciding judge and the commissar usually works closely with him, to all practical purposes relieving the officer of much of the camp routine. While on the march or in action, the authority of the commanding officer is absolute.

Reviewing an article by Mr. Robert Littell in the *New Republic*, the *New York Globe* observes:

To summarize Mr. Littell's figures, the Far Eastern Republic is about a third as large as the United States, has 270,000,000 acres of timber, or enough to cover completely almost three States the size of California; has in eastern Siberia alone 55,000,000 acres of arable land, of which only 3,500,000 acres are cultivated; is rich in gold, silver, lead, zinc, precious stones, iron and furs, and has 2,000,000 inhabitants out of the twenty or thirty million, which it might support by agriculture or stock-raising alone. In the island of Sakhalin, half of which belongs to Russia, but has been occupied by the Japanese, there are valuable supplies of coal and oil.

The Far Eastern Republicans are eager for investments or foreign capital and wish to open up trade with the outside world. In the fulfilment of this latter ambition they are limited at present by the arbitrary action of Japan in seizing the railroads and ports of entry on the Pacific.

It would doubtless embarrass our government at the present

FATHER IVAN GOES A-FISHING.

Tho carrying bait, this Siberian priest still wears his high hat.

moment to enter into cordial relations with this young republic. Yet an early recognition would be in line with the liberal Oriental policy of Mr. Hughes and would not afford Japan any reasonable cause for complaint.

A contributor to *Asia*, Mr. Orrin Keith, tells us how this youngest of Republics came into being. Says he:

The Far Eastern Republic is the child of the Russian Revolu-

The vital instant

in a motor comes when compression is complete, piston at top and spark fires. Every ounce of traction delivered to the rear wheels results from the action of the gas at that vital instant. Upon the degree of volatility of the gasoline depends the translation of every molecule into maximum energy at that vital instant.

TEXACO GASOLINE

THE **VOLATILE** GAS

(Volatility is the readiness with which gasoline gives up its power)

The high volatility of Texaco Gasoline comes into evidence in many ways; perhaps most unmistakably in the congestion of city traffic, where its delivery of quick impulse in response to the accelerator is sure to be observed and appreciated.

Texaco Motor Oils are heavy-body lubricants, and are distinguished by their clear, pale color. Light, medium, heavy and extra-heavy—they fit all cars and all conditions. You will find them wherever you see the Texaco red star*.

THE TEXAS COMPANY, U. S. A.
Texaco Petroleum Products

*In ten years the consumption of Texaco Lubricating Oils has increased from 300,000 gallons per month to 7,500,000 gallons per month.

tion and Allied intervention. The Bolshevik revolution swept across Siberia, carrying all before it until it met the forces of the Allies. The meeting was not particularly violent, but it played havoc with life and civilization in the Russian Far East. After two years of indecisive struggle, both forces receded, and between them sprang up a young state, peopled chiefly by Siberians and Russians. When the news of the Revolution reached them, in March, 1917, they were in ecstacy. Some thirty or forty thousand Russian escaped prisoners, then in the wilds of Siberia, shared their joy. These men, who hid by day and traveled by night, were working their toilsome way back to Russia. Many of them were "politicals." The great majority were ordinary criminals. To political and criminal alike the end of the Empire with its ubiquitous police system meant freedom. Still other persons whose situation was vastly altered by the Revolution were the revolutionary workers who had become voluntary exiles from their native land. There were thousands of such fugitives in the United States, and many of them crossed the Pacific and landed at Vladivostok.

Among them was a Jewish Communist. Alexander Michaelovitch Krasnostchokoff, known in America under the name of Tobelson. On his arrival in Vladivostok, in July, 1917, Krasnostchokoff, who had been practising law in Chicago, secured a job as secretary of the Domestic Servants Union. His salary was six rubles a month—and that in paper!

The position put him in touch with the laborers, and his ability soon took him to conventions and conferences, of which there were endless numbers in those days. Before long he was looked upon as the most able leader of the workers.

So when a Far Eastern Soviet Government was established with its headquarters at Khabarovsk, Krasnostchokoff naturally enough became its president, and eventually even Vladivostok recognized it. But, we read on:

This was a fatal success, for it resulted in the landing of Allied troops, the complete overthrow of the Soviet power in the Far East, three years of civil war and Cossack terrorism, and the utter disruption of the life of the country. At last the people grew so desperate that even the power of the Allies ceased to restrain them. Thousands took such weapons as were at hand, even to pitchforks and scythes, and fled into the hills to wage a guerrilla warfare against their oppressors. They looked to the coming of the Red Army as the one means of relief. But destiny had decreed that they should win their own freedom instead of changing from one master to another. And of the destiny Krasnostchokoff was the chosen instrument. When the Japanese advanced into the Amur country, in the fall of 1918, he had made his way up into the Zeya country, north of Blagoveschensk. After various adventures he found himself in jail in Irkutsk, in December of 1919. When Kolchak's soldiers revolted and the revolutionaries seized the city, they rescued their imprisoned comrades. They recognized Krasnostchokoff, altho he bore another name, and hailed him as the leader who should

direct their advance to join hands with the advancing Reds.

But during his two and a half years in Siberia, he had come to the realization that his old opponents were right, that the country was not ready for Communism. In its eagerness to be freed from Cossack tyranny, it must not make the mistake of embracing Bolshevism. But the Bolsheviks were advancing in overwhelming numbers. There was no power in Siberia, reactionary or Allied, which could stop their march to the Pacific. Krasnostehokoff therefore sought permission from the Czechs to send a mission to the headquarters of the Red Army. He accompanied the mission and met the Soviet commanders at Omsk.

The plan for a buffer state was laid before them, and after hours of discussion they approved it. Then Moscow had to be consulted, and there was more argument over the long-distance telephone with Lenin and Trotzky. Finally they, too, approved. The advance of the Red Army was halted, and Krasnostehokoff was permitted to go back and organize a democratic state in which the institution of private property was to be preserved in its entirety.

But by the time Krasnostehokoff reached Irkutsk, the Siberians had installed a Soviet Government. Krasnostehokoff tried in vain to interest them in a buffer state. Finally he gave up and started east to see if he could find a more receptive frame of mind among the people of Transbaikial.

He arrived at Verkhne-Udinsk the day the Siberians drove Semenoff out of that city. Here again he took up the argument for a democratic state, but he found the people suspicious of any moderate measures. They feared the return of reaction and they knew Bolshevism would prevent it. Therefore they wanted Bolshevism.

Even at that time, however, they repudiated Communism. They carried banners on which was inscribed the slogan, "We Want Bolshevism but Not Communism!" For the rest of the world the two terms are synonymous. The Siberian peasant, however, draws a distinction. To him the Bolsheviks are the men who made the Russian Revolution a success. Therefore he honors them. He has pictures of Lenin and Trotzky, because he looks upon them as liberators.

Ask the peasants if they are Communists, and invariably you receive for reply the indescribably final Russian negative, "Nyet!" They are not! They tell you that they have to work from dawn till dark for what they get, and that they are unwilling that the surplus should be given to the city worker, whose chief aim in life is to work six hours a day or less. They want money for what they relinquish and they are quite determined to have it.

Through their appreciation of the disadvantages of Communism, the peasants were finally persuaded to separate themselves from the mother country. It took weeks of argument and conference after conference, and there were many discouragements along the way. But, at last, on April 6, 1920, a great conference at Verkhne-Udinsk unanimously adopted a resolution declaring the provinces of Transbaikial, Amur, Primorsk and Saghalien "an independent democratic Far Eastern Republic."

This declaration of independence is an interesting document. It was first drafted in English, because Krasnostehokoff felt more at home in that language when he was discussing political principles than he did in his native Russian. When the

draft was completed, it was translated into Russian and submitted to the convention. It contains no enunciations of general principles such as find a place in the American Declaration of Independence. It is rather a recital of the events leading to the founding of the new Republic and a request for the sympathy and cooperation of the other peoples of the world.

The new state had but a strip of territory and no funds. Yet it had an army. Thirty thousand armed peasants stood ready to fight its enemies. Of these the nearest and most dangerous was Semenoff who, with Japanese support, occupied Chita and held the railway to the east. On the possession of this railway depended the very life of the new state. So the peasant army, in the ranks of which there were not a few women, for the women of Siberia are of massive build and share toil and danger with their men, advanced along the railway toward Chita.

The Republican troops and the peasant warriors entered Chita in triumph on November 7. All now recognized the authority of the new government and the former capital of Transbaikalia Province became the capital of the young Republic. Its sway was undisputed throughout Transbaikalia, and Blagoveshensk and the Amur country had given their allegiance as early as May. The new state had therefore acquired a territory that compared favorably in extent with that of the older nations of the world.

A Siberian constitution is well worth looking over. Here is a sketch of its provisions:

The bill of rights of the Constitution is fairly complete. It includes equality before the law, abolishment of all class distinctions and titles, liberty of conscience, separation of church and state, free speech, freedom of the press, the right of assembly, inviolability of homes and correspondence and the right of habeas corpus. Censorship of mails is forbidden as is also all capital or any other bodily punishment. Every citizen is given the right to use his native language in official communications and in his books of account. Foreigners are granted the same rights as citizens, except where such rights are definitely restricted by law.

The chief argument among outsiders in regard to the Constitution is over the question of private property. But the Constitution itself declares: "The institution of private property is preserved. All citizens and private companies are guaranteed the inviolability of their movable and immovable properties and estates with the restrictions provided by the principal laws."

There is no provision for any form of workman's control or participation in the management, but regulations concerning the employment of labor are such as would appeal to the working community. Various forms of social insurance are in force and child labor is forbidden. Hours are restricted. Eight hours is the standard working-day. Wages are fixed by the state. The wages thus fixed must be paid by the state as well as private employers, and since the state is hard pressed to find money for its workers, there is no immediate danger that this arrangement will have a deterrent influence upon private enterprise.

The forms of taxation are all taken from the United States and present no novelties. The Constitution recognizes the people as the source of all political authority. They exercise this authority through the National Assembly, which is elected by the suffrage of all citizens of the Republic, including women over eighteen years of age. Its term of office is two years, and during that time its power is supreme, even to amending the Constitution.

The Government, sitting with the Council of Ministers, thus forming a body corresponding roughly to our "President and Cabinet," is the chief instrument of administration. It has the general direction of all internal affairs and foreign policies, subject always to the check of the National Assembly. The latter body has full power to veto any act and nullify any law and, by means of its complete control over the purse-strings, to regulate the conduct of any department or official.

Already the Siberians have wrought wonders. In the face of every conceivable difficulty that nature could oppose to them, in the face of every obstacle that human selfishness could put in their way, they have got the wheel of civilization to turn once more. Hardly more than a year have these people been at work to rebuild and yet, even to-day, Siberia is a livable place.

To that end, so Mr. Keith goes on to say, the rehabilitation of the railroads was a prime requisite:

The railway is the life of Siberia. Along it cluster most of the towns of the country, and there is hardly a household but is dependent upon it in one way or another. From Baikal to the Pacific, the railway is the backbone of the country. And it was broken to bits during the civil war. Its possession was vital to each side. Much of the war was fought from armored trains. Great guns, mounted on flat-cars, tore up the track behind enemy lines. A retreat meant the dynamiting of bridges and the burning of buildings. When the time for reconstruction came, hundreds of bridges on the 2,800 miles of railways had been destroyed.

Half of the freight-cars had been burned or smashed. Most of the locomotives were useless. And nearly all the passenger-cars had been stolen! Stolen by escaping troops, who ran them into foreign territory or into the Japanese-controlled zone around Vladivostok. Yet to-day the railway is running from the borders of Soviet Russia on the west to Khabarovsk and the borders of the Japanese zone on the east. Freight moves regularly, and if the passenger schedule is slower than of old and the trains not so luxurious, still it is possible to travel with reasonable comfort from one end of the country to the other.

How was this result achieved without money? Simply because it had to be. The men who did the work were fed by the government, of course, and those most in need of clothing had some given them, but it was eight months before they got their first pay envelop. And that envelop contained just five rubles! About \$2.50 a man! Strike? Yes, they became discouraged at times and talked of striking. Then the Minister of Transport, who is a worker himself, would go down and talk to them.

"Shall we strike?" he would ask.

"Yes!" they shouted.

"All right!" he replied. "That kills the railway, and the death of the railway means the death of the Republic. Then Semenoff will come back, and we can all go to work for him. Let's strike."

There was no enthusiastic shout of "No! Never!" or "Hurrah for the Republic!" or any other dramatic reply. The men simply muttered the eternal Russian "*Nichero!*"—"Nothing to be done!" and went back to their jobs.

With the cessation of military operations and the rebuilding of the railway, Chinese merchants came into the country in droves, bringing with them great quantities of the cheap cotton piece-goods that are a leading product of Oriental mills. The Chinese are also supplying the people with needles, pins, thread, knives, forks, spoons, and the thousand and one other small manufactured articles that are almost indispensable in any Europeanized community.

Much of the trading is done by barter. The peasants exchange milk and eggs, and even meat and bread, for the manufactured goods. There is money, however, and since last May the gold ruble has been the standard. Paper money had been tried and found wanting. It is no longer issued, and now thousands of dollars of notes are to be found as scratch paper on the desk of any government clerk. The gold ruble is worth about fifty cents in American money. Small transactions are settled in silver rubles. The rate of exchange has been fixed at three silver rubles for one gold one.

Education in the Far Eastern Republic, like education everywhere, suffers from the lack of money. There are no funds for salaries, no funds for equipment. Of buildings the new government has all it can handle. Some of the higher school buildings are as fine as one finds anywhere. Of teachers, however, there are all too few. And a good half of those available are wholly without the proper training. Last of all, books are needed. The books compiled under the direction of an imperial government and a state church are wholly unfit for the education of the children of a democracy.

In Siberia, the machinery of civilization is running again. The Siberians feel that, except for the Japanese, it might be running less slowly and jerkily. The Japanese, they say, invaded the country; the Japanese supported the Cossack murderers; the Japanese have taken the greatest Siberian city and held it; the Japanese are choking the Siberian railways; the Japanese are backing the reactionary raiders; the Japanese stole the fisheries; the Japanese—well, the tale is endless in the minds of the Siberians. Japan has favored the world with rather full explanations of all of her activities in Siberia. But the Siberians resent the untrue impression of the Far Eastern Republic and its people that they claim Japan has given to the world almost as much as they do the exploits of the Japanese Army in their territory.

When they can be persuaded to forget the Japanese long enough to talk of other countries, they turn at once to America. They are not bitter. On the contrary they appear to be most friendly. They seem to feel that America does not understand the real situation, that she has been misled by false reports and hostile propaganda, and they continue ardently to desire both diplomatic and commercial relations with the United States.

Also writing in *Asia*, Mr. Charles H. Smith tells us—

The chief obstacle to the consolidation of power by the Chita Government and the extension of its sway over all Siberia is the presence of Japanese troops in and about Vladivostok. Since Vladivostok is the only important port of entry as well as the chief commercial distributing-point and the railhead, its control by Japan may be likened to a clutch on a single artery somewhere in the human body that can choke off the circulation of blood over the whole body. You have only to consider what would be the results if an alien Power held the New York terminus of the New York Central Railroad and the harbor.

Veteran Goodyear users tell us that our tires today give more than twice the mileage they did ten years ago

The average decrease in the price of Goodyear Tires since the year 1910 is more than sixty per cent

QUALITY WAS NEVER SO HIGH PRICES WERE NEVER SO LOW

It is a favorite practice nowadays to refer more or less sagely to the good values of "before the war."

So far as tires are concerned, any such reference is an illusion.

The plain fact is, pre-war tire values were only a pale shadow alongside those of today.

Every tire in the Goodyear line proves this to be true.

If you are a veteran Goodyear user you have probably noticed that our tires today give more than twice the mileage they did ten years ago.

If you have compared the prices of then and now you have seen that present

Goodyear prices are less than half of what they were.

Just to make this clear, consider our 30 x 3½-inch Cross-Rib clincher.

In 1910, for example, you paid \$33.90 for this size tire.

Today, for a vastly better tire of the same type, you pay \$10.95!

All other Goodyear Tires show similarly important reductions, the average decrease in price since 1910 being more than 60 per cent.

Goodyear quality was never so high—Goodyear Tires today are larger, heavier and more durable than ever before.

Goodyear prices were never so low—as the figures here listed will show.

30 x 3½ Cross-Rib

ELEPHANTS, TIGERS, SELADANGS— BUT ESPECIALLY MAYER

THRILLS come thick and fast, in the life-story of Charles Mayer, whose "Trapping Wild Animals in Malay Jungles" (Duffield) takes us behind the scenes with a collector of specimens for the circus menagerie and brings us face to face with elephants, tigers, leopards, pythons, wild boar, etc., to say nothing of the seladang, the East Indian wild ox. The capturing and crating of a 32-foot python before sending him off to Liverpool, was a comparatively mild incident in the season's work. A more thrilling adventure was Mayer's experience with an enraged elephant. As he tells us, there comes a period known as "must" when even a habitually well-behaved elephant becomes dangerous.

Like the Malay he "sees red" and runs amuck. A good elephant-keeper can detect the madness several days before it reaches the dangerous stage, and by securing the animal with hobbles, can prevent trouble. In the cheeks of the elephant are two small holes, called "errors," and from these holes oozes a slight secretion. One of the keeper's duties each day is to examine the holes and run a piece of straw into them. If there is an odor of musk about the straw when he pulls it out, it is an indication that the "must" period is coming. Sometimes the keeper fails to make this test, and the elephant runs amuck, killing people and leaving a trail of wreckage behind him.

On one of my visits to Sydney with a consignment of animals for the Zoological Gardens, I found the entire crew of elephant-keepers busy with the task of trying to control an animal that was in "must." His keeper had failed to make the test, and the elephant had suddenly gone mad. Fortunately he was in his stall at the time. When I arrived, he had wrecked the stall, and the keepers were afraid that he might get loose. Another stall had been arranged, but they could figure out no way of changing him to it. The men were thoroughly frightened and absolutely refused to risk hobbling him. The director of the Gardens offered me £100 if I would do it, and since I had Ali and several of my own men with me, I agreed to try.

With elephant hooks strapped to our wrists, we entered the stall. The elephant stood looking at us, apparently wondering which one he should knock down first. I told Ali to get behind him while I approached from the front.

I went up to him sideways, speaking to him and offering him food. He waited quietly until I was near enough; then, before I could duck, he hit me with his trunk. I felt myself spinning so rapidly that the elephant, my men and the stall were all a blur; and I came up against the wall with a thud. Fortunately, there was a gutter running along the wall, and I dropt into it just as the elephant lunged forward at me. His big head hit the wall and the floor, but couldn't get at me. He would not risk his trunk, because he realized that I would jab him with the hook.

Ali and the other men were at his tail, jabbing him and pulling. When he turned for them, I jumped up and began running my hook into his side. It became a game

of jabbing and dodging and worrying him to first one side and then the other. I took care to thrust my hook always in the same spot, tearing a raw wound in his side, while the other men caught him on the legs and on the trunk. We had to work fast to keep away from the big trunk as it cut through the air, and his feet, when he kicked. Each of us was sent sprawling several times before the fight was over.

At last I could see that the elephant was paying more attention to the wound I was making than to anything else we were doing; he favored the hurt side and tried to shield it. Then, with a bellow, he knelt down and dropt on his side to cover the wound.

While I kept him down Ali arranged the hobbles; then we petted him and allowed him to stand. He got to his feet doubtfully, as if he weren't sure that we were not playing a trick on him—urging him to stand up so that we could jab him again. The wound I had torn in his side was large enough for two fists, and it must have pained him terribly. He was worn out by the fight and he hobbled off to his new stall, much subdued. Several days later he came out of the "must" period, which rarely lasts for more than a week, and became again the docile elephant that took children on his back for a ride.

I went to see him several times before I returned to Singapore, and, when I entered the stall, he edged away from me, protecting his side. Years later, I went to Sydney and entered his stall. He didn't recognize me until I put my hand on the scar; then he muttered deep down in his throat and lay down. I petted him and fed him sugar, and he seemed to harbor no resentment against me, but he did remember me in connection with a strenuous and unpleasant afternoon.

It was while hunting with Tunzku S'leman, a petty rajah from Kelantan, that Mayer went in pursuit of a man-eating tiger. Late one afternoon a native came running into the Kampong, shrieking, "Re-mow, Sa-tan!"—"Devil tiger!" Says Mayer,

The man was about to collapse with fright and exhaustion from running. I calmed him so he could tell his story, which was that while he, his wife and daughter were gathering some faggots not one hundred yards from his hut, the tiger suddenly sprang from the thicket and striking his daughter down, carried her off in the jungle. After leaving his wife in the hut, he ran to the Tunghu's kampong to inform the Tunghu what had happened.

As it was too late in the afternoon to do anything I told Tunghu S'lamen to send out the alarm for all the available men; the alarm is sounded by the striking of a hollow log, which can be heard for miles in the stillness of the jungle, and all natives hearing the booming sound know its meaning. I advised Tunghu to send five or six men back with the messenger and for them to stay with him until we came the next morning. The hunt was on, and all preparations were made at once for our early start, as the men began to flock in from the outlying kampong. They were to stay at the Tunghu's kampong that night to be ready to start at daybreak, after eating their breakfast. There was intense excitement the whole night, very little sleep for any one, for, as I told the men, they would not return until we had killed the tiger. A few of the natives, especially the headmen, had flintlock, muzzle-loading

Everywhere West! to vacation joyland

HARTMANN

"NOT A WRINKLE AT THE END OF THE TRIP"

SUPREMACY comes from devotion to an ideal, with no thought of compromise with quality. The leader never builds to a price, but prices his product to give the fullest measure of economy to the user. There can be no substitute for value.

Travelers who consider a wardrobe trunk primarily from the standpoint of clothes protection and convenience, show marked preference for the Hartmann Wardrobe. To these discriminating people such words as Gibraltarized Construction and Cushion Top are symbols of the exclusive service which has established Hartmann leadership.

Before purchasing any trunk at any price it is the part of wisdom to see Hartmann Castle-Grande—the only trunk with an all-steel frame, as well as the Hartmann Gibraltarized Wardrobe Trunk. And to realize the extent of Hartmann development for special uses, one must see Hartmann Berth-High Steamer Trunk and its unique companion—the Hartmann Wardrobe Suit Case. Hartmann Patented Cushion Top Wardrobes range in price from \$30 to \$200.

rifles. To these I handed out extra powder and slugs; they were really good marksmen and men who could be depended on at the right moment.

We started at daybreak. The men having eaten, every one was anxious and eager to be off, now that the hunt was to be conducted not alone by a white man, but in numbers. There were fifty natives; the Tunghu and two of his headmen with their flintlock rifles rode on the first elephant, while Ali and myself followed behind on the second, the third with stores bringing up the rear, for I had no idea when we would get back. Altho the Tunghu assured me the elephants were well broken, I did not place any reliance on them. Riding on an elephant and jogging along peacefully is one thing, and tiger-hunting on the back of one quite another. As I have mentioned elsewhere, they are excessively timid both in their wild and domestic state, and to become a well-trained tiger-hunting elephant, one so broken must have plenty of courage and experience. It is simply madness to attempt to use an elephant that has never been broken and tried out, as they will always bolt. Then again, if one never had a gun fired from its back, the effect is rather startling to his riders. It is a terrible thing to be bolted with while on an elephant's back in the jungle. I intended to take no chances while mounted as far as shooting was concerned, depending on cornering the tiger, if possible, and if the ground were favorable, to start on foot.

Besides my 50-110 express, I had a Holland double-barrel 450 and a Fox No. 12 smooth-bore shotgun. Ali had his spears, but was to use either the express or double-barrel Holland if we came up with the tiger. The other men carrying spears, parangs and tom-toms made up the party. Arriving at the place where the girl had been seized, two men who were experienced trackers took up the trail, which was quite fresh and plain and could be easily followed. The tracks were not over an hour old, and as the jungle was sparse, it would give no cover to the tiger. After crossing a small stream, his track led toward a rocky hill less than two miles distant, coming suddenly into a clearing with tall grass.

Mayer shouted to his men, ordering them to "spread out, keep quiet, and move slowly within a few feet of one another." The grass, still heavy with dew, showed where the tiger had passed through into the deeper jungle. Mayer continues:

We had perhaps traveled about one hour, the tracks becoming difficult to follow on account of heavy undergrowth, when we were startled by the screaming and chattering of monkeys. We knew then the tiger was not far ahead, and at the same time the elephant that the Tunghu was on, spreading his ears and raising his trunk, uttered a shrill, brassy trumpet, expressing his fear. I called to the Tunghu to take the elephant back, as he would be worse than useless. He was quickly turned about and driven behind, the Tunghu coming up with me, the two headmen joining the men on foot. The elephant I was on showed no sign of uneasiness; the mahout or driver spoke sharply to him, calling back to me that he could handle him as that was not the first time he had been used in smelling tiger. Still I was loath to risk a gun from his back

We followed the trail of the chattering monkeys, when suddenly they ceased, as we came to a very heavy path with thick undergrowth, excellent cover for the tiger, into which he had evidently gone. The patch itself was not more than seventy yards in diameter. I called to the men to stretch out and surround the place, and make as much noise as possible, keeping close together.

As soon as the patch was surrounded, I told the Tunghu to send the two elephants, the one he had been on and the other one carrying stores, back to his kampong for more men, and the men as they came on were to cut and load up the elephants with all the dry wood they could; also each man was to carry some wood and as many of the long nets as had been made. These I intended to spread out at the back and as much around the sides as possible, making doubly sure he should not escape. I told the Tunghu we would not leave the spot until the tiger had been killed. I had the platform built with "kaj-ons" forming the roof. This was very soon finished, and late in the afternoon the elephants returned with more foodstuffs, wood and forty men. Each man had gathered a good bundle of dried wood, which wood I had passed around, as I intended to form a circle of fire and keep the tiger within the circle. I then had the fires started and they were kept up the whole night, but in the morning the fires that were in the front of the platform were allowed to die out, and after the men had taken turns eating, I ordered them to close in about twenty-five feet, throwing the fire before them. In this way I kept narrowing the circle every few hours while we on the platform kept a keen lookout.

On the second day one of the headmen on the left side of the circle fired a shot at what he said was the tiger. Instantly there was a great commotion and the men started shouting and making a great noise. We were keenly on the alert, as the platform faced the only spot of the circle that was open and free from fire, and hoped the tiger would break cover. Suddenly Ali, touching me, quietly said, as he raised his gun to his shoulder. "Tuem-block-on-poko" (behind the tree). Telling him to cover the left side, I covered the right side of the tree the tiger was crouching behind, and told Ali to shoot as close to the tree as he could without hitting it. He fired, and almost instantly I let go at a streak of yellow and black; it disappeared at once. The yelling by this time was enough to drown the grunt or roar of the tiger; there was no way at the time to know if we had succeeded in hitting it, so completing the fire circle in front of the platform, we lay down to sleep as best we could. What little wind there was, was in our direction, and kept us pretty free from being eaten alive by mosquitoes.

The fourth morning came. Still the beast refused to break cover. So Mayer resolved to go into the circle at once with the elephant. The nets, he tells us, were well put up at the back, outside the fire. Additional men strengthened the sides. Says Mayer:

I was taking no chances of escape. I had two headmen get up on the elephant I had come on, and told the driver to back a short distance, as I wanted the headmen to shoot off their guns from the elephant's back, in order to watch the effect on the elephant. I told them to each fire his gun off on opposite sides, but not at the same instant. Well, he never moved, and when those muzzle-loading flintlocks go off they

Steel ingot being taken from reheating furnace preparatory to rolling into rails

Rails and Research

THE New York Central Lines have placed orders for 172,400 tons of heavy open-hearth rails for 1922 delivery, enough to lay a new single track from Chicago to New York. In 1921 more than a thousand miles of rails were replaced.

In the New York Central research laboratories, out of the experience of never-ending road tests, has been developed the highest type of rail used in this country.

This search for absolute dependability in rails, to carry the weight of more and more powerful locomotives and heavier trains, insures the safety and comfort of the millions of passengers who ride each year on the New York Central Lines.

The rail ingots are made on precise physical and chemical specifications. From the time the ore enters the furnaces until the rails emerge from the great rollers, every step in the process is in conformity to the most rigid scientific requirements and under the eyes of New York Central rail experts.

When fabricated, the rails are subjected at the steel mills to exacting tests in machines of scientific precision. These tests are for the purpose of making certain that the finished rails are as nearly flawless as it is humanly possible to make them, and will withstand the strains of the heaviest traffic.

The 1922 rail order is an important part of the program undertaken by these Lines that they may efficiently perform a maximum share of the work of national transportation.

PERSONAL GLIMPSES

Continued

certainly kick and make a startling noise. After that test I was satisfied to take the chance and told the Tunghu that Ali and myself were going in after the tiger, and that he and his two headmen must keep sharp lookout from the platform and have their guns trained on the opening. The mahout was a plucky fellow and felt very proud, assuring me he could handle his elephant.

I passed the word for all the men to be on the lookout and allow the fire on the right side to die out, to keep together, and those of the headmen who had guns should shoot if the tiger tried to break through. As soon as the fires had died down, I told the driver to go ahead and keep to the right side. When on an elephant in fair ground, the object should be to get the tiger to charge instead of letting him sneak away, for the hunt is then ended in a short and exciting encounter, but if once let away it may be hours before he is found again, if he ever is at all.

Coming opposite the tree where we had shot at the tiger, and under a patch of heavy undergrowth, against a large boulder, we both saw it. Seeing the elephant, it gave a coughing roar, and as it did I let go, catching it fair in the eye. Ali had his spear poised ready to throw, but the man-eater slumped down, and to make sure I put another explosive bullet in its side as it lay. I called to the Tunghu we had got it. I will not try, for I could not adequately describe the scene which followed when the men knew their foe had been killed; shouting, yelling, dancing, they went wild. Runners started off at once racing back to the kampong to tell the news and have the women make ready a feast. The return to the kampong was like a royal procession. The Tunghu and I on the elephant led the way, the men carrying the dead tiger, singing and laughing, calling the dead animal all manner of names. There was great feasting that night; it was made hideous with the singing and beating of the tom-toms, and, altho dead tired from lack of rest, sleep was impossible. In the morning the Tunghu did a most astonishing thing; nothing of the kind had ever been known to the oldest subject; he set free five of his debt slaves.

On examination I found that the first time we fired at her, while behind the trees, as she leapt back from the shot Ali had fired, I had caught her in the flank, smashing the hind leg, and with all her suffering, thirst and heat, she never betrayed her cover or uttered a sound.

She measured eight and three-quarter feet from tip of nose to tip of tail and weighed about two hundred and ninety pounds. She was in milk, but tho we searched, we never found her cubs.

The last adventure told in Mr. Mayer's book has to do with the seladang or gaur. This animal is a species of wild ox which Mr. Mayer considers "the most dangerous animal on earth." In fact, except for a baby seladang that died, "not one has ever been captured alive." It was while rhinoceros-hunting that the party came upon a pair of seladangs, and before the adventure was over the hunters had become the hunted, Mayer's "headman" had been killed, and he himself felt the hand of the jungle fever upon him. It was sundown

Crossing the Atlantic in 4½ Days

The World's Record Passage between Europe and this country was made by the MAURETANIA—the holder of the Blue Ribbon of the Atlantic—in 4 days, 10 hours and 41 minutes.

This truly grand ship is back in service, thoroughly overhauled and converted into an oil-burner. She and her gigantic sisters, the wonderful AQUITANIA and luxurious BERENGARIA are making history in carrying on the fastest weekly Passenger Service—De-Luxe, the world has ever known.

From NEW YORK every Tuesday to CHERBOURG and SOUTH HAMPTON.

Other services to Queenstown and OLIVERPOOL, to Londonderry and GLASGOW, to Plymouth, Cherbourg and HAMBURG—a little less speedy but no less comfortable—by the beautiful, roomy, homey, oil-burning new ships such as the SCYTHIA, LACONIA, SAMARIA, CAMERONIA, in cooperation with the famed and popular CARONIA and her twin—sister the CARMANIA.

when a crash was heard in the jungle and the Malays in the party screamed "Seiadangs!" As Mr. Mayer goes on with the story:

The men dropt everything and jumped for the trees just as two seladangs came charging down upon us. Ali, who was carrying my rifle and who had become separated from me when the men rushed for the trees, started toward me. Gaging the distance, I saw that he could not make it and I yelled to him to save himself. I jumped backwards and made for a tree; then, as I pulled myself up, I saw the bull seladang catch Ali on his horns and toss him. I dropt to the ground again, horrified; I wanted to get my rifle and I forgot about the other animal.

The cow seladang charged, and I barely had time to get behind the tree. Unconsciously I had drawn my *parang* (a heavy knife) and, as the great chocolate-colored beast plunged past me, I slashed. The blade hamstringed her, and she plunged, bellowing, into the jungle. Then the bull, instead of catching Ali's body on his horns, allowed it fall to the ground and turned toward me. I swung up into the branches of the tree, just out of his reach, and slashed downward as he charged. I failed to hit him and I narrowly escaped falling.

We could hear the cow bellowing furiously and dragging herself away through the jungle. She did not return. The bull charged back again and stood beneath me, pawing the ground and bellowing. Then he turned and attacked Ali's body trampling upon it, time after time, until every bone was broken.

Each time the bull returned to the tree, I fired downward at him with my revolver, but I might just as well have used a pop-gun—the little bullets had no effect. One dynamite cartridge would have ended him, but my rifle lay on the ground five yards away. Night came on, but the seladang did not leave. I remained poised throughout the night, waiting for a chance to jump down and run for the rifle. Our thirst became terrible, and there was little consolation in the thought that the seladang was probably quite as thirsty as we were. But there was some chance that he would leave us for a few moments to find water, and I needed only a moment to get the rifle and climb back into my tree.

Ants and mosquitoes swarmed over us. Trying to find some protection against them, we wrapt our hands and faces in *sarongs*. But we were as helpless against insects as against seladangs.

Morning came and wore away to noon, and still the beast stayed by his post. Then the fever began to hit me and my head throbbed. I propped myself against the trunk of the tree, saving all my strength until the moment when I should need it most.

The ten natives were scattered through the trees near me and we talked back and forth. They, of course, depended upon me and my "magic" to save them, and I, with the fever burning more fiercely every minute, realized that something must be done immediately. My thirst was becoming unendurable and my strength was leaving me rapidly. I called to the men to join me in my tree, and they swung from limb to limb until we were together. The seladang took up his position beneath us, bellowing and pawing.

I counted the arms in the party; we had, besides our *parangs*, four spears and three krises. With the *parangs* we cut stout branches; then we tore our *sarongs* into strips and bound the krises to the poles.

How can one small dealer sell a carload of Sunbeams?

WHEN you see some hamlet of a few homes and you hear that the Sunbeam dealer there sells a complete carload every season, you wonder how he can do it.

Yet there are hundreds of such instances, for the Sunbeam is made by one of the largest furnace manufacturers in the United States and, therefore, can be sold at a quantity-production price.

Thousands of home-owners have learned that a Sunbeam Furnace will heat a given number of rooms more evenly, more healthfully and with one-third less fuel than stoves or fireplaces. Other thousands are learning every year.

During a bitter, cold winter the Sunbeam will maintain an even, comfortable temperature throughout the whole house, or in mild weather it will give just enough heat to remove the chill without waste of fuel.

With a Sunbeam in your home you will not have to carry fuel for several stoves. Just fill it morning and evening—the rest of the day control it from upstairs.

There is no dust from a Sunbeam, no ashes in the house, no smoke. It is just the kind of heater for a home where there are children.

Sunbeam Furnaces last a lifetime. All parts are greatly oversize and are so accurately fitted that leakage is impossible.

All that we have learned in thirty years of manufacturing has been put into the Sunbeam to make it a QUALITY furnace.

Don't wait until fall to get your Sunbeam. There are lots of dismal, wet days when you need a small fire, long before cold weather comes. It usually takes only one day to install a Sunbeam Pipeless Furnace, so why not start saving one-third your fuel right away?

SUNBEAM PIPE and PIPELESS FURNACES

Why the Sunbeam Pipeless Furnace

"Warms like the Sun"

AS EVERYONE KNOWS, warm air rises and cold air falls; that is the simple principle upon which Sunbeam Pipeless Furnaces work. Heated air, mixed with vapor, rises through the central compartment of the large register placed in your hall or living room. A constant, gentle circulation of warm, moist air at an even temperature is maintained in every room; the cool air of the house being drawn down through the outer compartment of your register, heated and sent upward again.

Owners tell us that their Sunbeams save 1/3 on the cost of fuel. See your local Sunbeam dealer.

Just send for the "Sunbeam Book"

Fill out the coupon and mail it to us. There's not the slightest obligation involved. It may be the means of saving you a great deal of money.

Keep Cooking Odors Out of Your House

LINGERING odors of cookery will steal through the house, reveal the menu to your guests before dinner is served, and remain long after it is over, if they are not made captive at their source.

You can change this unpleasant and unwholesome atmosphere to one in which there isn't a trace of greasy fumes, and dinner is as pleasant to prepare as it is to serve. It's simple and inexpensive with an

ILGAIR

With this kitchen ventilator you'll find no settling of grease on the woodwork, the stove, and the hard-to-get-at places. It disappears with the fumes — by way of the Ilgair.

The Ilgair is a compact, motor driven, self-cooled propeller fan. Easily installed in window, wall or transom in kitchen — draws out odors, fumes and heat — economical to operate, guaranteed as a complete unit.

Special illustrated literature on the ventilation of Homes, Stores, Churches, Offices, Cafes and Factories sent free, postpaid.

Architects and Engineers write for the new 1922 catalog—now ready—200 pages of illustrated matter — an interesting volume of Ilg Air Data.

Ilgairs are For Sale Everywhere by Electrical and Hardware Dealers.

PERSONAL GLIMPSES Continued

As was usual in the Archipelago, especially in the inland districts, the spears and krises were poisoned, and our only hope of victory lay in that fact. I knew that the poison would kill a man in a few minutes and I had seen smaller animals die of it, but I did not know what effect it would have on so large and powerful a brute as a seladang.

Next we gathered leaves and stuffed a sack, made from a sarong, full of them, and tied it with a string, so that we could dangle it in front of the beast. Then three of us armed with the krises took positions so that we should be above the seladang when he charged, and we lowered the sack. He snorted and drew back; then he put his strength into his legs and lunged forward. I drove downward with my kris, tearing a wound in his back near the hump; he whirled and charged again, and this time one of the natives blinded him in one eye.

He withdrew a few yards, snorting, belching and pawing. He turned again on the body of poor Ali, as if to vent his anger on it. Presently we lured him back with the bundle of leaves, and he charged again. I scored another cut near his hump.

This charging and jabbing went on for fully an hour, and we seemed no nearer success than when we started. It was impossible to get in a death-stroke, and the poison apparently was having no effect upon him. In any event, I thought, we were winding him, and, if we could last out another night, he would have to seek water. But there was another danger—one of the natives, crazed by thirst and excitement, might run amuck there in the tree. I planned, if we were forced to remain in the tree through the night, to take charge, diplomatically, of the krises and spears. I regretted having spent all the ammunition for my revolver on that useless fusillade the day before.

The game resolved itself into an attempt to pierce the seladang's sound eye; we lured him back, time after time, but could not drive a kris to the mark. Evening was approaching, and I thought the battle was over for the day. The seladang stood near by, ignoring for the moment, the sack we were dangling. Blood was flowing from a dozen wounds. When he took a step forward, we cried out in surprise. He was weakening! He almost tottered away, as if he had forgotten about us.

Even tho he had routed us completely, treed us and kept us treed and killed my good friend and assistant, Ali, I felt sorry for the beast, as I sat there watching him. He had put up a magnificent fight, and, half dead, he would muster his remaining strength and charge us again if we dared set foot on the ground. It was his victory until the moment he died.

His head drooped lower; and then he went down on his foreknees, bellowing weakly. Presently his hindquarters slumped down, and blood began to flow from his mouth.

I dropt from the tree and walked forward cautiously to the spot where my rifle had fallen; then, armed, I stood watching him in the throes of death. None of the Malays had followed me, and, when I told them to come down, they refused. Finally, to convince them that there was no danger, I put a 59-110 explosive bullet behind the beast's shoulder.

REVIEWS OF NEW NOVELS

THE ODESSY OF A PIONEER

THERE ought to be more books like this of Mr. Quick's, with its true epic quality, its great song of the making of our country. Here is a story (Vandemark's Folly, by Herbert Quick, \$2.00) that no lover of America can afford to miss, for it is filled with that wonderful spirit that has made America. You feel the growth of the nation as you read it, and the transmutation of a wilderness into a land of homes and farms. You struggle with those who fought for this transformation, you pit yourself against the forces of disintegration, the selfish and the evil, and triumph with the workers and the sowers and the reapers, and know that the work was good.

The narrative relates the adventures of a boy of Dutch blood from New York. The early picture is pitiful enough, with the brutal, sly stepfather, the driven, overworked mother, the small lad at work in factories, always tired, without time for sleep, let alone play. If there are any who doubt the progress made in the protection of childhood from many of the oppressions of that time, let them read here and they will see that we have done something at least. But this part is brief. We are soon introduced to the canal life with the boy, who runs away from the cruelties of his stepfather, and becomes driver for the captain of a canal boat.

The life along the canal in that time was a stirring and picturesque thing. Buffalo was the gate of the West, and through it went the men and women of a new era. The canal way was the only way, or practically so, and the boats dragged families and freight in an endless procession from the Sea to the Lakes. Adventurers of every stripe were travelers here, and the down-and-outer went along with the prosperous. The canalers themselves were a wild fighting crowd, with little restraint and less morals so far as the bulk of them went. Jacob Vandemark enters on this existence a little, puny lad, innocent and timid. He comes out at the end a strong, self-reliant boy who has seen much evil but is free of it himself, who has fought his way to respect, who knows many things but has had no schooling. One thing has kept him fine, and that is his love for the mother he ran from, ran because a brute tried to kill him. He is always looking for her, for when he got back on the return trip with his boat and rushed to the forlorn home where they had lived, he found it empty and deserted, without any clue as to the track he should follow. Years pass before he finds out where she went, and what became of her. The discovery marks a new era for him. He leaves the canals, and presses forward with the westward tending crowds to make a farm for himself in the prairies of Iowa. And step by step we go along with him on that long trail.

It is difficult to convey the fascination with which Mr. Quick has invested this long, slow progression toward a home and an ideal. Jacob's adventures are never striking, there is nothing of the impossible. But they are convincing and they give an extraordinary sense of actuality to the book. There is just enough description of the country and the hardships to make the thing vivid without burdening you; and there is an amazingly varied and always interesting succession of human types, men, women and youngsters, good, bad and in between. The slow, cautious Dutch

For the Good of the Public Service!

Next week there will be held at Atlantic City a meeting that should interest every citizen.

Gathered there from every corner of the country, and even from points outside, executives and operators of hundreds of electric light and power companies, large and small, will meet with manufacturers, engineers and distributors for the purpose of determining the method and means for improving and extending the electrical service which they furnish to you and to all the people.

The Electrical Industry realizes that its obligation and its opportunity is Service. The electric light and power companies are today serving upwards of sixty-five millions of people. The electric current is being used for lighting, for heating, for transportation, for performing household duties, and for the operation of factories. Such universal service is made possible by the adherence of electric light and power companies to definite policies of high value, fair treatment, and dependable and uninterrupted service.

It is for the purpose of developing the application of these policies, that the National Electric Light Association is holding this meeting at Atlantic City.

With such a purpose, the people of this country may confidently rely upon the stability of Electrical Service.

Number two is out!

AND if one cylinder in a gas engine does not explode, there is a similar effect. The other cylinders must fight against the missing one. They lose the power that it should give and must burn up some of their own power to carry the load of the dead cylinder with its compressed (and wasted) gas.

One cylinder missing irregularly is difficult to detect by screwdriver or open cut-out methods. It took an expert to find it before the Westinghouse Ignition Tester—Spark-C—was invented.

Now anyone, amateur or expert, can find ignition troubles almost instantly. All you have to do is to touch the point of Spark-C to the plugs or along the wiring to the coil or distributor and read the results in the window in the side of the Tester.

If you have a car, a motor boat, an airplane or stationary gas engine, buy a Westinghouse Ignition Tester—Spark-C. Check up the ignition system now and periodically. It will help to give you the full power of your engine and save you considerable unfired gas.

Your automotive dealer or garageman has a stock of Spark-C or can get them from our nearest branch.

REVIEWS OF NEW NOVELS

Continued

boy who never jumps at a conclusion, who makes sure of his footing before he moves, who is shrewd in his judgments and without fear, generous and careful at once, is a splendid piece of characterization. He tells his story in the first person from the safe harborage of an old age that can look about on his lands and houses, his flocks and herds, his large family, and he is always utterly real and immensely likable.

The day after Jacob reached his land, he put the plow to work. And this is how that act is presented:

"The next day was a wedding-day—the marriage of the plow and the sod. It marked the beginning of the subdual of that wonderful wild prairie of Vandemark's Township and Vandemark's farm. No more fruitful espousal ever took place than that—when the polished steel of my new breaking plow was embraced by the black soil with its lovely fell of greenery. Up to that fateful moment the prairie of the farm and of the township had been virgin sod; but now it bowed its head to the yoke of wedlock. Nothing like it takes place any more; for the sod of the meadows and the pastures is quite a different thing from the untouched skin of the original earth. Breaking prairie was the most beautiful, the most epochal, and most hopeful, and as I look back at it, in one way the most pathetic thing man ever did, for in it one of the loveliest things ever created began to come to its predestined end."

THE MYSTERIOUS AND MURDEROUS "BAT"

ON ONE occasion a certain Alexander Skeat was the guest of honor at a certain Club of Friends in London who met together for social relaxation. From time to time they entertained distinguished visitors who address them on some subject of interest which was afterwards discussed. The impression made by Skeat was not altogether pleasing, yet the club was horrified to read a week later in the *Times*, an account of his murder. A policeman in St. James Park heard a cry from one of the paths and hurrying thither found Skeat lying on his face. This policeman declared that close by he saw dimly in the fog a large animal, unlike anything he had ever seen before, with a long neck, narrow head and glowing eyes. He blew his whistle, whereupon the thing, evidently alarmed, hopped twice, spread a large pair of wings, ascended into the air and disappeared. An examination of Skeat's body revealed only a small red speck under one shoulder-blade, from which proceeded an incision, no larger than a thread, which reached the heart, while a further analysis showed a sudden and unaccountable disintegration of the component parts of the body. All London is aroused, for it appeared as if Skeat had been killed by a force unknown to science, for the story of the strange animal is hardly considered.

Of course the incident is discussed by the Club of Friends, but no solution of the mystery is reached, some being inclined to credit the policeman's story, while others scout the idea of any such animal's existence. The next startling event is the entire destruction of the Albert Memorial. An event that would doubtless be welcomed by thousands of English. One morning London awakes to find a huge pile of fine

gray dust where the monument had been; no ruins of bricks and mortar, no shattered pillars, but absolute disintegration of the whole thing, while a few scorched boughs of adjacent trees are the only extraneous signs of the catastrophe. Science is called in to suggest an explanation, but is helpless. Then follow more mysterious murders—in America, in England, in Europe—and all apparently of selected men; in fact, there seems to be an intelligence directing the movements of "the Bat," as the malign animal is called, for by this time it has been seen in flight by many, and one person has actually beheld it in the woods, with a man standing by it, apparently speaking to it.

Since "Bats" enter into modern plays as well as novels and furnish prolonged interest for the theater-going public, it is safe to assume that readers enough will be found for this mystery yarn called "No. 87" (Macmillan, \$2.00) by one who signs himself Harrington Hext, tho it is whispered that behind that name may be found the personality of an English scientist.

Some readers can not enjoy a mystery story unless everything is clearly explained in the end. Of course the explanation is necessarily based upon a hypothesis, which, being granted, is satisfactory. The book is extremely well written and the various discussions held in the Club of Friends enlarge the interest beyond the mere solution of the mystery.

REWARDS OF THE UNSELFISH

A POOR peasant girl in the south of France comes to take charge of the house and the two little children, one a mere baby, belonging to a widower, Michel Corbier. She remains there four years, giving to her work a devotion so wholehearted, so beautiful and so unconscious of self that it touches whatever there is of the divine in human nature. Simple and ignorant, she is none the less great, and to know her is to walk with the angels.

When a story impresses you as not so much a record of life as life itself, it belongs in a category by itself. Such a book was "The Story of an African Farm"; such was "Mario Claire," and such, too, is "Nêne" by Ernest Pérochon (George H. Doran, \$1.75) which won the Goncourt Prize in 1920.

Not that Nêne is faultless. But her faults are those that come from love of others, not of self. She knows only how to give, never how to take. Chaste she is, and she can defend herself if need be, but yet she sets no value on herself. She is as humble as a field flower, and as sweet.

The farm is in the Vendee, a part of France with a curious history that has resulted in dividing the people there into three sects, the Catholics, the Protestants, and the Dissenters, who once were Catholics, but who, during the Revolution followed their priests and rose for the King. And when, after all the fighting was over, and most of the priests were reconciled and had taken the oath to the Republic, a few remained who retained the bitterness of the war in their hearts and who refused any terms. The devoted peasants followed these into a fierce isolation, disdaining the threats of excommunication, forming small communities scattered over the Vendee, and gradually dying out. But some still remained, fairly strong and numerous. They were backed by the Protestants, who rejoiced in the break in the Catholic ranks. It was a disgrace for a girl or boy of the Dissenters to marry a Catholic, and seldom did one of the maidens violate this

Saving 25,000,000 Tons of Coal a Year

TWENTY-FIVE million tons of coal a year or 68,492 tons a day—such is the saving in fuel brought about by substituting efficient MAZDA lamps for inefficient carbon lamps to produce the country's nine billion candle-power of light.

To generate the electric energy required to produce these nine billion candle power about *ten million tons of coal must be consumed in a year.*

The MAZDA lamps of today are over *three times* as efficient as the old carbon filament lamps which they supplanted.

If the old carbon filament lamps were still in use we would have to burn *thirty-five million tons of coal a year.*

This annual saving of twenty-five million tons of coal has been made possible by the steady improvement of incandescent lamps in the Research Laboratories of the General Electric Company. In these Research Laboratories MAZDA SERVICE is centered and through MAZDA SERVICE manufacturers who have the right to use the mark MAZDA learn of the new discoveries. Their lamps are marked MAZDA because MAZDA SERVICE made them possible.

RESEARCH GLEAMS

Gleam 1

Nearly eight and one-half million homes are wired for current.

The national saving of coal is equivalent to three tons for each of these wired homes.

law of the cult. But with the young men it was different. They went afield and fell in love with Catholic girls, and then they got married, and usually the children became Catholics. But the Dissenter side of the family cast them out, fierce and unforgiving. So that there were enmities in the country, feuds that passed on from one generation to another. Still, Protestant and Catholic and Dissenter worked together in the harvest season, as need came. And if fights broke out, they rarely became sanguinary.

Naturally such a people are passionate and poetical, loving their land with ardor, feeling history as something vital and present.

Corbier has lost his wife only a year ago. He had loved her and he mourned her—mourned her so that as he followed his plow the day that Madeleine came to his house for the first time, to take up the work for which he had hired her, the tears ran down his cheeks for the woman he had lost, whose children must be brought up by a stranger, who would stand no more with welcoming eyes in the doorway as he came in from the fields. Lovely she had been, with soft hands, and they had had joy of each other. Why had she gone so soon to God's house, and left his house desolate?

He resents the presence of Madeleine, Nêne as the baby calls her, without being conscious that he does so. He is compelled to admire the way she takes hold, bringing order and sweetness into the whole place, keeping the children fresh as pinks, always at work, always cheerful, ready, self-effacing. But he says nothing in the way of thanks and encouragement.

Nêne does not expect either. She grows to love the two small ones immediately, and this love gradually dominates her whole life. Corbier is young, fine-looking, the father of the two babies. She dreams a little in regard to him, wondering if perhaps some day they may not marry, and she become truly the mother of the young ones. But once, as she plays with the baby boy, he gurgles out "Maman," and this Michel overhears. He flies into a rage, tells her that she is sacrilegious, forbids her ever to allow the child to say the word again.

Mortal sin, he called it. And Madeleine is hurt so badly that it seems to her she can not stay on. For three days the two do not speak to each other—Corbier does not so much as look at her, and the insult bites into her heart. After all, it is no sin to love the children. Yes, she will leave.

But she does not leave. Does a mother leave her children because she is insulted or unjustly used? And no mother ever loved her children better than Madeleine, loved the children of the dead wife of Corbier.

The misunderstanding is gradually forgotten, work goes on, and what work! Nêne is up by three every morning, and rarely in bed before ten, often later. It is a big farm, with many hands, and Nêne has everything to do, no help at all. The children use up much time, there are the clothes to wash and mend and make, spinning to do, cleaning, the goats and cows and fowl to care for, the cooking—it is endless.

Let those who know only the luxury of France read this book. Here is France herself, the France that is rebuilding her ruined towns, that is finding somehow the labor and the money to do what must be

done while Germany whines that she can not bear to be taxed, can not meet her obligations. Here is the courage, the devotion, the energy of a great race expressed quite simply in the person of a peasant girl.

Nène's story is a story of sacrifice. She loses everything, because she has never learned to ask, to take. Corbier accepts her labor as a due, does not even notice how perfect it is. Does not know that his children look so dainty and have their little treats and toys because Nène buys them pretty things with her own poor wages. Does not realize the blessing she is to them and to his house. He falls in love with another woman, a scheming, pretty, selfish little beast, cruel and clever, and that is the end of Madeleine. The tragedy develops swiftly and sweeps poor Nène away on its tide.

The book is written with consummate art and extraordinary insight and sympathy. Here is no touch of sentimentality to mar the truth. Each character is drawn with entire comprehension, full and round.

Each scene is painted as it is. You feel behind the special men and women, the actual farm or road or village or house, the whole neighborhood, the entire countryside. Yet this book was hawked about from publisher to publisher in France without finding any taker. When the author took it finally in its manuscript form to the Académie, its worth was recognized, and the Prix Goncourt of 1920 was the reward. Since then the story has met with steady success and the most distinguished praise. It has sold over a hundred thousand copies in France, and made its author, a poor school-teacher, famous.

KINDNESS TO BURGLARS

A BURGLAR out of jail may conceivably be like a fish out of water. The fish wriggles to get back, and in the hands of a humorist like George Barr McCutcheon, the burglar does likewise. "Yollop" (Dodd, Mead & Co., \$1.00) is not the burglar's name, however; it is the identification of the burglar's captor, and we meet him at the exact moment when the capture has been effected. In his efforts to get back to his jail, he is doing his best, but it is a difficult job—as difficult as to stay there once he's in. He tells Mr. Yollop all about it as the two sit in the rather chilly room where the capture has been made, waiting for the police. Mr. Yollop has the burglar's pistol, and the burglar is sitting against the wall with his hands up. He has just telephoned to the police under Mr. Yollop's instructions—even coercion. For tho he wishes to be sent home again to Sing Sing, every self-respecting crook has a rooted objection to being taken by the boob whom he is holding up or burgling or what-not, and Smilk is no exception.

The two are prepared for a long wait. As Mr. Yollop remarks, it will probably take the police at least two hours to find the house, with absolutely no clue to it except its number and the name of the street.

Mr. Smilk, the burglar, is particularly enraged by the parole law. As he puts it, "just about the time we begin to feel comfortably settled up the river, along comes some doggone home-wrecker and gets us out on parole. Then we got to go to work and begin all over again. Sometimes, the way things are nowadays, it takes months to get back into the pen again. . . . Why can't they leave us alone instead of drivin' us out into a cold, un-

Snow White and Rosy Red

Framed by the rosy curve of her lovely lips, her smile reveals the flashing white of perfect teeth.

Her beauty blooms triumphant over Time because she knows the secret of a healthy mouth.

Pyorrhea, which attacks youth's radiance as a grub destroys the budding rose, has passed her by.

Do you face your telltale mirror as fearlessly as she?

Four out of every five people who pass the fortieth milestone have Pyorrhea. Thousands younger are not immune.

Its danger signal is tender, bleeding gums. Quickly its deadly work is done, unless you halt it in its course. The gums recede, the teeth decay, loosen, drop out or must be pulled.

You can stop Pyorrhea abruptly in its course of havoc. At the first sign of warning, see your dentist for treatment.

Then go to your druggist, buy a tube of Forhan's For the Gums, and use it regularly.

Forhan's For the Gums is the formula of R. J. Forhan, D. D. S.

It will prevent Pyorrhea—or check its progress, if used in time, and used consistently.

Forhan's is a pleasant dentifrice that leaves the teeth white and clean, keeps the gums pink, firm and healthy.

35c and 60c, in the United States and Canada At all druggists.

Why do women like pipe-smokers?

We asked many women. One said: "Because a man who thinks things out, does them and goes all the way through with anything he starts generally smokes a pipe if he smokes at all—and nearly always he does smoke."

Another replied: "A pipe smoker is more of a home man, it seems to me. There is no better picture of contentment than a man smoking a pipe in his home after the day's work is done."

"He is more honest, more reliable, more manly," said another—but she was rather young.

There were many reasons given by the fair ladies; some of them not very powerful from a logical viewpoint.

And just to show that woman is not the only illogical of the two sexes, we asked a number of men why they liked the tobacco they smoked. One said it was strong enough for him. Another said it was mild enough for him—and they were smoking the same brand. All of them had some more-or-less indefinite reason for liking a certain tobacco, but putting that feeling into words was difficult.

Even our old Edgeworth smokers — our best friends — have difficulty in telling why they like Edgeworth. "It is a friendly, friend-making tobacco that just suits me," was the best answer we could get. *Just suits me!* There's the whole thing.

But Edgeworth doesn't suit everybody. Out of every hundred pipe-

smokers there may be one or two who couldn't get supreme satisfaction out of Edgeworth.

Nevertheless, we would like to send any pipe-smoker free samples of Edgeworth, and we are sincere when we say that we would rather send samples to a man who thinks he will *not* like Edgeworth—for he may find he is mistaken and then he will be the best friend for Edgeworth that a smoker could be.

If you will send us your name and address on a postcard, we will forward samples of Edgeworth, Ready-Rubbed and Plug Slice, and there is no tag attached, "Send money if you like it." The samples are free and post-paid. Address your card to Larus & Brother Company, 5 South 21st St., Richmond, Va.

To Retail Tobacco Merchants: If your jobber cannot supply you with Edgeworth, Larus & Brother Company will gladly send you prepaid by parcel post a one- or two-dozen carton of any size of Plug Slice or Ready-Rubbed for the same price you would pay the jobber.

feelin' world where we got to either steal or starve to death?"

Thus Mr. Smilk runs on, elucidating the hard life of the criminal whose only desire, after all, is to be comfortably in jail, where he is sure of three square meals a day, has a minimum of labor and a modicum of leisure, agreeable society, and any amount of amusement and recreation provided for him absolutely free. As he says, the law is all right. It is the people who abuse it who make the trouble, and who throw unoffending men, living an honest life at Sing Sing, back into crime again. It is "these here sentimental reformers who take it upon themselves to interfere with the personal liberty of criminals, and to say whether a feller shall stay in jail or not."

This is all new to Mr. Yollop, and he is soon taking a heartfelt interest in Smilk and his troubles. When the police arrive, and this is not until a number of astonishing things have happened, for whose exposition there is no room here, Smilk is discovered with the jewels in his possession, the sister of Yollop gagged and bound, and the rooms in disorder. He is arrested and removed. Then the business of getting along to Sing Sing begins.

And then the fight begins! Naturally Mr. Yollop, who is evidently a well-to-do man with at least some education, has no chance with the jury. Of course the testimony of the police is utterly discredited. And when Mr. Smilk's wife, arriving with a bunch of miserable-looking children borrowed for the occasion, enters the plot, the jig is up. Smilk is in despair, and tho Yollop, who has come to have a real feeling of affection for the unfortunate man, is doing all he can to get him convicted, there seems little chance of such a happy ending.

But Yollop is a man of resource.

In one of the confidential chats he and Smilk have together the burglar confides to him the names and addresses of several other wives belonging to him. And Yollop sees a great light.

No American jury would be so brutal, so devoid of all feelings of chivalry, as to set free a man who has wronged a woman. Especially a poor woman and a mother.

So, when two other wives are sprung in court, the sympathy that had been running high for Smilk, evidently a poor lad driven by starvation to robbing people who had plenty to spare, and who are evidently vindictive, heartless creatures who wish to see a helpless young man delivered up to the law, his career ruined, this feeling is suddenly chilled when wife number two and wife number three open their mouths and speak.

The trial scene is amusing, and the little book, which can be read through in an hour or two, is packed full of laughs from cover to cover. Mr. McCutcheon has his fun with the present-day methods of catching and convicting criminals, with the manners of counsel and the brains of juries. The talk of the jury in finally arriving at a conviction is a delightful bit of satire. In spite of the lure of such a book we find Burton Rascoe of the *Tribune* reporting the conversation of two of our "Young Intellectuals": "We talked about the little tragedy of once popular writers like Harold McGrath and George Barr McCutcheon, who had been crowded far in the background by the newer men, and how none of them, except Tarkington, had oriented himself to the newer fashion and point of view." What "newer men" could write "Yollop"?

French-English German-English Latin-English DICTIONARIES

They will show you how to find the equivalent in English of French, German, and Latin words.

And, vice versa, how to find the French, German, or Latin equivalent of English words.

How to spell, pronounce, syllabicate, etc.

How to conjugate the various foreign verbs.

How to translate American coins, weights, and measures into their foreign equivalents, etc., and vice versa.

They contain lists of proper names, geographical names, and various other valuable data.

Cassell's New French Dictionary

French-English and English-French

Edited by James Boileau, B.A. Newly revised by de V. Payen-Payne, Assistant Examiner in French in the University of London. Containing, in addition to the regular French-English and English-French vocabulary, a special article on French Pronunciation; a list of French Nouns of Double Gender; a table of Irregular and Defective Verbs and their Conjugations; a special Vocabulary of Proper Names; separate Vocabulary of Geographical Names, etc.

"The best French and English Dictionary of an ordinary size in existence."—*Critical Review*, Paris.

Octavo, Cloth, 1,230 pages, \$1.95 net; by mail, \$2.15. With patent double-thumb-notch index, 50c. extra. Bound in Full Flexible Leather, Indexed, \$6 postpaid.

Cassell's New German Dictionary

German-English and English-German

Compiled from the best authorities in both languages. Revised and considerably enlarged by Karl Breul, M.A., Litt.D., Ph.D., Cambridge University Reader in Germanic.

By the issue of this new edition, this dictionary becomes the cheapest as well as the best popular German-English and English-German dictionary in the world. Among the new words and phrases included will be found many thousands of idioms, well-known proverbs and familiar quotations, besides colloquialisms and German slang terms which often prove puzzling to English students.

"I think that Dr. Breul, who has been so long engaged in the preparation of this work, has succeeded in giving the public an excellent book. It deserves to be recommended so much more, as the print is perfect and the price moderate."—*An Eminent Scholar*.

Octavo, Cloth, 1,360 pages, \$1.95 net; by mail, \$2.15. With patent double-thumb-notch index, 50c. extra. Bound in Full Flexible Leather, Indexed, \$6 postpaid.

Cassell's Latin Dictionary

Latin-English and English-Latin

216th Thousand. Thoroughly Revised and Corrected by J. R. V. Marchant, M.A., formerly scholar of Wadham College, Oxford; and Joseph F. Charles, B.A., late assistant master at the City of London School.

It is, above all, intended to be a dictionary of classical Latin, and thus, in this new edition, a large number of archaic, or post-Augustan, words have been omitted, while nearly all of the important articles have been entirely rewritten, chiefly with a view of introducing a greater number of quotations to illustrate construction and usage. The historical and geographical notices have been largely increased in number. In addition to the regular vocabulary features the book contains a table of the Roman Calendar, and a Geographical Glossary of the English names of important places with classical or later Latin equivalents.

Octavo, Cloth, 928 pages, \$1.95 net; by mail, \$2.15. With double-thumb-notch index, 50c. extra.

Each Dictionary is also exquisitely bound in full-crushed Levant, gilt edges, hand-tooled, raised band, boxed at \$12.00 each.

POSTHUMIZING DICKENS AGAIN

DICKENS readers have here a pretty *casus belli* if they choose. The idea of trailing people through a generation or two after they have been quietly disposed of by the original authors is an adventure that appeals to Sir Harry Johnston. He first trifled with "The Gay-Dombey's," then turned to Shaw, and expanded the careers of Mrs. Warren and her daughter Vivie. Now he is back again to Dickens and drags out "The Veneerings" (Macmillan, \$2.00), and incidentally adds to his culpability in the minds of any who feel there is a serious question in literary ethics involved in the process of carrying on the lives of another man's characters.

At the end of "Our Mutual Friend" we are told that the Veneerings, after a brief career of social endeavor, go bankrupt and retire to the Continent, where they propose to live on the proceeds of Mrs. Veneering's jewelry, and Sir Harry Johnston's book opens with their arrival in Calais, where they encounter Mr. and Mrs. Alfred Lammle, who had preceded them by a short time. As is often the case in life the women blossom out in times of adversity while the men pursue the downward path with ever-increasing speed. Mrs. Veneering takes to raising poultry and vegetables on a small farm near Calais while Sophronia Lammle becomes a more or less respectable adventuress, to use the word literally, and after a short experience in the French Secret Service, settles down in a paid position in the Pyrenean nurseries of John Harmon. For that gentleman had bought the drug business of Chicksey, Veneering & Stobbles, and with far-seeing intelligence was establishing nurseries in various parts of the world where the plants could be grown necessary for the production of curative drugs. This is evidently a subject on which the author is thoroughly at home, and he writes of such a plan with enthusiasm and great knowledge of the plants of many countries, such descriptions being among the most interesting parts of the book.

John Harmon is a rich man but he entirely disagrees with his sons, who think that fact should permit them to live in idleness, and as neither of them takes the least interest in their father's business he seeks out young Mervyn Veneering, who is only too glad of such a chance, and gives him a place, near the bottom of the ladder to be sure, but with every chance to rise.

Besides the characters whom we remember of old, others are introduced. Some of Bella Harmon's troublesome brothers and sisters, on hearing that she has married a rich man, break the silence of years and apply for help, while Susie, the family black sheep, charitably spoken of as "on the stage," has to be firmly dealt with by John before subsiding. Georgy Podsnap reappears, with plenty of money left her by her parents and firm in her old allegiance to Sophronia, now known as Mme. de Lammelle, and whose latter years are in shining contrast to her earlier ones. Part of the scene is laid in South Africa, where Mervyn goes with Harmon and his daughter in order that they may be married where marriage with a deceased wife's sister is legal. We have a glimpse of Cecil Rhodes at Grote Schur, where the English party is entertained, and an account of the Jameson Raid, in which Reggie Harmon takes part and is severely wounded. Altogether the story is vivid and full of life and interest, tho some might ask if the author is warranted in his account of Sophronia's origin and her relations with Veneering in the days when Dickens was responsible for her actions.

How to Reverse a Ford Quietly

If there is "F" Autoline Oil in your crank case your Ford will glide instead of "jump" when you reverse.

The reason some Fords "chatter" is because the brake and transmission linings have become hard and glazed, so that they cannot grip the transmission drum evenly.

"F" Autoline Oil stops and prevents "chattering" because it keeps these linings soft and pliant. It costs no more than ordinary oil. It will not clog the oil line.

You have nothing to risk. "F" Autoline is sold on the basis of "stop the chattering or money back." Get your garage man to drain the oil now in your crank case and fill up with "F" Autoline Oil. If your car "chatters" after that, your money will be refunded.

Ninety years in the oil business taught us how to make "F" Autoline Oil. We are the makers of "OO" Autoline Oil, one of the few oils recommended in the Franklin Owners' handbook—for use in Franklin Cars.

A Ford dealer wrote us a letter telling how "F" Autoline Oil for Fords stopped "chatter" for his customers and said, "We are glad to recommend this oil to all of our friends and Ford users."

Go to the garage that displays the red Autoline Oil sign—and put an end to "chattering."

TO MAKE THE LABEL TELL THE TRUTH

HEREAFTER manufacturers can be prevented from labeling an undershirt "all wool" when it is really 90 per cent. cotton, even tho its composition may be no secret throughout the underwear trade. Not only is such misleading labeling illegal but, according to the United States Supreme Court's decision, the Federal Trade Commission has a right to order any manufacturer to cease using any label or brand which might deceive the ultimate consumer. Under the Clayton Act, says Justice Brandeis, "trade-marks which deceive the public are denied protection, altho members of the trade are not misled thereby." The decision is welcomed by the press, which realize that the court, in the words of the *Indianapolis News*, "decided from the view of the retail purchaser rather than from that of the trade," altho, as the *New York Journal of Commerce* remarks, "the elimination of deception in labeling or branding should aid honest business as well as the consumer." "Common sense," it may be noted, is the most popular editorial characterization of the decision.

It seems to one of the counsel for the Trade Commission that as a result of the Supreme Court's decision against the Winsted Hosiery Company, which appealed from an order of the Commission, "there will come a revolutionary change in advertising. It will be possible to give the public full protection from unscrupulous firms which mislabel, misbrand or misrepresent the article they are offering on the market." But the *New York Commercial* thinks that the word "revolutionary" is rather too strong for the case, "in as much as first-class periodicals have for a long time been enforcing this law in its strictest interpretation; in fact, none but second-rate publications will knowingly accept advertising that in any way deceives the buyer. In this respect the efforts for clean advertising have been supplemented by the first-class advertising agencies until straight advertising has become so wide-spread among the advertising fraternity that its general enforcement by the Federal Trade Commission could not be called revolutionary."

Taken by itself, as affecting only the practises of the Winsted Hosiery Company, the decision read by Mr. Justice Brandeis on April 24 would not appear to have very far-reaching consequences, several editors admit. But, they contend, the case is typical of a large number of misbranding cases now before the Trade Commission, which will probably be settled on the lines of the decision. Besides, as we read in the *New York Times*, it will, taken in connection with the recent decisions in

the shoe machinery and price-fixing cases, "serve to remind certain classes of prominent persons that they can not break the law with impunity."

This means not merely the protection of the general public from exploitation by conscienceless producers of one kind or another, but also the protection of the humbler and poorer of producers from the capacity of those strong enough to dominate in certain industries, and who have, in the past, been wont to use their power to crush competition. Live and let live promises to be the new slogan in business.

The strengthening of the hands of the Federal Trade Commission is emphasized by other commentators. "This is almost the first real victory the Commission has won," says the *Boston Herald*; "and it may prove to be a great significance." To the *New York World* it seems all important that the Commission and "the law of its creation" should be so fully sustained:

This is a pioneer body in the Federal Government. It was designed not to supersede but to aid in the enforcement of the anti-trust laws. It has been fighting for its life ever since its establishment, and having uphill work. The hand of every manufacturer or dealer or coal-operator or others engaged in doubtful practises under the laws to maintain fair competition has been set against it, and quite too often have the lower Federal courts been disposed to give them refuge.

Now the Supreme Court has spoken in the matter and with but a single dissenting voice. This little game of hamstringing the Federal Trade Commission will have to stop. That body represents a line of Government trade regulation which is here to stay for a while.

ARE LIVING COSTS TOO HIGH?

OFF-HAND, most of us would probably say yes. But when Secretary Wallace tried to answer the question in a recent address before the National League of Women Voters he made the statement that "if it were possible to bring up prices of everything to about 60 per cent. above the pre-war level that would benefit most of our people and the nation at large." Now there is occasion for wide difference of opinion on this point, the *New York Evening Post* notes in discussing Mr. Wallace's remark. And, in fact, the Secretary of Agriculture readily admitted this. It seems to *The Evening Post's* financial editor that to bring prices up to the level advocated by Mr. Wallace would involve "a considerable amount of readjustment":

In the first place, average prices would be higher than they now are; for nearly a year wholesale prices have been fairly stable, at about 50 per cent. above the pre-war level. Again, the suggested plane of

Before you decide

Before you decide on your method of check protection, ask yourself:

1. Is the protection complete?
2. Is it dependable?—proved by actual use.

National Safety Paper

protects every part of a check—amount, payee's name, date and endorsements—against alteration with chemicals, eraser, or knife. A glaring white spot instantly shows up the change.

The dependability of this protection is established by over 50 years of use. More than 75% of the banks in New York, Chicago and Philadelphia, and thousands of other banks use checks on National Safety Paper.

Ask your bank for checks on National Safety Paper or specify them to your lithographer. Look for the wavy lines.

Write for our book
"The Protection of Checks"

& Son, Ltd., Toronto

desirable prices would mean a considerable rise in prices of farm products, food, and metals, and a considerable drop in the prices of clothing, household goods, fuel, and building materials. One's views as to the desirability of these changes will naturally be governed largely by the degree to which they may promote or retard his own economic welfare. As a general proposition, it may be said that individuals with fixed incomes from salaries and investments will not welcome any suggestion of a higher level for average prices, while farmers and producers of metals and any others whose prices are below the general level, as well as the debtor class generally, would welcome a higher level. What is really needed now is not higher prices or lower prices, but more uniform prices as between different groups, and then, after uniformity, stability.

THE BELGIAN TRUST IN THE SAVINGS BANK

OF all these the thriftiest are the Belgians, might seem to be a perfectly proper paraphrase of Caesar's characterization, when we read in the Commerce Department's *Commerce Reports* that practically half of the 7,600,000 inhabitants of Belgium are savings-bank depositors. And what is more, almost all these deposits are in the same bank. For—

The function of depository of popular savings in Belgium is not, as in the United States, shared by numerous savings banks, or the savings departments of established financial institutions, but is mainly concentrated in the Caisse Générale d'Epargne et de Retraite, at Brussels. The Caisse d'Epargne is a private company with legally regulated functions, and operates under the supervision of the Minister of Finance. It cooperates with the Belgian postal service, thus obviating any need of a postal-savings system. According to its last report, this institution had 3,500,008 accounts, indicating that practically one-half of the inhabitants of Belgium are depositors. Total deposits at the close of 1921 were 1,494,522,172 francs, showing an average credit to each depositor of 427 francs.

VIENNA BECOMING THE WALL STREET OF CONTINENTAL EUROPE

SELDOM does the same road lead to poverty and financial leadership. But it seems to in the case of the capital of stricken Austria. Vienna, according to a correspondent of the *New York Evening Post* who writes from that city, is now becoming "the most important center for continental European arbitrage transactions." That is, it has become a center of foreign exchange for the very reason that the Viennese banks have been compelled by the worthlessness of their own money to become experts in dealing with foreign moneys. The writer notes that:

The quotations in Milan, Zurich, Prague, Warsaw and Belgrade have for the past few weeks been nothing else than transcalculations of Vienna quotations. The point is that Vienna bankers are no longer calculating in crowns. The exchange markets of all Continental countries are more or less hampered by the habit of

Have you a friend who is a printer?

If you haven't, you may sometimes feel that printers are a cantankerous lot, whose chief business is keeping you from having the kind of printing you think you want.

But if you know a printer well, you can testify to a keen, marrowy man; a man of agile intellect and sound instinct in matters of taste.

There's something in the tradition of the art of Bodoni and Ben Franklin that attracts and holds that sort of man.

A cantankerous lot

We firmly believe that is because printers are like this that Old Hampshire Bond is so well known. For longer than we can remember, printers and Old Hampshire Bond have had a strong affinity—it just seems as though they get on together naturally and with mutual respect.

Printers buy almost all of the Old Hampshire Bond that is made. They buy it to make into business letterheads which they design and print and sell to their customers everywhere.

Ask your printer

We have never met a printer who did not appreciate this fine paper and recommend it whenever he was called on to supply business stationery of character and distinction. And if you have acquired wisdom in printing matters, you will take his say-so as the dictum of the man who knows, and use Old Hampshire Bond for your letterheads.

For printers and business men interested in fine paper, we have some interesting samples, which we shall gladly send to all who write on their business letterheads.

INVESTMENTS AND FINANCE

Continued

thinking in the national currency. This mental limitation does not exist for the Vienna banker. He always thinks in the currency in which he is dealing and not in his national currency. This creates a mental flexibility which is a condition of international currency transactions.

Of course, the London banker, who before the war was trained to think in metal, gold or silver, had the same mental independence from the peculiarities of national exchange, but in the European continent even neutral bankers took their national exchange as the national unit.

It is remarkable that the German markets for foreign exchange depend on Vienna quotations. Vienna is the market in which German importers buy dollars, pounds, French francs and so on. Of course, it represents an enormous economic and financial brain without an adequate economic body. The critical situation for Vienna was at the time when this hypertrophic brain of Vienna appeared condemned to think only for the small economic body of little Austria. But if Vienna has a brain for big economic units she may play an important rôle in the European East which will not only help the bankers and the bankers' employees but the whole population of the town.

WHAT UNCLE SAM OWES

UNDER this heading *The Nation's Business* (Washington, D. C.) assembles, in a convenient form so that the whole situation may be taken in at a glance, the essential facts regarding United States Government's indebtednesses:

	Billion Dollars
The public debt is about.....	23.5
Of this amount there falls due within the next 15 months a total of about.....	6.2
This 6.2 billions is made up of the following:	
Victory Notes.....	3.5
Due in 15 months (May 20, 1923)	
Treasury Certificates.....	2.2
Due in varying amounts in from 1 to 10 months.	
War Savings Securities.....	.5
Due in 10 months (January 1, 1923)	
	6.2
In addition there are:	
Treasury Notes.....	.7
Due in June and September, 1924	
	6.9

THE WAR LOANS

The war loans mature in this order:

	Billion Dollars
1. (1923) Victory Liberty Loan.....	3.5
Redeemable June 15 and December 15, 1922	
Payable May 20, 1923	
2. (1928) Third Liberty Loan.....	3.6
Payable September 15, 1928	
3. (1938) Fourth Liberty Loan.....	6.3
Redeemable October 15, 1933	
Payable October 15, 1938	
4. (1942) Second Liberty Loan.....	3.3
Redeemable November 15, 1927	
Payable November 15, 1942	
5. (1947) First Liberty Loan.....	1.9
Redeemable June 15, 1932	
Payable June 18, 1947	

[Within twenty-five years, that is, by the time of the maturity of the First Liberty Loan in 1947, not only all of the war loans will have become payable but practically all of the present indebtedness of 23.5 billion dollars will have become payable.]

Can You, Too, Say, "Yes, I'm Getting My 8 Per Cent?"

THAT was the answer Dr. Thompson got when he cross-questioned a friend who had been investing in Miller First Mortgage Bonds. An interest yield of 8% is attractive provided you get it. Invest in Miller Bonds and be sure of getting it. Write today for free story, "Yes, I'm Getting My 8%," which explains how and why.

CURRENT EVENTS

FOREIGN

April 26.—In an address to the British and American press representatives at Genoa Premier Lloyd George declares that Europe faces another war unless its political difficulties are cleared up by the Conference.

The Ambassadors' Council demands that Germany immediately hand over for trial 15 men accused by the Inter-Allied High Commission of having attacked the French barracks at Petersdorf, Upper Silesia, three months ago.

It is officially announced at Cairo that the United States Government has recognized the new Egyptian Government, but that it maintains capitulatory rights.

April 27.—The Russian Soviet Government issues notes in denominations of 50,000,000 and 100,000,000 rubles, which will be redeemable in 1924.

Three soldiers are killed and six wounded in a pitched battle between Irish Free State and Republican troops at Mullingar.

April 28.—Separate plans proposed by the British and the French for the rehabilitation of Russia, the one emphasizing the need for a revival of industry and the other for a revival of agriculture, are given by the Genoa Conference to a body of experts for the purpose of harmonizing and combining the essentials of both.

Fighting, accompanied by heavy artillery firing, begins between the troops of General Chang Tso-lin, Governor of Manchuria, and General Wu Pei-fu, Commander of the forces in Central China. Meanwhile the foreign legations issue a joint warning to the Chinese Government against fighting in Peking.

Five more Protestants are murdered in County Cork, making a total of eight killed in two days. Since February 1, the Secretary of the Ulster Union Council announces, 51 Protestants and 9 Crown servants have been murdered in Belfast by Sinn Feiners.

Paul Deschanel, who retired from the Presidency of France on account of illness and was succeeded by President Millerand, dies in his 65th year.

April 29.—The peace conference between the Free State and the Republicans ends when Eamon De Valera and Charles Burgess, rebel leaders, reject three offers made by the Provisional Government.

Richard Croker, former leader of Tammany Hall, dies at Glencairn Castle, Sandycroft, a few miles from Dublin, in his 79th year.

The Russian delegates to the Genoa Conference serve notice on the Allied Powers that unless a declaration of the Entente's stand, including credit grants, is forthcoming immediately, the Bolsheviks will withdraw the concessions they agreed to a week ago and will stand on their old demands.

The southern naval squadron belonging to the Peking Government is captured by the forces of President Sun Yat-sen, head of the South China Government at Canton, and the opposing forces about Peking engage upon a wide front. One hundred and fifty bluejackets and marines arrive to reinforce the American Legation at Peking.

The advisory committee of the League of Nations, meeting in Genoa, recom-

“Comfort at every point —from neck to knee”

“WHY didn't somebody make an athletic union suit like Topkis long ago?”

“Look at the long, wide legs! You can walk all day in Topkis without ever feeling a pinch or a pull. Scarcely touches your body. Big, roomy armholes.

“Fits exactly right—no bagginess; no clumsy belt.

“And listen—Topkis lets your skin breathe. No stuffy feeling.

“Quality? Value? Feel that fabric. Look at the workmanship. Seams firmly stitched; buttons put on to stay. Where could you get underwear anything like

it for a dollar except in Topkis?”

Only the best nainsook and other high-grade fabrics are used in Topkis Athletic Underwear. Pre-shrunk—full size guaranteed. But get *your* size—38 if your coat is a 38, and so on.

No good dealer will ask more than a dollar for the Topkis Men's Union Suit—although many will tell you it's *worth* more.

Men's Union Suits, \$1.00.

Men's Shirts and Drawers, 75c per garment. 75c for Boys' Union Suits, Girls' Bloomer Union Suits, and Children's Waist Union Suits.

Ask for TOPKIS Underwear. Look for the Topkis label.

mends control of the opium trade, by providing that no opium shall be exported or imported without a written governmental certificate that it is needed for medical or other legitimate purpose.

April 30.—Heavy fighting, resulting in combined casualties of 1,000, continues between the armies of General Chang Tso-lin and General Wu Pei-fu. Martial law is declared in Peking, and the American Legation requests Washington to send another warship to Tientsin.

Pope Pius XI sends a note to all the Powers represented at Genoa, appealing to them to adopt a conciliatory attitude toward Russia and to open the way to peaceful relationship among all the nations of the world. Georg Tehiteherin, chief of the Bolshevik delegation, assures Louis Barthou, head of the French delegation, that the Russo-German treaty contains no secret military clauses and that the Bolshevik delegates are anxious to cooperate with France.

The Sublime Porte agrees to the Allied High Commissioners' suggestion for the demilitarization of Thrace and for the freedom of the Dardanelles, provided the security of Constantinople is assured.

May 1.—Representatives of the regular and irregular branches of the Irish Republican Army agree to accept the fact that a majority of the Irish people favor the peace treaty, and to hold an election for the establishment of a government which will have the confidence of the whole country. Irregular forces are reported to have robbed various branches of the Bank of Ireland of more than £100,000.

The subcommission of the economic conference at Genoa decides to ask Chief Justice Taft, of the United States Supreme Court, to name the president of a mixed tribunal of three which will fix the amount the Bolsheviks shall pay to holders of Russian bonds and the compensation in cases where the Bolsheviks have seized private property. This action is subject to acceptance by the Bolsheviks.

Leon Trotzky, Soviet War Minister, declares to the Moscow garrison at the May Day review that the Allies at Genoa desire conditions to which Russia will never yield, and asks the troops to be prepared.

A sergeant of the American forces in Germany is wounded during the May Day celebration in Mayence.

The rival Chinese leaders agree to exclude Peking and Tientsin from the field of military operations.

May 2.—The Allied plan for the rehabilitation of Russia is sent to the Bolshevik delegation at Genoa, but without ratification by the Belgians and with only tentative approval by the French.

The revolt against the Free State Government, accompanied by raids on branches of the Bank of Ireland, spreads in Southern Ireland; and in Kilkenny the rebels seize several public buildings, from which they are later ousted by Free State troops.

Severe fighting occurs along the Hun River, 30 miles south of Peking, where 40,000 troops of General Wu Pei-fu, the Central Chinese leader, endeavor to force a crossing to gain control of the Peking-Tientsin railroad from General Chang Tso-lin.

**The Truth About
The Drug Menace**

The Drug Octopus is rapidly reaching out in all directions, in every stratum of society, from the palace on Fifth Avenue or Beacon Hill to the slums of State Street or the Barbary Coast. Dr. Royal S. Copeland, Health Commissioner of the City of New York, said: "It is safe to say that in all New York one person in thirty is a victim. During one month one drug store sold 500 ounces of cocaine, enough to send 2,500 people to hell." The entire appalling situation is discussed for you authoritatively, clearly, forcefully and interestingly in a remarkable book entitled

HABITS THAT HANDICAP

By Charles B. Towns

The author is one of the most successful fighters in the United States against this devastating blight of drugs on our civilization. Dr. Richard C. Cabot, M.D., himself an eminent physician, says of Mr. Towns, the author: "I do not hesitate to say that he knows more about the alleviation and cure of drug addictions than any doctor that I have ever seen."

"Habits That Handicap" contains amazing facts and figures, facts of which physicians, social workers, clergymen, nurses, educators, heads of families dare not remain ignorant if they have at heart the betterment of the race.

DOMESTIC

April 26.—Continued reports of dead and missing in the flood that inundated Fort Worth, Texas, for two days brings the list to 63.

April 27.—President Harding delivers a memorial address at General U. S. Grant's birthplace at Point Pleasant, Ohio, and says that all nations are backing the disarmament movement.

Twenty-four nationally known lawyers file a report with Secretary of State Hughes denouncing the motives and methods of the State and Navy Departments in their treatment of Haiti.

April 28.—The House passes the Dennison "blue sky" bill making it illegal to use United States mails and other agencies of interstate commerce for transporting and promoting the sale of securities contrary to the laws of the State.

April 29.—The Senate unanimously adopts the La Follette resolution calling for an investigation into the action of the Interior Department and the Navy Department in the leasing of the naval oil reserves in California and Wyoming.

The Socialist party of the United States, in convention at Cleveland, votes for an immediate affiliation with the Vienna Internationale.

Gifts by John D. Rockefeller for the advancement of education in the United States within the last twenty years are estimated by the President of the General Education Board to be \$120,000,000.

Secretary of State Hughes replies to the protest lodged against the United States Government in Haiti by announcing that the Government's policy will stand.

Twenty-five moonshiners of the Mill Creek district in Kentucky agree to turn over a new leaf and to surrender their stills to Judge Hiram Johnson of the Circuit Court, and afterwards engage in prayer in the court-room.

April 30.—President Samuel Gompers, of the American Federation of Labor, issues a statement declaring that recognition by the United States of the Bolshevik government would be "a needless and base betrayal of civilization."

May 1.—A bill extending for one year from next July 1 the power of the War Finance Corporation is passed by the Senate by unanimous vote.

The House passes the Dun bill authorizing an appropriation of \$65,000,000 for road-building for the year beginning July 1, and \$75,000,000 for the year thereafter.

Major-General James William McAndrew, Chief of Staff of the A. E. F. in France in the latter part of the World War, dies in his 60th year.

May 2.—President Harding sends to the House a request for a special appropriation of \$500,000 to be used by the Department of Justice to investigate and prosecute all civil and criminal cases growing out of the war.

Two joint resolutions to legalize light wines and beer, and a bill providing, in effect, for submission of the same question to a referendum vote are introduced in the House by Representative Anson, of New York.

Collections of internal revenue for the first three-quarters of the current fiscal year fell off by more than \$875,000,000, as compared with the corresponding period of last year, according to a report of the Internal Revenue Bureau.

THIRD OF NATIONAL SERIES

Friday Evening, May 19

CONN radio concerts have taken the nation by storm! Our programs of March 17 and April 14 by America's leading dance orchestras and nationally famed soloists have occasioned universal admiration for Conn enterprise.

Isham Jones, Joseph Smith, Frank Westphal, Hal Nichols, D. C. Rosebrook and their orchestras have already played; Benne Henton, Charles Randall, John Leick, Mable Keith Leick and Fred Tait have given solos. More of their calibre are to appear.

Travelers on shipboard 1500 miles from the Atlantic and Pacific coasts, people in Northern Canada and in Central America will enjoy the same music which will be heard throughout the United States May 19.

Think of it—Conn Ltd. is entertaining people by wireless a quarter of the way around the globe

May 19 programs will be broadcasted from:

New York, Station WJZ; Pittsburgh, Station KDKA;
San Francisco, Station KDN; New Orleans, Station WAAB;
Detroit, Station WWJ; Denver, Station ZAF;
Chicago, Station KYW; Kansas City, Sweeney Station
Seattle, Wash., Station KGB

Conn dealers are entertaining at radiophone concerts.

How Do You Buy a Car?

DON'T buy a car on its demonstration alone. To know that it has a good engine, clutch, etc., is very important, but there are other things to consider.

Have you stopped to think how much depends upon the fuel feed system? That unless the gasoline is delivered in a steady flow to the carbureter the motor cannot properly operate. The Stewart Vacuum Feed System is always on the job. That is why nearly 90% of car manufacturers equip with it. It always takes you where you are going and always brings you back home.

On the instrument board you are almost certain to find a Stewart-Warner or Van Sicklen Speedometer—all made by the Stewart-Warner Speedometer Corporation.

Back of these Stewart Products is the Stewart Service organization, 86 Service Stations covering the world.

Fortunate, indeed, is the car manufacturer who can equip with Stewart Products and thus save the expense of training additional mechanics to give service on equipment.

Car dealers should insist that the cars they sell be Stewart equipped that their selling talk may be strengthened. Car purchasers should insist that the cars they buy be Stewart equipped. It is an assurance that in the building of the car, quality was considered above all else.

The Higher Journalism.—REPORTER—“I have come to interview you, sir.”

GREAT STATESMAN—“Well, go back and write your interview and let me see it.”

REPORTER—“Here it is.”—*Life.*

Suburbanity.—WOMAN—“I should think you would be ashamed to beg in this neighborhood.”

TRAMP—“Don't apologize for it, mum, I've seen worse.”—*Williams Purple Cow.*

Wised Up a Bit.—BURROWS—“Sorry, old chap, but I am looking for a little financial succor, again.”

BANGS—“You'll have to hunt further. I am not the little financial sucker I used to be.”—*Lawyer and Banker.*

Why Business Is Now Dull.—“I've got a lot of things I want to talk to you about, dear,” said the wife.

“That's good,” answered the husband: “you usually want to talk to me about a lot of things you haven't got.”—*Tit-Bits.*

Tame Bird, Wild Parson.—JUDGE PRIEST—“Parson, that turkey you sold me yesterday wasn't a tame one as you claimed it to be, for I found shot in it.”

PARSON BROWN—“Judge, dat was a tame turkey jest like I sed it was; dem shot was meant for me.”—*Judge.*

Soft Answer Turneth Away Wrath.—WIFE—“My dear, you've forgotten again that to-day is my birthday.”

HUSBAND—“Er—listen, love, I know I forgot it, but there isn't a thing about you to remind me that you are a day older than you were a year ago.”—*London Opinion.*

Superiority.—Booth Tarkington tells of an old colored man who appeared as a witness before one of our committees. In the course of his examination these questions were put to the man: “What is your name?” “Calhoun Clay, sah.” “Can you sign your name?” “Sah?” “I ask if you can write your name.” “Well, no, sah. Ah nebber writes ma name. Ah dictates it, sah.”—*Atlanta Chronicle.*

His Passing Fancy.

There was a man who fancied that,

By driving good and fast,
He'd get his car across the tracks

Before the train came past;
He'd miss the engine by an inch,

And make the train hand sore,
There was a man who fancied that. . . .

There isn't any more.

—*Carnegie Tech. Puppet.*

Self-Defense.—SHE—"I'm afraid, Don, that I will never see you in heaven."

HE—"Great guns! What have you been doing now?"—*Sour Owl.*

Sufficient Excuse.—COP—"You're pinched for speeding."

COPPED—"What's the big idea? Doesn't that sign say 'Fine for speeding'?"—*Sun Dial.*

Good for What Ails You.—"Quite a long line in the doctor's office."

"Yes."

"Lot of men ill?"

"Not ill, hopeful."—*Judge.*

Filial Piety.—VISITOR—"Are your children doing anything for you in this your last illness?"

OLD MAN—"Oh, yes; they are keeping up my life insurance."—*Western Christian Advocate.*

In the Artist's Studio.—CAPTAIN OF COMMERCE—"D'you sell them?"

ARTIST (in hope)—"Oh, yes, certainly!"

CAPTAIN OF COMMERCE—"Young man, come with me. I've been looking for a salesman like you for years."—*Sydney Bulletin.*

"—!—!!—!!!"—CLERGYMAN—"I brought back the second-hand car I bought from you last week. It is too obstreperous."

DEALER—"What's wrong? Can't you run it?"

CLERGYMAN—"Not and stay in the ministry."—*Motor Life.*

Painless Dentistry.—AUNT ETHEL—"Well, Beatrice, were you very brave at the dentist's?"

BEATRICE—"Yes, auntie, I was."

AUNT ETHEL—"Then there's the half-crown I promised you. And now tell me what he did to you."

BEATRICE—"He pulled out two of Willie's teeth!"—*Punch.*

Puzzle: Find Pop.—Colonel B. A. Franklin, Vice-President of Strathmore Paper Company, is responsible for the following story: A gentleman having business with a back-country farmer inquired of the farmer's boy where the old man was to be found. "He's out in the pig-pen doctoring a sick shoat," replied the boy, and added as an illuminating after-thought, "Pop's the one with a hat on."—*Christian Intelligencer.*

Letting Him Down Easy.—A rich man, lying on his death bed, called his chauffeur who had been in his service for years, and said:

"Ah, Sykes. I am going on a long and rugged journey, worse than ever you drove me."

"Well, sir," consoled the chauffeur. "There's one comfort. It's all down hill."—*American Legion Weekly.*

Spoiling the Fun.—The teacher said to her pupils:

"Wouldn't this be a great world if people would all love one another and treat each other with kindness?"

One small boy looked doubtful.

"Wouldn't you like to see everybody treat everybody else with kindness?" the teacher inquired.

After a moment's reflection the boy answered:

"Then there wouldn't be any more Mutt and Jeff pictures."—*Youngstown Telegram.*

\$1,000⁰⁰ in Prizes

Build all the words you can from the phrase, "Use Elam's Irish Lawn When You Write."

THE person who submits the largest number of English words formed in accordance with the simple rules will be paid \$500.00 in cash; the next largest list will win \$200.00 and so on down to \$2.50 as shown by Prize List No. 1, if the words are written on Elam's Irish Lawn. You may, however, use any other paper and be eligible for the cash awards in Prize List No. 2. All lists, on whatever paper submitted, will be given the same unbiased consideration by impartial judges. Anyone may compete except persons connected with our organization. Buy Elam's Irish Lawn from your druggist, stationer or department store or send us 50 cents for full sized box containing 24 sheets of paper and 24 envelopes to match. Specify color: White, Gray, Buff, Blue, Pink or Lavender.

Made only from clippings of the finer fabrics, Elam's Irish Lawn immediately proves its finer qualities.

Contest Rules:

1. Only words found in Webster's dictionary to be counted. Don't send foreign, hyphenated or compound words. Words of the same spelling can be used only once, even though they express different meanings.
2. Letters may be used in one word only so often as they appear in the contest phrase. For example, s may be used three times, but in only once.
3. Contest closes July 31, 1922.
4. Use singular or plural, but where singular is used, plural cannot be counted also, and vice versa.
5. The list showing the largest number of correct words will be awarded first prize; the next largest, second prize, etc.
6. All answers must be written on one side of the paper only and words numbered 1, 2, 3, 4, etc. Write your name and address on each sheet.
7. In event of ties, full amount of the prize tied for will be paid to each tying contestant.
8. The decision of the judges will be final and awards made and checks mailed to winners as soon as possible after close of contest.
9. So called master lists sometimes offered for sale are barred.

ALLEN'S FOOT-EASE

The Antiseptic,
Healing Powder

Shake It in
Your Shoes

Use It in
Your
Foot-Bath

USE IT IN THE MORNING

And walk all day in comfort. At night, sprinkle it in the foot-bath, and soak and rub the feet. It freshens the feet and takes the Friction from the Shoe.

IN PEACE AND WAR for over 25 years, Allen's Foot-Ease has been the STANDARD REMEDY for hot, swollen, smarting, tender, tired, perspiring, aching feet, corns, bunions, blisters and callouses. Nothing gives such relief. Ladies can wear shoes one size smaller, and shoes and stockings wear longer. Those who use Allen's Foot-Ease have solved their foot troubles.

Over 1,500,000 pounds of Powder for the Feet were used by the United States Army and Navy during the war.

In a Pinch, use ALLEN'S FOOT-EASE

A copy of Mothersill's Travel Book sent on request without charge.
MOTHERSILL REMEDY COMPANY, Detroit, Michigan
Also at 19 St. Bride Street, London; Montreal, New York, Paris, Milan, Hamburg.

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the current use of words, the Funk & Wagnalls New Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"G. L.," Americus, Ga.—"Kindly give me the correct pronunciation of the name *Deschanel*."

The name *Deschanel* is correctly pronounced *de'sha'nel*—first *e* as in *prey*, *sh* as in *ship*, *a* as in *artistic*, second *e* as in *get*.

"R. K.," Lisbon, N. H.—"Kindly give me the correct pronunciation of *sky* and *ski*. Is there any authority for the 'h' sound?"

The word *ski* in Danish is pronounced *ski*—*i* as in *police*. In Norwegian and Swedish *sk* before *e*, *i*, and *y* is pronounced as English *sh* in *ship*; hence, *ski* is invariably pronounced *shi* (*sh* as in *ship*, *i* as in *police*) by Scandinavians. The word *sky* is pronounced *skai*—*ai* as in *aisle*.

"E. S. L.," New York, N. Y.—"I swear frequently by *The Great Horned Spoon*. Who built *The Great Horned Spoon* and what was it made of?"

The phrase "by the great horn spoon" is a ludicrous oath of unknown origin, of which we find a mention as early as 1848 in the "Biglow Papers," "Sez Mister Foote, 'should like to shoot, The holl gang, by the great horn spoon.'"

"E. J. H.," Chicago, Ill.—"In the expression 'This is a book of *Mary's*' is the apostrophe necessary in front of the 's' in *Mary's*? It seems to be a case of double possession. Is there good authority for omitting the apostrophe in this case?"

"Sometimes the form in 's and the form with of are combined, making a double possessive. Thus we say, 'That check of *Thompson's*,' where 'That *Thompson's* check' would be awkward, and 'That check of *Thompson*' would seem rather flat. We prefer the possessive at the end of the phrase, even tho it combines two forms, and this mode of expression has become an accepted English idiom."—Fernald's *English Grammar Simplified*. Therefore, the form you give is correct—"This is a book of *Mary's*."

"H. R. D.," Dayton, O.—"Is there but one correct pronunciation of the words *data* and *apparatus*? Must the penultimate 'a' be long in each word?"

The words you give are correctly pronounced as follows: *Data*, *de'ta*—*e* as in *prey*, *a* as in *final*; *apparatus*, *ap'a-re'tus*—first *a* as in *fat*, second *a* as in *final*, *e* as in *prey*, *u* as in *but*; or *ap'a-ra'tus*—first *a* as in *fat*, second *a* as in *final*, third *a* as in *art*, *u* as in *but*.

"J. D. J.," Tampico, Mex.—"How is *Easter day* figured out? I already understand that it falls on the first Sunday after the first full moon after the twenty-first day of March. Now I want to know whatever the full moon and the twenty-first of March have to do with the matter."

Easter day, according to the decree of the Council of Nice, is the first Sunday after the paschal full moon, that is, the full moon that occurs on the day of the vernal equinox, March 21, or on any of the 28 days following that date. Consequently the earliest date on which *Easter* can fall is March 22, and the latest is April 25. It is considered the great movable feast of the Christian year.

"R. W.," St. Louis, Mo.—"How is the term professor correctly used?"

A professor in the specific meaning of the term designates a public teacher of the highest rank who holds an endowed or established chair in a university or one of its colleges. Endowed teachers of higher grades of study are also called professors, and the term is used to designate one who holds a high *salaried* (or *endowed*) position as a teacher in an educational institution. The title is higher than those of *Reader*, *Instructor*, or *Lecturer*. As a teacher in a high school is not an instructor of the highest grade, it is technically wrong to style him "Professor," but the word is used sometimes as a title of courtesy, when added to the name of a person spoken to, and, having the sanction of usage, is permissible, if not distasteful to the person to whom it is applied. That it might prove offensive is due to the fact that the term has been much abused, having been used by charlatans, magicians, prestidigi-

tators, jugglers, and instructors in dancing, as well as exponents of phrenology, without due and accredited title thereto.

"D. O'B., Detroit, Mich.—The correct pronunciation of the word *cello* is *chel'o—ch* as in *chin*, *e* as in *get*, *o* as in *obey*.

"R. E. S., Yoakum, Tex.—"Kindly give me the meaning and correct pronunciation of the word *mezzanine*."

The word means—"(1) A low story between two higher ones; especially, one between the ground floor and story above, sometimes between the ground floor and basement, or in a theater below the stage boards, from which the traps are worked; hence, *mezzanine floor* or *story*. (2) A small window broader than it is high." The word is pronounced *mez'a-nin—e* as in *get*, *a* as in *final*, *i* as in *hit* or as in *police*.

"J. J. C., Auburn, N. Y.—"Please give me the correct pronunciation of *Apache*, an American Indian, and *apache*, a French robber or assassin."

Apache, the name of an American tribe of Indians, is pronounced *a-pach'i*—first *a* as in *final*, second *a* as in *fat*, *ch* as in *chin*, *i* as in *habit*. The word *apache*, one of a band of lawless persons who frequent the streets of Paris at night and prey upon pedestrians, is pronounced *a'push'*—first *a* as in *artistic*, second *a* as in *art*, *sh* as in *ship*.

"E. F., Lima, Ohio.—"Kindly tell me which is correct and state the reason: (1) 'Livingstone was one of the most daring explorers that *has* ever been known.' (2) 'Livingstone was one of the most daring explorers that *have* ever been known.'"

Have should be used, as the antecedent of "that" is "explorers," not "one"—"Livingstone was one of the most daring explorers that *have* ever been known."

"E. M. L., Iowa Falls, Ia.—"Is there authority back of the expression *ought* for the term *zero* (0)? What are the other expressions used for that term?"

The word *ought* is a corruption of *naught*, which is the proper word to use for the cipher (0).

"H. E. F., Sand Springs, Okla.—"Please tell me the correct use of the period after a sentence ending with an abbreviation. Is it correct to use one or two periods, for example—'We have on hand many cases of jars, caps, lids, etc.' or 'We have on hand many cases of jars, caps, lids, etc.'?"

When an abbreviation ends a sentence, only one period is used to mark the omission of letters and the end of the sentence. When the construction requires an exclamation-point or an interrogation-point, the mark is placed after the period; as, "He called for us this P. M." "Can you call for us this P. M.?" "We ordered several books shipped to Jones Bros." "Have you shipped the books ordered by Jones Bros.?" Only one period should be used in the sentence you cite—"We have on hand many cases of jars, caps, lids, etc."

"I. B. R., Santa Barbara, Calif.—"Kindly give me the correct pronunciation and meaning of the word *viscount*."

The word *viscount* means "(1) In England, a title of nobility between earl and baron. (2) In continental Europe, a title next below that of count; also, the son or younger brother of a count. (3) Formerly, in England, a sheriff." The word is pronounced *vai'kaunt—ai* as in *aisle*, *au* as in *ou* in *out*.

"E. B., Voluntown, Conn.—"What is the correct pronunciation of *La Salle*, the name of a famous explorer in the early history of America?"

The name is pronounced *la sal*—first *a* as in *artistic*, second *a* as in *art*.

"A. C. D., Seattle, Wash.—"Kindly explain the difference between *already* and *allready*."

Already, now used as a solid word, was originally written *all ready*. *Already* and *altogether* have meanings that differ greatly from *all ready* and *all together*. *Already* means "beforehand"; *all ready* means "everything is in a state of preparedness." *Altogether* means "completely"; *all together* means "every one in union, or conjointly."

"E. A. F., Earlington, Ky.—"Is the expression 'I have enjoyed myself to-night' correct?"

The expression "I enjoyed myself" is an English idiom for "I enjoyed the entertainment," or whatever there was to enjoy in common with others.

When Your Springs Call for Help

Respond quickly with 3-in-One Oil. Repair men say that many spring breaks are caused by rust forming between the leaves. They stick together instead of sliding. You hit a bump and one breaks.

3-in-One *The Universal High Quality Oil*

is easier to apply than graphite. Simply squirt it along the edges and ends of the leaves. The wonderful penetrating quality will cause it to work in and work out old dirty, gritty grease and rust. The squeak will vanish. The spring be saved. And your car rides easier.

A 3-in-One Handy Oil Can is one of the greatest of motoring conveniences. A squeak develops on the road—anywhere about your car—in running board, hood, steering wheel, door. Out comes the Handy Oil Can. Away goes the squeak.

3-in-One is also just right for oiling starter, generator, magneto, horn.

Ford Owners—Use 3-in-One regularly on your Timer. Saves trouble. Makes it last longer.

3-in-One is sold at all good stores in 1-oz., 3-oz. and 8-oz. bottles and in 3-oz. Handy Oil Cans.

FREE. Generous sample and Dictionary of Uses. Write for both on a postal

Does 1922 look so rosy that you can afford to throw away that which these world leaders are so carefully saving?

Can you afford to use cumbersome riveting to join pieces of steel which they would weld at half the cost with a Lincoln Welder?

Can you afford to throw into the scrap heap worn or broken equipment which they would make good as new at a welding expense of a few dollars?

Can you afford to discard for minor defects castings, forgings, and stampings which could be made sound and perfect by arc welding?

Can you afford to go merrily along without *even knowing* what arc welding might do in your plant, when such firms are continually asking Lincoln Welding Engineers to advise on their problems?

A Lincoln Welding Engineer will gladly inspect your plant, study your processes and make you a complete, written report, showing whether you can use arc welding.

This rousing thought led to the saving of thousands of dollars for one business man. It had never occurred to him that he could possibly make use of a Mimeograph in his work, until on a happy day he happened to see one in actual operation. Duplication! One perfect thing—and then a thousand exactly like it! And that too at practically no cost. The thought to him opened up new ideas for business and organization development. The first job which the Mimeograph completed for him saved more than the cost of the machine. And that is what it is doing for thousands of business and school men everywhere. Well printed type-written sheets—with maps or designs included, if need be—easily printed at the great speed of five thousand an hour. Why not see for yourself—today? Or send for booklet “L-5”—to A. B. Dick Company, Chicago—and New York.

A Wonderful New Manuscript of the Four Gospels with Fragments of the Pauline Epistles was Recently Found by an American in Egypt? Excavations Recently Made Throw an Illuminating Light on the Cities Visited by St. Paul? Suffragists, Millionaire Tax Dodgers, High Cost of Living, Shorthand, Elevators, Hot Air Heating, Grafting Politicians, Pipe Organs, Trusts and Trade Unions, "Preparedness," etc., were common things in Apostolic times?

Here is Meat for Hundreds of Sermons and Sermon Illustrations!

This is a scholarly pioneer work, without a competitor. It has just been published. It summarizes all discoveries of the past few decades in all lands, right up to the present, which have any important bearing upon the New Testament writings or the Primitive Church. It is withal a thrilling, readable Chronicle of intense human interest. Large Octavo, bound in cloth. Many illustrations; intensively and thoroughly indexed.

SERGEANT YORK AND HIS PEOPLE

By Sam K. Cowan

THIS is not a war book, but a true, vivid and inspiring record of the making of a real American.

The story which Mr. Cowan has so graphically told is an enthralling one of mountain life in Tennessee from the days of the "Long Hunter" down to today. Here are given for the first time the full facts about Alvin York, his ancestry, his surroundings, his home life, his handicaps, and all the influences which so shaped his character that, when put to the supreme test, he was enabled to perform what Marshal Foch declared to be the World War's greatest individual achievement.

12mo. Cloth. With 16 full-page illustrations. Price, \$2.00 net, at bookstores. By mail from the publishers, \$2.12.

The Fourth Revised Edition of

HAY FEVER

Its Prevention and Cure

By

Wm. C. Hollopeter, M.D.

Since the last edition of this book was published six years ago great advance has been made. We know that the emanations of vegetable matter actually cause hay fever, that different parts of the United States produce different pollen, so the treatment of hay fever in one portion will be different from the treatment in another. The West, North, and East, will call for a different immunizing process than that of the middle states, yet any one can prevent his annual suffering by selecting the proper anaphylactic reaction from inhaled atmospheric pollens. Hay fever is now successfully treated by immunizing the patient in advance of the attack, by the use of the same pollen that creates his trouble. The 4th edition now offered has been completely revised and enlarged and gives the results of the most modern and efficacious treatments.

Commence Treatment Now

Dr. Hollopeter is a well-known specialist who has had unusual success and any one who suffers from rose colds, sneezing spasms, asthma, or hay fever, should get this book immediately and carefully consider the immunizing treatment which, among other successful methods, is so carefully outlined.

A Renewed Vote of Confidence

The year 1921—the year of business extremity—proved to be The Chicago Daily News’ year of advertising opportunity, in that it was again able to demonstrate—and under the most exacting conditions of general business depression—its long established power of service to its advertising patrons.

During a year of business uncertainties and readjustments and of the general cutting down of advertising appropriations, and the careful weighing of every dollar spent, The Chicago Daily News published the greatest amount of advertising among all the Chicago daily newspapers.

Under the most exacting analysis of the Chicago advertising situation advertisers, local and national, were governed by the common conviction that the 400,000 circulation of The Chicago Daily News—94% of it concentrated in Chicago and its suburbs—could be depended upon to produce the greatest possible returns for every dollar expended.

The result was that the lineage figures for 1921 show that The Chicago Daily News led all other Chicago daily newspapers in the total volume of display advertising published.

Following are the figures:

	Lines	Comparison Lines
The Chicago Daily News.....	13,309,155	13,309,155
The Daily Tribune.....	9,523,905	9,523,905

THE CHICAGO DAILY NEWS—FIRST IN CHICAGO

LITERARY DIGEST readers seeking private institutions of learning will find in our pages between May 13th and September 9th, the following Classified Directory containing the names and addresses of some distinctive residential schools; vocational, professional, special schools; colleges, and supervised camps. Advertisements describing these institutions will be found in the first issue of each month from May to September.

You are invited to write for information to any of the institutions in which you are interested. We list only such schools as we believe are under highly trained and public-spirited executives. Our School Advisory Department continues to serve, as it has for many years, our readers and the schools without fees or obligation. It is necessary for inquirers to give specific information that may aid us in giving prompt service.

New Methods in Child Training

Now for the first time there is a scientific method in child training, founded on the principle that confidence is the basis of control. This new system shows you how in your own home to correct the cause of disobedience, wilfulness, untruthfulness and other dangerous habits which, if not properly remedied, lead to dire consequences. The trouble in most cases now is that children are punished or scolded for what they do. The new method removes the cause—not by punishment or scolding but by confidence and cooperation along lines which are amazingly easy for any parent to instantly apply.

Highest Endorsements This new system, which has been put into the form of an illustrated course prepared especially for the busy parent, is producing remarkable and immediate results for the thousands of parents in all parts of the world. It is also endorsed by leading educators. It covers all ages from cradle to eighteen years.

Free Book "New Methods in Child Training" is the title of a startling book which describes this new system and outlines the work of the Parents Association. Send letter or postal today and the book will be sent free—but do it now as this announcement may never appear here again.

\$1500 for a Plot

Can you write a scenario? Producers are begging for plots. \$1500 is the average price paid for a plot synopsis. You need no literary ability. The successful photodramatists today are not skilled authors but men and women who have only recently started to write.

Producers do not want fine writing. They want strong, dramatic plots. If you have imagination, if you want to create stories, you can learn how to prepare scenarios just as the producers want them. The Fox Photoplay Institute, backed by film authorities and leaders, can show you how.

Free Book The Fox Plan fully explained; statements by authorities telling of your opportunities; 32 pages beautifully illustrated, free to all men and women interested in photoplay writing. Just send name and address. Write today.

Do You Suffer From WEAK LUNGS?

If so, do you know that nine times out of ten, weak lungs mean straight, out-and-out tuberculosis? Many things formerly considered merely as forerunners of tuberculosis are now known to mean that the disease already has a foothold. Do you wish to know how signs of tuberculosis may be detected before it gets a firm hold upon you? Are you anxious to know how to protect your dear ones? How to win back health? How to apply curative measures to your own case and acquire the confidence, ease of mind, and satisfaction that come only when you feel the tide of success turning overwhelmingly in your favor? Then read this remarkably helpful new book, just off the press, entitled

LESSONS ON TUBERCULOSIS AND CONSUMPTION

by Charles E. Atkinson, M.D.

The author is a physician of high standing who has given years of study to the subject. Having himself made the fight, Dr. Atkinson knows the invalid's viewpoint, and writes for him, from his long experience, in plain, non-technical language.

In these 16 lessons, printed from clear, distinct type and compressed into one handy volume, you will find almost every conceivable aspect of lung tuberculosis fully, clearly, and accurately discussed in a practical and compelling manner. You will not meet with broad, vague generalities or wearisome theories, but will find a veritable mine of information on hundreds of vital, relevant topics, all treated with extraordinary completeness. In addition, you will find many questions that have a vital interest, but to which you have failed to obtain an answer from other sources, here answered authoritatively and convincingly. Absolutely trustworthy and highly endorsed, this book is literally filled with just the information you need to recognize the first danger signals, to shield your family and friends, and to guide you safely to and through the gateway of health.

12mo. Cloth, 460 pages, 16 pages of illustrations.

BECOME AN EXPERT STENOGRAPHER AND SPEED TYPIST

A profession that offers men and women rich rewards, fascinating work, big pay, and opens the way for promotion to high executive positions paying \$50 to \$100 a week and up. Many of America's biggest business men and women got their start because they mastered stenography. Demand for expert stenographers and typists always exceeds the supply at salaries of from \$30 to \$50 a week. The Tulloss New Way makes you an expert, one who can start in at a large salary. Complete course in shorthand and typewriting, new principles, insures exceptional speed and accuracy. You can write shorthand the new way 125 to 150 words a minute. You can typewrite 80 to 100 words a minute and with this speed goes accuracy and ease of operation—no fatigue as with the old way. Remarkable methods—remarkable results. You learn faster the Tulloss New Way. No previous stenographic schooling necessary. Train at home during your spare time. Only about half usual cost—you will become a far more efficient stenographer—worth more money than the average right from the start. If already a stenographer you need the new Tulloss New Way training in speed typewriting, for no matter how good you are in shorthand, you can never expect the high salaried position until you get speed, real speed and accuracy on a typewriter. Quickly acquired in ten easy lessons. Will send you free our amazing book, "How to Be a Big Man's Right Hand." It tells how business men choose their private secretaries, how they advance them to executive positions. Send postal or letter and indicate whether you are interested in the complete stenography course or simply speed typewriting. No obligation—write today.

THE TULLOSS SCHOOL, 535-A College Hill, Springfield, Ohio

Keeping Fit to Music Is Fun!

A great ideal! A new way to get glorious health, strength and "pep." Ten minutes' fun a day does it! Walter Camp's famous "Daily Dozen" Exercises have been set to music on phonograph records. Just put a record on your machine and you're all set for your ten minutes' fun and a new and bounding health. The music carries you swingingly through the "Daily Dozen." The results are soon apparent. Your chest is enlarged, your wind is improved, your muscles are developed. You'll say goodbye to those half-alive days and the ailments to which run-down bodies are constantly subject. And you will entertain yourself all the time!

The records are playable on any disc machine. A clear voice tells you exactly what to do. Then the music starts and you swing along through the refreshing, exhilarating movements.

Among the ailments that you can say goodbye to are headaches, nervousness, constipation, that over-tired feeling and insomnia.

RECORD FREE

See for yourself what this new Health Builder System will do for you—without a dollar of expense. We will send you, entirely free, a sample record carrying two of the exercises and a chart with actual photographs and directions. Just mail the coupon—no obligation. The record and chart are yours to keep. Just enclose a quarter (or 25 cents in stamps) with the coupon, to cover cost of packing, postage, etc. Send coupon today—now—to Health Builders, Dept. 95-A, Oyster Bay, N. Y.

HISTORIC ENGLISH

By James C. Fernald, L.H.D.

This is more than a history of English speech or English language. It is a quick, sweeping, and fascinatingly interesting résumé of the history of the English people as seen in the development of their language. Those who love their Emerson, Holmes, and Henry James will find in *Historic English* a work that lacks none of the graces of these masters. Written by a man who combined an amazing versatility of mind with vivacity of intellect and an intuitive sense of harmonious association, *Historic English* is marked by a discrimination and elegance seldom if ever excelled. Dr. Fernald's flowing style, his infectious enthusiasm, his broad scholarship, and his selection of pregnant facts and incidents to illustrate his points—all combine to lay graphically, clearly, and interestingly before the reader the vital facts bearing on the development of our language. It is an invaluable book on the history of English, and will render an unequalled service to every reader.

To Win Friends, Fame, and Fortune

Why do some deserving men fall in business? Why are some handsome, well-educated men unpopular in social life? What is the real secret of achieving personal success?

These and hundreds of other pertinent questions on the tip of your tongue are answered by that popular inspirational writer, H. Addington Bruce, in his invigorating and fascinating new book—

SELF-DEVELOPMENT

A wonderfully clear-cut analysis, in plain, conversational English, of certain mental actions and reactions, every page radiating encouragement and helpfulness for ambitious men and women.

It explains how you may develop will power, memory, poise, and personality; elaborates on the simple methods all must adopt—and which are easy to adopt—to achieve marked success in social and business life; visualizes the insidious pitfalls that must be avoided!—and which are easy to avoid after he points them out.

All that Mr. Bruce advises will appeal to you. You'll know he's right! And everyone who takes his advice will be better able to win friends, fame, and fortune and to get all the good out of life that life has to offer.

"Gives an illuminating explanation of real success and the courses to follow in its attainment."—*Deseret News, Salt Lake City.*

"Any young man who refuses to be stimulated and inspired through reading a book like this needs to alter his viewpoint in life."—*Star, Toronto.*

Whenever soap comes in contact with the skin—use Ivory.

COPYRIGHT 1922 BY THE PROCTER & GAMBLE CO., CINCINNATI

Watch those first 10 years

THOSE who study human habits agree that most of our *good* habits are formed before we are ten years old.

That is why the mother's watchful care and early teaching are so important.

Millions of mothers believe that Ivory Soap cleanliness is a basic part of their children's education. They use Ivory Soap from the very first—for the baby's bath, clothes, bottles, nipples and utensils.

Then the *child* begins to do things. And so, Ivory Soap washes doll clothes and doll faces. Of course, she takes her own bath with it, too.

Right now, while she is still young and eager to learn, teach her the seven important things about fine soap. They are: Purity, mildness, whiteness, fragrance, abundant lather, easy rinsing and "It Floats".

Having learned these, she will probably use Ivory Soap *always*, because Ivory combines all seven.

For these same seven reasons *you* are probably now using Ivory today for your face and hands, for your bath, for your hair, and for laundering your silks, laces, woolens and other delicate garments.

Ivory Soap comes in a convenient size and form for every purpose

Small Cake

For toilet, bath, nursery, shampoo, fine laundry. Can be divided in two for individual toilet use.

Large Cake

Especially for laundry use. Also preferred by many for the bath.

Ivory Soap Flakes

Especially for the washbowl washing of delicate garments. Sample package free on request to Division 38-E, Dept. of Home Economics. The Procter & Gamble Co., Cincinnati, Ohio.

IVORY SOAP . . .  . . . 99 $\frac{44}{100}$ % PURE

REFORMING SPENDTHRIFT UNCLE SAM

BY EXPOSING THE HEART of our financial system for Dawes to peck at, we have saved ourselves in one year a quarter of a billion dollars, or almost \$2.50 for each man, woman and child in the country. Figures given by the World Almanac show that our Government's annual "ordinary disbursements have been decreasing steadily since the high peak of 1919, when expenses incurred during the World War brought them to the enormous total of nearly fifteen and a half billions of dollars. According to the report now submitted to Congress by our first Director of the Budget, General Charles G. Dawes, Uncle Sam's expenses for the fiscal year ending June 30, 1922, amount to just under four billion dollars, or one billion six hundred millions less than he spent the year before. The sum of \$250,134,835,.03 of this saving, President Harding explains in a letter accompanying the report, may be directly credited to the work of General Dawes and his Budget Bureau. The three cents so punctiliously recorded may be intended as a reminder that the pennies count, even in a business whose operations are reckoned in billions. "On the whole," writes the President, "I believe the Congress will find the operation of the newly adopted methods to be highly gratifying, not only in having brought about reductions in expenditure in accord with the manifest wishes of Congress in reduced appropriations, but in revealing the possibilities of large savings through still more efficient methods in the future." This report, he adds, points the way to "ultimately lifting the excessive burden of taxation." What counts, comments a Washington correspondent of the *New York Evening Post*, is not the amount saved this year by the new Budget Bureau, but "the fact that machinery to bring about

economy in the Federal Government has been set up, and that under General Dawes that machinery has worked."

The "prime and essential cause" of the administrative economies now reported, declares Budget Director Dawes, has been "the assumption by the President of the United States

of his full responsibilities as the head of the business organization of government." But the report evokes many editorial bouquets for the General himself. Recalling that "Hell and Maria" Dawes attained national fame by his vigorous and picturesque language when testifying before a Congressional Committee on the business management of the war, the *Kansas City Star* (Ind.) remarks:

"Now that he has shown what that same foreefulness can accomplish in cutting the expenses of the Government, the remark of Lincoln about learning what kind of whisky Grant drank so he could send some to the other Generals might be applied. Perhaps some of the other Government executives should be taught to swear."

Noting that "the reform in the fiscal affairs of the Government has only begun," the *Springfield Republican* urges that General Dawes ought not to retire from the Budget Bureau at the end of one year, as he stipulated when accepting the office. His report, remarks the *Kansas City Journal* (Rep.), "shows what the inclusion of an impersonal business agent in the Government means to the taxpayers."

The \$250,000,000 saved by the budget, notes the *Topeka Capital* (Rep.), "is interest on a billion and a half of dollars"; and it goes on to say:

"But this does not mean that the work of the budget reform is finished. Director Dawes in his report points out that this is far from the fact. The Government's system of accounting,

HE IS TEACHING UNCLE SAM TO SAVE HIS MONEY.

General Charles G. Dawes, whose new Budget Bureau is responsible for \$250,000,000 of the \$1,600,000,000 cut in annual Government expenditures reported by the Harding Administration.

he says, is still hopelessly archaic and the public can never be fully and properly informed as to the business operations of the Government until it is reformed. There is still plenty of work to be done before the budget system has been fully established in all its functions."

Director Dawes describes the Budget Bureau as "an impersonal, impartial and non-partizan business agent." It is noticeable, nevertheless, that most of the hostile criticism evoked by his figures comes from Democratic quarters. Thus we find the *Norfolk Virginian-Pilot* declaring that "members of Congress, on reading the Dawes report, would be excused for borrowing from the General's vocabulary and exclaiming 'Hell and Maria, how do you get that way?'" This report, the *Norfolk* paper admits, "shows the possibilities of the budget as a money-saving system." But "it fails to prove that, under Republican rule, the nation is saving money at the rate of more than a billion and a half dollars a year." In an editorial headed, "Budget Bunk," the *Louisville Courier-Journal* says:

"Cutting down appropriations to make a show of economy and subsequently passing deficiency bills to make up deficits is a favorite practise of Congress which Mr. Dawes seems to have overlooked.

"There is a Congressional election next November and many millions of dollars of the Government's disbursements will not appear on the books until after that.

There is, for instance, a round hundred millions of interest which even Secretary Mellon did not include in his deficit estimates. A different system of bookkeeping, while showing a deficit for the next fiscal year, would also show a deficit instead of a surplus for the present fiscal year."

"While the Government's expenses for 1922 have been reduced in comparison with those of the preceding year, there has been no marked reduction in the taxpayers' actual burdens," remarks the *Baltimore Sun*, which goes on to say:

"The budget system is capable of being made to perform a great work of economy, and Mr. Dawes has probably gotten all out of it possible in the short time he has been in charge, and considering the extraordinarily difficult conditions which he has been called upon to meet. Taxpayers will be thankful even for comparatively small favors. But they will not hurrah for the Harding Administration as the great champion of economy until they know what is coming next. There is such a thing as saving at the spigot and taxing through the bung-hole."

The savings at Washington "are trivial where they are real," thinks the independent *New York Globe*.

In Congress the report was ridiculed by Representative Byrns of Tennessee and Representative Byrnes of South Carolina, both Democratic members of the Appropriations Committee. A Washington dispatch to the *New York Times* quotes the South Carolina Mr. Byrnes as saying:

"It has been said that figures will not lie, but every one knows that they may be juggled with, and even a casual examination of the immense array of figures submitted by the very large accounting force of the Bureau of the Budget, and which it took three months to compile, shows that the figures have been

manipulated in an effort to mislead the public into the belief that some economy has been effected by the Administration. In this connection it should not be forgotten that the appropriations for the expenditures in 1921 were made by a Republican Congress."

The trouble with the report, Mr. Byrnes concluded, was that "the people of the country are misled into believing that there is a saving when there is nothing but a political saving." And Mr. Byrnes of Tennessee added the remark that "a reduction of taxes is the only test as to whether or not there has been a reduction in expenditures."

Several journals, however, find deep satisfaction in the showing of the Dawes report. The *Philadelphia Public Ledger*, for instance, independent tho of Republican leanings, considers the report a sign that—

"Along with the nation the Government is getting over the war-time squander mania. The rising wail of the taxpayer has penetrated Capitol Hill and resounds in the White House. The protests, grumblings and mutterings, and the fear of what the taxpayer is certain to do to those responsible for his troubles, are resulting in this deflation of war-time conditions in departments and bureaus. There would have been a certain amount of deflation, budget or no budget, but it has hastened this deflation and broadened and deepened it. It broke through the barnacles that incrust the bureaus."

The *Washington Post*, friendly to the Administration, tells us the "success" in cutting down Government expenses is due to two main agencies—"the resolute purpose of Mr. Harding and the skill of his chief lieutenant."

"If the rules of the House and Senate dealing with appropriations are now overhauled and made more adaptable to the actual will of Congress, a still better showing can be made. Antiquated methods and obstructive rules should be thrown overboard. The executive department should not be the only agency working for combined efficiency and economy. Congress owes it to itself to revise its rules of procedure, because the splendid work done by conscientious legislators in committees is sometimes brought to naught by their inability to show the two Houses what has been developed and the reasons for actions proposed."

To the *Minneapolis Tribune* (Rep.), "the wonder is that a Government representing a business people so efficient as ours should have delayed so long in putting the budget principle to work in the conduct of Uncle Sam's enormous business." To the *Omaha Bee* (Rep.) also the report "shows conclusively the great changes effected by the adoption of business methods in handling Government affairs," while the *Los Angeles Times* (Ind. Rep.) declares that President Harding's firm, businesslike attitude "awakens alike the respect and dismay of the politicians." As the *Baltimore American* (Rep.) points out:

"If Mr. Dawes had merely announced so many millions 'saved,' he would have been saying nothing. But when he announced that one Department has taken the trouble to make a fulcrum pin for twenty-three cents less than it formerly cost, he announced that a new attitude toward the business of government has been inculcated in the servants of the people. He has not

only shown that his savings really are savings, but he has shown that the Government has at last been converted from an instrument for spending money to an instrument for conducting business."

As the *Baltimore News* (Ind.) analyzes the report it finds the Administration has been able to "show under a conservative estimate a direct increase in the efficiency of the Government machinery which is equivalent to a quarter of a billion dollars a year."

The *New York World* (Ind. Dem.) hails the "triumph of the budget" and observes:

"The budget system is already amply vindicated. But it will take more than one year for it to work out its full worth. The executive branch of the Government is doing its part to that end. It remains for Congress to do its part in cooperation with the Executive, and this is what, up to date, Congress has not been doing."

What the Dawes report means to the historian is one thing. What it means to the politician is several things, as the press discussion just quoted indicates. But to many of us who have been looking for a General Dawes of our own to show us how to make both ends of our personal budgets meet as they should, the interest in the Dawes report lies in its revelation of "just how one soldier-banker with a reputation for profanity and a record for efficiency set out to reform the outworn methods of a corporation which is doing \$4,000,000,000 business a year." So remarks Mr. H. P. Stokes in a Washington dispatch to the *New York Evening Post*. He finds in the report a striking picture of the actual work of the Budget Bureau in contributing total savings of \$250,134,835.03 to the reduction of Federal expenditures for the current fiscal year. Looking over the report Mr. Stokes notes that the twenty-seven of these millions were saved by simple little "transfers." The old traditional Government way of doing business was for one Department to sell off for whatever they might bring any supplies it had no immediate use for, while some other Department might at the same time be looking frantically around for similar articles and paying the highest market prices. For instance, on page 32 of the report we find that the Shipping Board Emergency Fleet Corporation had some teapots it couldn't use, while at the same time "the Interior Department happened to be fairly thirsty for teapots." By simply turning these teapots over to the Department that wanted them, instead of losing money on two sales, the Government saved exactly \$2.57. Then the same Corporation "had a trowel, a wedge and a squeegee on hand which it could find no use for but which the Department of Commerce thought it could use very handily, perhaps on some of its lighthouse tenders." Here it was 56 cents saved for the Government. In the same way little savings were made on waste-paper baskets, some chairs, some hacksaw blades, an automobile. Of course, comments Mr. Stokes, "all the transfers were not such small items, for they could never have mounted up so large a total. The small items have been picked out to show the precise point of impact in the Budget Bureau. There is a list of ship transfers on page 60 which contains some of the

larger fish in General Dawes's basket." The estimated savings on the transfer of these ships to the Departments that had use for them was \$125,000 apiece. So, we read, "there have been very substantial savings effected. What is more significant, there is no doubt that the new order of things is a tremendous improvement over the old, when each Department had a notion it ran a business all its own with other Departments regarded more or less as rivals with whom one had to bargain and dieker, if one made any exchanges." And then there are the "coordinators," who have been saving considerable sums by better handling of better passenger and freight shipments, motor transport, and real estate rentals for Government agencies.

But it is the Departmental savings, we are reminded, that make up the bulk of the \$250,000,000. The Department of State, for instance, "helped General Dawes put his program across" by setting its messenger force to the duty of cleaning the rooms and thus dispensing with extra charwomen and also by seeing to it that employees who happened to be working late in the evening assumed responsibility for turning out lights and closing things up for the night. A few samples of Departmental savings are taken at random from the report, as follows:

"War Department—Reduction of expense due to establishment of fixed allowance of clothing for enlisted men on a money basis, as against the former system of issue of clothing as called for, \$2,340,000.

"Air Service—By remodeling old airplanes, \$2,500,000.

"Navy—Reduction over last year's allotments to shore stations (in addition to \$3,000,000 of curtailed, canceled, or postponed work), \$3,000,000.

"Post-office Department—Economies in the lines of solid loading of cars, the elimination of duplication, and the discontinuance of unnecessary services, \$3,000,000.

"Veterans' Bureau—General Order No. 26 requiring prompt discharge of patients, and so preventing unnecessary prolongation of hospitalization, \$2,800,000.

"Shipping Board—Total estimated savings, \$96,407,509."

The Dawes report, as the *Kansas City Journal* remarks editorially, "includes accounts of nearly everything from typewriter ribbons to the traveling expenses of the President." It shows many interesting ways in which some and large economies were effected. In the Employees' Compensation Commission, for example, \$2,300 was saved in the increased use of addressing machines." And "the War Department saved \$1,560 by using excess and salvaged material at one aviation field."

Returning to Mr. Stokes's *Evening Post* dispatch we find him aware that the report is vulnerable in spots. He thinks, for instance, that the Shipping Board figures "have a rather padded look" and include some savings in wage schedules which were "largely the result of economic causes entirely beyond even the President's control." Yet General Dawes believes that he has erred on the side of modesty. His bureau, for instance, has taken credit for only \$41,000,000 out of a total reduction of \$725,000,000 in War Department expenditures. "What is more, there are a large number of intangible savings whose money value it has entirely been impracticable to figure."

WHY BEVERIDGE BEAT NEW

"**T**HAT'S BULLY. T. R."—was alone lacking to give the capture of the Senatorial nomination by Albert J. Beveridge in the recent Indiana Republican primary the complete Bull Moose flavor. All through the day following the election the congratulatory telegrams came pouring in to Mr. Beveridge's Indianapolis home from old Roosevelt Progressives who did not forget the leading part played by Beveridge in the stirring events of 1912. "This return of the Bull Moose," remarks the *Terre Haute Tribune* (Ind.), "may be a bitter pill for the old-line Republicans," but old Roosevelt papers are delighted with what one of them, the *Kansas City Star*, calls the victory of a representative of "the Progressive point of view—the point of view represented superlatively by Roosevelt."

Democratic editors are found fairly unanimous in hailing the reemergence of a former "insurgent" and "Bull Moose" as forecasting another party upheaval and as a sign of popular discontent with Republican conduct of affairs at Washington, but Republican dailies of the more regular stripe generally refuse to see any great political significance in the result of the Indiana primary, considering it the natural result of an assiduous campaign skilfully conducted by a now regular Republican of great eloquence, ability, personal charm and long political experience.

If we turn to the press of Indiana to find out why the author of "The Life of John Marshall" defeated President Harding's close friend, Senator New, by some 20,000 votes on May 2, we find a great diversity of opinion. The pro-New Indianapolis *News* inclines to attribute the result to factional fights and rural discontent with Congress. The trouble, as the pro-New South Bend *Tribune* sees it, is that the people of the State did not know Senator New and not knowing him could not appreciate his high quality. The pro-Beveridge Indianapolis *Star* looks upon the result as a personal triumph of a brilliant Hoosier, without any "reflection even by implication" upon the national Administration. Senator New's "vote for Newberry and his general reactionism" defeated him, in the opinion of the *Evansville Press* (Ind.). The *Gary Post*, a Democratic observer in a part of the State where Republicans voted heavily for Beveridge, does not think that the Newberry matter had much to do with the result. But—

"What did mainly influence opinion in Indiana was Mr. Beveridge's earnest, lucid, analytic and informing addresses on the great problems of taxation, finance and government. He showed himself thoroughly informed on many deep and intricate problems, and convinced the people that he was well prepared to stand up and dissect these matters, cut out unnecessary expense, relegate profligacy and extravagance, promote constructive legislation and get our country and the world back on a sound basis."

One of the Indiana Republican dailies, the *Evansville Journal*,

in a careful editorial review of the results of the primary, finds a fundamental explanation of Mr. Beveridge's victory "in the feeling that Congress has been a dawdler." But it can find no repudiation of Warren G. Harding, since the people "clearly separate the President and his work from Congress and its work." In the primary campaign Senator New was at a disadvantage because he remained faithfully at work at his Senatorial duties in Washington. Mr. Beveridge, on the other hand, was "active as a speaker" and has, in fact, "been speaking at public gatherings in Indiana on religious, historical and political subjects with unbroken regularity for the last two years." *The Journal* concludes, with an apparent touch of Hoosier pride in a brilliant and successful son of Indiana:

"I SHALL SUPPORT PRESIDENT HARDING."

But Mr. Beveridge's defeat of President Harding's friend, Senator New, in the Indiana primaries, is taken by Democrats as a sign of Republican discontent with Republican management at Washington.

"Intellectually Mr. Beveridge has no superior in the United States Senate to-day. As a student of American history and the philosophy underlying the development of our political institutions, he has few equals. He thinks clearly and deeply; he has the gift of oratory beyond most men; he is a writer as well as a speaker. When Indiana elevates him to the Senate, it will be sending a man who has had large experience in legislative affairs, and who has in addition a ripened and comprehensive knowledge of public questions, the fruits of twenty-five years of work and intensive study."

When the crockery flies out of the window, the neighbor across the street is likely to conclude that there is serious trouble in the family. So it is, perhaps, no wonder to find a large number of Democratic papers interpreting the victory of Beveridge over New as, in the words of the *New York Times*, "a sign of Republican dissatisfaction and as the first heavy political blow which the Harding Administration has received."

"A hard blow to the Harding Administration, but a harder blow to the present Republican leadership in Congress," is the way the *Chicago Journal* (Dem.) sizes it up. This "stiff rebuff and repudiation" of the present Administration convinces the *Columbia State* (Dem.) that "we are nearing another Democratic era." The *New York World* is hardly less positive, saying:

"Senator New's defeat for renomination in the Indiana primaries is President Harding's defeat. The Republican voters of Indiana have repudiated the Harding Administration. Back of the Beveridge victory is unmistakably the growing unpopularity of the Harding Administration and the increasing disgust of the voters with the quality of political leadership in Washington."

"If the Indiana Republicans will not renominate the President's personal friend and thick-and-thin supporter, it is already plain that the name of Harding will not save the Republican Congressional ticket in November. The returns from Indiana show that the country, having traveled the road to normalcy, is now on its way back, none too pleased with its experience. The power that was obtained in 1920 under false pretenses can no longer be held under false pretenses."

The fact that Mr. Beveridge was one of the Republicans who followed Roosevelt out of the party in 1912 leads a number of Democratic papers to emphasize the importance of the Indiana primary as a sign of a Progressive rebirth. The *Pittsburgh Post* (Dem.) finds it "difficult to see where the old guard element behind the Administration can see anything in this result of the Indiana Republican primary to give them optimism." On the other hand, the *Cleveland Plain Dealer* (Ind. Dem.) remarks that if Beveridge's nomination is followed by election, his return to the Senate "will bring new cheer to the Progressive wing of his party, indicating that the standards set up under Roosevelt ten years ago have not been wholly submerged by reaction."

Crookery-throwing and loud mutual recriminations, it has been observed, are generally interpreted by outsiders as signs of serious domestic differences. But those inside may consider them simply a normal method of settling difficulties and readjusting relations. So we find important Republican dailies like the *Philadelphia Bulletin*, *Baltimore American*, *Buffalo Evening News* and *Milwaukee Sentinel* wondering why anybody should see in the fact that the Republicans of Indiana prefer Albert J. Beveridge to Harry S. New as a Senatorial candidate, any indication of coolness toward the President or Republican policies. With two such good Republicans contesting, remarks the independent *Washington Post*, which is in close touch with the White House, "about the only way in which an Indiana Republican could indicate a desire to repudiate the Administration was to stay away from the primary." Other Republican dailies declare that the defeat of Senator New by Mr. Beveridge, who has served two successive terms in the Senate, is really an excellent thing for the party. Mr. Beveridge will lend a new element of strength to his side of the Senate, says the *Portland Express* (Rep.). The

capacity of leadership, who would contribute constructively to the making of a practical and popular party program, and whose brilliancy in debate in the Senate has become one of the traditions of that chamber—and she, quite naturally and appropriately, chose the latter."

Similar assertions come from such once-Progressive Republican dailies as the *Philadelphia North American*, *Chicago Evening Post* and *Kansas City Star*. The last named paper, which once counted Theodore Roosevelt as an editor, tells why it thinks that Beveridge's election "would be the best thing that could happen to the Harding Administration":

"Beveridge, if elected, will bring new blood into the higher councils of the party and into the Senate. He is known throughout the country as a progressive and a practical progressive. The Administration is plentifully supplied with organization politicians. It has been shy on men who represent the progressive point of view—the point of view represented superlatively by Roosevelt.

"President Harding needs Beveridge in Congress. He needs him, not as a rubber stamp, but as a man of creative imagination and independent thought, who will help keep the party an instrument of achievement for the common good."

Before the election the *New York Tribune's* Indianapolis correspondent wired: "A victory for New to-morrow will be considered a victory for the Administration. A victory for Beveridge will be a defeat for the Administration." But after the election *The Tribune* declared that any attempts to make the Beveridge nomination appear as a rebuke to the Administration were "childish," suggesting both a "spirit of desperation" and "paucity of partizan invention." And in this editorial *The Tribune* goes on to point out how good a thing it is for the Republican party to have new blood infused into its Washington leadership. "New leaven is constantly needed in politics and a more clearly shown sympathy with the spirit of Roosevelt will be to the party's advantage."

But not all Republican papers are so cheerful. In a leading editorial the *Minneapolis Journal* again and again rings the changes on the statement that the Indiana primary is a warning to the Republican party and a sign of wide-spread political discontent. After all allowances are made, says the *Columbus*

choice of a man of Beveridge's character, record and predilections, "indicates life, movement, adjustment and intelligence" within the party, avers the *Manchester Union* (Rep.). Indiana, it adds, "had a chance to choose between a man who had proved himself a loyal follower, but no leader, and a man who had the

Ohio State Journal, Senator Beveridge's victory "reflects strong Republican dissatisfaction with the way things are going in Washington, no doubt chiefly, if not almost wholly, due to disgust with Congress and its shufflings." A remarkable editorial appears in the *New York Herald*, an independent paper which was a strong supporter of the last Republican ticket. After denying Democratic allegations that the defeat of New means the repudiation of the Harding Administration and paying Mr. Beveridge a high tribute for his adroit, clever and earnest campaigning, it concludes with this significant paragraph:

"But if the Republican Congress insists on looting the Treasury with a bonus bill, insists on passing an impracticable and impossible tariff bill and makes itself generally offensive to the intelligent people of the country, as it has been doing, even the very splendid work of President Harding and his Administration can not save it from a thundering thumping at the polls this fall."

Among independent newspaper observers we find the *Newark News* and *St. Louis Post-Dispatch* considering Beveridge's victory "a blow to the Harding Administration." The *New York Commercial* prefers to call it "a slap at Congress," but the *Springfield Republican* does not think that the voters are likely to make a very close distinction between Congress and the Executive. The *New York Evening Post* is convinced that the defeat of Senator New by Mr. Beveridge in the Indiana primaries is a sign of intense and wide-spread dissatisfaction with, and disapproval of, the way things are going at Washington. And this independent newspaper proceeds to state some of the causes of this dissatisfaction as it believes even the Republican leaders must see them:

"Instead of the model of harmony which was to be exhibited by the Harding Administration, they have seen a Republican House almost contemptuously override the recommendations of a Republican President in reference to legislation affecting economy, the very watchword of the Administration. They have seen a wholesale dismissal of the officials of an important bureau without definite explanation, and they have witnessed the unfavorable impression made upon the public by this act and by statements of members of the Cabinet which seem to point to a step backward toward the spoils system.

"If in addition to all these causes of dissatisfaction Congress adds a tariff which sends the cost of living up again, what reason can friends of the Administration have for hoping that the outcome of the Indiana primary will not prove to be as menacing as their opponents are proclaiming?"

A brief glance at other editorial pages reveals the fact that the *Philadelphia Public Ledger* and the *Chicago Daily News* (Ind.), *New Haven Journal-Courier* (Ind.), and *Washington Star* (Ind.) consider the Indiana primary a purely personal triumph for Mr. Beveridge. And Mr. Hearst's *New York American* comes to the conclusion that Senator New was defeated because the Republican Administration for which he was a Senate spokesman has been making foreign alliances and has "sold America's birthright of independence for a mess of international bankers' pottage."

MR. WU CHECKS MR. CHANG

MILITARY POLITICS IN CHINA, long known as the most thickly settled, and lately even better known as the most unsettled, country on the globe, seem to have been somewhat clarified by General Wu's apparently decisive defeat of General Chang. General Chang Tso-Lin, ex-bandit, Governor of Manchuria, and recent threatener of the Peking Government, is practically eliminated, and with him go a number of complications. The situation is still so thoroughly mixed up,

however, that a good many mere Americans in editorial chairs resign themselves to repeating the remarkable names mixed up in the Chinese puzzle, wondering why the various leaders and factions are doing what the cables say they are, and hoping for the best. Thus, "Wu, Chang, Sun and Hsu," sighs the *Houston Chronicle*. "What a babble of names—and the issues are quite as mixed!" Nevertheless this editor manages to untangle a few leading strands to the effect, that:

"Hsu is the colorless president of the colorless republic of North China. His Government is without cash, and he himself is without men.

"Sun is the virile head of the stormy republic of South China. He is infatuated with Western ideals."

Chang, a monarchist by inclination, was anomalously lined up with Dr. Sun, the radical, and Wu Pei-Fu, said to be a Liberal, came to the assistance of the dictator Hsu, while several other military leaders of the general standing of Wu and Chang are waiting their chance to get into the squabble. These include, according to a special dispatch from the *New York Tribune's* Washington Bureau, a gentleman by the name of Tsao-

Kun, and leaders of the "Chekiang, Kiangsu and other factions." In the meantime, complains the *Chronicle's* editor:

"The multitude of commissions created by the Washington Conference for the protection of Chinese integrity . . . are marking time. They would be glad to turn back a lot of occupied territory, give up a lot of concessions and draw up a lot of agreements if they could find any responsible Government with which to deal.

"In the first place, power is hopelessly divided. In the second, wherever manifested in practical form it appears to be exercised by unofficial persons.

"About the only significant, outstanding, concrete fact in the whole mess is that China has so far forgotten herself as to be employing machine-guns, airplanes and surgery.

"These form a part of modern, or Western civilization. Their employment forecasts a new era for China more definitely than her political squabbles."

Several editors agree that perhaps the most significant fact about the present mixed-up condition is that the Chinese are learning modern methods of warfare. In General Wu there seems to have developed a Chinese leader of parts. Another general, a Christian fighter, is attracting even more attention. The *New York Times* observes, apropos of this remarkable man:

"An important part in the victory of Wu Pei-Fu in China seems to have been played by the Christian General Feng Yu-Hsiang,

CHINA'S "STONEWALL JACKSON."

Feng Yu-Hsiang, one of Wu Pei-Fu's generals, and a devout Methodist, is given much of the credit for the victory over Chang. He hopes to introduce prohibition, on the American plan, into China.

who is a Methodist. From the American Board of Commissioners for Foreign Missions we learn that he rules his troops and his province with great firmness. Smoking, drinking, gambling and profane language are forbidden in his army."

General Feng is called by missionaries "the Stonewall Jackson of China," observes the *New York Morning Telegraph*, and adds these further bay leaves to the Christian general's wreath:

"It was his division which turned the tide of battle, after General Wu had suffered what practically amounted to defeat. Feng came up and, falling upon Chang's right wing, soon had the Manchurian army in disorderly retreat. These meager facts are picked out of the body of dispatches. They are significant.

"China is the most densely populated country on the globe. Her man-power is almost incalculable; and in modern warfare it is not hard to make shock troops out of the raw material if the right kind of instructors are in charge.

"It may be generations before China has adopted Western methods in the daily lives and activities of the people; but China could, and may, adopt and put into practice the military methods of the West within a decade. Japan did it, and the Chinese are a more intelligent people than the Japanese, with a higher sense of honor, according to their traditions and their habits of thought.

"The world should be greatly interested in the future of China's army. It may mean much to civilization."

In the meantime, however, a good many editors seem to feel that China's peaceful settlement of its disputes, internal and otherwise, may mean even more to civilization than do the exploits of its army. There is a strong current of optimism in the comment. It may reasonably be believed, in the opinion of the *Philadelphia Enquirer*, that "the situation has been beneficially simplified and substantially improved by General Wu's victory." This journal notes with approval:

"To judge from the way in which he has acted since he assumed control of the situation, General Wu, who is a soldier pure and simple and nothing at all of a politician, is not actuated by any inordinate ambition, and is not intending to improve the opportunity in his hands for his own personal advantage. Instead of setting up a dictatorship, as he could easily have done had he so desired, he extended his support to Hsu Shih-Chang, the actual President, and went no further than to insist upon the removal from the Ministry of the three men, including Premier Llang Shih-Yi, whom he mistrusted. He has announced that it is his intention to liberate China from its militaristic incubus, and his program includes the disbandment of the provincial forces; the formation of a small army to be used for defensive purposes only by the Peking Government; and the convocation of a Parliament to be chosen by the people by which arrangements will be made for the installation of a successor to President Hsu Shih-Chang."

Sao-Ke Alfred Sze, Minister at Washington representing the Peking Government, agrees that Chinese affairs are improv-

ing, and will improve even further if Dr. Sun comes to time. "Personally, I think too much attention has been directed to the present unrest and disarray," he says in a bulletin sent out from his headquarters at Washington. "In an organic change in the life and habits of a nation there follows always a period of national readjustment in the guise of disturbance and unrest." Ma Soo, on the other hand, representative of the Canton, or South China, government of Sun Yat-Sen, states in an interview that "It must be admitted at the start that the Peking Government represents nobody," and that one of the first moves in any permanent improvement of Chinese conditions must be its complete elimination. Ma Soo also calls attention to the fact that American missionaries in China are backing Wu's campaign, a sure sign, in his opinion, that predatory American business interests are hoping to cash in on the victory.

The *Providence Journal* is glad, at least, that "General Wu is frankly anti-Japanese," and gives evidence of being a man who has set out "honestly to form and maintain a government that will most actually realize the needs and desires of the Chinese people." Even more optimistic and complimentary is the *New York Evening Post*. It comments in an editorial headed, "The Mystery of Sun Yat-Sen":

"Wu Pei-Fu's victory near the gates of Peking was a victory on two flanks, in more than a geographical sense. It was a victory over reactionism as represented by Chang Tso-Lin and over advanced liberalism as represented by Sun Yat-Sen, arch-radical and head of the Government of the South. China is so much of a puzzle in general that we need hardly go out of our way to hunt for special puzzles. And yet there is the mystery of why Sun Yat-Sen, one of the first of China's patriots, a former President of the Republic, should have made common cause with a Manchu ex-bandit strongly suspected of being in the Japanese pay.

"One conceivable answer is in the extremist psychology which finds illustrations outside of China. Left Wing will sometimes cooperate with Right Wing, as in Germany not so long ago when the Monarchists were not at all displeased by the activities of the Communists. But it is only a desperate partizanship that will play that kind of game. There is about Sun Yat-Sen a strong suggestion of De Valera in the subordination of national unity to personal ideology.

"In Russia to-day the chief hatred of the Monarchists is directed not against the Bolsheviks, but against the Center, the moderate mass that thinks nationally instead of in terms of partizanship. Extremists are less afraid of the counter-extremists who play into their hands than of the middle-of-the-road men. Such a man of the Center in China would now seem to be Wu Pei-Fu geographically and in ideas. His victory would thus hold out the promise of a unified and progressive China."

THE TEMPEST OF TEAPOT DOME

IS SOMETHING BEING "PUT OVER" on the people of the United States in the matter of the Teapot Dome, Wyoming, naval oil reserve lease to private oil interests? Both Democratic and Republican editors are asking the question. Secretary of the Navy Denby and Secretary of the Interior Fall agree that the geological structure of the dome is such as to permit its pools to be drained by wells in the nearby Salt Creek area, and that the Government, by leasing this rich oil-bearing area of some 9,000 acres for a period of years on a royalty basis, is making a bargain that will save millions. Independent oil experts, on the other hand, claim that the private producers to whom the Teapot Dome area has been leased will make a profit for the lessees of at least \$2,000,000,000, and that there is no danger whatever that oil from the dome is being or will be drained by contiguous wells. Officials of the Geological Survey, according to the Washington correspondent of the *New York World*, "insist they were unanimous in agreeing that the Teapot area could not be drained by drilling wells in the vicinity," while Secretaries Fall and Denby say it was on the strength of a report by a Government expert to the exact contrary that the lease was entered into.

The reviews of this matter in the press recall that the Teapot Dome field was one of the three great Western oil areas taken over years ago by the Government to conserve a supply of fuel for the Navy. The Taft and Wilson administrations, particularly the latter, were kept fairly busy, it is said, resisting encroachments upon the three oil areas by private oil interests. When, in 1914, Secretary of the Navy Daniels reported to the President that coal was to be superseded by oil as Navy fuel because of its superior steam-producing qualities and other economies, it was decided by the Wilson régime not to lease the oil reserves under any circumstances. Under the present Administration the Taft and Wilson policies of conservation were reversed, and the three oil reserves leased. The royalties, as we read, range from 12½ to 50 per cent. in the Teapot area, and the lessees agree to construct a pipe line connecting with other pipe lines from the mid-continent oil fields to the Central West. The first twenty wells are to be begun within six months, and if oil in paying quantities is not found the lessees are required to drill two more twenty-well series. The Government, moreover, is to have the privilege of exchanging with the producing company crude oil for fuel oils suitable for Navy use, and with the understanding that the producing company shall deliver such fuel oil to naval vessels at any designated point between Maine and Cuba. The amount of royalty oil which the Government is expected to receive will be approximately 27 per cent., say independent experts.

The charge that Secretary Fall conducted secret negotiations with the oil interests for the exploitation of the Teapot Dome oil fields is made by the Democratic *New York World*, and an investigation has been ordered by a unanimous vote of the Senate. A political turn has been given the matter by reason of the fact that Mr. Daniels, while Secretary of the Navy, stubbornly op-

posed leasing these areas. "If all that is hinted at is true, Mr. Harding has a scandal of the first magnitude on his hands," declares the Independent *New York Globe*. "Certainly the affair ought to be probed root and branch," believes the *Manchester Union* (Ind. Rep.), and the "bitterest sort of a controversy" is predicted by the Washington correspondent of the *New York Tribune*.

One of the most outspoken opponents of a lease is Senator La Follette (Rep.), of Wisconsin. "If the two Secretaries considered proposals from a number of prominent oil companies and individuals before awarding the lease, why were the proposals not made public?" asks the Senator from Wisconsin. "Moreover, why was the lease signed on April 7 and all information regarding it withheld from the public until April 21, when its existence was finally admitted in response to a resolution of inquiry passed by the Senate?" Other critics are ex-Governor Brooks, of Wyoming; the present Governor; the State Geologist, who believes there is practically no possibility of draining Teapot Dome through nearby wells, and Senator Kendrick (Dem.), of Wyoming. "The opinion of no geologist has yet been presented in support of the opinion that Teapot Dome is being tapped," asserts Senator Kendrick, "while all the independent oil operators who have knowledge of local conditions are a unit in saying that there is no possibility of the Dome being drained by any well that has yet been drilled."

"True, the Government is to receive a royalty on each barrel of oil produced," admits the *New York Evening World* (Ind. Dem.), "but who wouldn't pay 50 cents a barrel for crude oil that sells for several dollars?" Another objection of this paper is that "an air of mystery enshrouds the whole transaction." And "Secretary

Fall will find this policy of secrecy costly," thinks the *Baltimore Sun* (Dem.), "because the growing tide of opposition will feed more quickly on suspicion and secrecy than if negotiations were conducted in the open." As the *Richmond Times-Dispatch* (Ind. Dem.) remarks:

"Instead of leaving the oil in the ground, where it has accumulated for uncounted centuries, and is as safe as anything can be in the material world, the Administration has decided to drain the lands and divvy up with the contractors.

"This is not being done because the Navy is in immediate need of the oil—not at all. There is a superabundance of oil to be had at low prices, and the visible supply is sufficient to meet all Navy needs for a decade or more."

While there have been many verbal broadsides similar to the foregoing, mostly from Democratic sources, Republican editors apparently have been withholding their fire. "All the foregoing charges are too grave to permit a hasty editorial judgment," in the opinion of the Independent *Syracuse Herald*, and to the *Chicago Daily News* "the royalties exacted from the lessee, ranging from 12½ to 50 per cent., seem fair." Furthermore, President Harding, himself, according to the Washington correspondent of the *New York Herald*, believes that the interests of the public have been protected in every way, and that the lease is much to the advantage of the Navy, and that it will bear the most intensive scrutiny by either friendly or unfriendly eyes.

MAP OF SALT CREEK OIL FIELD.

The heavy line between Teapot Dome and Salt Creek Dome indicates a water line which opponents of the lease of the Navy's oil reserves claim makes drainage into Salt Creek private fields impossible.

SOVIET SKULDUGGERY SCENTED HERE

THE RUSSIAN SOVIET SLUSH FUND of several millions which Samuel Gompers declares is being used in the United States to spread propaganda and pay bribes is, in the opinion of several American editors, merely another method of "boring from within" to disrupt the American Federation of Labor, of which Mr. Gompers is the president. The plan, charges the National Civic Federation, of New York, "contemplates the selection as 'key' men of 1,000 disaffected revolutionary trade unionists in as many localities, who in turn are to round up all sympathetic members of their respective unions." Present leaders are to be ousted, and the unions disrupted generally. The person behind the scheme, agree the Civic Federation and Mr. Gompers, is William Z. Foster, leader of the last steel strike, and the main object, it is said, is to oust Samuel Gompers as president of the labor organization, because of his protests against recognition of Soviet Russia. The fact that Foster, who had no money, visited Soviet Russia, and after returning to this country established a magazine in Chicago as the official organ of the Trade Union Educational League, is pointed out by both the Federation and Mr. Gompers, as proof that he is spreading Bolshevik propaganda among the workingmen of the United States.

But the charge by Mr. Gompers "should not be taken too seriously," thinks the *Chicago Socialist*, "for Samuel has a habit of making loose statements." Besides, maintains this labor paper, "in view of the general practise of foreign governments it would not be surprizing to learn that Russia is following the example of England, France, and other European countries in spending money to put their case before the people of the United States." The purpose of the Gompers statement, *The Socialist* continues, is to prevent recognition of the Soviet Government and the resumption of trade relations, and this in turn "will delay the restoration of normal industrial conditions and thereby work an injury not only to the workers of all countries, including the United States, but to civilization itself."

These opinions agree with those of the editor of another labor paper, the *Schenectady Citizen*, who asks Mr. Gompers to be "more specific and state names, figures and dates." The *New York Herald* suggests that Mr. Gompers is "tuning up" for his annual campaign for reelection, and the *Socialist Milwaukee Leader* hints that "in all probability Gompers could tell a few things about Allied propaganda if he wanted to." In *The Leader's* opinion—

"Whatever may be the facts about Soviet propaganda which Gompers claims to have, we should like to see them and the facts about Allied propaganda both uncovered to the public gaze. We predict that if such an exposure ever takes place, the Soviet propaganda will look small and sick compared with the Allied propaganda."

Mr. Foster denies with considerable heat that he is undertaking to construct a political machine with Soviet money for the purpose of undermining the American Federation of Labor or any other organization. Moreover, he demands that Mr. Gompers "make good." It is the opinion of Mr. Foster that Mr. Gompers is "suffering from an anti-Russian complex." And he goes on:

Copyrighted by Underwood & Underwood

"I DEMAND THAT MR. GOMPERS
MAKE GOOD ON HIS INSINUATIONS."

Says William Z. Foster, denying that he is building, with the help of a huge Soviet slush fund, a secret machine to undermine the American Federation of Labor movement.

"Either Mr. Gompers must prove his statements and innuendos or stand convicted of flagrantly unfair propaganda. As far as the books of our organization are concerned I stand ready to submit them to any reputable auditing company, who will be given every opportunity to examine into our sources of revenue.

"Mr. Gompers's charge about my building a great secret machine to undermine the American Federation of Labor movement is ridiculous. The fact is that the Trade Union Educational League, the body which Mr. Gompers has in mind, operates in broad daylight.

"A factor making for Mr. Gompers's blast is that he fears the new spirit of progress now taking shape among the rank and file of the trade unions all over the country. Under his leadership the trade union movement has come to a standstill politically, industrially and philosophically. The Trade Union Educational League is working to break this deadlock."

The *Buffalo News*, however, wonders if Mr. Foster isn't "suffering from a pro-Bolshevik complex," and *The Express* of that city reminds us that "because of the good work Mr. Gompers has done in combating the spread of Bolshevism among American workingmen, his strong attack upon the new phase of the Bolshevistic movement must be read with great respect as the warning of a man who has studied the subject closely and appreciates its menace." As for Mr. Foster's denial, we read in the *Detroit Free Press* that—

"He would have been more convincing if he had omitted his remark about the anti-Russian complex. Here he went just a little too far for good strategy, and left the impression that whatever else may be in his mind, certainly no hostility to Bolshevism lurks there. He has no 'anti-Russian'—that is to say, no anti-Soviet—bias.

"Indeed, when we remember the record of Mr. Foster as a leader in the steel strike and take into consideration the extreme character of a good many of his utterances, he seems to have made out something like a prima facie case against himself."

Mr. Gompers is fighting Bolshevism in this country, according to the *Chicago Post*, "with an adroitness which proves that the veteran labor leader has lost little of his cunning with the passing of the years." And "those who seek to outwit him will have to rise very early in the morning even on daylight-saving time," notes the *Utica Press*. Turning to the *Indianapolis Union*, a conservative labor paper, we find it confident that Mr. Gompers "has the goods and is prepared to come forward with the data if called upon." He "has been in public life too long to make foolish statements," it avers; and it predicts that when the time comes "he will present to the country an array of facts that will startle the most skeptical."

A wide reading of editorials discloses the fact that editors in general are not greatly disturbed by reports of Soviet propaganda, tho not a few appear to be concerned regarding organized labor. The *St. Louis Star*, for instance, believes that—

"If there ever was a time in the history of American industry when the wage-earners of the country needed unity of purpose and a solid front, it is to-day, when certain influential groups of capital are openly engaged in a battle to break down unionism in the United States. Not only first-class leadership is needed, but it must be a sane and conservative leadership, and any swing to radicalism would be well-nigh fatal to organized labor at this time. If for no other reason, the present leaders of the American Federation should be maintained in command because of their experience in dealing with similar crises."

FOREIGN - COMMENT

THE RUSSO-GERMAN TORPEDO AT GENOA

NO CRIES OF JUBILATION in the German press greeted the disclosure of the Rapallo Treaty between Germany and Russia, it is remarked by some adverse critics, who say the Germans have learned that the only mistake they made in the sinking of the *Lusitania* was "giving vent to rejoicing." "This second *Lusitania* feat," as some Jugoslav newspapers term it, rather inclines German editors to "explain, apologize and minimize" what is now known as the "Russo-German torpedo at Genoa." Meanwhile Paris dispatches advise us that the Allied Reparation Commission has notified the German Government that there is nothing in this particular agreement which seems to violate the terms of the Treaty of Versailles, and therefore no intervention is required. But it is also stated that the Commission has "made it plain that if the provisions of the Rapallo

Treaty, when put into effect, jeopardize the interests of any of the Allies, Germany might be called upon by the Entente to nullify the treaty or any part of it." Parallel with the Rapallo Treaty, we learn from Berlin dispatches, the Russians and the Germans have negotiated a consular treaty of "far-reaching commercial and economic purport." Of the Rapallo Treaty the *Koelnische Zeitung* declares the excitement it caused abroad resulted in much misjudgment of its provisions and tendencies, and it adds:

"As far as the material contents of the treaty are concerned from the German point of view, they present no cause for excitement. The treaty itself has nothing to do with the Genoa Conference. It was lying in Berlin for eight weeks before the conference opened, all ready to receive the necessary signatures, and even its stipulations were well known. At that time—as it was announced to all the world—the representatives of the Soviet Government were in Berlin and negotiations were going on regarding the agreement. The fact that the leaders of the Soviet Republic met our representatives for the first time at Genoa brought about a closer understanding on different points. That the treaty was signed there ought not to have created a shock."

The *Koelnische Zeitung* goes on to say that the foreign press, particularly the French, do not conceal the aim of their attacks, and avers that "when the French press says that the Cannes resolution must be assailed, it is no doubt the third paragraph, point 3.a., they are hinting at. Here it is said that all debts and public obligations of the pre-Bolshevik régimes must be acknowledged and all damages resulting from confiscation will have to be made good by Russia." The German Government "dis-

GERMANY TO RUSSIA: "This is my best hit since I torpedoed the *Lusitania*."

—The Vreme (Belgrade).

claims both of these in the first paragraph of the treaty on basis of mutuality," according to this Cologne daily, which is convinced that "Germany had a right to conclude such a treaty even if it is damaging to Entente interests that she negotiate with Russia."

The *Frankfurter Zeitung* is skeptical as to the real meaning of the Genoa Conference as long as Germany has been excluded from the deliberations affecting Russia, and believes the barring of Germany from participation in the sub-commission of the First Political Commission was an arbitrary act on the part of the "chief opponent of the Russo-German Treaty." Here France is meant, which is said to have "succeeded in securing the support of a group but not of the conference as a whole," and this journal proceeds:

"Against this tendency we must warn our delegates to exercise caution. The Entente and even some neutral Governments regard our concluding a separate treaty with

Russia as disloyal toward the other participants of the conference. We may reply to this charge that the Entente were the ones to begin separate negotiations with the Russians, taking no notice of Germany. As a matter of formality either charge may have some foundation. As a political *coup*, it can withstand all objections."

The *Frankfurter Zeitung* also asserts that if the conference succeeded in making a collective bargain with Russia, the principal Powers "would have laid a ready-made program before Germany and some of the other countries as well, and none of these would have had a chance to promote their individual interests." "The German delegation," it says, "would have had to accept the dictation of the victorious Powers as to her future relations with Russia, instead of concluding a treaty that covers Germany's proper interests." The Socialist *Vorwaerts* is of the same opinion as its bourgeois contemporaries, and assures us that Germany had a perfect right, moral and political, to conclude a separate treaty with Russia as long as it does not interfere with other nations making similar treaties with the Soviet Republic, and it argues:

"The treaty does not permit Germany to interfere in Russia's internal affairs. On the contrary, strict neutrality is the term employed as to her attitude toward Russia. As a commercial treaty with Russia was not only a necessity, but also the desire of the working classes as well as of the industrialists of Germany, we may expect that the German people in general will endorse the treaty without reservations. As to its effect on foreign countries—it is already evident that they do not think the signing of the treaty was properly timed."

The Berlin correspondent of the Paris *Temps* reports that the German public is confident that the Rapallo Treaty is a "defini-

ENGLISH CARTOON VIEWS OF THE RUSSO-GERMAN PACT.

tive victory for Germany," but much concern is expressed in some quarters that the joining with the Soviet Russians signifies so much to the German Communists and German National Bolsheviks who are "delighted to see Germany arm in arm with Soviet Russia." In Parliamentary circles more reserve on the Treaty is met with, according to this informant, who says that the deputies of the majority do not wish to express hostile criticism of Wirth and Rathenau, but one deputy was heard to quote a German proverb about the Russo-German Treaty to this effect: "For a pigeon on the roof, Germany let go a sparrow in her hand." Anglicized this would indicate that Germany has failed to realize that a bird in hand is worth two in the bush. Also a Nuremberg professor, Martin Spahn, is quoted by the Paris *Temps* correspondent as saying that "the German Government has committed a great fault by unnecessarily irritating France and England, and this imprudence will surely be followed by an energetic counter-offensive to the detriment of Germany." Professor Spahn is also of the belief that "it is impossible now to expect France to permit consideration of the reparation problem at Genoa." We read further that 20 deputies of the Right in the German Reichstag brought up the question of the "preponderance of the Jewish element in the German Delegation at Genoa," which they charged, "amounts to 33 per cent. of the whole delegation membership." This correspondent tells us also that the coming opening of the frontiers between Russia and Germany is causing grave disquiet to the German sanitary authorities on account of disease conditions in Russia, and one medical officer characterized the Rapallo Treaty as the "typhus alliance."

In France a representative view is expressed by the Paris *Journal de Débats*, which says that Germany and Russia have "ousted themselves from the Genoa Conference" by the mere fact of the Rapallo Treaty. From the moment that they "began to come to understandings between themselves, that could not

but affect matters of the first importance under discussion at the conference, they made it impossible for the other Powers to treat with them." Through their own initiative they have formed "one of those European groups which Mr. Lloyd George was anxious to prevent," but in the opinion of the *Journal de Débats* such groups are in the nature of things and it is vain to attempt to round up the world in one little household. The truth is that nations come together through mutual affinity and not through prescribed rules, according to this influential Paris daily, which wonders what Mr. Lloyd George really thinks of the Russo-German "initiative."

In England the London *Daily Telegraph* considers the agreement as "a testimony alike to the astuteness of the Russian delegates and to the short-sighted folly of their German colleagues whose action can not but vastly intensify the distrust of Germany which is the dominating feature of French policy." This London daily tells us further that the Germans have "placed all the mediating influences at the conference in a position of extreme difficulty and have inflicted a severe setback on the strenuous and unceasing efforts which have been made by Mr. Lloyd George to lead all the parties at Genoa forward in the path of conciliation and mutual cooperation." We read then:

"It remains to be seen how far their wholesale sacrifices of Germany's interests will receive adequate compensation at the hands of those to whom they have surrendered, and it will be instructive also to discover, as we shall in the course of the next few days, what is the view taken of this extraordinary action by the representatives of Germany's great industries. The clauses of the Treaty which provide for the abandonment of all claims for compensation in respect of the Soviet confiscations of foreign property in Russia amount to a betrayal of all the principles which have hitherto governed international obligations, and are, in effect, an endorsement of the Bolshevik doctrine and practise hitherto condemned in every civilized state, as striking at the roots of organized society."

JAPAN'S EXIT FROM SHANTUNG

THE FIRST MEETING between the Japanese and Chinese committees on the withdrawal of Japanese troops from Shantung was held March 23rd, and five days later the articles of agreement were signed. Such speed is unprecedented, we are told, for former negotiations between China and Japan have always proceeded at a snail's pace. Of course much credit is due to the Washington Conference, which decided the fundamental principles of the retrocession of Shantung, say Japanese editors, but they flatter themselves that after all the "speedy conclusion of negotiations is more substantially attributable to a great concession made by Japan relating to the problem than to the sincerity of China." Of course the Chinese delegates were sincere, rather grudgingly observes the Tokyo *Chugai Shogyo*, for they realized that the settlement of the problem will have "a serious influence upon the abolition of extra-territoriality in China in the event that peace and order fail to be maintained in the Shantung Province." But to this daily "Japan's sincerity throughout the negotiations reigned supreme." In fact, "Japan's attitude is not only sincere but humiliating," and we read:

"Japan ate humble pie in the Shantung problem, more especially in the withdrawal of her troops from Shantung. The lease of Kiaochow and the Shantung Railway is not retroceded to China but is abandoned. All the efforts of Japan in Shantung have been sent to the devil through the humiliating attitude of the Japanese Government, but it is already a story of the bygone days, and we do not cry over spilt milk. The momentous problem that needs a painstaking study at the present juncture is how to protect the Japanese residents in Shantung and along the Shantung Railway with large business interests and investment. The life and property of twenty thousand Japanese residents will be exposed to danger and menace after the withdrawal of the Japanese troops."

That the Japanese residents in Shantung do not expect much from the Chinese troops, or police, who will take the place of the Japanese troops, is the rather slurring suggestion of the *Chugai Shogyo*, which tells us that "many weird rumors are persistently circulated among the people of Shantung concerning the maintenance of peace and order in the province after the withdrawal of the Japanese troops." Without disclosing the source of such rumors, a consideration generally affecting rumors, this journal proceeds:

"It remains a question whether the Chinese police or soldiers can maintain peace and order. If the perfect guaranty of the Chinese authorities be obtained concerning the responsibility to be borne in connection with the maintenance of peace and order along the Shantung Railway, the evacuation of the Japanese troops will be made as quickly as possible. The administration of Tsingtao as well as of the Shantung Railway will be transferred to the control of the Chinese Government authorities upon the withdrawal of the Japanese troops and the majority of the Japanese residents will at that time either return home or go to Manchuria. If such a state of things occurs, Japan's trade with

Tsingtao will be divested of much of its present prosperity and Tsingtao itself will be destined to ruin after all. In carefully considering the future of Tsingtao, the port promises to rise in ascendancy with the present Shantung Railway extended to the hinterland and the proposed Hailan Railway constructed to add much to the prosperity of the seaborne trade. Opinions agree that Tsingtao promises to become an entrepôt ranking next to Shanghai in future and to occupy the largest commercial port in North China, overshadowing all other ports in existence. The fact that the Japanese make economic development at Tsingtao with their foothold firmly established there will not only tend to guide Japan's trade with China advantageously, but will serve largely to the profit and interest of China herself. It devolves upon the Government authorities to take relief measures as far as possible for the enterprises maintained by the Japanese subjects and the maintenance of the status quo. The development of Tsing-

SHANTUNG, THE "CRADLE OF CHINESE CIVILIZATION."

Japan's exit from Shantung, decided at the Washington Conference, is under way, and Japanese newspapers fear that the "life and property of 20,000 Japanese residents will be exposed to danger and menace."

tao owes its origin to the Teutons, but the present prosperity to which the port was raised is solely attributed to the Japanese."

The Tokyo *Yomiuri* reminds us that it was stipulated at Washington that the Chinese Government should repay the Japanese money invested by them in public properties, the Shantung railway, wharfs and warehouses, and other enterprises of public nature; and that the original price of the Shantung Railway, amounting to 5,300,000 gold marks, and of the salt fields should be repaid by the Chinese Government to Japan. We read then:

"Chinese observers are anxious for the enormous sum of money required for the taking over the interests of Japan in Shantung, and are saying that there is no necessity for China to indemnify the amount of money named by Japan, because the free investment of funds was made by Japan without China's consent, notwithstanding that Japan pledged herself to the retrocession of Shantung in the Twenty-one Demands. Should this absurd theory be left to take its course, the sincere solution reached between the two Governments concerning the negotiations for withdrawal of troops would become impossible. The indemnification of enormous amounts of money by the Chinese Government will tell severely on the Chinese people who will have to groan under the heavy burden. We can not but express our sympathy with the Chinese people at large, but think of the heavy sacrifices paid by Japan in upsetting the German foothold in the Orient and in bringing Tsingtao to phenomenal prosperity and the Shantung Railway to high efficiency."

COLOR CONFLICT ON THE RAND

THE TWENTY-EIGHT MILES OF GOLD REEF known as the South African Rand is the stage of an ominous quarrel between organized white labor and native black labor, we are told, altho the strike and attempted Bolshevik uprising there has been settled by the administrative firmness and skill of Premier Jan Christian Smuts. The Premier's analysis of the situation has been recorded previously in these pages, but an account of the antagonism between white and black labor on the Rand is considered timely by the *New Zealand Auckland Weekly News*. Conflict between white and native labor is of long standing, according to this newspaper, which tells us that the mining industry of the Rand depends fundamentally on the employment of native labor, and that colored workmen have always outnumbered the white by eight or nine to one. We read then:

"The Rand contains immense wealth. The line of outcrop extends for nearly eighty miles, and the formation is unique for regularity as regards both the thickness and the gold-tenor of the reefs. The value of the ore in the main reef series is estimated at £2,500,000,000, and it is assumed that production will continue for at least a century. But these calculations presume cheap labor. Most of the ores now being worked are low grade, and were unskilled white labor at only eight shillings a day to be employed to the exclusion of native labor the loss on the Rand would run into millions a year. Even with gold fetching a high price, the inflated costs of production due to the war have proved a heavy tax on most mines, and one of the causes of the present strike was a proposal for the partial replacement of white by native labor in semi-skilled occupations."

This touches the white labor organization on its most tender spot, the *Auckland Weekly News* goes on to say, for the traditional white policy is "to deny the native the right to rise in the industrial scale." He is to be kept always "a hewer of wood and a drawer of water," to perpetuate the system which has been picturesquely described as "paying a white man 12s. 6d. a day for painting the lower part of a telegraph pole, and a native 1s. 6d. for painting the upper part." In pursuance of this policy, whole classes of skilled and semi-skilled labor have been reserved for Europeans, and native agitations for higher pay have often been suppressed with unnecessary rigor, says this journal, and adds:

"The policy of discriminating against the native and still more the arrogant manner in which it has been applied have aroused bitter feelings—feelings which disturb every South African who remembers that he lives in a country where the white people are in a minority of one to seven. On the Rand, the situation is at all times strained, and in playing with the menace of a race war the strikers run a grave risk of creating the actuality. No words more fitly describe the present danger than those with which a South African missionary recently described the native discontent: 'Let no time be lost, for at any moment a lighted match may fall and set up such a flame all along the Reef that none will be able to quench it.'"

FOR A JAPANESE-GERMAN COMBINE

BEFORE GERMANY AND RUSSIA astonished the world by their Rapallo agreement, the outlook for German trade and commerce appeared so clouded to some Japanese newspapers that the brilliant idea of Japanese-German economic cooperation became the subject of comment. The

Tokyo *Yorodzu* reminds us that it has frequently "laid stress on the necessity" of a "Japanese-Prussian economic rapprochement," and says the time is hourly ripening for concerted effort in the promotion of the business interests of Japan and Germany. Germany's science and Japan's business "convenience" joined together will make a strong force not only in China but throughout the Far East, and it adds:

"Contracts for establishing an electric machine industry in Japan are reported to have been concluded between the Furukawa Industrial Company and Siemens Schuckert and Company. By this agreement Japan will supply materials, capital and labor to the German firm which will in turn supply factory equipment, experience, technique and experts. While visiting Germany early last March, the Japanese Business Mission entered into negotiations with many influential German business men, including Hugo Stinnes and Kesler, of the Krupp Factory, for the contribution of mutual attributes following the example of the Furukawa-Siemens negotiations and also for the joint enterprises, such as

medicinal and chemical industries. These schemes are very appropriate to meet the present economic situation in both countries, and Japan will be able to make good her defects and shortcomings, and Germany to have influential methods for her economic restoration."

This newspaper goes on to speak of Great Britain's "anxiety" because Germany sought economic restoration through Russia. But the exhausted condition of Germany "through war devastation" is a factor unfamiliar to American and European observers which impresses this Japanese daily as the real reason for the obstacles to economic collaboration between Germany and Russia. Meanwhile before the conclusion of the Rapallo Treaty between Germany and Russia, Germany's prospects appeared to this daily as follows:

"Germany's interests in Russia are now gradually losing ground by the advance of Great Britain into Russia. The only orchards from which the Powers will gather manna for their war fatigue are Russia and China. To Germany more especially, Russia is the only stick on which she can lean, and the wresting away of the stick by other countries means a fatal accident to her. If the British and American hands are clearly visible in the competition for Russia, Germany's hope for economic restoration through Russia will be completely sealed. She must turn her attention to China. Germany's footholds in the Orient were, however, utterly upset by Japan and there admits of no room for her to develop in South Sea Islands and China. She is reported to have recently started activity in China, commercially and industrially, but industry without political support will not prosper. An economic combination of Japan and Germany is necessary."

SCIENCE - AND - INVENTION

EVERY MAN HIS OWN TWIN

FEW PERSONS ARE EXACTLY ALIKE on the right and left sides. Some are decidedly different, as careful examination of a full-face photograph will show. Such persons, in the view of some biologists, may be regarded as the halves of twins, grown together. Had each half developed to full extent, there would have resulted two nearly identical indi-

viduals. This and other startling information about twins may be found in an article on "Mental and Physical Correspondence in Twins," by Dr. Arnold Gesell, director of the Yale psycho-clinic, contributed to *The Scientific Monthly* (Lancaster, Pa., May). Dr. Gesell reminds us that biologists have for some time accepted a classification of human twins into two distinct types: (1) fraternal or "dizygotic" twins, who may or may not be of the same sex, who show ordinary fraternal resemblance, and are presumably derived from two separate eggs; (2) duplicate or "monozygotic" twins, who are always of the same sex, closely resemble one another, and supposedly originate from one fertilized egg. The existence of both types of twinning has been indisputably established in the lower animals. He continues:

"The fact that the experimental embryologist can bring about the growth of a paired structure by a simple wound of a single limb bud reveals the fundamental nature of twinning. Of similar significance is the fact that Loeb produced a 90 per cent. increase in twins by a simple immersion of his experimental eggs in lime-free sea water, which caused the segments of the living eggs to fall apart as they were formed. Newman, likewise, regards the phenomenon of twinning as a 'very fundamental process almost universal in the field of biology. For wherever we have bilateral doubling, we have twinning in some form.'

"From this point of view every bilateral individual may be conceived as being morphologically a pair of twins. This view is

so legitimate that it need not be called paradoxical. The human individual is undoubtedly derived from a single fertilized cell. He is monozygotic in origin. From this zygote, through a process of symmetrical division, develop all his right and left hand homologous organs and the right and left halves of his 'unpaired' organs and structures. He is a product of developmental duplicity. Now in the case of true, complete monozygotic twins,

this process of duplication has been carried to such a degree that two offsprings result from the single ovum. A perfectly symmetrical bilateral individual on the one hand, and a perfect pair of duplicated individuals on the other, represent the ideal extremes of the process of twinning. Between these extremes there are many gradations and deviations.

"If the balance of power is equal, the partial community of blood supply carries no penalty. But a stronger or favored embryo may appropriate an increasing monopoly of blood, so that the other degenerates into an amorphous parasite. One twin may be relatively normal, but the cotwin dwindles developmentally into a vegetative mass of malformed or unformed tissues.

"This glimpse into the subject shows that twinning actually expresses itself in two apparently contradictory end results. It may produce perfect symmetry and mirror imagery; or it may produce gross disparity. Nowhere in the study of man do we find such complete duplication of individuality, and nowhere do we find also such profound and monstrous degrees of individual difference.

"FEW PERSONS ARE EXACTLY ALIKE ON THE RIGHT AND LEFT SIDES."

These odd pairs of twins show the striking difference in the right and left sides of the faces of well-known people. The first picture in each case shows the right side combined with a reverse photo of itself to make a complete portrait, while the second picture shows the left side treated in the same way. "Such persons, in the view of some biologists, may be regarded as halves of twins, grown together."

P. & A. Photo.

ANOTHER TRIUMPH FOR CALIFORNIA'S FAMOUS CLIMATE: A STUDY IN TWINS.

The Sixty-first Street School in Los Angeles takes great pride in its nine pairs of twins and proves that there is no race suicide in the well-known California town. Only one pair contains a boy and girl. Note also that the resemblance becomes less marked as they grow older.

in origin, and asks the question, 'What more natural, therefore, than to infer that separate twins which are of the same sex and strikingly alike are also monozygotic?' Parenthetically it may be stated that Newman has definitely established the fact that armadillo twins are monozygotic in origin, and that twinning is a specific hereditary character in this species.

"The problem of physical and mental resemblance in dizygotic twins is more simple. Dizygotic twins must be considered merely as two contemporaneous individuals. As a class such contemporaries doubtless show a higher degree of psychophysical resemblance than non-contemporaneous siblings, but in any given pair we must be prepared to find ordinary fraternal individual differences.

"Such twins usually look no more alike than ordinary brothers and sisters, are easily distinguished by physical, mental and temperamental characteristics. Indeed, one such twin may be mentally normal while the cotwin is backward or even feeble-minded. Goddard made a study of the family histories of 327 feeble-minded individuals. Fifty-one of his charts recorded the birth of twins. In four of these cases, one of the twins was mentally normal and the other feeble-minded. There is no reason to expect duplication or identity under such conditions."

It must be remembered, Dr. Gesell goes on to say, that there are wide variations possible within either group. Neither process works with iron-clad rigidity or uniformity. Williams recognizes that single ovum twins may be produced in as many as four different ways. Moreover, we must recognize the indisputable occurrence occasionally of an ovum with two nuclei. Recently Professor R. S. Lillie has suggested that the process of development is basically regulated by some repressive influence comparable to chemical-distance action. We have Newman's general observation that in human twins, "twinning is by no means a single fixt process, but is highly variable, evidently beginning earlier and being more complete in some cases than in others." To quote in conclusion:

"These various suggestions do not suddenly clarify the problem of correspondences in twins, but they do make more intelligible the distribution of correspondences and disparities which is actually found; and they do not necessitate the denial of a relatively frequent occurrence of monozygotic twinning.

"To a clinical psychologist who is so constantly impressed with the differences which obtain both among normal and abnormal individuals, it seems almost like a violation of the laws of nature to find in one afternoon two personalities which are practically indistinguishable. From the biological point of view, however, there is no reason why such instances of almost complete duplicity should not occasionally occur. The germinal and the somatic determinations of development may be so nicely balanced during

the period of conception and cleavage, that we may have two persons who, psychologically as well as morphologically, stand for but one individual to the pair. Shakespeare might again have said, 'The apple cleft in two is not more twin than these two creatures.'"

TOBACCO SMOKE AS A DISINFECTANT

THE DISINFECTING ACTION OF TOBACCO under conditions comparable with those found in the mouth and air passages, has recently been studied by an Italian investigator, Signor V. Puntoni. The results of his experiments, which were recorded in the *Annali d'Igiene* and quoted in the *Monthly Bulletin* of the International Public Hygiene Association, may be summarized as follows:

"Signor Puntoni first endeavored to determine the effect of tobacco smoke on the most common microbes, using impregnated 'tests' of bacterial emulsions placed in a small glass box. The bacteria employed included those of meningitis, cholera, typhoid fever, and diphtheria, as well as the staphylococcus, the streptococcus, and Pfeiffer's bacillus. These varied in resistance, but all were killed in five to thirty minutes.

"In order to identify its ingredients, the tobacco smoke was filtered through cotton-wool to remove those substances which make it opaque, and the products contained in the wash water were then separated by distillation. The different qualities of tobacco examined, including cigars, cigarettes, and pipe-tobacco, showed a power of disinfection about equal for the same weight. 'Tuscan' cigars, which are composed of denicotinized tobacco, were as strongly disinfectant as ordinary cigars.

"The filtered smoke (rendered transparent by filtering through compressed cotton) was found to retain a marked bactericidal action, altho the process of filtration had entirely removed the nicotine. The bactericidal substances contained in the filtered smoke are soluble in water; one of these is formaldehyde, which distills over at 100 deg. Cent. Another constituent possessing a very considerable degree of germicidal power is pyrrol, which distills over at a higher degree.

"Unfortunately, the disinfectant action is less powerful in the smoker's mouth than in the test-tube. Signor Puntoni's experiments in this direction led him to conclude that at most there is a comparatively mild germicidal effect produced after one has smoked a very large amount of tobacco. Moreover, this applies only to the less resistant germs, such as those of cholera and meningitis. Those microbes having a resistance equal to that of the typhoid bacillus, or greater, can not be destroyed by tobacco smoke. He also regards it as a grave mistake to suppose that the germicidal action of the smoke manifests itself in the respiratory passages as a result of inhaling the smoke."

OUR PACIFIC COAST FOOD PROBLEM

HOW LONG SHALL WE EAT?" asks a Pacific coast editor who has been looking into the food situation there, and he finds that the answer is: As far ahead as we can see, if we will only irrigate sufficiently; otherwise we must import food or stop growing. This question and reply are specifically for the Pacific States of the Union and are from an article contributed to *Pacific Industries* (San Francisco) by its assistant editor, Ward C. Schafer. Mr. Schafer tells us that if the population of California, Oregon and Washington continues to increase for the next ten years at the same rate as for the last ten, 1930 will see 10,000,000 people on the Pacific coast. Of this number, approximately 6,000,000 will live in the cities, while the remaining 4,000,000 will live in the country, on farms, or in towns of less than 2,500 population. He asks:

"Will the 4,000,000 farmers be able to feed themselves and the 6,000,000 in the cities? Or will the cities be faced with the necessity of importing the bulk of their food? How great an industrial population can the West support with its own food products?"

"The West is yearly shipping out a huge surplus of agricultural products to all parts of the world. The percentage that is retained here for consumption is only a drop in the bucket when compared to the total yield. But how soon will we see the day when that surplus will diminish and the demand become so great that it will be necessary to call on the rest of the world to supply the shortage?"

"A general survey of the agricultural situation in the three Pacific coast States shows these main tendencies to mark the development during the last ten years:

"1. City population is growing three times faster than country population.

"2. The total number of farms operated has increased 23 per cent.

"3. The total acreage operated has increased only 10 per cent.

"4. The physical volume of farm products has increased 100 per cent.

"There is only one explanation of such a set of conditions—intensive cultivation and scientific farming. If a factory could increase its output 100 per cent., with only 10 per cent. more plant investment, you would say that it had a future! Yet that is just what is taking place in Pacific coast farming.

"Twenty years ago the old grain farmers fought irrigation like the '49ers fought the introduction of the twenty-five cent piece—they figured it would ruin the West. To-day, irrigation is paying them an annual dividend of \$28 an acre in increased yield on an investment of \$33 an acre. The cost of operation and maintenance amounts to an average of \$2.75 per acre, giving the farmer a net return of 75 per cent. on his investment, or rather on the investment of the irrigation district bondholders, the bulk of whom live in the cities.

"Moreover, irrigation on a large scale is like large-scale production in industry—the greater the bulk production, the less the unit cost. A concrete example is furnished by California. When the present irrigation projects are completed, the total investment will be 165 per cent. greater than in 1910, yet in the same period the average investment per acre will have increased only 65 per cent.

"That is the reason the total acreage farmed has increased so little. The farmer is only beginning to appreciate the possibilities of the ground he has been working for twenty years or more. Why should he move out onto new land and wait for development to come to him when he hasn't even begun to scratch the soil where development is already well under way.

"How close is present development following future needs?"

"City population has increased 65 per cent. in ten years. To support this increase it has only been necessary to improve 50 per cent. of the arable acreage that was already under cultivation in 1910.

"The cities of the Pacific coast are twenty years behind the back-country in development.

"Agriculture will always lead the procession here in the West. For every sack of wheat or barrel of flour needed there will always be two furnished from our own granaries and mills. Right now there are 700,000 acres of irrigated land and 23,000,000 acres of unimproved farm lands waiting for the cities to catch up with the supply they already have. The greater development of the West lies with the cities—the back-country will take care of itself."

A BUS LIKE A PARLOR-CAR

FOR THIRTY DAYS, says a writer in *The Illustrated World* (Chicago), the residents along the road from Oakland to Los Angeles noticed a large, white, luxuriantly furnished automobile bus passing their homes in both directions. They noticed it so often that they began to speculate as to how many busses of this same type were running. Finally, the

Courtesy of "The Illustrated World," Chicago.

THE PARLOR-CAR BUS.

question was settled. There was only one, and that one had spent the whole month in making continuous trial trips between the two cities in order to obtain actual figures on the economy and efficiency of its operation. We read further:

"The bus was the 'Silver Fox,' California's latest contribution to motor-bus designing and construction. The most remarkable feature about the car is that it is probably the first passenger-carrying motor vehicle designed as a complete and special unit for the express purpose of passenger-service. Practically all the busses in use to-day are merely bodies placed on truck chassis or are standard touring-car chassis fitted with special elongated bodies.

"The motor is specially and strongly constructed and is of sixty-four horse-power. It was built and designed for the super-bus by Col. E. J. Hall, the co-designer of the now famous Liberty motor. The motor is equipped with a governor so that it is possible to obtain a maximum speed of only fifty-two miles an hour. The motor and drive shaft are suspended from fabric and rubber pads, in place of the usual metallic contact between the propelling mechanism and the body, thus forming an insulation against the vibration that is bound to occur in a heavy vehicle.

"Another unusual feature of the car is the extremely low center of gravity, as the running-boards are but sixteen inches and the floor of the car but nineteen inches from the ground. Additional safety and the elimination of sidesway are provided by a wide sixty-eight-inch tread instead of the usual fifty-six, and by the extra large brakes.

"The interior of the passenger bus is more like a parlor-car than an automobile-bus, as it is luxuriously finished. Individual backs are provided for the upholstered seats and an indirect lighting system reflects the light against a silver-sheet ceiling. The bus has a capacity of twenty passengers. Another design that will carry twenty-nine persons is being built by the same company. This bus will be built along the lines of a one-man street-car and will be used for branch service for metropolitan street-car lines or for complete city service in small towns. Both of these models are of aluminum construction."

WHY THE MOVIES MOVE

WHY DOES A MOVING PICTURE seem continuous when the screen is in almost total darkness sixteen times a second and in partial darkness sixteen or more additional times? Why do we get the impression of motion from a series of pictures, each of which in reality is absolutely motionless? Why do the pictures have the appearance of depth when in reality they do not possess any objective third dimension? These and some related questions are discussed in *The Scientific Monthly* (New York) by Donald A. Laird, of Iowa University. Movie fans will be astonished to know that so many controverted points in physiology and psychology are concerned in what they have regarded as purely a recreational act. Taking up the question of continuity first, Mr. Laird says:

"All ordinary visual images persist for about three-thousandths of a second at the full intensity of the original stimulus, even after it has ceased to act upon the eye. Intense stimulation, such as the gas-filled bulb and the movie screen give, or long continued stimulation, causes the terminal inertia to remain for a much longer time.

"As almost universally projected at present, sixteen separate pictures are flashed on to the screen within one second. In the earlier machines, as in Edison's kinetoscope, the film was passed steadily. But with the bright illumination and large pictures now in use the picture has to be still while on the screen. Otherwise nothing but one great, big, rectangular blur would be seen.

"In order to accomplish this still projection of the individual pictures to produce the motion picture each picture is jerked before the lens one at a time.

"Altho the light thrown on the screen is interrupted thirty-two or more times each second, a positive after-image of each picture remains until the next picture is projected in full intensity on the screen. The actual period of darkness on the retina is bridged over by the retinal persistence. This is what gives apparent continuity to the motion picture.

"As the intensity of the illumination increases, the period of persistence increases. Thus, with the strong illumination which the modern electric arc furnishes, the appearance of continuity is furthered and the intervals of actual darkness are covered by brighter positive after-images than would otherwise be possible."

Dealing next with the illusion of motion, Mr. Laird notes that it can not be explained in the positive way in which we accounted for the continuity and the clearness and freedom from flicker. There is still some controversy among psychologists regarding the perception of visual motion in ordinary life. He goes on:

"Eye movements have been used for a long time to account for the perception of motion by the eye. This theory holds that the eye follows moving objects and that we get the impression of motion from the strain and tension on the six muscles that move each eye. There are objections, however, which seem to render this theory untenable.

"We must look to the nervous and retinal elements of the eye rather than to its musculature for an explanation of the perception of visible motion.

"For some time it was stated by some psychologists that there is a special sensation of motion. They neglected to search for or

indicate the sense organ which is necessary if there is to be a special sense of movement.

"If we analyze movement as a stimulus we find that it resolves itself into a series of changes in the stimulation of the retina. The eye is constantly in motion; it is never at rest for more than a few hundredths of a second at a time. Ordinarily we are completely unaware of these movements, but they have been accurately observed and studied.

"Ordinary vision is essentially momentary and cross-sections motion in various phases, just as the motion-picture camera photographs progressive phases of the action. In either instance there is no difference between the perceptions of motion. The motion itself is not seen. What is seen is the change in positions and a blur which may be looked upon as the sensory index of the change.

"The same filling-in activity of the mind is at work in reading. Only a very few of the letters in any line are really clearly seen; the remainder are supplied by the mind's integration. It is for this reason that the inexperienced proof-reader passes over error after error; in ordinary perception the eye touches only the high spots."

Photos by courtesy of the Bray Productions, Inc.

WHAT GIVES THE JERKY MOVEMENT.

At the left is the sprocket wheel that meshes into the film and makes it go. At the right is the Maltese cross device for jerking the pictures before the lens one at a time. The large upper wheel revolves steadily, the cam band holding the Maltese cross firmly in position until the pin enters the slot; then the cross is turned 90 degrees. The axle that carries the cross also carries the sprocket which meshes with the openings in the film and jerks it down picture by picture as the pin pulls the cross around one-quarter of a turn.

Going on to discuss the illusion of depth on the screen, Mr. Laird notes that we find the inner activities at work again in the flat world of the photo-play. Our ordinary environment extends not only to the right and left, and up and down, but some objects are also seen close to us, while others are far away. Just how we perceive depth was one of the first problems to receive the attention of the early experimental psychologists: He continues:

"The main criteria which we have to assist

us in the perception of depth take issue from the fact that our vision is normally binocular. Two eyes make us much more accurate in the perception of the third dimension than would otherwise be the case.

"Since the eyes are separated by a few inches, each one sees a given object at a slightly different angle from the other.

"This principle is used in the ordinary stereoscope. The two pictures on the card are taken from a slightly different angle and the resulting appearance is one of a single object in clear relief.

"It is not known how it is that these two images combine to form a perception of depth. The important thing, however, is that such is the fact.

"Motion pictures are flat and lacking in any real quality of depth. Then how is it that the observer receives the impression? While the predominant factors in the perception of depth are physiological there are still a large number of secondary or psychological factors which assist materially in building up these perceptions.

"What we have long known as perspective is perhaps the most important. It is largely this factor which gives apparent depth to flat representations. In perspective we find the integrating activities of the nervous system prominent. Altho distant objects cast a smaller image on the retina than near objects, the former are still interpreted, not as small people and things, but as of usual size but more remote.

"Distant objects are also partially hidden by those nearer the observer. Very distant objects are also seen through a haze and are higher in the field of vision. Shadows are another factor in producing the impression of relief.

"The motion pictures utilize all these psychological factors. In addition they take advantage of certain common illusions by having the action take place in the background rather than in the foreground: through this procedure the impression of depth is increased. Sometimes the action in the background is pro-

LITTLE DEVICES THAT MANY MOVIE AUDIENCES KNOW NOTHING ABOUT.

The two blades that eliminate the flicker and hide the film when it is moving, as in the center picture. If this motion were seen there would be a blur—so a shutter is used.

vided by the sea or by a breeze waving the trees. It does not need to be human action to produce the illusion.

"Paneled walls in the screen settings are popular with the directors since these enhance the perspective of lines; round tables are discarded in favor of long rectangular ones for the same reason. The rooms used in filming the various scenes are enormously exaggerated as to depth, not primarily to produce an appearance of lavishness, but that the factor of depth may be made to stand out clearer in the projected, flat picture.

"Colored projection will always be hampered not only by the expense and great mechanical difficulties involved, but also by the fact that the lag varies with the colors and it is impossible to get the smoothness that is obtained with black and white.

"The effect of depth will always suffer so long as it is necessary for the photo-play spectators to view the pictures at distances and from angles at which they were not photographed. The maximum effect of depth is obtained when one is at the same position in relation to the scene at which it was photographed. This is one reason why extreme side seats are undesirable. And at the same time no position in the auditorium is perfect in this respect, for the various scenes are photographed from different angles and distances."

WHY OLD RAILROAD TIES ARE BURNED—Why should worn-out crossties be burned by railroads instead of allowing people to take them for fuel? This question, we are told in *The Electric Railway Journal* (New York) has been answered by Samuel Poreher, general purchasing agent of the Pennsylvania Railroad. We read:

"He states that efforts have been made to interest dealers in firewood in buying the old ties, but thus far without much success. The causes appear to be that the old ties are often dirty; that they contain stone, grit and slag wedged in the cracks which might injure the saws used in cutting them; that in many cases they are partly decayed; that they are dried out and that their fiber is more or less crushed, so that they burn out quickly. For these reasons dealers have been unwilling to pay the railroad company enough to cover the cost of collecting the ties and delivering them to a point at which they could be removed. Efforts have also been made to dispose of old ties in such ways as for wood pulp purposes, for extraction of chemicals, for burning and sale of the ashes for fertilizer, and for manufacture into charcoal, but without success. Some ties have been sold to purchasers living on or near the right of way who buy them at nominal prices, usually at from 10 to 15 cents apiece. Such means of disposal is practicable only where the ties can be delivered at a public crossing or other points so that they can be obtained safely by the user and where the cost of delivering them is no greater than the nominal prices obtainable. The company feels that it can not allow the public to go promiscuously over its track and through the yards to gather up old ties, as this would be practically letting down the bars against trespassing on the tracks, an evil against which the Pennsylvania Railroad has struggled for years and which has been the cause of about half of the fatal accidents on railroads in the United States."

CONFISCATING AMERICAN INVENTIONS

FOUR THOUSAND DOLLARS AND UPWARDS is the cost of taking out the simplest patent in the foreign countries that issue patents. Taken in connection with the large annual tax levied directly on patents, this really amounts to the confiscation of American inventions abroad, thinks Edwin Hopkins, a New York inventor, who discusses this matter in a letter to *The Times* (New York). The whole matter of international patents, Mr. Hopkins says, needs the attention of our State Department. American inventors are mulcted of large annual taxes wherever they obtain patents abroad, and what with Polish, Czecho-Slovakian, Austrian, Hungarian, Jugo-Slavian, Finnian, Roumanian, Latvian, Esthonian, Finnish and the like patents to cover territory, formerly included in a few jurisdictions, they must be capitalists as well as inventors. Even the British Empire requires separate patents in Australia, Canada, South Africa and India. He explains and argues to this effect:

"There should, of course, be an international patent to cover all countries, just as there is an international copyright, to which America does not subscribe. The effect of the numerous foreign patent requirements and taxation is that foreign countries benefit by the work of American inventors, while we allow foreigners protection without any taxes. This is not a condition which should continue.

"A tax on a patent is fundamentally wrong. It is quite sufficient to tax the inventor on his income. The tax on the patent discourages invention, as the inventor is burdened with expenses that had better be devoted to further experimentation, while the prospect of taxation restricts his initiative.

"But the greatest sufferers in the restricting of invention, as well as by the policy of taxation, which seemingly gives a country the fruits of the toil of the inventors of other countries free, are the workers.

"If, for example, there is no patent protection in France for an American invention due to the inventor being unable or unwilling to foot the French tax bill, no particular French manufacturer will be disposed to take up the invention and expend money in placing it on the market when any one else may do the same and profit by the work he puts in on it and the expense of introducing and popularizing the invention. Thus French industry suffers, and likewise the trade of all countries which might find a better customer in a more prosperous France.

"An international patent office and international patent court would be of vast benefit in economic rehabilitation. Progress depends upon invention, invention upon patents. Yet a world civilized enough to have patents accommodatingly provides over fifty places where an inventor may pay fees and taxes after complying with vexatious, highly technical and expensive procedures. Now, no doubt, we shall have Irish patents; a kind of patriotism gone mad.

"Self-determination under such circumstances approaches self-extermination."

RADIO • DEPARTMENT

SAVING SHIPS WITH THE RADIO COMPASS

ONE OF THE MOST RADICAL improvements of radio in recent years is the development of the loop aerial. This consists essentially of a coil of perhaps ten turns of copper wire wound about a Maltese-cross frame to make a square about four feet in diameter. The entire apparatus is arranged to revolve on a vertical axis and may stand on a table or be suspended from the ceiling. In any event, it is usually indoors, differing thus as in other respects from the conventional aerial.

This location gives the loop aerial relative freedom from the influence of "static." But that is only an incidental, even if not unimportant, advantage. Meantime the loop is much less sensitive than the single-wire aerial. It develops efficiency as a receiving antenna only when supported by amplifying electron tubes. Granted such support, however, it reveals unique power, in that it can not only detect radio waves but can point out the direction of the transmitting radio station from which they come. When the edge of the loop is pointed toward the transmitting station, signals are loudest. When the loop is slowly revolved on its axis, the signals weaken, and they disappear altogether when the plane of the loop is at right angles to the direction of movement of the oncoming radio waves. A pointer attached to the axis of the loop enables the listener to chart the direction of a transmitting station with great accuracy.

The single-wire aerial has a certain measure of directional power, but nothing comparable to this; and for obvious reasons could not in any event compete with the mobile little loop.

The loop-aerial was used as a direction-finder during the war. Perhaps its most spectacular feat was to reveal to the British radio experts that a German ship from which signals were being sent had changed its location, suggesting that the German fleet contemplated action; with the result that the British Admiralty sent the High Seas Fleet in pursuit of an enemy that had not as yet left its base. The battle of Jutland was the sequel.

More recently, radio stations equipped with loop-aerial have been established along our coast, to give aid to ships that in fog or storm have lost their bearing. The loop-aerial thus used has come to be spoken of as a radio compass. Three stations at different points along the coast, receiving signals simultaneously from a ship, will promptly send their directional findings to a central station, where the three records will be charted, and the location of the ship determined by the simple and familiar process of triangulation. A radio message from central conveys this information to the captain of the ship—who thus gets his bearings from a land station perhaps a hundred miles away!

Still more recently a different method of using the radio compass has been worked out by the Bureau of Standards in cooperation with the Bureau of Lighthouses, and the plan has been

put into operation by the Department of Commerce. The loop-aerial now becomes a veritable radio compass, for it is installed on a ship above the pilot-house, its axis being extended below deck and so mounted that wires stretched across its divided base

move about the face of a compass as the loop is revolved. The direction from which a signal comes is made known instantly to the observer on the ship in terms of ordinary compass bearings. The station from which the signal comes thus performs for the navigator the function of a beacon. When the loop-aerial has been turned about to receive signals from two other stations, the navigator can obviously chart his own position without difficulty. An article in the *New York Tribune* gives details of the practical operation of the system:

"At the present time there are three radio-compass stations around New York Harbor performing the duties of radio beacons. They are located on the Ambrose Channel and Fire Island light vessels, and the Sea Girt (N. J.) light station.

"Now, these beacons operate in exactly the same manner as the ordinary lighthouse, the only difference being that they send out invisible electro-magnetic rays instead of rays of light. Lighthouses about the coast are known to the mariner by the flashes they send out, and the radio beacons are identified in the same way. Perhaps it would be best at this stage to use the language of George R. Putnam, Commissioner of the Bureau of Lighthouses of the Department of Commerce, who was responsible for the installation of the system, in order to explain its operation.

"The stations are identified by the characteristics of the signals. Ambrose Channel sends one dash, Fire Island a group of two dashes and Sea Girt a group of three dashes, with brief intervals between the groups. The particular station on which a radio bearing is being taken in a fog is by this means just as definitely known as is the light on which a sight bearing is taken by the navigator of a ship identified by its order of flashes or color.

"The signals are operated continuously during thick or foggy weather, and also at the present time they are sent each day from 9 to 9:30 and from 3 to 3:30, so as to permit any vessel equipped with radio compass to try out this method and apparatus in clear weather.

"To avoid continuous interference between the signals themselves they are sent on different time schedules as follows: Ambrose sends for twenty seconds, silent twenty seconds; Fire Island sends for twenty-five seconds, silent twenty-five seconds; Sea Girt sends for sixty seconds, silent six minutes. The signals are repeated rapidly, Sea Girt, for example, sending over forty groups of dashes a minute.

"The transmitting apparatus now in use is a commercial panel type transmitting set of simple and rugged construction of about one kilowatt power. In addition to this set, a special automatic motor-driven timing switch for producing the desired signal at regular intervals is provided. The antennae at the transmitting stations are the same as used for ordinary radio communication. The wave-length used at present is 1,000 meters—the present international standard for such signals. The range of usefulness varies from 10 to 100 miles, depending upon the sensitiveness of the receiving apparatus."

RADIO COMPASS.

The loop aerial above detects the direction of the wireless radiations and the compass seen below gives the bearings.

WHAT IS AN ELECTRIC CURRENT?

AN ASTONISHING QUANTITY of radio literature is coming from the press, and the amateur whose purse is not of indefinite length finds it increasingly difficult to know where to begin and where to end with the purchasing of reading matter. There are many valuable books, but comparatively few that can be said to treat the subject comprehensively.

Among those for which this claim might justifiably be made, one of the most recent and satisfactory is the "Principles of Radio Communication," in the writing of which Professor J. H. Morecroft, of Columbia University, has had the assistance of Messrs. A. Pinto and W. A. Curry. It is a work of more than nine hundred octavo pages, and whoever reads it carefully and with understanding may feel himself pretty fully in touch with current knowledge of radio phenomena. It should be explained, however, that Professor Morecroft deals with the subject mathematically, and that therefore the reader to whom figures are repellant must expect to find many pages that for him will be meaningless. But even the non-mathematical reader can usually get a pretty clear idea of the meaning of the figures from the textual interpretation which the author supplies, and not infrequently the explication of obscure phenomena is presented graphically, and even picturesquely. As an illustration, one may cite the description of that elemental phenomenon in which all radio manifestations find their source—the electric current. Having defined the electron as the smallest possible quantity of negative electricity, and nothing but electricity, Professor Morecroft states that an electron in motion constitutes an electric current, and he presents a curious paradox:

"The amount of electricity on one electron is so small that the current produced by one electron in motion would not be detectable by the finest current-measuring instrument, even the most sensitive. To produce currents of the magnitude occurring in every-day experience requires the motion of electrons measured in billions of billions per second.

"Contrary to what one would naturally think, the progressive movement of the electron is very slow. To produce a current of one ampere in a copper wire one millimeter in diameter requires that the average velocity of electrons be only .01 centimeter per second." And yet "it must not be thought that the actual velocity of the electrons is small. If we assume the 'equi-partition of energy' idea of thermo-dynamics and thus calculate the average velocity of the electrons in a copper wire, at ordinary temperature, it appears that even when no current is flowing in the wire the electrons have a haphazard motion, due to the thermal agitation of the atoms (or molecules), which gives them, on the average, a velocity of about 35 miles per second.

"Now when current flows the required progressive velocity of the electrons is only a fraction of a centimeter per second; with a current so large that the copper wire is heated to the melting point the velocity of drift of the electrons is less than 1 cm. per second."

Electrons moving 35 miles per second, and progressing a fraction of an inch per second! A paradox indeed; but Professor Morecroft suggests an analogy by way of explication:

"Suppose that we wanted to measure the rate of flow of people past a given point in a large city; the unit of flow might be 100,000 persons per hour. At any time there will be people going in all directions, some uptown, some downtown, some cross-

town. In the morning a million people pass a certain point where the flow is to be ascertained. If 200,000 move in the uptown direction and 800,000 move downtown, the net flow is 600,000 people. If this number of people pass in one hour the flow is 6 units downtown. At noontime again a million people pass the same place let us suppose; 400,000 move uptown, 400,000 move downtown and 150,000 move crosstown west and 50,000 move crosstown east. The net flow is 100,000 people west and if this number pass in one hour the flow is one unit west. Some

of the people would be moving rapidly and others going more slowly and some might, at times, be standing still.

"The picture suggested by the above traffic analysis probably gives one a reasonable idea of the motion of electrons in a conductor-carrying current; it is, of course, too simple, because of the immense number of electrons in a conductor and the tremendous number of collisions occurring between the electrons. When a conductor is carrying no current the motion of the electrons resembles that of the individuals in a stationary crowd; there is a deal of agitation among the electrons, but they, on the whole, show no progress along the conductor."

After reading such an account, the amateur who was not previously well-grounded in the fundamentals is likely to look with new interest on the electron tube which is the very heart and brain—one is tempted to say the very soul—of both transmitting and receiving apparatus.

SETTING HIS WATCH BY RADIO

SETTING YOUR WATCH BY RADIO

EVERY ONE WHO LISTENS in on broadcasting soon learns to recognize the buzzing signal that indicates the approach of ten o'clock, when the time announcement is to be sent out

from the Arlington transmitting station. *Radio Broadcasting News* gives some hints as to a convenient way of setting your watch by the Arlington signals:

"The signals are given between 9:55 P.M. and 10 P.M., eastern time, the article says. Each second of time is sent as a dot making a distinct tick in your phones. The tick for the twenty-ninth second of each minute is omitted, making a noticeable pause. At the end of each minute the signals are omitted for several seconds, making a longer pause. At the end of the fifty-ninth minute the signals are omitted for ten seconds, making a much longer pause.

"This silence is broken by a dash, which is heard as a continuous sound for several seconds. The beginning of this dash is the zero second of the new hour, or exactly 10 o'clock, 75th meridian hour.

"A convenient way to check your watch is to follow the second hand during the first part of the signals, thus noting the position of the second hand relative to the end of the minute. The minute hand should be observed during the fifty-ninth minute and checked with the signal for 10 P.M. In this way you can tell exactly how many minutes and seconds your watch needs to be changed."

ARMSTRONG BUSY AGAIN—An item in the radio review of the *New York Evening Mail* states that Mr. Edwin H. Armstrong, of "Feed-back" fame, is a very busy man these days, spending much of his time in Professor Pupin's laboratory at Columbia University. "Mr. Armstrong has a new receiving machine," we are told, "that does everything that the super-heterodyne does, but uses only one tube. Amplification on 'phone signals is 100,000 times greater than the ordinary regeneration receiving set and nearly a million times greater on telegraph signals." Mr. Armstrong has already accomplished so much in the way of the amplification of radio messages that

no announcement of his new achievements in that line, present or prospective, could excite surprise, much less skepticism. The work just referred to obviously fits in with Mr. Armstrong's previously announced project to do away with the cumbersome antenna. If the receiving apparatus can be made sensitive enough, there is no obvious reason why the length of an antenna should not be measured in inches—or for that matter in millimeters—instead of in feet. The ideal antenna would be one the size and shape of a watch-spring.

ELIMINATING THE STORAGE BATTERY

REPORT COMES FROM THE BUREAU OF STANDARDS of the development of a radio-receiving apparatus that will do away with the storage battery, using ordinary 60-cycle current directly from the electric light lines. The apparatus utilizes three stages of radio-frequency amplification, and two or three stages of audio-frequency amplification; but detection is effected by a crystal instead of by the ordinary detector tube.

There is special apparatus of resistance and grid leaks to do away with the objectionable hum which ordinarily attends the use of the 60-cycle current. The crystal is used for the same purpose. The ultimate result is said to be the practical elimination of the hum, or at least of its objectionable character.

This official authentication of a substitute for the storage battery is not unexpected. A good many amateurs have experimented along the same line more or less successfully. In *Wireless Age* (New York), Mr. Jack Greenfield tells of his success in substituting ordinary electric light current for the storage battery, by use of a transformer and a voltage-divider, commonly referred to as a "potentiometer." The account will interest every amateur who uses an electron-tube radio-receiving telephone.

"The filament is supplied by A. C. 60 cycles stepped down by a transformer to give about 6 volts. The transformer can easily be made, or better still, an ordinary bell-ringing transformer can be used for the purpose. A series resistance consisting of the ordinary filament rheostat is used to vary the filament current. Across the low-tension side of the bell-ringing transformer is placed a potentiometer P of about 1,000 ohms, the center point of which is connected to the grid. Unless this connection is made to the grid from the center point the hum will not be eliminated, because if the grid is connected to either end of the filament, it will have large 60-cycle voltage variations impressed on it. Thus suppose it is connected to point A of the filament, or point B. The potential at these points is either plus 4 volts or minus 4 volts, since the A. C. voltage is of that value. When the voltage wave has passed through one complete cycle the potential at either of the points has changed from plus 4 volts to minus 4 volts, or has changed from minus 4 volts to plus 4 volts. This change is so great that the 60-cycle hum must of necessity be impressed on the grid and repeated in the plate. It is therefore necessary to find a point on the filament which is neutral with respect to these voltages, and to connect the grid to it. By connecting a potentiometer as shown, this is accomplished.

"This connection alone will give very good results. However, by utilizing one other modification, the very best results can be obtained. This modification is shown in the plate circuit of the figure. A transformer T is connected in series with the plate

battery, the high voltage winding being connected to the plate. The low voltage winding is connected to the headphones in series with a condenser of capacity 0.0002 mf. (microfarad). The transformer should be such that its transformation ratio applied to the headphones will give most efficient results. That is, the impedance of the plate circuit must be equal to the plate resistance of the tube. The action of the transformer condenser circuit in reducing the 60-cycle hum follows: The circuit rejects the 60-cycle hum on account of the impedance offered to it by the small condenser in series with the phones. The impedance of a condenser is inversely proportional to the frequency, consequently the above condenser will show a greater impedance to the 60-cycle hum than to the 500-cycle note. The impedance will be 8 times as great. Consequently the 60 cycles will be swamped by the 500 cycles of the received signal, should any 60 cycles get through.

"Thus we have the 60 cycles practically eliminated by the use of the filament transformer and potentiometer. The small remaining 60-cycle hum is effectively eliminated by the plate filter circuit above described. This circuit, it will be seen, does away with the storage battery, and substitutes A. C. power supply where it is available. The cost of the apparatus required is negligible compared to that of the storage battery and its upkeep."

RADIO IN CITY APARTMENTS

THE builder of apartment houses, like everybody else, has felt the radio impulse; and we are told that at least one prominent New York company has decided to wire several apartment houses for radiotelephone service, and that all builders were advised to wire their new houses. The announcement leads Mr. Leo S. Herzog to write a letter to the *New York Times*, in which certain difficulties attending the enterprise are pointed out. The writer goes so far as to make the claim that, whatever the desirability of the project, it is impossible of fulfillment under present conditions, if the requirements of the Board of Fire Underwriters are met.

It should be known, however, that there is difference of opinion among members of the Board of Fire Underwriters as to just how the rules should be interpreted as applied to city dwellings.

As a matter of fact, there are doubtless thousands of aërials installed on the tops of apartment buildings and other buildings in New York and other cities in which a lightning ground is affected by a lead to a water-pipe without installing a special wire on the outside of the building. This is considered both safe and satisfactory by many experts; and it is probable that the rules of the Fire Underwriters will be modified in the near future. The statement that to follow out those rules to the letter in the case of city buildings would cost in the neighborhood of \$200 for a single aerial, coupled with the statement that an alternative system in which water-pipes are used is or could be made quite satisfactory, sufficiently shows the need of modification. There is no reason to doubt that the regulations of the Fire Underwriters will be satisfactorily modified to meet the new conditions imposed by the unexpected invasion of the average household by the radio receiving telephone.

HINTS ABOUT THE AERIAL

IN DESCRIBING THE INSTALLATION of a simple radio set, in *The Modulator* (New York), Mr. William F. Crosby gives hints about the installation of the aerial that should be of interest to a good many novices.

"This very important part of the set is usually put up any way, and the average amateur seems to think that because he has some wires strung up outdoors that is all that is necessary. True, these wires may work after a fashion, but for best results a single wire about 100 feet long should be used. This wire should lead all in one direction, and be in a straight line. The addition of several wires will not help the receiving set in the least.

"When it comes to sending, it is a different proposition, but as stated above the receiving aerial only requires a single wire. Take the lead in from one end of this wire and run it directly to the set. Taking the lead in ten feet from the end will only make the short end of the aerial inoperative and this wire will be wasted. Two wires 50 feet long will not give the same results as a single wire 100 feet long, and running the wire around in triangles or squares will not give the best signals. Run the aerial wire all in one direction as directed above and the results will soon show the amateur that this is the best way.

"The aerial will have to have some sort of a device for grounding it during the electrical storms, and this can best be accomplished by installing what is known as a vacuum lightning arrester. No cumbersome lightning switch is necessary for an aerial that is used for receiving only. This lightning arrester must be installed outside the building, preferably on the window-sill, and a wire will have to be run from it to the ground. This ground will also have to be outside the building and the water-pipe will not do for it. A heavy wire should run from the arrester to a pipe driven deep into the ground and the wire will have to be kept about 5 inches from the building. Full directions for installing the outfit are given with each one that is purchased.

"The ground wire for the set itself may consist of an ordinary insulated wire running to the cold-water pipe. Scrape the pipe clean and then wind several turns of the wire about it. Make the winding tight so that there is no danger of a loose connection. A ground connection clamp may be purchased that will insure a good connection at this point, or the amateur may solder the wire to the pipe.

"Remember to use the cold-water pipe if possible as it is the most direct connection to the ground. The radiator or the hot-water pipe will do almost as well, but these pipes will have a great many more joints in them before they reach the ground and every joint added makes just that much more resistance that the current will have to pass through. The gas-pipe is about the worst ground possible and it is very apt to have an insulated bushing in it somewhere that will not allow the current to pass through it at all."

A MOSQUITO-NETTING ANTENNA

AN INTERESTING SERIES of tests conducted by the Bureau of Standards has to do with the substitution of wire netting, such as is used for screening doors and windows against flies and mosquitoes, in place of the ordinary aerial wire. Two strips of netting from six to fifteen feet long and from 18 to 36 inches wide suspended a few feet above the earth and a few feet apart were found to act more or less efficiently as a receiving antenna.

The effect is to produce relatively large capacity, and the wire strips are spoken of as a condensing antenna. The efficiency is greatly reduced if these strips are hung vertically instead of horizontally.

Photo from the Bureau of Standards, Washington, D. C.

A NET THAT WILL CATCH MOSQUITOES OR RADIO MESSAGES.

Mr. J. C. Warner, Assistant Physicist in the Bureau of Standards Radio Laboratory, summarizes the results of the test as follows:

"Experimental results show that a condenser antenna of small dimensions gives excellent results when used at wave-lengths below 400 meters. At longer wave-lengths it suffers by comparison with the coil antenna when the dimensions are kept small enough for portability.

"It is useless for directional work unless used with a coil antenna, but may be used in places where the sharp directional characteristics of the coil are objectionable. By proper design and by taking precautions to keep dielectric losses low the effective resistance may be reduced to a value lower than can be obtained either with the coil antenna or the ordinary elevated antenna.

"On account of this low resistance and ease of construction this form of antenna should be of great value in portable short-wave radio stations, such as are used for military purposes and on airplanes, altho in the latter case some difficulty may be experienced in keeping down dielectric losses.

"It is evident that the study of this interesting form of antenna is by no means complete. Its use as a transmitting antenna offers a wide field for investigation, and a large amount of work remains to be done in following up the investigations which have only been started in this study. For example, signal intensity measurements should be made with a calibrated detector set or with a radio-frequency comparison method so that the actual current or emf in the antenna is measured. Further work should be done in determining the best design of antenna for a given wave-length and for minimum resistance. Also this antenna furnishes a means of studying the form of the electromagnetic wave and a large amount of work might be spent profitably in this study as well as in the checking of transmission formulas."

LETTERS - AND - ART

LITERATURE DRAMA MUSIC FINE-ARTS EDUCATION CULTURE

THE MANGLERS AT THEIR WORK.

Director, author, cutter, continuity writer make up the hydra-headed being responsible for what the screen shows us.

—Lui Tsugo in *Picture-Play Magazine*.

MANGLING MASTERPIECES IN THE MOVIES

WHAT SEA CHANGES overtake the classics of literature when they are "picturized" for the movies are known but not comprehended! Half the repulsion that cultivated people feel for the screen arises from seeing their beloved tales turned into what to them are only hideous burlesques. Something has happened in the screen transit, and one is often puzzled to know if the changes are due to wilfulness or perversity. Mr. Gerald C. Duffy tells us in the *Picture-Play Magazine* (June) that there is "nearly always a good reason for bending stories out of shape," and we find that the reasons are "good" for everybody but the original author. If he be living he may rise up like Fannie Hurst and repudiate the whole thing. If he be dead and can not turn in his grave, then only his friends and admirers suffer the bitter anguish. But Mr. Duffy is persuasive from the movie angle:

"Frequently a producer purchases the rights to a popular book because the title is valuable. He is not dismayed by the fact that his star does not 'fit' the story. This difficulty is blandly overcome by cutting the story over to make it fit the star. So some of the things you liked are lost. When the star, who is naturally more interested in herself or himself than in the story—reads the script, the objection is raised that other characters are too prominent and will 'steal the picture.' So the other characters—perhaps characters you were very fond of—are subordinated or entirely murdered and dragged out of the plot. Again you lose a friend.

"In rewriting the script to add splendor to the star's part the scenario writer may think of an original twist which so startles and pleases him that he injects it into the story. Whereupon the director, who is never without ideas and audacity, elaborates this twist, gives birth to a few more characters, adding them to the characters who have traveled safely from the remote regions of the book, and starts to bring them to life in film. Half-way through, it may be discovered that an important episode takes the characters to Greenland. There being no ice in California, and the manufacture of a substitute being expensive and bothersome, the players are sent to Pasadena instead of Greenland; and, says the director, the houses in Pasadena are more modern and impressive than the snow huts of Greenland, anyway. When you finally see the motion-picture version of your favorite book upon the screen you are dumfounded. The

only person who is more dumfounded is the man who wrote the book."

The author of the screen story, then, is not one but "hydra-headed," as Mr. Duffy names him, and we are led "to learn the ravages that can be wreaked upon a plot by collaboration without coordination; to see how the poor, helpless idea is manhandled before it is presented to you to laugh at, to pity, or to admire." We are asked to figure the first author leaping out of bed in the dead of night and grappling with an inspiration:

"He subdues it and puts it down where it can't get away from him. The idea is next turned over to the second author, the scenario writer, who 'sees something in it.' What he sees is either something very slight and weak and in need of much plotty nourishment, or else it is wonderful, inspiring, exhilarating. If it is weak he gives it treatments of technique, removes portions of it, alters other portions, and inoculates it with some ideas of his own. If it is wonderful he gives it treatments of technique, removes portions of it, alters other portions, and inoculates it with some ideas of his own.

"An idea is a plastic thing. Like sculptor's clay it can be twisted and squashed into countless forms, some graceful, some grotesque—but still it is the original clay.

"After two or six or eight weeks of labor, the scenario writer hands the story, in its present and temporary state, to the director, who 'sees something in it.' Always he expresses his opinion of what he sees in one of two adjectives. Either it is 'awful' or it is 'm-mm-fair.' Never until he has overhauled it is it 'great.' Then, invariably, it is 'great.' To achieve this transformation he gives it treatments of technique, removes portions of it, alters other portions, and inoculates it with some ideas of his own.

"At this juncture the story is turned over to the casting director, who is just as much an author as any one else for the reason that the characterization is completely in his power, and characterization is of as much importance to a story as intrigue.

"The casting having been accomplished the time arrives for the collaboration of the star. Here all of the preceding work can be ruined instantaneously, or it can be improved. According to the work of the star the heroine can be made piquant or wooden.

"Assuming that the story passes through the hands of all the authors thus far without sustaining any serious injuries and that it has constantly acquired qualities, it has still the bloodthirsty cutter to confront. The most conservative director will expose a minimum of fifty reels of film in photographing the story, yet this must somehow be contracted into five or six reels—without losing the story in the shuffle, if possible. If not possible, the story is lost. It is the duty of the cutter to throw away at least nine times as much as he uses without throwing anything away. I have never known of a production where the percentage of waste was not even in excess of this."

By far the most dangerous of all the authors, in fact, says Mr. Duffy, is the cutter, for—

"With his weapon he can assassinate every person in the play, he can gouge every idea out of the plot; he can even extract the plot itself. And, since he is not always personally acquainted with a plot upon sight, even if he has seen it before, there is a constant possibility that it will disappear."

"Having been lacerated, the story is handed to its final author, the title writer. Here it is more likely to find aid than damage. Many a decrepit and dying story has been revived by the title writer's literary pulmotor. Not until it has passed through this final reconstruction can any one say what the story will be, for each author may make a change that will completely alter the plot and even the theme of the picture. When it has at last undergone this complicated process the story is completed. What the author of the original story sometimes thinks on seeing the finished production may best be left to the imagination."

"Whether or not this combination system of authorship is advantageous compared to the usual method of story construction is a matter of conjecture, for as yet the hydra-headed composer is an erratic being who has no set standard of ability. He has made wonderful pictures from anemic plots, and he has made pitifully anemic pictures from wonderful plots. Beyond doubt the recognized masters of fiction consider him a deadly monster who devours manuscripts and kills young ideas before they can mature for the mere pleasure of slaughter. But the picture producer always has the ready and forcible reply that, since two heads are admittedly better than one, it is a mathematical necessity that six heads are a great deal better than one."

"Both sides of this question are supported by impregnable arguments. It has been proven absolutely that the hydra-headed author is best. Also it has been proven absolutely that the hydra-headed author is not best."

"To sustain the former claim there exists the immortal example of 'The Birth of a Nation.' No one who read 'The Clansman,' from which the famous picture evolved, considered it to be a literary giant. It was not. There was 'something in it,' and the essence of the book plot was part of the picture story; but Thomas Dixon, who wrote the book, was author of less than half of the film. Yet, the film rocked the world by the applause it received. I mention this picture only because it is one which every screen follower will remember, but there are numerous other examples which prove that the many brains of the hydra-headed author are better than a single brain."

"On the other hand, however, there is the recent explosion from Fanny Hurst, which also rocked the film world at least. 'Star Dust,' in its original version, the novel, was a powerful story; but 'Star Dust,' as a motion picture, according to Miss Hurst's announced belief, suffered grievously by the changes that had been made. Personally, I agree with her in that."

"Hardly any one who has read novels and then seen them translated to the screen is without a grievance. Undoubtedly a great many stories have been unplotted during their locomotion from fiction to film. . . ."

"It is in an effort to please you—the mysterious, unapproachable, demanding public—that most mistakes are made; but there are usually very good reasons why you are more often dissatisfied with picture stories than pleased with them—and there is no doubt that bad and mediocre films outnumber absolute successes."

"The principal reason, in my opinion—and my opinion has been formed in mourning murdered stories—has to do with about five-sixths of the hydra-headed authors. In beginning this article I said that five-sixths of the authors have never written a word of *plot* in their lives, and this is true; for the writer is perhaps the only one who has any notion of scientific story construction—not *picture* construction, but *story* construction, which is building a plot so that it will grip you, hold you, sustain your interest, and give you your money's worth. There are, of course, a few directors who have come from creative fields and who do know something about building a story, but as a rule the other five know nothing about it."

DOES MAN WANT AN EDUCATED WOMAN?

THE FLAPPER CONFESSES to no particular interest in flapping, but only in boys. Apparently it's all done to please him. If he didn't demand it, she would turn her activities into other channels. This may sound frivolous, but it is really the superficial aspect of a deeper question. Is education in girls worth pursuing for its own sake when it is a

ONE BEHIND THE SCENES.

Gerald C. Duffy, whose activities as director, author, cutter, and continuity writer qualify him for the degree of H. H. S. D. — Hydra-headed Screen Dramatist, who tells us here how the trick is turned.

commodity uncalled for or disdained by the male? *Vogue* (New York) poses the question whether we shall "force cultivation upon our sons, or deny it to our daughters." The former alternative is hardly entertained by this interpreter of the women, for it finds that "the latter seems the simpler, and at least we shall not have to work against fathers and companions as well as youth itself." *Vogue* does not aim to be merely satirical in respect to man, but professes the sincere desire to learn of him in order that his desires may be passed on to the girl who is to be educated for life companionship with him. This is how he is figured in the feminine consciousness:

"Boys, particularly American boys, go to school and college with the idea before them not so much of cultivation for cultivation's sake, as for special courses with a view to a subsequent career. This of itself would limit, to some degree, the amount of time and interest they were prepared to give to general subjects. Business success, either through trade or a profession, is the aim of almost every one. The great money-making game is forced upon them by circumstance or public opinion. But it seems a pity that while in their minds they must admit this, they should consider it the part of manliness to starve their tastes in order to conform to it. Athletics they allow with an almost universal agreement. But to cultivate any knowledge of trees and plants, unless one definitely meant to be a forester or a landscape gardener; and liking for design, detail, and color, unless one intended to be an architect or an interior decorator; any great interest in music, unless a world-wide profession opened before one; any real study of languages, unless a career in diplomacy or some trading interest demanded it; in fact, to

be a man of many and varied tastes because, altho possibly unprofitable, such tastes give the highest form of pleasure, would be inconceivable to most of our college youth.

"And those to whom it was conceivable—whose bringing up and whose home life had induced the slightest appreciation of pictures, books, music; of beauty in landscape and garden, fine proportion in rooms and furniture, lovely surface in china and shape in glass; who took the least interest in languages, history, or literature; who showed any preference for an educated tone of voice or the decent articulation of words—such have, no doubt, even tho qualified in games and sports, been forced to run the gauntlet of rough ridicule from the masses of their contemporaries, or do themselves and their forbears the despite of discarding a goodly heritage for the peace of living among hoodlums as the hoodlums dictated."

Convinced that "young men grow up in quantities despising, or ignoring, any habit of mind that does not have to do with business, sport, or the cruder side of amusement," how, it is asked, should the young women be educated for marriage with them?

"How little should a wife know in order to be happy with the average husband? She might be taught how to keep house; for, whether his income be small or great, a man has a right to expect both sensible economy and sensible expenditure in his home circle. She might learn with advantage something about the care of infants and the bringing up of children. She would do well to study herself with reference to dress and dress with reference to herself. She could encourage any taste she might have for newspapers and the not too intellectual periodicals and novels; for the ordinary music show, for the modern light comedy, for the moving-pictures; for cards, perhaps, and some kinds of outdoor exercise; for anything, in fact, which produces just the right amount of cerebration and no more in the tired business brain.

"But suppose, just for the sake of supposing, that she happens to be literary, or seriously musical, or artistic, or merely just well educated, so that a dozen interests are burning in her which mean less than nothing to him. What chance of companionship is there between those two? Suppose world politics bore him, foreign countries suggest only opportunities for shrewd dealing and have no historical or geographical significance, that he derides their customs and can not speak their tongues; suppose science appears like a higher sort of conjury; suppose he doesn't care for reading, and that anything not of the most obvious and commonplace in the way of fun seems to him putting on airs? ('Highbrow stuff' in his vernacular.) Where shall their minds meet pleasantly, beyond their joint concern in a house and possibly in a family? And if their feelings about their house and family should differ—which they very well might—as much regarding the arrangement of the house and the education of the family as their tastes differed in other matters, where would their minds meet at all? The mating instinct, natural, simple, and beautiful as it is, may quite properly attract two people whom civilization has rendered entirely unsuitable for life companionship. What is to be done about it?"

THE SEASON'S BEST ACTING—Rating the season's players is one of the sure signs of spring and a closing dramatic season. If one were conscientious in doing it this year, thinks Mr. Hammond of the *Tribune*, one would be in a dilemma, for he finds the plays of this year full of good acting. Then the stage must be looking up. He "surmises" that Miss Pauline Lord as *Anna Christie* "was most acclaimed both by the senate and the people as the best of the performers." Then he finds some others:

"Lionel Barrymore in 'The Claw.'

"George Marion, as the drunken sailor in 'Anna Christie.'

"Louis Wolheim, in a brutal, relentless realization of a hairy ape.

"Otto Kruger, in Eugene O'Neill's study of disease, 'The Straw.'

"A. P. Kayes's picture of Lloyd George, in 'Back to Methuselah.'

"Miss Violet Heming's incredibly courageous bravadoes in 'The Rubicon.'

"Miss Doris Keane's fleshly satires in 'The Czarina.'

"Lionel Belmore, in a characterization of a romantic, fat parson, in 'He Who Gets Slapped.'

"Gilbert Emery, Ferdinand Gottschalk and others in 'The Truth About Blayds.'

"Miss Marguerite Forrest, as the acquiescent waitress in 'S. S. Tenacity.'

"Miss Lucille Watson, as the forgotten mother in 'The Nest.'

"Miss Katherine Cornell's perfect impersonation of the daughter in 'A Bill of Divorcement.'

"A little less than these there are charming, expert personalities in the plays—for instance, Miss Mary Nash, in 'Captain Applejack'; Charles Cherry, in 'The Dover Road,' and numerous others, the record of whose feats belongs to the more complete compilers. It has been, as a matter of fact, a thorough season of good plays, good acting, bad plays and bad acting. We have had more than our share of all of them. Most of us have an outstanding memory of the thing we most enjoyed this year in our theatergoing, excepting, of course, the *Chauve-Souris*, Ed. Wynn, 'Sally,' Eddie Cantor, 'Good Morning Dearie,' and the *Music Box Revue*. Personally, I think that the season's most conclusive and finished acting was done by Miss Forrest in 'S. S. Tenacity,' and that the most enjoyable plays are 'The Dover Road,' 'The Truth About Blayds,' 'Captain Applejack,' and 'The First Year.' Not, as an unamiable correspondent tells me, that it matters."

BARRIE'S "LEAGUE OF YOUTH"

THE YOUNG MEN are very self-assertive, but it is questionable if they have been able to state their case quite so well as Sir J. M. Barrie has just stated it for them. A league of youth would be better than a league of nations, he told the students of St. Andrew's University at Glasgow, because the latter is run by older people, and decisions on national matters are more vital to youth. This was Barrie's first speech and he assured his hearers it would be his last. He can afford to rest on it, for he seems to have summed up all the philosophy needful for the time in his single-word theme, "Courage." "All goes if courage goes," is his motto. He seems aware that he is speaking to more than the Scots lads who sat before him, tho what he was giving them was the Rectorial address that is an annual affair. Sir James, who was 62 last week, brings together the youth of the world when he says:

"You have got more in common with the youth of other lands than the youth of any age can ever have with each other. Even hostile countries have sent out many sons very like ours from the same sort of homes and the same sort of universities, with the same sort of hearts, who had as little to do as our youth with the great adventure of war.

"Can we doubt that many of those from both sides who have gone into the beyond and who were once opponents are now friends? You ought to league youth as your practical beginning. I sound to myself as if I were advocating rebellion. Perhaps I may be arrested on leaving the hall.

"You will have to work harder than ever and possibly not so much at the same things. You'll have to know more of modern languages if you are to discuss a league of youth with the students of other nations when they come over to St. Andrew's for a conference.

"I am far from taking sides against the classics. One of the most valiant men who ever trod St. Andrew's, Dr. Johnson, said that doubtless the Almighty could have created a better fruit than strawberries, but that doubtless also He never did. It is doubtless also that He could have provided us with better fun than hard work, but I don't know what that is.

"To be born poor is probably the next best thing. The greatest glory that has ever come to me was to be swallowed up in London, not knowing a soul and without means of existence. I had the fun of working until the stars went out. To have known any one would have spoiled it. I didn't even quite know the language. When I rang for the boots, they thought I wanted a glass of water, so I drank the water and worked on. There was no food in the cupboard, so I did not have to waste time eating."

Sir James has a whimsical way of differentiating between old and young. By "you" he says he means youth, and by "old" he indicated "its betters," and he tailed off that distinction by declaring that "youth had too long been left in the hands of its betters in national affairs." In these ways:

"Things about the next war, for instance, and why the last

one ever had a beginning. Your betters had no immediate share in the cause of the war, but for fifty or so years we heeded not the rumblings of distant drums, and when the war did come we told you that, tho you had no hand in getting us into it, still you had to get us out of it. Told you tales of what it really was and what clover beds it would lead to.

"We were not mean and decisive. Most of us were as honorable and as ignorant as youth themselves, but that does not acquit us of stupidity and jealousy. If you prefer to leave things as they are, we will probably fail you again. Do not be too sure that we have learned our lesson and that we are not at this very moment doddering down some brimstone path. If you must get into a struggle, there is all the more reason that you should know why before it begins, and should have a say in the decision whether it is to begin.

"The youth who went and was killed had no such knowledge, no such say, and I am sure the survivors want you to be wiser than they were and they certainly determined to be wiser next time themselves. Without suspicion there might have been no war.

"War and other happenings have shown you that age is not necessarily another name for sapience. Declaring war taught youth to distrust their betters. This attitude of distrust, however, will not help you or the country unless it stirs you into getting to know how world-shaking situations arise, how they may be checked and what way to obtain fighting partners and share in the decisions. Doubt all your betters who would deny you that right. Begin by doubting all in high places.

"The spring of the year lies buried in the fields of France and elsewhere. By the time the next eruption comes it will be you who are responsible and your sons who are in the lava—all perhaps because this year you let things slide.

"We are nice, kindly people, but it is already evident that we are struggling back to the old grooves. We are too old for any others—that is the fundamental difference between us and you. We have no intention of giving you your share. See how much of a share youth has now that the war is over. You got a handsome share while it lasted.

"I expect we will beat you unless your fortitude be doubly girded by a desire to send a message of cheer to the brothers who fell, the only message for which they crave. They want to know if you have learned from what befell them. If you have they will be braced in feeling that they did not die in vain. Some of them think they did. They won't take our word for it that they didn't. You are their living image. They know you couldn't lie to them, but they distrust our flattery, our Cunningham faces."

These passages from his address are reported by cable to the New York *Herald*, and following are some "barrieisms" that are taken out of their context:

"When you reach the evening of your days, you will realize with becoming cheerfulness that we are all failures, the least of all and the best of us."

"Stupidity and jealousy are two black spots in human nature which, more than the love for money, are the root of all evil."

"Go through life without ever ascribing to your opponents motives meaner than your own."

"Nothing so lowers morale as jealousy. Give it up. Be great."

"Another sure way to fame is to know what you mean. Almost no one, if he is truly eminent, knows what he means."

"Our avoidance of frankness in life and in arts is often but a cowardly way of shirking unpalatable truths."

"Do not put your photographs at all ages into an autobiography. Photographs give away what you have done with your life."

"Youth looks into the mirror unnecessarily through vanity, and says: 'What an interesting face! I wonder what he is to be up to?' Your betters do not look into mirrors so often. We know what he has been up to."

"My own theme is 'courage' as you should use it in the great fight that seems to be coming between youth and their betters," Barrie explained. "By youth I mean you and by your betters us."

The New York *Herald* plays with Barrie's ideas of age and rather scoffs at the idea that mere years have anything to do with mere deeds. Particularly that "old men, if they had wished to, could have prevented the Great War":

"Age," said Sir James, "is not necessarily another name for sapience." True words: Aristotle had finished his great works before he was as old as Barrie is now; at 43 Newton had completed the elaboration of the law of gravitation.

"There is no definite relation between age and wisdom; it can only be laid down as a broad principle that a man of 50 knows three times as many things that he shouldn't do as he knew when he was 25.

"So far as preventing wars is concerned, does Sir James know of any instance where youth proved more conservative in council than age? It is true that in the Great War old men were in the majority as ministers and generals. Pitt became Prime Minister at 24; Lloyd George at 53. Napoleon was only 30 when he won the battle of the Pyramids; Joffre was 62 at the

Marne. Grant was 43 at Appomattox; Foch was 67 at the Armistice. These comparisons mean nothing except that time has added to the complexities of politics and war. In these sciences there are no more beardless geniuses.

"Youth has every chance it wishes to take. In literature, for instance, the young writers find young reviewers and young readers; and the aged publishers fork over the royalties. But neither youth nor age makes greatness in letters. Byron was famous at 20, scandalous at 30 and dead at 36; Thomas Hardy, at 84, is a very live poet even if he is sardonic. Barrie himself was a mado man at 28; so was Conan Doyle, who at that age published 'A Study in Scarlet.' No reader, young or old, questioned the works of these youths because of the immaturity of their authors.

"If it were true that the elders made war, as Sir James suggests, then obviously the men to prevent war in future must be the young ones. England should have sent a youthful enthusiast to the Washington Conference. Some think she did that very thing. Mr. Balfour may have been old in the '70's, when he was chumming with Disraeli and Salisbury, but he seems very young at 83, when he plays tennis and matches Mr. Hughes at the game of scrapping navies.

"Everybody who lives to be 90 or so is old at one stage of the way and young at another, but it is hard to tell whether youth or age will arrive first. Methuselah probably put his affairs in order when he was about 105."

THE YOUNG BARRIE.

We haven't seen an "older Barrie" photo for ten years, and now we find him telling Glasgow University youth that photographs "give away what you have done with your life."

DR. STEPHEN S. WISE.

He reminds Christianity of its responsibility as the daughter-religion of "Mother Israel."

LEADING JEWS WHO WOULD BRIDGE THE GULF OF PREJUDICE BETWEEN CHURCH AND SYNAGOG.

FOR CHRISTIAN-JEWISH FRIENDSHIP

CHRISTIAN BLOOD for the Passover was once believed by non-Jews to be an essential of the ancient Judaic rite, and in numerous instances, history records, this carefully fed tradition has been responsible for the ordered slaying of Jews. But ancient superstitions and grudges are being dissipated in the light of knowledge, and here in the Western World, we are assured, the Jew and non-Jew are gradually arriving at a mutual understanding and respect which are clean of religious prejudice. However, there is still much blind antagonism between Jew and Gentile, the responsibility for which, tho not altogether one-sided, rests heavily upon the younger faith. Yet Christianity is the daughter-religion of "Mother Israel," a circumstance alone which imparts "an abiding and inerasable obligation upon the Christian Church in its relation to a people directly descended from those who were the founders and disciples of Israel." Thus writes Dr. Stephen S. Wise, a prominent New York rabbi, in *The American Hebrew* (New York), which devotes its Passover number to a symposium on a means to a better understanding between the two faiths. Jew and non-Jew were invited to a frank discussion, and the result affords a brighter outlook for the settlement of the ancient grudge.

The second responsibility resting on Christianity to which Dr. Wise calls attention is "the obvious one" which grows out of "over-emphasis upon Jews as the slayers of Jesus and the under-emphasis upon Jews as the bearers and bringers of Jesus," and, continues the rabbi:

"I maintain there will be no appreciable lessening of prejudice among Christians as against Jews until Christian churches earnestly and solemnly affirm that the death of Jesus, at whosoever's hands, was incidental to the eternal fact of the birth and rise and teaching and influence of Jesus, the young Judean of Nazareth.

"Whatever Christians may have taught or believed touching this in the past, their duty in the present is clear as are the heavens in the noon hour—the duty of affirming that incalculable and eternal is the debt of Christians to Israel, of whose gifts Jesus is treasured as the chiefest.

"And a third reason, perhaps most binding of all, to move

Christian churches consciously to do battle against existent prejudice respecting the Jew ought to be found in that consciousness of reparation owing to the Jew for nearly nineteen centuries of Christlessness, which have been suffered by Christ's people. . . .

"Nothing, in a word, could have been more unmessianic than the attitude of Christendom toward Israel, the people of Jesus—tho I do not forget that there have been in every generation Christian men and women who have borne themselves as the new brothers and sisters of Jesus toward his elder brothers and sisters."

But continued oppression has served to evoke from the Jew "a measure of forbearance which no people on earth has ever been challenged to achieve," and Dr. Wise affirms: "We were, we would be, we shall be just to Christendom whatever Christendom be to the Jew."

The basic cause of the gulf between Christians and Jews—whatever other causes, economic, racial, or what not, may be added thereto—is a religious one, says Dr. Edward N. Calisch. President of the Central Conference of American Rabbis, and he maintains that the Jews did not reject Jesus of Nazareth, but the Christ of a Pauline Christianity that "was formulated more than a century and a half after his death." Happily, he considers, this theology is "losing its ascendancy, and real religion is coming into its own among the children of men. The throne of dogmatism, like many other thrones, has been toppled over, and a spirit of religious democracy is making its way into the heart of mankind. Creeds and catechisms may be useful things in their way, but character and conduct are more important." There are, the writer holds, beautiful ideals common to all religions, "and a recognition of this fact leads to a sympathy and appreciation in whose presence polemics and mere theological hair-splitting are a futile waste of time." It appears to Dr. Calisch, then, that the synagog could profitably undertake a campaign of education along these lines, and he suggests:

"A general expression on the part of the leaders and teachers of the Synagog of deep appreciation of the profound and far-reaching influence of the man Jesus, and of the sweetness and

beauty of his life, together with a statement of the lack of historical basis for the accusation by the Church of the responsibility of the Jews for the crucifixion of Jesus will do much toward contributing a finer mutuality and a lessening of prejudice between Jew and non-Jew in America."

What the American Jew needs to develop, writes Walter Lippmann, formerly associate editor of *The New Republic*, is the habit of self-criticism. If the spokesmen of the Jewish people would devote one-half the energy they now expend in answering attacks to attacking the evils that stare every one in the face, he says, "they would make a real contribution to the unity of American life. But, judged by their public utterance, they seem to me supersensitive to trivial prejudice in non-Jews and extraordinarily insensitive to the faults of the Jews." Similarly, Charles D. Isaacs, author and music critic, who has "never been seriously confronted with any anti-Jewish feeling," warns his fellow Jews: "start with yourselves."

"Start by believing that the non-Jews are human beings and not too much beneath you—or above you! So many of our Jews eulogize the history of the race and assume superiority of the Jew, yet are fearful before the non-Jew."

"Our Jews must clear their minds of their own hate, their own fear, their own belief, that there is a terrible misunderstanding between Jew and non-Jew. I would say to one who was crying about the prejudice he had found everywhere, clean out your mind of that belief. Get it out. Believe that most people don't care what you are or where you go to church or where you were born or what your name might be. What have you for sale, what talent is yours, what have you to offer in friendship? Don't go hangdogging about when there is a crowd of assorted folks, feeling in your heart that something's between you and the rest."

"Didn't President Wilson, the Presbyterian, and ex-President Taft, the Unitarian, and Cardinal O'Connell, the Roman Catholic, and Bishop Rhinelander, the Episcopalian, and Bishop Berry, the Methodist, and Russell Conwell, the Baptist, in the name of Christian sentiment, and representing millions of Christian church folk, issue an appeal for fair play?" asks Samuel Purvis, D. D., a Methodist minister and author of "The Romance of the Jew." With gentle sarcasm Dr. Purvis ridicules the much-heralded story that the Jews are attempting to gain control of the world, and mentions that he has heard similar stories concerning the Masons, Catholics, and Methodists, who are just now "accused of being up to the neck in politics and of taking away the little brown jug from their neighbor's parched and thirsty lips and trying to control these United States." And from one who is familiar with prejudice, but himself prepossessed with the Jews, comes this note of cheer and warning:

"You are not only Jews, you are American Jews, part of the great American Commonwealth. And, believe me, as a Christian preacher and a man of affairs, you have the good-will of every good American. I'd stake all on that. There would have been race and religious riots and pogroms long since if that were not true. . . .

"If I were a Jew I would minimize my class consciousness and emphasize my religion. It's a great one! Worry less about anti-Semitism and more about the crying indifference of the Jews to Judaism as a religion. Set your spiritual house in order. If you serve faithfully the God of your fathers, no weapon that is formed against you shall prosper. You have the Bible and thousands of years of history back of you to prove that!

"To your tents—and to your knees—O Israel!"

LEADING THE CHILD INTO TEMPTATION

THE DIME NOVEL IS DEAD and half-forgotten, but its evil influence persists, we are told, in a certain type of modern fiction, in the "yellow" newspaper, and in vicious movies. It is alarming, says *The Herald of Gospel Liberty* (Christian), how much of our latter-day fiction introduces subjects and vulgarities of the most questionable kind, and puts into the mouths of heroines as well as heroes "rough and vulgar by-words, even curses." Some of the books are by popular authors, and the number of them is said to be legion. As to the movies, most parents are said not to know what the wrong kind is. "They have been thinking of evil pictures as being

Photo by International.

HOW NOVELS OF THE "DIAMOND DICK" TYPE FARE IN GERMANY.

Berlin school children being saved from the effects of bad literature, which is regarded as an increasing source of temptation to the children of our own country.

only those which show women indecently garbed, or voluptuous dances, or extreme delineations of the sex question." Apparently, they have not grasped "how virulently evil are the coarse and vulgar caricatures of life, the Wild West robbery and murder thrillers, and those showing violation of marriage vows and scenes suggestive of unchastity." Here, we are told, is one of the most imposing problems that have ever confronted parenthood. Other temptations lurk in the desire for luxury and finery and in the wish to appear prodigal with money, and the *Herald* observes:

"On every hand our young people are being allured into ways to spend their money for things they can not afford to buy and their time in ways that are harmful rather than beneficial. Business men know the almost irresistible power of salesmanship and advertising. But few parents have realized how this same power affects the lives of their children. In magazines, on billboards, in window displays, everywhere youth is tempted to use fine tobaccos, to wear gaudy and costly raiment, to dress in daring and extreme garb, to drink this or that or the other kind of beverage—and all at a cost of money which only a few of them can afford, and at a cost of moral fiber and stamina and regular habits which none of them can afford. In no previous generation did childhood and youth ever have thrown about them so many allurements and tendencies drawing them away from thrift and industry and studious habits as at present. And happy indeed is that home whose parents have perceived this truth, and have wisely and tactfully fortified its children against this modern danger."

WHY CATHOLIC GROWTH HESITATES

THE RELATIVELY SLIGHT INCREASE of the Catholic population in the decade 1906-1916 as compared with the increase in the total church-going population is due to the fact that the Catholic Church in America is a city church, dependent largely on "borrowed" membership, while the Protestant Church is a country church having its own source of supply. This is the conclusion of a Catholic writer, Edwin V. O'Hara, after studying the United States religious census of 1916. The outstanding facts of this census as regards the relative growth of the Catholic Church and all other denominations, he writes in *America*, a New York Jesuit weekly, is that in forty-two States the relative proportion of the Catholic population to the total church population decreased in the decade 1906-1916. In support of his theory the writer gives the following tables, the first of which shows the number of members of the Catholic Church and of all denominations in 1890, 1906 and 1916 and the Catholic percentage of the total:

CHURCH MEMBERS						
Denomination	Number			P. C. Distribution		
	1916	1906	1890	1916	1906	1890
All Denominations	41,926,854	35,068,058	21,699,432	100.0	100.0	100.0
Roman Catholic	15,721,815	14,210,755	7,343,186	37.5	40.5	33.8

From this table it will be seen, says the writer, that the proportion of all church-goers in the United States who were Catholics was 40.5 per cent. in 1906 and had fallen to 37.5 in 1916. The second table shows the number and per cent. of increase in each decade:

INCREASE OF CHURCH MEMBERS						
Denomination	1890-1916		1906-1916		1890-1906	
	Number	P.C.	Number	P.C.	Number	P.C.
All Denominations	20,227,422	93.2	6,858,796	19.6	13,368,626	61.6
Roman Catholic	8,378,629	114.1	1,511,060	10.6	6,867,569	93.5

From the second table the writer shows that in the decade of 1906 to 1916 the Catholic population of the United States increased only 10.6, while the total church-going population increased 19.6. During this decade, we are told further, the increase of the total population of the United States was approximately 17 per cent. The explanation of this disparity is that "the Catholic Church in America is three-fourths a city church and the Protestant Church in America is three-fourths a country church, and the difference in percentage of increase of the two bodies is a reflection of the difference in the rate of increase of rural and urban population, combined with the difference in mortality rates for the city and country." Many reasons have led to the congregating of Catholics in the cities:

"First, the great volume of Catholic immigrants have been impressed into the industrial life of the nation as soon as they have landed, finding it easier to get a job in industry than to get out to the farms. Then there has been the entire lack of organization on the part of the Catholic Church for the distribution of rural-minded immigrants to the land in this country. Moreover, our strong city and town Catholic schools have been magnets which have drawn Catholic families from the land.

"On the other hand, the Protestant Church in America is 75 per cent. rural. In the big cities it has failed to keep up with the population and chiefly exists as a suburban church, patronized by the immigrants from the country. This estimate is supported by the recent volume of the American Survey of the Inter-church World Movement, which indicates that Protestantism in America is substantially a rural church. Regarding the Protestant churches in the city the World Survey says:

"The Protestant Church in American cities is largely the property and product of the rural immigrant. In the larger cities it has survived from the earlier rural period of the State's development. Counts made of those attending city churches indicate that they are largely made up of rural immigrants; seventy-five per cent. of those present are frequently found to have been born in the country."

What are the consequences of this difference in the locale of the two churches?

"Cities are relatively sterile and the country is relatively prolific. Besides the invasion of city life by voluntary race suicide there are a number of natural causes operating which tend to limit the increase of urban population; chief among these is the fact that in the city, owing to the economic pressure, marriage is put off until a much later period than in the country and more homes are broken up through divorce. With the rural and urban total population practically equal in total numbers, there were 1,800,000 more married people living in the country. The bearing of these facts can not be evaded.

"But we are not left to mere conjecture in reference to the relative increase of city and country population. The 1920 census places the matter beyond cavil. . . . Except in New England and New York, where the rural population is in decay, the greater percentage of children in the country districts is strikingly large, and for the whole United States, as against 18.9 per cent. of the city population under ten years of age, we have 24.4 per cent. of the rural population under ten years. Speaking in terms of total population, altho considerably more than one-half of the total population of the United States lives in cities, still there are in the country 2,500,000 more children under ten years of age than in the cities, that is, the country has 11.6 per cent. more than its normal proportion of children. Of course this does not completely represent the facts, since during the last ten years an immense number of children under ten years of age have accompanied their parents in the rush to the cities. So, from the standpoint of natural increase of population, the country is prolific and the city naturally tends to sterility. With the passage of time institutions based upon a city population will be found to languish and institutions which are based upon the rural population will flourish as the bay tree beside the running water. . . .

"Our conclusion, then, is that given the Catholic population of the United States as 75 per cent. urban and the Protestant population as 75 per cent. rural, given, moreover, the vastly more prolific tendency of the rural population as compared with the urban, and finally the greater expectance of life in the country than in the city, especially for the Irish, who form such a large part of the Catholic city population, we can express no surprise at learning from the 'religious Census' that the increase of the Catholic population has been only slightly more than 10 per cent. in a decade, when the Protestant population increased 19 per cent. and the total population increased 17 per cent. The only other large element that could enter into the population increase would be through immigration, and for us in America to be depending for the increase of Catholic population on immigrants is like living on borrowed money. There is only one way out; namely, through the systematic fostering of Catholic rural life."

WHERE PREACHERS NEED ADVICE—Most preachers are easy marks for dishonest promoters, and the recent experience of a well-known New York preacher who had judgment entered against him for more than \$24,000 on a note he had endorsed, excited general sympathy. Practically all the clergy are savers, comments the *Chicago Journal of Commerce*, and "a depressingly large percentage of them make unwise investments." The adventurer with a patent announced to be worth millions, the stock salesman whose certificates will double in value in a year, the man who has valuable corner lots to sell, and all other gentry who gabble of get-rich-quick schemes find the penurious pastor a lamb only too ready to be shorn. We are reminded that

"Several years ago a bank president in Marietta, Ohio, Mr. W. W. Mills, was so disturbed by the number of preachers whose savings were dissipated by hazardous investments, entered into with so much credulity when they were solicited by business adventurers, that he delivered an address to a body of clergymen which was in substance a primary lesson in the care and protection of savings. His audience needed just such a lesson, and no doubt his kindly and intelligent advice saved many of those who heard him from serious losses.

"Every ministerial body, at least once a year, should be given instruction in the care and investment of their small savings. With little or no business training, they need this kind of advice to save them from 'confidential opportunities' to lose all they have. One word of caution every clergyman should be willing to remember, and that is never to invest with a stranger or with anybody else until the investment has met the approval of a banker or a prudent business man in his congregation."

MADE BY THE MAKERS OF CAMPBELL'S SOUPS

Every grocer in America

should be prepared for the big demand for Campbell's Beans next week—the first big outing of the season. People will buy Beans for picnics, boating trips, motor trips, camping, house-parties and the family table. Campbell's Beans are famous not only for their delicious quality, but because they are slow-cooked and easily digested. Their rich tomato sauce is another reason for their enormous popularity. Advertise Campbell's Beans! Display them in your windows and on your counters! • Your customers will be glad to learn the special advantages of buying by the case—to have them on hand whenever wanted.

12 cents a can

Except in Rocky Mountain States and in Canada

CURRENT - POETRY

Unsolicited contributions to this department cannot be returned.

THE writer here is accounted for by *Poetry* (Chicago) as born in Philadelphia of Spanish and Russian parentage, a graduate of Harvard and now studying at Oxford. Considering his origins, his note is strangely and authentically English:

LITTLE LOU

By JOSEPH AUSLANDER

To drink where the birds drink—
Oh, the draught's touch is tender and cool!
Think—
Scattered like soft buds over the brink
Of this delicate pool
The birds leave their kisses for you,
Little Lou.

To dream where the birds dream—
Oh, the wind on the leaves is drowsily wild!
Stream,
Feathers of slumber in magical number
Over our child. . . .
The birds breathe their pale dreams on you,
Little Lou.

To die where the birds die—
Oh, why is the woodland so hushed everywhere!
And why
Are all the leaves listless and limp in mid-air
Beneath a dead sky!
The birds, they are dying for you,
Little Lou.

PARTICULARLY English is this which *The Measure* (May) gives us. May we not feel that we have some one who matches well with our overseas writers? In spite of possible protest of hundred per cent. new Americans:

IS THIS THE LARK!

By JOSEPH AUSLANDER

Is this the lark
Lord Shakespeare heard
Out of the dark
Of Dawn! Is this the bird
That stirred
Lord Shakespeare's heart!

Is this the bird whose wing,
Whose rapturous antheming,
Rose up, soared radiant, became
Sharp flame
To Shelley listening
And made him sing.
Throbbing alone, aloof, feveredly apart,
His profuse strains of unpremeditated art!

To think that I should hear him now
Telling that single fiery rift of heaven a wild lark
comes!
The fresh cool scent of earth yearns at the plough;
In short keen rapid flurries the woodpecker
drums. . . .
To think that I should hear that mad thing sliding
Along a smoking opal ladder!
Hear that inevitable deluge of music riding
Into the sun, richer now—fainter now—madder!
To think that I should hear and know
The song that Shelley heard, and Shakespeare,
long ago!

THE surge of these lines is like a deep, quiet wave that moves to its goal. It is in *The Atlantic Monthly*:

THE SUPPLIANT

. Πότνια, πότνια νύξ, ὑπνοδότειρα τῶν
πολυπόνων βροτῶν!

By ANNE GOODWIN WINSLOW

I did not hear the footsteps stealing softly through
the door,
I did not see the shadow falling darkly on the floor,

I did not heed his coming nor know when he had
passed,
Nor dream that he could take you when I held
your hand so fast.

Are you happy in the meadows where his tall, pale
flowers grow?
Do you never miss the roses that you loved here
long ago?
How they bloom and how they wither while you
never come again,
In the garden where the morning still must look
for you in vain!

But the night knows how to find you; in her
mansions cool and deep
She has spells that lure and bind you, she has
dreams that clasp and keep;
And I kneel before the portal where her marble
moons are hung,
And I snatch the gift immortal to my mortal
yearning flung.

STATE-CONSCIOUSNESS is an exaggerated condition of modern days, and the poets are working the theme. *The American Poetry Magazine* (Milwaukee) devotes its April number to celebrating its home State. Charles Winke exploits Wisconsin as "an experiment in Democracy" and celebrates its capital in these lines:

MILWAUKEE

By CHARLES WINKE

I

By the far point that forms your upper bight,
Where the gray sea wall shelters like a nest
A bevy of gay pleasure craft at rest,
And 'round the nearer cape, low shored, alight
With the strong flare of furnaces at night,
They come—steel boat and barge and packet
pressed

Deck-deep into the water, or, more blessed
With beauty, some old schooner, gleaming white.

And in the city, where your triple streams,
By slip, canal and channel multiplied,
Flow blackly by their panoramic strand,
A thousand hulls lie, steeped in gentle dreams;
Disturbed not by the cranes above them spanned,
They slumber and are strangely glorified.

II

Beauty is here one with utility,
As in a tree or brightly flaming star:
They plow your harbor's flood, but do not mar
Its loveliness, the fleets that industry
Sends up and down upon the sapphire sea
Above whose surface, bright, enamelar,
Sun-flashing, or in hours that sunless are,
Moon-paved with gold and jeweled gloriously.

With night's innumerable stars, you rise a queen,
Fair mistress of the pathways of the lake:
From where majestically your structures stand,
White walled above the lake front's sloping green,
The busy boats, like shuttles weaving, take
Their winding courses to and from the land.

III

The daughter you might be of Italy,
A fairer Venice, though your life belongs
To a far sterner sway than rules the songs
Of gondoliers on streets of storied sea;
Here, up or down, a tug boat stridently
Whistles for passage, and the clattering gongs
Of bustling bridge guards halt the moving throngs,
And the stilled traffic for a space is free.

While from the flaring boat hull curls a small
Swift swell that breaks against the blackened piles
Flanking the towers that rise on either side;
And o'er the water, where, inverted, fall
The many-windowed walls in mirrored files,
A sea gull wheels, its snowy wings spread wide.

HERE is one of the "occasional parodies" that pop up in the *New Witness* (London). It derives from Alfred Noyes, and any one who knows aught of the sea will perceive how bitter the parody is in matter let alone manner:

THE HALLIARDS CHANTY

By W. K. S.

O, a neat young master went to sea
(With a way-ay, blow the man down)
With a bottle of milk from his fond mammie
(O, gimme some time to blow the man down)
He went to sea on a whaler trim
To see what the sea could do for him
(O, poor young man!)

He climbed the rigging in plush and silk
And nourished himself with a swig of milk.
He couldn't eat weevilled bread nor pork
And he couldn't abide no honest work.

One day he sighted a Spanish sail:
"O, there she blows!" he cried, "A whale!"
But the crew they sang with wicked glee
"O, take him back to his fond mammie!"

Now when his bottle of milk was gone
He faded away to a skellington;
His plush was tattered with tar and brine
And his breeks was patched with knotted twine.

He died and we buried him out at sea
(With a way-ay, blow the man down)
And we sent a word to his fond mammie
(O, gimme some time to blow the man down).
"Now don't send lads like that again
With a bottle of milk to sail the main."
(O, poor young man!)

It sometimes strikes us that there is a spiritual sisterhood between Aline Kilmer and Alice Meynell. Here in *Hearst's Magazine* is one of the things that lead us to the reflection:

SANCTUARY

By ALINE KILMER

God has builded a House with a low lintel,
And in it He has put all manner of things.
Follow the clue through the mazes that lead to
His door,
Look in! Look in! See what is there for our finding.
Peace is there like a pearl, and rest and the end
of seeking;
Light is there and refreshment. But there shall be
more:
There we shall find for our use wide, beautiful
wings,
Ecstasy, solitude, space; and for those who have
been too lonely,
The love of friends, the warmth of a homely fire.

Oh, never grieve again for the piteous ending
Of loveliness that could not be made to last:
There all bright passing beauty is held forever
Free from the sense of tears—to be loved without
regret.

There we shall find at their source music and love
and laughter,
Color and subtle fragrance and soft incredible
textures.

Be sure we shall find what our weary hearts desire:
If we are tired of light, there shall be velvet dark-
ness

Falling over long fields, with stars, and a low voice
calling,

Calling at last the word we thought would never
be spoken.

But we, being hard and foolish and proud and
mortal,
Are slow to bend and enter that humble portal.

Youth is Flexible

Supple Grace is a Reward —keep your feet young

Today everyone wishes to keep young. This spirit has much to do with the increasing popularity of Cantilever Shoes. For youth is essentially flexible and the springy, elastic grace of youth has its foundation in the feet.

It is apparent to all that the pleasant activities that prolong the vitality of youth, such as golf, tennis, dancing and walking, depend largely upon healthy feet for their enjoyment and their benefits.

The expression "young feet" heard so much today is significant. Your foot is a cantilever spring, formed of twenty-six bones held in place by muscles. When these muscles are forbidden full freedom to exercise, your feet are not only losing their health but are causing you to lose yours.

Cantilever Shoes are made with flexible arches like the arches of your feet. These arches follow the curve of your own, affording gentle, restful support that does not hamper the natural flexibility of your feet. They permit your foot muscles to exercise and strengthen.

With their flexible arches, trim, natural lines and properly placed heels, Cantilevers give you comfort, better circulation and correct posture. A sense of freshness and physical elation often results. Many women speak of the comfort and increased vitality they derive from Cantilever Shoes.

Cantilevers are made of fine materials, by skilled workers who have received a special training for years. When buying shoes, be certain that you are at a Cantilever dealer's (there is only one in each city, except in

New York) and look for the Cantilever trademark in the shoe. Cantilever Shoe merchants have been carefully selected for their ability to fit the foot.

There is a partial list of Cantilever dealers at the left. If none listed is near you, write the makers, Morse & Burt Co., 1 Carlton Avenue, Brooklyn, N. Y., for the name of a nearby dealer and an informative booklet about shoes and feet.

THREE OF HIS NOVELS—THERE WERE A THOUSAND OTHERS.

not long ago. "Summer or winter I am up at daylight, and as soon as I have eaten a steak or two, I am ready for the battle. I usually finish my day's work by noon. I can't have a moment's peace of mind until my day's work is done. All I need is my faithful typewriter and a window from which I can look out upon the water, if that is possible.

"I used to have a stenographer to whom I dictated my stuff. But I found that was more tiresome than writing it myself. When prest, I can write at the rate of three thousand words an hour. From constant training I find that my brain, or some subconscious something keeps about six hundred words ahead of the machine. The mind is blazing the trail and paying no attention to the work of the hands."

Dey wrote more than 1,000 Nick Carter novelettes, some 400,000 words in all, so the *Newark News* tells us, continuing, "If his fiction was not of high order, and if it distorted life, it at least had the merit of being clean and always of painting the hideous mien of vice. It scorned to give the criminal a romantic gloss." Meanwhile the *Rochester Times-Union* observes,

Time has made us realize that Nick Carter was pretty good reading. Virtue always triumphed and the villain always was foiled and punished, in the Nick Carter stories.

The present generation would be better off if it read Nick Carter and even the namby-pamby Rollo stories instead of the modern flood of erotic and decadent, trashy sex fiction.

Farewell, Nick Carter! You were a great detective.

An entire page by David Karsner in the *New York Call* is devoted to an analysis of "Nick Carter's" popularity. We are told,

Nick Carter was an American institution, quite as much so as Independence Hall and the Betty Ross House on Arch Street, in Philadelphia. Millions of

Americans who were boys a generation ago waited breathlessly from week to week for the lurid-covered quarto sheets, badly printed, that contained the latest exploits of this great American hero who won every single battle in which he engaged with his many enemies. That was the wonder and glory of Nick Carter! He never lost. He always won. Success must have been his middle name. Defeat was as foreign and as strange to him as a flapper would be among the Igorotes.

It was the element of success, of victory, in Nick Carter's career that made him readable and alluring. Millions—I do not think that is an exaggeration—of American boys who are now college presidents and professors, some preachers, too, perhaps, devoured that weekly story like bees swarming around the shrinking bud. Nick Carter was not a blustering braggart—oh, how shy, modest and diffident he was in telling how he bumped four train robbers off the earth with a quartet of bullets, saving the fifth and final ball for his own stout heart should he find himself in a tight corner with his back to the wall.

It is interesting merely as a matter of wayward speculation to try to figure out just what percentage of the present-day colonels, captains and corporals of great and small industry, the professions and the sciences, started their reading with Nick Carter. Who knows but what those lurid tales of daring fired the imagination of many a boy now a prominent figure, or figure-head, in public or private life? Was Henry Ford a Nick Carter fan? Did not the late Edward H. Harriman admire the old sleuth? Who knows but that President Harding, as a youngster, slipped round to the candy and cigar store where the big wooden Indian, with immobile face, always stood, his right hand clutching a tomahawk, and bought the latest issue of Nick Carter from Marion's Main Street merchant?

American girls, at least many of them, missed much of the joy of life by not being able to appreciate the exploits of Nick Carter. What did they have to read! Such stuff as "Elsie Dinsmore," by Martha Finley, who wrote and rewrote her one and only theme into 20 titles.

CHAPTER VIII.

A TERRIBLE REVENGE.

"Murder!" cried Ashley, "but where is the body?"

Nick knew well enough. On the floor by the box were the books which he had packed in it, as well as the mats and cushions with which he had filled the extra space.

To tear the cover from the box was the work of an instant.

A ghastly sight was revealed, but it was not what Nick had feared.

It was the body of Harrington.

The beautiful girl had accomplished her own vengeance.

Nick dragged the body out. It was transfixed with a dagger, sharp as a needle, and so long that the point protruded from the dead man's back. The weapon had evidently passed straight through the villain's heart.

He must have died without a groan. The body

THRILLS TO BURN.

A page from "The Hunter of Men," typical Nick Carter romance—beat it if you can.

This curious, fibrous rock is the basis for all Johns-Manville Asbestos Roofings. It gives them fire-safety, of course, and in addition, durability and permanence. It keeps roofing costs down.

For \$30 more he could have prevented this with an Asbestos Roof

A SPARK from the chimney flue... it falls on the roof... a tiny, ominous flame... and soon the whole house is ablaze—betrayed by the roof that is supposed to protect it.

All because somebody grudged the few dollars necessary to make that roof a real protection. The cost of a few shrubs from the lawn would have given that home the fire-safety of Asbestos Roofing.

Perhaps they did not know this. Many people are inclined to think Asbestos Roofing expensive because it is always so highly spoken of.

But this is not so. Anybody who can afford to set up four walls can afford to protect them with Asbestos Roofing. On such a house as that in the picture the difference

is less than thirty dollars. It is worth it.

For the same indestructible rock fibre that gives Johns-Manville Asbestos Roofing their fire-safety also gives them permanence. Weather, rot and corrosion have little effect upon asbestos. These roofings never need painting, refinishing or other protective measures, and they should last as long as the home they protect.

There is a roofing of Johns-Manville Asbestos, either in shingle or roll form, for every type of structure. Select yours from the chart on the right.

Ask your roofing dealer or builder for samples and prices of these roofings. Each is given the highest rating in its class by Underwriters' Laboratories, Inc.

What Type of Asbestos Roofing? This chart will help you decide

Kind of Building	Type of Asbestos Roofing	Brand or Trade Name
Small buildings	Slate surfaced roll roofing or shingles	Flexstone—red or green
Dwellings \$3,000-\$7,000	Slate surfaced roll roofing or shingles or rigid asbestos shingles	Flexstone—red or green; rigid—red, brown or gray
Dwellings \$7,000-\$25,000	Rigid asbestos shingles	Standard or extra thick—red, brown, gray or blended
Dwellings \$25,000 upwards	Rigid asbestos shingles	Colorblende—lives-tone, brown with or without red or gray accidentals
Factories, shops and mills—Monitor and Sawtooth roofs*	3 or 4-ply ready roofing	Johns-Manville Asbestos Ready Roofing or Built-up Roofing
Flat roofs—all buildings*	Built-up roofing	Johns-Manville Built-up Roofing
Skeleton frame buildings—standard conditions*	Corrugated asbestos roofing with steel reinforcement	Johns-Manville Corrugated Asbestos Roofing
Skeleton frame buildings—excessive temperature or condensation conditions*	Corrugated asbestos roofing without steel reinforcement	Johns-Manville Transite Corrugated Asbestos Wood Roofing

*Note—Industrial buildings call for expert advice. A roofing expert is available at all Johns-Manville Branches.

JOHNS-MANVILLE Asbestos Roofing

were not slight ones—were used by the beneficiary to the best of his ability. And, when all is said, could he have done more than that?

If Croker's use of his talents was an expensive thing for New York City, well, why did New York City allow itself to be ruled by Richard Croker? As the *New York Evening Post* asserts,

The peculiar shame of Richard Croker's decade and a half of rulership in New York City was not the sordid character of that rule, but the fact that it was endured. Richard Croker could not have lasted as dictator for a day if the Croker spirit of "working for my own pocket all the time" had not animated numbers of citizens who passed as respectable. One of them expressed their position in the cynical remark: "Mr. Croker seems to be able to deliver the goods." The list of hosts at the famous dinner that was given to the former boss upon one of his return visits from abroad is sufficient explanation of what we conventionally speak of as the mystery of bossism among an ostensibly democratic people. Whenever the voters made up their minds to rid themselves of Croker, they had no difficulty in turning the trick. The question that rises to plague them is, why didn't they do it oftener?

We are driven for comfort to the consideration that, inexcusable as Croker's misrule was, it was not the orgy of corruption that flourished under Tweed and that it is not being duplicated in this city or in any other to-day. Nobody accuses Murphy of making his money as Croker is supposed to have made his, by the sale of offices and legislation and participation in the swollen profits of public contracts. It has been twenty years since Philadelphia had a Mayor who left office a millionaire. Even Thompson of Chicago, who stands alone as a Mayor who is also a boss, is not on the Croker plane. The boss has yielded to the demagog. In New York we have our Hylan, as Boston has her Curley. Mayors like these may compel self-respecting men and women to blush for their city, but at least they do not give them the sickening sense of degradation that afflicts them under the reign of an Ashbridge or a Croker.

The demagog must persuade the people that he is fighting their battles. The boss is under no such compulsion on his own account, altho he naturally nominates demagogic candidates to serve as his pawns. Even with a Hearst behind a Hylan, pulling the strings of his puppet, we are not in the slough in which we wallowed when Richard Croker was the uncrowned king of New York.

At all events, Croker was a "character." Witness the stories told of him to a *New York Times* reporter the other day by old friends of the "uncrowned king." We read:

Altho accustomed to placing wagers on race-horses, Mr. Croker was averse to card-playing for high stakes. It was recalled that once when returning on a train from a Democratic State Convention at Buffalo, Mr. Croker was repeatedly invited by a prominent New York City Democrat, then an \$1,800 loser, to "sit in" a poker game. Mr. Croker finally accepted the invitation and asked what were the stakes. He was told that the limit was \$50. "You're crazy," he said, "let's make it fifty cents."

As Mr. Croker was then the "boss" in every sense, the 50-cent limit continued all the way from Syracuse to New York to the great disgust of the other players, particularly the one who had prest Mr. Croker to play, and who had no opportunity to recoup his earlier losses.

Another anecdote concerned Mr. Croker's action in placing the Tammany Hall flag at half-mast when President McKinley was shot. He reprimanded an Assembly district leader who gave an outing on the following day and directed another leader to postpone the outing he had arranged.

Mr. Croker's favorite cartoon was said to have been a picture of himself walking arm in arm down a gang-plank with Thomas B. Reed, then Speaker of the House of Representatives, with the caption "Who's Your Fat Friend?" This sentence afterward became a catch phrase of his. Cartoons, even those most bitterly attacking him, were always of interest to Mr. Croker. He had many of them bound in volumes, which he presented to his friends.

One of Mr. Croker's favorite forms of enjoyment was in eluding newspaper reporters. Once when he returned from Europe, after he had left Lewis Nixon in the leadership, Mr. Croker eluded the reporters and passed three days on Mr. Nixon's houseboat in the bay. He then went to the summer home of Edward Murphy, Jr., of Troy, at Elberon, N. J., and related with chuckles at dinner how he had kept his whereabouts secret. He had just finished his story of how he had done it when a servant entered with the information that a group of newspaper men had called to see Mr. Croker.

Chatting with a New York *Sun* reporter, the other day, Mr. Chauncey M. Depew described Croker as a square fighter and an "exceedingly able and forceful leader," adding,

"He was a king, and New York was his kingdom. He was the absolute master of the city, such as I don't believe could ever exist again, and the Mayor and the heads of the various city departments recognized him as the absolute controlling power.

"I said to him once: 'You naturally feel responsible for the conduct of the city government. How do you know that things are being properly managed?' Mr. Croker replied: 'I go down to the City Hall every day and go through the departments and see what is going on. Of course, I get many complaints, and when I do I investigate them, and if I find any one at fault, I take them to task.'

"Once, when I suggested that there must be innumerable conspiracies being plotted to overthrow his power, he replied: 'Yes, there are combinations constantly being formed but when the conspirators or rebels reach as many as five somebody always gives them away, and then I have no trouble.'

"He was an exceedingly able and forceful leader, and the railroad had to recognize him as the ultimate controlling power, just as did the Mayor and the city officials. His outstanding characteristics were his intense loyalty to those who were loyal to him, and his quick punishment of those who were unfaithful. And he was perfectly fair. When he thoroughly understood a subject and it he did, or had the city do, what he

made up his mind about it he thought was right.

"Of course, he didn't always do what I thought was right between the city and the railroad, but I always had absolute faith in the honesty of his judgment. He was always a fair opponent and never attempted to take undue advantage, except in the case I have just cited."

Mr. Depew and Mr. Croker were not personal friends; they were separated by party lines and by social ties, so the two rarely met except when "Mr. Croker would drop into my office for what he would call 'a friendly chat,' but what really was a scouting expedition for information. He used to pay calls of this kind on the prominent men of the day, the bankers and lawyers, and in that way kept in close touch with everything that was going on in the city in other fields than the political.

"He was one of the strongest men physically in New York," added Mr. Depew with a smile, "and he told me once that if he suspected a district leader of plotting against him he would summon him to his office and stand him in the corner and seize him and jump him up and down. After each jump Croker said, 'I would say to him, "Are you square?" and he would always surrender.'"

THE BOSS AND HIS BOSS
Richard Croker with the Indian bride who inherits his fortune.

Lake Placid—Wilmington Road, N. Y. A water-bound macadam highway kept traffic-proof with "Tarvia-B."

A picturesque stretch along the Keeseville-Plattsburg Road, N. Y.—treated with "Tarvia-B."

Notre Dame de Montreal—an impressive edifice facing on the Place d'Armes.

All roads lead to Montreal—

QUAINT, historic, modern—a picturesque city of romance where the atmosphere of the Old World blends with modern customs of the New—that is the Montreal of today.

Good roads have opened up to the American tourist this unique and intensely interesting old city: Sherbrooke Street West, "The Fifth Avenue of Canada," has become the common meeting ground for cars from California to Florida and from Maine to Texas.

Yet only since 1913 has Montreal been readily accessible to American tourists. In that year the Quebec Government built the famous King Edward Highway, 45 miles long, from Montreal to Rouses Point, New York, linking up with the wonderful tarviated roads of New York State which lead through the incomparable Adirondacks and Lake Champlain country.

Last season the Québec authorities tarviated the entire King Edward Highway and over its smooth surface thousands of autos sped to and from Montreal.

Throughout all Canada and the United States, road officials have discovered that Tarvia solves all road problems. It brings durable, dustless, mudless, all-year roads within reach of the most modest community.

If you have any road problems—construction, maintenance or repairs—our engineers will gladly help you solve them.

A section of the beautiful King Edward Highway maintained with "Tarvia-B."

Chateau de Ramzay—one of the most interesting spots in a most interesting city. Built in 1705, this old Chateau was for some time the official residence of the early British governors.

If you want smooth, dustless, mudless roads in your community 365 days in the year, write to our nearest office for free copy of our illustrated "General Tarvia Catalog." You'll find it interesting.

Tarvia

NOT A CHAUTAUQUA OR A CAMP MEETING.

These tent-dwellers at Beardstown, Ill., are homeless because of floods

RIVERS ON THE RAMPAGE

FLOODS, FLOODS, AND STILL other floods—enough all told to satisfy the most enthusiastic demand of the “wets” for wetness or the “drys” for water, as a paper in the vast inundated district puts it—have been spreading destruction far and wide. In a recent issue the *San Antonio Light* declared,

Up in Illinois, where the Illinois River is usually a placid third-class sort of a stream with no ambition to injure anybody or anything, towns have been cleaned out and thousands upon thousands of acres of land have been flooded by its excess of waters. One town, Beardstown, has been isolated for nearly two weeks, and is not yet restored to the community of cities.

Over in New Orleans, where the Mississippi River is going to spill over the top of the dike some day and do a lot of damage, they are struggling with the highest water ever known. At Memphis and a dozen other points along the lower Ohio, lower Missouri and middle Mississippi almost every town on the river bank has had to fight for its life. Even far-off San Antonio, which has had its own experiences with floods, has been called upon to send flood prevention to places along the larger rivers.

Up in northern Texas they have experienced rainfalls the like of which has not been recorded since the establishment of the Weather Bureau. In one day eleven persons lost their lives because of floods in and around Fort Worth. In that city nine inches of rain fell within twelve hours, a history-making deluge for that part of the world.

Moreover, an Associated Press dispatch from New Orleans reported:

While thousands of men were working to-day to prevent further breaks in the levee, smaller groups in small boats hunted for refugees and removed them to safety.

Reports from the Ferriday area late to-day said the flood waters were spreading over larger areas, altho the first rush has lost much of its force. A depth of nine feet was reported from Clayton. The flood is near the towns of Vidalia, Azucema and Delta Bridge. At Ferriday the water is about six feet deep, with a swift current running through the streets.

Plantation homes, more than a century old, have been swept away and great trees, which have withstood the force of many previous floods, have been uprooted. Many prosperous plantations have been inundated, ruining every prospect for a crop this season.

Approximately five hundred refugees have crossed the river into Mississippi and Natchez and are being cared for there. The Red Cross to-day took charge of the camp established yesterday at Harrisonburg, where it is reported 1,500 are being cared for. Approximately 2,000 others are in camps at Jonesville and Martinsville.

The continued spread of backwater in the lower Yazoo Basin, where approximately 1,700 square miles of territory are inundated, including some of the richest farming lands in the Mississippi Delta, to-day brought appeals for aid from thousands of residents who had become marooned in Isseguena county. Rescue parties were despatched in power boats and these people were to-night being brought to Vicksburg to the refugee camp. Heavy rains throughout the lower Mississippi valley during the last twenty-four hours have added gravity to the situation.

Also, a special correspondent of the *New York Times* telegraphed from Austin, Tex.:

The Colorado, Brazos and other rivers of Central and South Texas are at flood stages and their cultivated valleys are being swept by one of the most disastrous overflows for several years.

The rise of the Colorado River at Austin has reached 22 feet, with the floodwater of its larger tributaries, the Llano and Concho, still to reach here. A stretch of valley farmlands more than 400 miles long is being rapidly inundated.

From Fort Worth, Tex., meanwhile, a representative of the Associated Press wired,

Eleven persons were drowned, at least fifteen hundred made homeless, the city water and power plants put out of commission, other public utilities endangered, property damage of \$600,000 inflicted, all interurban traffic was suspended and street-car service crippled as a result of a storm, the most terrific that ever visited Fort Worth and vicinity last night and this morning.

Nine inches of rain fell here between 10 o'clock last night and 10 o'clock this morning, breaking all previous records.

All ambulances in the city and scores of motor cars were prest into service to rescue stricken families, citizens volunteering their services and cars. Ten flood victims were taken to hospitals, but most of them were rushed to the headquarters of the Fort Worth Welfare Association, where hot coffee and restoratives soon revived them.

Residents of Arlington heights and the North Side are completely marooned, a wide expanse of water extending from the foot of both the Paddock and Seventh street viaducts for nearly half a mile beyond. Showing the depth of the water north of the Paddock viaduct, the right field grandstand at Panther baseball park is half submerged and the fences of the ball park can not be seen. The flood broke through the levee protecting the park and went through the grounds a raging torrent.

The river gage Tuesday showed 36.7 feet, a rise of 29.7 feet in only twelve hours. In the big flood of 1908 the gage was thirty-eight feet, but the flood at that time was not so serious, as it came gradually and was more spread out.

Dozens of persons had narrow escapes, many being rescued in their night clothes, just as the waters crept into the second stories of their homes.

Throughout the night lights flashed from windows in the flooded areas, calling for help. In one instance, rescuers were unable to reach a house in boats, and shortly afterward the flashing of a light in an upper story window ceased, causing the belief that the floor had collapsed and the occupants drowned.

The great loss of life was chiefly due to the suddenness of the storm, the worst of which came while the city was asleep.

Two women were drowned near the Van Zandt bridge, the old West Seventh Street bridge, when a rescue boat was overturned at 10 o'clock Tuesday morning. Street Commissioner Gilvin was one of the rescue party in the boat. After much difficulty they succeeded in getting the women out of the house in the river bottom and shortly after they were in the boat, it capsized. About the same time the body of a white man floated beneath the bridge.

Two other women were swept from a tree at the foot of Florence Street and two more drowned in the West Side flood district.

About 8 o'clock this morning a white man imprisoned in a

"Studies and fun can't crowd out music if you have a Gulbransen!"

"Studies, dances, parties, athletics—how in the world does a busy girl have time for music?"

"I wondered—before we got the Gulbransen. Now I know.

"Ten or fifteen minutes a day—if that is all the spare time I happen to have—keeps me in touch with the best in music. Enables me to play with all the personal satisfaction that any musician feels, but without the hours of practicing, practicing, practicing.

"If only all my problems were as easily solved as that of music!"

* * * * *

You mothers who wish your daughters to have an accomplishment—to have an intimate knowledge of music in general, and to be able to converse intelligently on the subject—the Gulbransen also solves a problem for you.

In every feature it is designed for artistic playing:

first—the construction of the instrument itself.

second—its tone.

third—the exclusive Instruction Rolls.

fourth—the exclusive Melody Indicator.

Guardians of the Circuits

The telephone at your elbow seems so simple an instrument, it does its work so quietly and quickly, that it is difficult to realize the vast and complex equipment, the delicate and manifold adjustments, the ceaseless human care "behind the scenes" in the central offices.

Behind the scenes is the terminal of all the underground and overhead lines on the streets and highways. Here are the cable vaults; the great steel frames containing the thousands of separate wires and fuses for the subscribers' lines; the dynamos and storage batteries; the giant switchboards through which your telephone is connected with the other thirteen million telephones in the Bell System.

And here, in charge of this equipment, are the guardians of the circuits—the wire chief and his assistants—master electricians and experts in telephony. Their first duty is the *prevention* of "trouble." By day and by night they are constantly testing the central office equipment, the overhead and underground lines, the subscribers' individual wires. And when, from some cause beyond control, "trouble" does occur, nine times out of ten it is repaired before the telephone subscriber suffers the slightest inconvenience.

It is the skill of the men behind the scenes, together with scientific development and construction, efficient maintenance and operation, which make it possible for you to rely upon the telephone day and night.

NOW IT SEEMS THAT AMERICA "BEGAN THE WAR"

THE "beautiful spirit of the German Army" had been "poisoned" before America entered the war, we are told, not in a funny column, but in the *Atlantic Monthly*, where, at the editor's request, General Ludendorff writes of "America's Effort." The General informs us, moreover, that America encouraged the Entente to "begin the war," and that the success of our participation was the result largely, of "lucky circumstances." In the General's own words:

If one reflects once more on the history of the Great War, one has no doubt that, by the behavior of the United States, the Entente felt encouraged to begin the war and to carry it on, till, at the end, America's interference in France, and at the same time the growing propaganda, made the Allies win the war.

That being so, I believe the Americans have common sense enough to agree that lucky circumstances favored them greatly. The main part of the American Army intervened in the war at a time when they had the great advantage of having their nerves intact, while, on the other hand, Germany's resistance had considerably slackened after four years of heroic fighting against an overwhelming superiority in number, during a starving blockade, when the German nerves—unceasingly exposed to terrible experiences—and the bodies of the constantly dwindling number of combatants, were no longer able to stand the destructive effect of a defense in modern warfare, when no relief from home was brought to the Army, and when the enemy's propaganda and the revolutionary agitation of the Independent Social Democrats had poisoned the beautiful spirit of the German Army.

But the chief advantage we had, General Ludendorff appears to believe, accrued from our long-cherished resolve to injure Germany. When the time for action arrived, we merely put into operation a plan already conceived, we are told, for the General declares:

It is my firm belief, and I draw from the very best sources, that before the war a "Gentlemen's Agreement" existed between important men in France, England, and the United States. It was directed against the alleged "Pan-Germanism Danger" and bound the United States to interfere in case of a war with Germany and Austria. A German diplomatist states that Wilson came to a like agreement with England in 1913, and that he promised benevolent neutrality and copious supply of arms and ammunition. It stands to reason that this agreement made it much easier to the Entente to decide for the war.

Thus from the very beginning of the war the Government of the United States has never been neutral. When, in 1914, before the battle of the Marne, some voices in France were heard who asked for peace, some official representatives of the United States in Europe declared that France had to hold out, because the United States

would interfere in any case. The result of the battle of the Marne allowed them to remain aside. The Entente and Russia conceived new hope for Germany's and Austria's defeat. Besides, the Entente's propaganda in the United States had not yet stirred the hatred against Germany. It needed time, and the Entente was to take their measures, or to let things go when they took the right turn. In the meantime the Government of the United States gave the Entente every possible support, and thus strengthened their purpose to go on making war. The Government agreed to anything that the Entente was pleased to do or to order, and interfered every time when Germany tried to cut England's thread of life—its commerce.

Rather curiously, those charges directly follow General Ludendorff's plea for a restoration of good feeling between the United States and Germany. To that end, he bids us reexamine the facts concerning our share in the great struggle. As for his own views on the subject, he confesses that they are necessarily identical with those of the German Headquarters, and goes on to say,

I can only contribute my opinion to the solution of the problem; but I believe that even this share will be interesting and important to any American who takes some interest in the matter. I am very much interested myself and think it most useful to listen to what foreigners say about the German strategy and—stirred by those criticisms—to examine carefully and repeatedly what I have done myself.

If both sides would act accordingly, free from passion and prejudice, it might help them to understand and to esteem each other again, to encourage the interchange of views among the leading intellectual classes of both nations, and to reconcile them after the deplorable historical conflict has been brought to a close.

However tactless General Ludendorff's article may be, he is far from disparaging the bravery of our troops—or of his own. We read on:

The German troops were not lacking in bravery, nor in tenacity. But, to be successful, they needed something which the leader had no influence on, but with which he can not dispense—good luck. More than once fortune smiled upon me; but in the decisive moment of the war it left me alone and favored the enemy. When stating that, it is not my intention to disparage the enemy's merit.

I have written so copiously about this question because it is my opinion that a German victory at the Marne and near Rheims, even in July, 1918, would have been able to change the situation entirely in favor of Germany. A difficult and unthankful business would have devolved upon the Americans; to support their Allies at any place, in order to keep them afloat. A systematic use of the reinforcements they brought would have been impossible. Ideas of peace, which dwelt in the hearts of the Entente, would have spread.

But as things developed after the failure of the German attack, the Americans had the advantage of keeping their units together in the attacks they prepared, and of playing an important part in the decisive battles. They did it vigorously and successfully.

The newest thing in filing cabinets—a Fire-Wall steel file and counter combined

Your customers will like this service, too!

A BUSY real estate office. A customer enters hurriedly. "What have you to rent in the Rosedale Residential District?"

Without leaving the counter, the clerk flips open a drawer, consults a card-file and quickly gives him the information he wants.

"Y and E" Counter-Height

Steel Files make records instantly accessible, right within the counter itself.

Fire-Wall Protection

Records and papers are safer, too, because all "Y and E" Counter-Height Steel Files are built with the exclusive Steel-Plus-Asbestos construction, which makes them twice as fire-resisting as the ordinary steel file.

THE REAL, NOT THE REEL, COWBOY

"WHEN I'M HUNGRY I bites off the noses of living grizzly bars," a Western "bad man" used to say, and Mr. Philip Ashton Rollins tells of him with glee in "The Cowboy: His Characteristics, His Equipment, and His Part in the Development of the West" (Scribner). But observe, Mr. Rollins is not for taking the "bad man" too seriously. He remarks that pseudo "bad men" of the "I eat humans for breakfast" kind functioned in the presence of tenderfoots by fierce looks and snorts, by savage remarks, and sometimes by the recital of speeches ferocious in phrase and committed to memory. These men, it seems, would "wild up" whenever they obtained an impressionable audience, and their braggadocio often was picturesque, even tho made up at least in part from strings of stereotyped Western anecdotes. For instance:

Old, harmless Jim——, when in his cups, would fervently relate: "I'm the toughest, wildest killer in the West. When I'm hungry I bites off the noses of living grizzly bars. I live in a box canyon, where everybody is wild, and shoots so much they fills the ar plumb full of lead, so there ain't no ar to breathe. The further up the canyon you goes, the wilder the people gits, and I live at the very top end. Whoop!" If tenderfoots continued their presence, Jim would persist in this strain; and perhaps, because of him, a diary or two would receive the entry "Saw to-day a real Western 'bad man.' He carried two large revolvers in holsters which hung, one just above each knee. This marks him as being what is called a 'two-gun-man,' and a person who 'totes his weepens low.'" If only Westerners were auditors, Jim soon would quit his oratory, go to sleep, and snore himself to peaceability.

However, the cowboy insisted on choosing his own time to "wild up," and he hated the idea of "wilding up" to order.

One day, in 1889, there squatted in a circle upon the station platform at Pocatello five cowboys, who, bound eastward with a bunch of live stock, had paused for a bite of luncheon. Each of them displayed a puncher's full equipment, including "chaps" and gun. One of them, their foreman, Ed Peters, was an amazingly fine rider. The other men were almost of front rank. At the moment the five punchers were doing nothing more "wild and woolly" than to eat canned peaches out of five cans, to include among the feasters a local very wistful-looking little girl, and to affect great interest in her battered dolly's precociousness as prattlingly alleged.

There rolled from the southward into the station a train for "American Fall, Nampa, Baker City, The Dalles, Portland, and intermediate points. Stops here twenty minutes," but the cowboys' interest was absorbed by peaches and the owner of the dolly. From one of the train's Pullmans alighted two young and comely women, a self-confident cub male, and a stout elderly, austere female.

The young women and the cub male, each carrying a camera and clicking their way among the station's populace of disdainfully inquisitive townfolk and seemingly imperturbable Indians, came upon the cowboys. Click, click, click, this for a dozen times, and punctuated with "Aren't they interesting!" "Right out of a book!" "I think that one over there is the most picturesque." The punchers did not counter. They merely writhed and grunted and lessened their talk to dolly. Then the cub male authoritatively volunteered: "You men move into a straight line. The ladies want to take you that way." Ed Peters, one of the quickest shots on the northern Range, quivered, glanced at the cub male, serious-faced in his position of general manager, glanced at the young women, serious-faced in their perpetration of a nuisance, grinned, and ordered: "Let's git in line, fellers."

Quietly, save for the jingling of spurs and the scraping of feet, the men moved as requested, and resignedly were clicked standing, and then squatting.

The men had not yet risen in compliance with the young cub's next dictum: "Say, this looks too peaceful. You men draw your guns and brandish them," when the stout female bustled up in answer to "Mother, come here. We've found five, real, live cowboys." Mother looked, sniffed, said, "I'll have to change my spees," looked again and uninterestedly observed: "Humph. Fancy. They're playing with a doll. And as for those hairy overalls, they suggest vermin."

Ed Peters shot out sotto voce to his companions: "Ten minutes more of this! Not on your life." Then he rose to his full height of six feet three, doffed his wide-brimmed hat with courtly

flourish, and commencing with honeyed voice: "Beg pardon, ma'am, for speakin'," he continued with a howl to his companions: "Whoop, playing with a doll and full of vermin! They wants our real selves. Rise up, you murderous devils, and raise immortal h—l for the ladies."

The audience fled. The punchers bowed solemnly to their little guest, mounted, and rode out into the lava beds. And, as they started, there floated back Ed Peters' wail: "Oh, why didn't that old one wear pants! Why didn't it! Oh, if it had been a man!"

Buffalo Bill learned better than to display his cowboy posters in the West without marking them "The West as the East Sees It." He might even have marked them "The West as the Movies See It." For the "Wild and Woolly" is extinct, or so nearly extinct as to be grossly, absurdly unrepresentative of the West, and to-day Mr. Rollins uses the past tense throughout, quite properly. For example, when he reminds us that

The cowboy was not always called "cowboy." He everywhere was equally well known as "cowpuncher" or "puncher," "punching" being the accepted term for the herding of live stock. In Oregon he frequently was called "baquero," "buckaroo," "buckhara," or "buckayro," each a perversion of either the Spanish "vaquero" or the Spanish "boyero," and each subject to be contracted into "bucker." In Wyoming he preferred to be styled a "rider." To these various legitimate titles, conscious slang added "bronco peeler," "bronco twister," and "bronco buster." He was a cowboy or cowpuncher whether his charges were cattle or horses. There were no such terms as horse-boy or horse-puncher.

As Mr. Rollins goes on to say, a great deal we have been told about the cowboy was sheer humbug, always—especially the accounts of his having been a walking (or rather, a riding) arsenal. Rare, indeed, was the "two-gun man."

When one recalls that the gun actually carried, when one was carried, was the forty-five or forty-four caliber, eight-inch barrelled, single-action Colt's revolver, weighing two and a quarter pounds, and that its ammunition weighed something in addition; when one recalls also that the average cowpuncher was not an incipient murderer, but was only an average man and correspondingly lazy, then one realizes to be true the statements that the average puncher was unwilling to encumber himself with more than one gun, and often even failed to "go heeled" (armed) to the extent of "packing" (carrying) that unless conditions insistently demanded.

Moreover, the cowboy had other interests in life beside shooting at newcomers' feet. The employment of the pistol either as a means of admonishing strangers' feet or inviting them to dance, or else as an instrument for snuffing barroom lamps occurred so extremely rarely as to have amounted to little more than the foundation for amusing legend, but it has become in the novel one of the cowboy's diurnal functions. Indeed, there are few instances on record of the cowboy's taking a shot at his arch-enemy, namely the cook. For that matter, as we read on:

The puncher rarely complained. He associated complaints with quitting, and he was no quitter. Custom, however, allowed guarded criticisms of the cook, tho these strictures were made with an amusing risk. Whoever ragged the cook was subject to be impressed by him for twenty-four hours as an assistant or a complete substitute. Out of this grew the story of the cowboy who, by diplomacy, saved his initial blatancy, for he is reported to have said: "This bread is all burned, but gosh! that's the way. I like it!"

Still, Mr. Rollins is far from denying that on occasion the cowboy could be a good deal of a terror, sometimes beneficially, as in the case of Vic Smith:

Vic Smith, idolized in Montana and Wyoming, had no fear of attack by man or devil, for his marvelous accuracy with gun and rifle was known throughout the cattle country. There floated from nowhere in particular and into Charley Scott's saloon at Gardiner, Montana, a long-haired and quite drunken stranger, who presently became obnoxious. The instant after the stranger had completed his announcement that, as soon as he had swallowed his liquor, he intended to wipe Gardiner from the map, the door opened and a head stuck in with a cheery "Hulloa, boys. Just struck town." At the cordial answering, "Hulloa, Vic Smith, you old," the stranger fairly howled "Vic

Wadsworth Cases

MAKE WATCHES BEAUTIFUL

Choose with care the watch
for bride or graduating youth

*A dependable movement in a WADSWORTH case
will stand as the enduring mark of your regard*

COMES now the orange-blossom time, when man and maid go forth as bride and groom. Now, too, the classroom sends its youth into the world.

And in this group there's one most dear to you—whom you will want to gladden with a gift.

Consider, then, a watch—the gift that will stand through future years as a faithful reminder of your regard.

But choose with care, first a movement of undoubted dependability—for therein is the test of usefulness.

Then, to protect this mechanism from the inroads of dirt particles, choose an exactly fitting case—a case which, too, will lend such beauty to the watch as will reflect the spirit of your giving.

Such are the Wadsworth cases pictured here. Products of the highest watch case artistry, they are built to add protection and a beauty unexcelled to the delicately adjusted watch movements. And there's a Wadsworth case well suited to your taste and means.

*The watch—a product of
two industries*

With great skill the movement maker constructs the movement, an intricate mechanism for the measurement of time. But, for the completion of the watch he now turns to the case maker, who employs such artistry in the designing of the case as will make the completed watch a beautiful article of personal wear.

Thus it is that for thirty years Wadsworth cases have dressed and protected the watch movements of leading manufacturers and importers. Many of the most beautiful, most popular designs with which you are acquainted are Wadsworth creations.

When you buy a watch, select a movement that your jeweler will recommend and insist that it be dressed in a Wadsworth case. The Wadsworth name is your assurance not only of correct design but of the finest material and workmanship.

"Controlled Heat"

for the smallest home
for the biggest building

WHEN you enter a friend's home on a cold winter day, what is your first impression? Isn't it the *atmosphere*?

If it is comfortably warm there is a *coziness* and a *hospitality* that invites you to stay awhile.

Your friend also is cheerful and friendly because of the wholesome warmth you enjoy every minute of your stay.

But if the atmosphere is chilly your reception is chilly and your stay is a frigid and formal one of short duration.

Hoffman Controlled Heat means a cozy, comfortable heat that is always just right, every room just as the occupant of that room wants it, because Hoffman Controlled Heat is *Steam Radiator Heat* with the heat in the radiator controlled with *one finger*.

Just think of it—the *temperature* of your room under one finger control. Not too warm—not too cold and the pressure of one finger does it.

Baby's bath in the Nursery—temperature 80°. Living Room 70°. Bed Room 60°

One finger does it.

That's Hoffman Controlled Heat—Comfort Heat.

The Hoffman "Watchman of the Coal Pile" goes right along with Hoffman Controlled Heat. He sees to it that you get full value for every pound of fuel burned.

But we have a booklet, "Controlled Heat," that tells you all about this Wonderful Hoffman Controlled Heat for big or little buildings. Just send a postal to our Waterbury Office and it will come to you free, in the following mail.

Smith. My——! Vic Smith!" and jumped through the window, at which Charley Scott, one of the finest men who ever "tended bar" in all the West, lost a thoroughly worthless customer and a perfectly good window-sash.

In the cowboy, as Mr. Rollins pictures him, there was a wealth of tender sentiment along with all this roughness. He loved his horse:

In little corners of the West, under spreading yellow pines, or amid the pinons, or at the points of aspen groves, not with extreme infrequency, appeared boards, or else slabs of slate, either of them rudely inscribed by heated iron or by scratching metal point. Their legends varied with the stories they had to tell, often were illiterately phrased, but occasionally disclosed assistance by some scholar among the regretful cowboy's friends. Three of them read respectively as follows:

JIM

a reel hors

oct 1, 82

HERE LIES

"I'M HERE"

The Very Best of Cow Ponies,

A Gallant, Little Gentleman

Died on this Spot, Sept. 3, 1890.

HERE LIES

"WHAT NEXT"

born 1886, at———

Died July 16, 1892, near Ft. Washakie, Wyo.

He had the Body of a Horse,

The Spirit of a Knight, and

The Devotion of the Man

Who Erected this Stone.

But the same cowboy hates a mule, and lavishes bad language on him, as here related:

An Eastern woman, riding on a forest-girt Wyoming road, rounded a corner and trotted into the full blast of blasphemy flowing from the lips of the driver of a bogged mule team. The moment the driver saw the woman, he curbed his tongue, and apologized sincerely and in these very words: "Excuse me, ma'am. I didn't know there was ladies present. If I had, I wouldn't a swore. Hi there, you mule. Hell's roarings be damned, ma'am. How in hell can a man keep from dropping out a cuss-word now and then when a lot of ——— mules jack-knife on him? Excuse, ma'am. I sure begs your pardon. It just slipt out. Hi there, you lead mule, you ——— !"

However, the cowboy had even his religious side, such as it was:

Tazewell Woody, who, while not a ranchman, but a scout and hunting guide, yet lived in close relationship with ranchmen, was with a companion searching for mountain-sheep. The men had reached the summit of a peak the moment before the morning sun rose from behind another peak, and shot a golden pathway across the intervening field of snow. Woody's companion, with eyes glued to binoculars which were pointed elsewhere, said at that climactic instant: "There's a big ram," and was answered. "Shut up. God's waking."

A MERE MAN ASKS. "HOW SHOULD I LIKE TO BE A WOMAN?"

"I WISH I were a man!" is a feminine sentiment so often delivered, with emphasis and conviction, that most people have become used to it. But whoever heard a man wish that he were a woman? Sometimes, says one inquisitive man to whom this difference in the view-points of men and women particularly appeals, men are asked whether they would like to be women. The man to whom such a question is put always dodges a direct answer, we are assured: he dodges awkwardly, suavely, or flatteringly, according to the degree of *savoir-faire* with which he is endowed. But surely a serious consideration of this question, suggests the inquisitive man, Max McConn, introducing a little article in *The Woman Citizen* (New York), "might be expected to throw some curious sidelights on the status of women." It might be expected at least, some critic may amend, to throw some curious sidelights on what a mere man thinks of the status of women. "For myself," begins Mr. McConn:

I think I might easily have been a woman. I am in no sense a "he-man." My mental and moral attributes, so far as I know them, lie in the neutral region that is common to the two sexes. I am not athletic, aggressive, or taciturn. It is true I am fond of cigarettes; but nowadays I need not forego even that small vice if I wore one short bag instead of two long ones about my legs. There is no "maseuline mess" in my bedroom or study; when I finish dressing or working I pick up every garment, every book and paper, and put them neatly away.

But let me approach the citadel. The innermost core of femininity, if I have rightly understood all I have heard, is "intuition." Bah! I have as much "intuition" as any women I ever saw. No female can beat me in the length of the jump I can make to a conclusion. Of course, my training among men has made me careful to go back and work out a series of steps. But that is camouflage. I don't really progress by those steps. I jump, and let down a ladder afterward. The point is that I am by nature qualified for the discussion of the question before the house. I might easily have been a woman. How should I like it if I were?

There is one obvious aspect of the typical feminine situation that appeals to me strongly. I have said I am not aggressive. That is putting it very delicately. The fact is, I am lazy. Being a man, I am compelled by the conventions of society to earn a living for myself and a family. Which means that I go daily to an office and plow through a rather strenuous mass of drudgery, and I don't like it. It strikes me I should much prefer to stay around the house, boss the maid, look after the baby a little, read the paper and a magazine and part of a novel, make a call or two, take in a movie, consume a chocolate Boston, and go home to dinner. Not bad at all!

Would it satisfy me? I cringe under the scorn that rings in the new woman's tone. Maybe not. But neither does my daily grist of dull dictation, unexciting telegrams, and stupid business conferences "satisfy" me. I should be willing enough to exchange for a while.

In short, on the economic side the status

Since this happened

La Salle discovered the Mississippi, the Declaration of Independence was signed, Bonaparte lived and died, and the steam engine was invented.

It was in the reign of Louis XIV of France that the first iron pipe ever cast was laid in the gardens of Versailles.

That was more than two hundred and fifty years ago. But the pipe is still in the ground—and still giving service.

Cast iron rusts, of course—but *only on the surface*. The film of iron oxide thus formed preserves the metal against further decay, and so far as we know, it will last *forever*.

Engineers know this. That is why Cast Iron Pipe is standard for water and gas mains, and for many industrial purposes.

Your water supply is vital to you. Upon its purity depends your safety against disease—upon its dependability, your protection against fire.

See that your community uses Cast Iron Pipe.

"Pipe and the Public Welfare"—an illustrated cloth-bound book—is full of interest. Sent postpaid for 25c

FOR THE MAN

WHO CARES

And Now Their Cashier Carries a Colt

"They got it all!" he managed to say, and sank into a chair.

SATURDAY A. M. Pay day! At eleven o'clock precisely, methodical John Morse, cashier for Keith & Company, took the small, black bag in which he carried his payroll and hurried over to the Merchants' National Bank.

"One hundred and fifty tens, one hundred and fifty fives, one hundred twos and fifty ones this time, please."

"There you are, Jack," said the teller as he placed the various piles of greenbacks under the wicket, "twenty-five hundred dollars."

John Morse dropped the package into the black bag as he had done on a hundred Saturday mornings before and left the bank.

Five minutes later, breathless, speechless, pale and disheveled, he burst into Mr. Keith's office minus the bag.

"They got it all!" he managed to say, and sank into a chair. "I did my best to save it, but they got it all!"

"Only last night when I read about that

Everett robbery," said Mr. Keith, glumly, "I was thinking 'it might happen to us.' It might happen to anyone—once. But we'll take no chances again. Here, John, run over to Stevens' right now and get the best Colt Revolver they carry. Hereafter you and the payroll will come back together—safe."

The newspapers are full of stories of payroll robberies. It happens every day—everywhere. Yet you need not fear. You can go and come in safety protected by a trusty Colt.

A Colt Revolver may save your money and your life. A small investment for a great protection.

Your dealer will gladly show you various models of Colt's Revolvers and Automatic Pistols.

If you write to the Colt's Patent Fire Arms Mfg. Co., Hartford, Connecticut, they will send you free "The Romance of a Colt," an interesting book sent free for the asking.

PERSONAL GLIMPSES

Continued

of the comfortably married woman seems to me decidedly attractive. Would I give up my "economic freedom"? Should I be willing to be a "parasite"? Why not? Those things are words. "Economic freedom," for a man like me, means "wage-slavery"—or, at any rate, white-collar salary-slavery. A parasite? What I am looking for is some one to be a parasite upon. And merely because I happen to be a man no one will undertake to pay my bills for life!

But what if I were unmarried, or married but not "comfortably"? That, I admit, is different, and the difference leads us into the heart of the woman question.

If in the first minute of my earthly career the doctor had ejaculated, "Girl!" instead of, "Boy!"—should I have married? My thoughts turn unwontedly to my physiognomy. For there is no sense in blinking the cynical fact that a girl's chances of marrying turn principally on the prettiness of her face. I strive to recall the features that confront me matutinally in my shaving mirror. The vaguely recollected image dismays me. It was not, I suspect, such a face "that launched a thousand ships and burnt the topless towers of Ilium."

I try to be optimistic. My eyes are a very decent blue. If I had learned to "use" them? My hair before I lost so much of it was curly. If I had been a girl, my features would probably be more delicate. With a few quarter-inches sliced off my jaw and ears and the skin fair and soft instead of roughened with beard-mowing—I should never have made the Ziegfeld chorus, but I might have passed. Lots of girls no better looking catch husbands.

But I don't want to have to think about my face! I don't want to "use" my eyes! They're *my* face and eyes. Whose business is it but mine what they're like? Alas, if I had been a girl, it would have been everybody's business with whom I came in contact to appraise them, comment on them, criticize them. I should have had to worry about them—"make the most of them."

And I begin to realize that this is only the beginning. Not my face and eyes only, but my whole personality—my figure, walk, manner of dressing, my smile, laugh, tones—would have been subject to similar appraisal. For the simple and sufficient reason that I should have been up for sale—not my services, not my ability to do this or that, but I myself. I should have had to stage and feature my every attribute, to make myself in my own person "charming," "fascinating"! And not in play, mind you, but in deadly earnest, with the deliberate (if not constantly conscious) purpose of actually overpowering the senses and shaking the reason of some poor boob until he should desire and offer to support me for life, for the sake of appropriating my "fascination" to himself!

Being a parasite would be fine, thinks the writer, but the process of getting to be one strikes him as appalling. "I think maybe I'd rather work for a living," he says, and continues:

Of course there would be compensations. It must be highly agreeable to be "fascinating," if one can get away with it. No praise or flattery that a young man receives can be so intimately delightful, so precious and sweet to *amour propre*, as that which is

given to a "charming" young girl. The young man is admired even socially for something he can do—for talking well, dancing well, tackling swiftly and hard, selling goods, or some combination of these accomplishments—but not just for "being himself." He does not hope to be, in his own individuality, "entrancing" or "adorable." It must be nice to be "adorable." Not for anything you ever did or can ever be expected to do, not even because your hair is curly and your eyes are blue, but just because you are you—*you—YOU.*

Still, I don't know. It would be an awful strain, being that kind of a "you." Suppose one didn't get away with it! To make oneself up—face, figure, mind, and soul—to be fascinating, and then be left a wall-flower! That must be more intimately and devastatingly mortifying than any kind of failure to which a man is liable.

I realize that I have never sufficiently appreciated the comfortable privacy of the male in respect to his personality, as contrasted with that fierce light that beats upon the female and blackens every crow's-foot; his glorious freedom from inspection; his relative independence of his own superficial attributes.

But suppose I were unmarried—the modern, independent, self-supporting type. Not so bad, perhaps. I should not have to provide for a family. Only for my own simple wants. I should be excused from ambition. It is so very difficult for a woman to achieve professional or financial distinction that failure to do so is no disgrace. I should escape the nagging comparison with more aggressive and successful competitors which continually pursues me as a man, no matter how plainly I may voice my contempt of their strenuosity. I could be comfortably and respectably a nobody, a cog.

What should I be? A teacher, a librarian, a stenographer? Teaching is hard work, and I am not sufficiently devoted to children. Library jobs are scarce. I should probably be a stenographer—perhaps in the very office which I daily frequent in another capacity. How should I like that? Well, taking dictation must be easier than giving it and only a little more tiresome. And I should be really through at five o'clock; I should not have to take work home at nights. Still I should be doing pretty much the same sort of thing—for about one-fourth the salary. On the whole, I'd rather have my salary than my stenographer's, even if I do have to support a family. There's some fun in having a family after all.

But the worst of it is, I shouldn't have escaped from nagging comparisons—with my friends who got married! I should have to meet continually what must be the most odious of all questions, spoken or unspoken: why hadn't I married? And the cynical unspoken answer in most of the eyes fixt on my poor face would be, because I was not sufficiently "adorable."

This is the phase of the matter that leads me in the end to an answer unequivocal and profane and rude: I should hate like the devil to be a woman!

Economic dependence in itself I shouldn't mind. Under favorable conditions I should even like it. What I could not stand would be the intolerable invasion of my private ownership of my own body, mind, and soul involved in the universal assumption that I must devote them all to the purposes of seduction—must powder and primp and corset, and mince and glance, and smile and smile and be a vampire still. Even after marriage, in order to "grace" society and "retain my husband's affections." Even if

Order Your Ideal Power Mower *this Week!*

Grass cutting time is here! Now is when you should order your Ideal Power Lawn Mower—give your lawn proper care right from the season's start and get full benefit of the big saving in labor.

The Ideal Junior, shown below at left, is exactly the right machine for medium sized lawns. It is a dependable, moderate priced mower that will prove a paying investment on lawns when there is too much grass to conveniently care for with hand mowers.

The 30" Ideal, shown above, is used by more large estates, parks, schools, colleges, hospitals, golf clubs, ball parks, tennis clubs, etc., than any power lawn mower ever built. This sturdy, powerful and simple mower will easily cut 5 or 6 acres of grass per day, doing the work of 5 or 6 men with hand mowers.

Ideal Power Lawn Mowers are carried in stock in all sections of the country. You can get immediate delivery from any of the dealers at the addresses listed below.

Call at any of these addresses—see for yourself the many advantages of these labor-saving machines.

unmarried, in order to be successful (as a woman) in business.

My hair is growing thin. What of it? My waistband augments with the years. That unesthetic circumstance merely adds to my respectability. Am I getting wrinkles about the eyes? How do I know? I never thought to look. Moreover—and this is the point—neither did anybody else—not even my wife. My looks are my own affair. My clothes (within very wide limits), the same. My gait, my laughter, my conversation, my moods, all ditto. I have to do a bit of work, but in all other respects I am free. Free to look and act and be myself, without any artifice, any play-acting.

My most fervent thanks to "whatever gods may be" that I am a man!

And I hearby swear that every "movement," every tendency, in the direction of giving the women of the future the same priceless freedom of personality shall have my support.

JOHN FRANTZEN WAS THE MAN WHO SENT RADIO JESTS OF DEATH

"UNKNOWN, unhonored and unsung," will not be the fate of the jesting wireless operator, lost when the Norwegian steamer *Grontoft* went down with all aboard in one of the March gales that swept the mid-Atlantic. The man's bravery was mentioned in cables at the time, but nobody knew his name. Investigation by a New Orleans newspaper reporter at the Norwegian consul's office in that city has disclosed not only the name of the radio jester, but also a curious and apparently significant curse against the schooner, scribbled on the walls of the narrow corridor near the consul's office. John Frantzen, a Norwegian, 26 years old, second mate of the ship, was the radio operator who stuck to his key, sporting with death, until *Grontoft*, her life-boat smashed, went down stern foremost, with all on board. On the same ship, it develops, there may have gone down another man whose death was almost as dramatic, if far less heroic than Frantzen's. This man, it is believed, drew a picture of the *Grontoft* on the walls of the corridor that lead to the Norwegian consul's office, and wrote underneath his sketch: "We wish you a happy voyage to Hell—if not this summer, then next year." Superstitious sailormen of the Southern city say that the fate of the *Grontoft* was foretold in this message on the walls of the corridor.

The New Orleans *Times-Picayune* tells both of Frantzen and of the curse against the ship which later foundered in mid-Atlantic. Beginning with the hero in the case, we read:

A carefree sailor, the life of the *Grontoft* crew, Frantzen was betrothed to a Norwegian girl of Esjburg, whither the ship was bound with a cargo of grain from New Orleans, it was learned Thursday. Her grief will be shared by wives and sweethearts of the other members of the crew, nearly every one of whom were Scandinavians.

Frantzen went bravely to a sailor's death, a smile on his face and a half-ticked joke speeding into the ether from his key, sustaining to the end the traditions of Norse sailormen for whom Neptune has no terrors. This was shown by the radio log of the Danish steamship *Estonia* to which Frantzen flashed S. O. S. calls, punctuated with wit. The *Estonia* was unable to reach the *Grontoft* in time to be of service. Not even a piece of wreckage was found.

On the kalsomined wall outside of the office of the Norwegian vice-consul was discovered Thursday a pencil sketch, artistically done, of the *Grontof*, and beside it the well-lettered name of "J. W. Hawkings," who drew it. On the other side of the narrow corridor written in Norwegian was the following ominous curse scribbled against the *Grontoft's* fate:

"We wish you a happy voyage to Hell—if not this summer then next year."

"Hawkings" was the pseudonym used by a member of the *Grontoft's* crew who feared his identity might be learned, according to L. K. Gjertsen, secretary to W. W. Young, Norwegian vice-consul.

Mr. Gjertsen said Thursday he remembered the radio operator Frantzen well. He said Frantzen came frequently to his office for mail and sat laughing and joking with him. The wireless operator looked younger than his 26 years, had the typical Norwegian blond hair and blue eyes, and became known as a wit, he said.

One day Frantzen told the secretary of a little girl who awaited him in Norway. The Norse sailor's eyes sparkled and his face glowed as he pictured his fiancée and glanced at the calendar to note the days before the *Grontoft's* sailing date.

It was the same day that "Hawking," the pencil artist, led a gang of ten men from the *Grontoft* to the vice-consulate's office to complain of bad food in the ship's mess. The men were loud in their denunciation of their "chow," and demanded that the vice-consul take the matter up with their captain, O. O. Westhassell.

During the protest meeting, "Hawking" went into the hall to leave in sketch and inscription his opinion of the *Grontof*, thinking little he was bringing a curse on his own head, for it is the belief of Secretary Gjertsen that "Hawking" went down with the *Grontoft*, for whose death he penciled a "voyage to hell."

"It seems strange, that picture, the inscription and my talks with Frantzen, the operator," said Secretary Gjertsen. "If I were superstitious, there surely are grounds in what I experienced in connection with the crew to believe the fate of the *Grontoft* was foretold here in this corridor."

There also was written on the corridor wall by "Hawking" the title "Captain of the *Grontoft*," under which he had evidently intended to draw a caricature of Captain Westhassell, but left the sketch undone.

Down along the dock fronts, in the Seamen's Bethel on St. Thomas Street, and especially in the Norwegian Seamen's Mission in Magazine Street, seamen Thursday were discussing the fate of the *Grontoft* and the operator Frantzen, who laughed at death as his ship went down. Theirs was a warm eulogy of the happy-go-lucky Norse sailor.

A. Gjertsen, manager of the home, and father of the vice-consul's secretary, remembered Frantzen and spoke highly of the operator, as did his other son, H. G. Gjertsen, who made repairs on the *Grontoft* while the ship was in New Orleans.

At the Norwegian Mission was P. Sundstrom, who was "paid off" from the *Grontoft* here. He counted himself lucky Thurs-

From Washington to Boston in half a second

THE day this horse starts its ultra-express service between Washington, Philadelphia, New York, Boston and points north and west, the nation starts to save 50,000,000 tons of coal and 500,000,000 dollars a year.

This is an electrical horsepower, rushing at the snap of a switch to answer somebody's call for light or power. The course over which it will travel, if present plans develop, is to be known as the Superpower System—designed to connect a vast area into one closely knit electrical community.

For the 25,000,000 people who live in the area in question, the Superpower System will mean a bigger and better electric service—just as similar systems already in operation have improved the service in various south-eastern, middle-western and Pacific coast states.

But for every American this proposal has a significance; it is one indication of a condition true the country over. The electric light companies are working to improve your service; they are developing far-reaching projects, and planning ahead five, ten, twenty years.

The need for this work bespeaks a growing demand for service—an assured market for what the electric companies have to sell.

This is another way of saying that the securities of these companies are, as a class, sound. You can make a wise investment and at the same time help a work which will help you, by buying some good electric light security.

day that he had left the ship. On the steamship *Gunny*, moored at the First Street dock, Johan Petterson, also "paid off" from the *Grontoft*, was equally happy.

ENGLAND'S "ADULT SCHOOLS" FOR WORKING PEOPLE

SENDING the working classes to school is England's latest notable experiment. They are not going to school, these grown men and women, to learn how to earn more money, to improve themselves in their trades, but simply for the good of their minds and souls. They study Greek history, poetry and philosophy, among other things. Fifteen thousand of them, men and women toilers day after day, who had no opportunity in youth to acquire the rudiments of an education, have taken a three-year course in tutorial classes. There are miners and factory hands among them, says Forrest P. Hull in the *Boston Transcript*, "who, it is said, care not a twopence about increasing their wages, living in larger houses or wearing finer clothes, but who can discuss Greek history with men like Alfred Kimmern, Greek poetry with Gilbert Murray, and Greek philosophy with men who spent most of their lives in research." Is such a movement likely to do much, he asks, toward solving the problems of labor and capital, and lifting politics to a higher plane? He replies:

To hear of this movement from Albert Mansbridge, the originator and energizing force behind it for years, is to become convinced that the British Empire is close to a renaissance in labor and politics. Educators, government officials, labor unionists and employers have watched the spread of educational enthusiasm with curious eyes, and there is general sentiment in England that the nation is being greatly benefited.

Mr. Mansbridge makes no bombastic prediction. All he cares to say is that "England is seeing to it that in the rise of her working men and women to power she is not to have an uneducated democracy."

There has been wide-spread interest in Mr. Mansbridge's visit to Boston to deliver lectures at Lowell Institute on "The Earlier English Universities." Few men in educational work have had such varied training. From 1906 to 1913 he was a member of the consultation committee of the board of education; then for two years he served on the Prime Minister's committee on teaching and modern languages; the following two years he was a member of the ministry of reconstruction commission on adult education. He has just completed his work as member of the royal commission on Oxford and Cambridge and as a member of the advisory commission of the board of adult education.

In the war Mr. Mansbridge served as educational expert to the British and Australian armies. In 1913 he went to Australia where he united the universities and organizations of working men and women in every state, returning through the United States. Owing to ill-health he was obliged to resign as secretary of the Workers' Educational Association, which he

founded. Later, however, he founded the movement of a central library for students and the World Association for Adult Education, which has membership in thirty countries. Growing out of that movement was the experiment of the seafarers' education service. Later the British Institute of Adult Education was founded.

All this activity has been accomplished without the aid of a university education. Mr. Mansbridge was the son of a carpenter who lived in Gloucester. The family moved to London when the boy was five years old. At school he made wonderful progress, but his father decided that he must take his place in the world at fourteen. He obtained a position in a merchant's office, where he earned a few shillings a week. A visit to his old home in Gloucester gave him an inspiration. He had gone to the cathedral at evensong. The eloquence of the preacher and the beauty of the service made religion from that moment the master passion of his life. He heard of university extension lectures and began to attend them. At eighteen he was a licensed lay reader in the diocese of Rochester, continuing his work in the civil service and editing a magazine. At that time he married.

The Workers' Educational Alliance began with two members—Mr. Mansbridge and his wife. They solemnly paid their subscriptions and got to work, agreeing that no educational scheme was worth while which can't be started on half a crown a week. They planned no campaign for subscriptions. Their idea was to go about England and get working people interested to start branches on a small scale. They found people hungry for something, and they felt that there was some great eternal force at work, and that all they had to do was to get out of its way.

"We knew the people wanted education and our business was to supply it," Mr. Mansbridge says.

Mr. Mansbridge has said that in all his work he has stood outside politics. He would have no mistake made about the spirit that founded the Workers' Educational Alliance. From the very first those who founded it and those who joined it were inspired by a love for the pure, the beautiful and the true. It was a glorious movement, he says, because of this spirit.

"I hate cleverness [and knowledge]," Mr. Mansbridge says. "I hate your intellectual men; I hate all the pedantry of the mere brain. What I am after is wisdom. Wisdom is independent of knowledge, in the sense that the carpenter is independent of the tools he creates. Knowledge without wisdom is inimical. It spoils the man."

"I've no time to waste helping people pile up facts. All over England you will find men and women working long hours at low pay, treasuring in their soul as the most precious possession of their lives this yearning after spiritual perfection. They don't join our classes to improve their positions, to get higher wages, to climb into another social set. They join the classes, making tremendous sacrifices, because they desire more light in their souls and a greater warmth in their hearts."

"The whole romance of the Workers' Educational Alliance lies here. It has proved to the world that our democracy is disinterested and spiritual, that it is not materialistic and gross. Our members are the apostles of a new state—a Christian state in which the grabber and the profiteer and the sweater will find it impossible to breathe." The tutorial classes have received the highest encouragement from the universities of Oxford and Cambridge.

Too much air!

and your car rides like a truck with solid tires

Not enough air!

*and you weaken the side walls of your tires
and lose mileage*

When you are not sure of the amount of air in your tires, the chances are you have too little.

It doesn't take very long for "not enough air" to do a lot of damage to the carcass of a tire—weakening the fabric or cord construction.

Own a tire gauge and know how much air you are carrying in your road tires and your spare.

Don't depend on borrowing a tire gauge. You seldom borrow a gauge until you are afraid you need air. Maybe you have needed air *for days*. If so, you have been injuring your tires for days.

The Schrader Tire Pressure Gauge costs \$1.25 and with proper care lasts for years. It is compact, accurate, and easily read.

Own a Schrader Gauge, use it, and you will save its price many times in mileage. Sold by garages and auto supply dealers.

A. SCHRADER'S SON, Inc., Brooklyn, New York

GASOLINE GYPSYING

THAT EVEN a six-months-old babe can be taken along with perfect comfort and safety—comfort and safety of the babe, we assume—is the boast of an enthusiast who calls autocamping The Permanently Popular Vacational Institution. The capitals are his, and enliven an article on "Family Gypsying," by Mr. F. E. Brimmer in *Outing*. The enthusiasm is also his, tho shared to-day by a large and rapidly increasing tribe of gasoline nomads, who agree with Mr. Brimmer that—

There is just one place where you may spend your vacation just as you choose, where you like and when you please; the Highway.

The autocamper is a feudal lord with the world all his own. His castle is his automobile or camping trailer. His serving vassals are scores of camping conveniences. His manorial domain stretches as far as automobile roads penetrate.

Automobile camping is vastly different from any other style of outing, and is *never* "roughing it." You take home and loved ones with you when you autocamp the highway and you make your roadside home as cozy and homelike as the domicile that you left behind.

Instead of looking at pictures of beautiful landscapes under the reading lamp in your home, why not take your domicile with you into the beauty spots themselves? You can't get much of the Yellowstone moved into your home, but you can set up regular housekeeping in the Yellowstone. The National Parks and Forests of the West, the mountains and recreation regions of the East, and the mild winter climate of the South all invite you to move the Mountain to Mohammed—move your vacation home into their midst.

For gypsying by automobile an adequate tent is one of the first articles selected for the outfit. Canvas and balloon silk

are the two most popular materials; canvas being heavier but costing more than the balloon silk. You will not find a thread of silk in any balloon silk tent you inspect, for it is merely a very closely woven cotton fabric that has been subjected to a very exacting wet-proofing process. The best weight canvas tenting for autocamping is eight or ten ounce material double filled and standard twenty-nine-inch width. It should be waterproofed.

There are styles and sizes of tents of both balloon silk and canvas almost without number that may be made to serve for a tent home. The wall tent is a good, old standard tent, but it does not readily attach to your car and it has the great disadvantage of requiring long and heavy tent poles for its erection. The most simple tent is the lean-to, which merely attaches to the top of your car and pegs to the ground at its lower side. The shed tent, which is a wall tent cut lengthwise in half, makes an excellent autotent, for its ridge may be attached to the car top and no tent poles are required.

To meet the demands of family autocamping there have been constructed many styles of tents purposely for use with the automobile. Some of these attach to one side of the car, others to both sides, and the remainder may or may not be attached to the automobile as you choose.

The points of a good tent, Mr. Brimmer tells us, are (1) a maximum of floor space; (2) plenty of head room; (3) moderate weight; and (4) a minimum demand on space. Specifically,

Select a tent that has a maximum of floor space with plenty of *head room*, one that is not too heavy, that may be erected with little trouble, and packs in a minimum of space. For a family of four to six the tent should weigh from forty to fifty pounds if canvas, while the balloon silk will be a third lighter. Its floor

WHEN AUTOMOBILE GYPSIES GET TOGETHER.

Automobile "house-boating" has become so popular that there is now an organization of "Tin-Can Tourists." Here they are at a jubilee held at the Gainesville, Florida, camping-ground. Many cities and towns now have camp grounds for motor tourists, especially in resort regions.

illuminate the camp, and then comes to that much-debated subject, the trailer:

The camping trailer is fitted with two double beds with springs, mattresses and pillows. Over the opened trailer camp is a folding frame supporting a canvas tent. The food compartment and ice-chest is under the floor. Gasoline stove, folding chairs, and the necessary camp conveniences are packed about the trailer. The loaded trailer weighs about eight hundred pounds.

After all, the style of outfit one selects for automobile gypsying is a secondary matter. The first requisite is the philosophy of the campers. Children are natural gypsies and they will be ready as quickly as little Indians. Youth likes the smell of adventure, the charm of new surroundings and the exotic, and as a last resort mature age—perhaps under the disguise of seeking health—feels the same lure to autocamping.

Throughout the West and in the large cities and many of the towns and villages of the East and South you will find municipal Motor Camping Parks ready for your tent. Denver, Colorado, has set the example for others to follow. Two years ago this city purchased one hundred and sixty acres along the Platte River, and Overland Park is the result. This park has eight hundred camping lots, each twenty-five by thirty-five feet, located so that no camper is more than one hundred and fifty feet from a city water hydrant. Your camp in Overland Park may be lighted by the city electric current. A large, three-story clubhouse in the park is a headquarters for municipal grocery store, meat market, kitchen, grill and luncheon counter, steam-heated table from which food is dispensed, billiard-room, barbershop, reading-room, separate men's and women's lockers and showers. A parking garage, filling station, and motion-picture theater offer themselves for the use and recreation of the automobile gypsy. And still there is plenty of shade and real outdoorsy atmosphere in this municipal park. For half of the one hundred and sixty acres are wooded with maples and cotton-wood. Denver is merely cited as a sample of the thousands of Motor Camping Parks in every section, including Canada and our National Forests and Parks.

On long autocamping trips one need never fail to spend the night at a public camping park if he wishes. There are also plenty of other camp sites. Everywhere there are schoolyards offering their welcome. We have camped many nights by permission in farmers' fields or door-yards. Everywhere there will be found along the highway either State or Federal holdings where you are permitted to pitch camp. Your automobile clubs are recognizing the difference between the automobile *tourist*—who pilgrimages from hotel to hotel—and the automobile camper. Hence you will find plenty of data covering camping facilities in any locality. Map-makers and tourist booklet publishers supply this same information specially prepared for the automobile gypsy. The United States Forest Service, Information Department, Washington, D. C., has compiled the data for service to campers in the National Parks and Forests, mainly in the West, but a few in the East. The chambers of commerce in many cities are giving special instructions or assistance to autocamping. Many of them, like Denver, have established Tourist Publicity Bureaus.

Writing in *Outdoor Life*, Mr. Brimmer goes into detail regarding the camping |

MOTORING AND AVIATION

Continued

ailer, that "movable home on wheels." he asserts,

With a trailer tagging along in the rear, noticed and forgotten, the motor camper simply banishes every care and is virtually a tourist. His car is not loaded with out-gear, his running-board is free from duffle, and unless he looks behind there is no evidence that the excursion is more than a touring trip. When meal-time or night comes, the autocamper remembers with a start that his home is right behind his car. One would not expect to pull a trailer, weighing 700 or 800 pounds, with a car that was only little more than twice as heavy as the trailing load. In other words, you need a heavy, or medium-heavy, powerful automobile. This does not mean a six-cylinder, necessarily. There are a great many four-cylinder cars that are pulling trailers successfully. I have found that gasoline consumption is increased from 4 to 10 per cent. with a trailer. There is no way to determine whether oil or tires are used to any greater extent, but, of course, the slightly added wear exerted must have a slight tendency to increase the depreciation of the tires and the consumption of lubrication.

Nobody will say that a trailer puts too much of a strain on his car. In deciding between a trailer and a car outfit you must remember that when you are told that the trailer increases the consumption of gasoline, say 5 per cent., this is concerning the fuel burned by the average automobile.

Remember that a mule can pull much more than he can carry. The same is true of your automobile. So it makes little difference in actual gas consumption whether you *burden* your car with a 400-pound outfit, carried in and on your automobile, or *pull* an 800-pound trailer. Both experience and the laws of physics will agree with me out. Figured from the standpoint of increased cost in the operation of your car, the trailer *will not* cost any more than a car outfit that is half as heavy carried in a tonneau and on the running-board.

Mr. Brimmer is aware that his plea for the trailer may fall upon skeptical ears, so he hastens to deal with the arguments often brought forward against it:

There are three standard objections to the camping trailer: one is the difficulty of backing; second, the limited space afforded; and the other is the bugaboo of increased running expenses and the lug on the ear when in hilly country. In the first place one can reverse with a trailer if he will always remember to judge where the trailer is going by the position of his rear wheels. That is, to back around a corner with a trailer you must first get the trailer going as you want it by causing the rear wheels of your car to throw in the *opposite* direction. There is one thing to remember, and the rest is practise: turn your front wheels in the *opposite* direction that you want the car to go until the trailer starts, then right your automobile. But you back up but little. And remember the thousands of commercial trailers in use; if this backing bugaboo was so serious they would not be a success. And if you don't want to back your outfit, unhook the draw-bar of the trailer and turn it by hand—an easy task.

The second popular objection, of limited space afforded by a trailer, is not a real objection at all. The roof over your heads is plenty large enough—nobody at the start expecting any surplus room. And in fair weather your dining-room and kitchen and living-room are not inside your trailer necessarily, but out in the fresh air under the shade of a tree. You always have your automobile for a second "room," too. Most car outfits will present the same lack of space that any trailer does. Nor will I admit that that is a *real* limitation that hampers living-quarters in any camping trailer that I have ever seen. If you want more room than the trailer itself affords, for large numbers of people, say six or eight, then take an extra tent and accommodations.

The third popular objection, viz., that the trailer is too much of a load for your car, has already been disproved, provided you use a heavy, powerful car. Indeed there will not be any more strain when pulling a good trailer than when using a car outfit.

If a camping trailer looks good to you, do not hesitate. I believe that this outfit will prove more and more popular every year. It is like buying a completely built and furnished bungalow, compared with obtaining the parts independently and building the house for yourself. The trailer is the ready-built and furnished home, the car outfit the home you build for yourself.

TRAIN YOUR EAR FOR ENGINE MUSIC

NO automobilist will deny that "a trained ear is the best asset when the engine knocks," as it takes skill to detect the cause of the trouble and tell which of the mechanism's various parts is worn out or needs readjustment or has been broken. But how to train the ear? In the *American Automobile Digest* (Cincinnati), Mr. Frank E. Lockhal remarks that

In the location of the peculiar noise which an engine gives rise to when certain of its parts fall out of perfect relationship with each other, nothing counts quite so much as experience. An experienced ear can detect and locate the cause of an unusual sound in one-tenth the time and with much greater accuracy than the inexperienced one.

It is for this reason that in the operation of a garage, repair shop, or service station, specialization on one or two makes of cars is distinctly worth while. A repairman, for instance, who has put in much time on the cars, repair and adjustment of one particular make of car may be totally at a loss to recognize the cause of even a pronounced knock on some other make on which he has had little or no experience and whose little peculiarities are unknown to him.

It so happens, therefore, that where specialization on one or two makes is not the by-word and where the mechanic or mechanics have not been keyed up to the most efficient point on any one make of car, a whole lot of time is wasted in locating faults which the trained man—the specialist—would have found with no trouble and in short order.

As a general rule, both the character of the knock, its frequency and its regularity or lack of regularity are the chief guides used by the thorough-going repairman in determining its location.

By character is meant not only the intensity of the sound, but also its timber. In some circumstances, for instance, the

My dear Mr. Gillette:

Your letter of March 30th received. I have used the new razor constantly ever since you sent it to me and it has given me the greatest satisfaction. It is infinitely better than the old one. The question of adjustment was always a troublesome one to me. Now I keep it screwed down tight and have not the slightest difficulty. I am well pleased with it and heartily congratulate you upon this invention.

I hope I may have the pleasure of seeing you soon, to renew our old acquaintance.

With kindest regards, I am

Sincerely yours,

Chas. M. Schwab

More about Water

It is a curious trait of human nature that no one likes to follow directions.

How many times have you been lost because you thought you knew better than the road map?

Or, to be more specific, have you ever read and followed the instructions which come wrapped around each tube of Mennen Shaving Cream?

Of course, Mennen's will give great results no matter how you use it, but just the same you will never experience the perfect Mennen shave until you obey the rules.

These instructions (I wrote them myself) say to use three times as much water as you formerly used with old-fashioned soap. Yet, so far as my observation goes, most men use only the first brushful of water and, as a result, get a thin coat of whitewash instead of the heavy bank of lather they could build up if they would only use a lot of water.

Now, this extra water has a lot to do with putting your beard into a proper condition to be shaved.

One reason why Mennen's is so much better is because its lather holds so large a quantity of water.

Please do it my way just once. Start the lather on the point of your chin and gradually spread. Then keep adding water—a little at a time. It is amazing how much water you can pack into Mennen lather. Until you have exposed your beard to a three-minute, complete saturation with Mennen lather, you will never know the joy of operating on a thoroughly licked beard.

Just to fill up the column, I want to plead with you to learn what comfort there is in Mennen Talcum for Men for after shaving and bathing. It is neutral in tone and doesn't show. I'll send samples of Shaving Cream and Talcum for Men for 10 cents.

Jim Henry

MOTORING AND AVIATION

Continued

engine will give forth very loud pounds, perfectly dead and without ring as to tone. Where these sounds occur periodically, the most likely source of the condition giving rise to the trouble is a loose fly-wheel; if, on the other hand, these pounds occur in no regular manner—that is, they are not timed to occur and reoccur at any set position of the crankshaft—the fault will usually be found to be what we know as “gas knock,” a peculiar heavy pounding condition which arises when the mixture, for one reason or another, becomes excessively rich.

This gas knock, Mr. Lockhal explains, is usually caused by a leaky valve or by a “water-logged” float in the carburetor, faults generally resulting in the coming and going of the knock, which makes it all the harder to locate. As Mr. Lockhal tells us,

The cure, of course, is self-evident. It means simply the replacement or reconditioning of the affected part so that the proper fuel level will be maintained in the carburetor float chamber at all times.

A somewhat similar condition, except for the fact that it is always present and is not recurrent, is brought about by a sticky or ill-adjustment of the carburetor choke, so that instead of returning to normal position, allowing free ingress of the air through the primary air intake, it shuts the air off partially, altho the supply of gasoline remains constant. Under such circumstances, we generally get a tendency to pound, a tendency for the engine to miss spasmodically and also a tendency for it to fall off in power and to heat up.

Going back once again to the character of the sound, we sometimes encounter heavy pounds which have a distinct metallic ring and are not dead in tone, such as are caused by the conditions outlined above. Where we get these heavy pounds with the metallic ring, we can almost always look for bearing faults. Worn or loose main bearings, for instance, more frequently play in one or more of the connecting rod bearings.

Lighter knocks of a ringing character can be attributed to a number of faults, any of which are likely to occur at almost any time with a machine as intricate and as lightly regarded as the average automotive engine.

Loose pistons, for instance, give rise to what we call a piston slap, which is especially noticeable when the engine is started from cold and which may be recurrent with perfect regularity, or, on the other hand, may be of intermittent occurrence, coming and going and varying in tone and intensity.

A loose wrist pin bearing will give a somewhat similar knock which, however, will not be greater when the engine is cold and will always occur with perfect regularity.

As a rule, this noise can be distinguished only once to every two revolutions of the crankshaft. This condition is also true of the connection rod-bearing pound referred to above. However, when excessive looseness in either of these bearings occurs, so much shake or play is established that the sound can be heard once for each revolution of the crankshaft, tho generally on that revolution on which the gas pressures and inertia forces are light the sound will

likewise be subdued in character. Furthermore:

Camshaft noises are generally more in evidence at low speeds than at high speeds, and for this reason it will be found that several of the makers of better class cars, both here and abroad, have adopted means for putting a constant drag or load on the camshaft so that at low speeds the pressure of the valve springs will have no tendency to cause forward motion of the camshaft taking up any looseness in the drive chains or timing gears.

A knock of regular character and sounding about like a piston slap is sometimes caused by excessive end play in the crankshaft. A knock of this kind is very hard to locate.

Piston and bearing knocks, while they generally can be diagnosed from the intensity and character of the noise by a trained mechanic, are sometimes hard to locate with precision.

One of the simplest plans which is quite effective for this purpose is to employ a short rod or even a screwdriver as an improvised stethoscope. One end of the stick is held between the teeth quite firmly and the other is brought into contact with the engine at various points until a point is reached where the noise sounds loudest and the ring is most clear. When this point has been located, it is almost certain that the trouble will be due to looseness in some part of the mechanism adjacent that locality.

This is an operation, again, which requires experience and patience.

BRAZIL OR BUST

THE daring aviators whose seaplane was wrecked on St. Paul's Rock during an attempted flight from Lisbon, Portugal, to Pernambuco, Brazil, may yet complete their adventure, as the Portuguese Government plans to ship them a new seaplane, so an article in *Aviation* informs us. Of their achievement thus far, *Aviation* remarks:

Despite the failure, near the goal, of the two Portuguese naval aviators, Captains Cabral and Coutinho, to link their country via the air route with Brazil, their gallant attempt both deserves recognition and affords food for some thought.

To begin with, the three principal legs of the journey which were completed, of 700, 800 and 900 miles length, respectively, required an extremely fine piece of navigation by compass and sextant. If it is considered that these flights average in length about two-thirds the distance from Newfoundland to the Azores (1200 miles); that the last stopping place, St. Paul's Rock, is a mere speck in the waste of the South Atlantic; and that the two flyers only had the assistance of a few vessels of the Portuguese Navy, the achievement of Captains Cabral and Coutinho will be better appreciated. Even tho they failed to reach the South American mainland, their names will live in the annals of aviation alongside the names of other more fortunate pioneers of the air.

But this 2700-mile flight has still another aspect. The Portuguese transatlantic attempt was more than a mere sporting venture: as a matter of fact it was the first attempt to connect Europe with South America via a workable commercial airway. The route chosen is more favored

That delightful aroma of the pines

THE FRAGRANCE of the pines—
Everybody knows—means health.
You *instinctively* like it.

And men enjoy Packer's Tar Soap for the same reason. Its smell proclaims its invigorating pine tar, which is blended with pure glycerine and soothing vegetable oils.

Your first shampoo with Packer's Tar Soap will stimulate your scalp and begin to give it fresh vigor—new ambition. And you will feel, at once, a brisk feeling of glowing refreshment. Notice, too, your hair's improved appearance.

These first effects will grow more apparent as you continue to use Packer's regularly.

All druggists carry Packer's Tar Soap, but if you like, we will send you a sample of either the cake or Packer's Liquid Tar Soap on receipt of 10c. The Packer Manual "How to Care for the Hair and Scalp"—free on request.

by nature than even the best route across the North Atlantic, by way of the Azores, in that the maximum overseas distance is 900 miles long as against 1,200 for the latter, and in that cyclonic disturbances are less frequent. Hence it is to be expected that the first transatlantic commercial airway will lead from Europe to South America and not to the United States.

We have, some time ago, commented on the projected German-Spanish en-

After a map in the "New York World."

THREE THOUSAND MILES OVER SEA.

Portuguese aviators attempted the longest over-water flight, and accomplished most of it before coming to grief at St. Paul's Rock.

terprise which is to use Zeppelins of a size far exceeding anything built heretofore between Cadiz and Buenos Aires. But this project, which seems to be nearing realization, is not the only undertaking of its kind. The French department of civil aviation has for some time been engaged in establishing the ground organization of a route which will lead from Casablanca, the present terminus of the France to Morocco air line, down the West coast of Africa to Dakar. This work, it is stated, will be completed in about a year, by which time the French expect to have built the machines capable of crossing the South Atlantic from Dakar to Pernambuco, Brazil.

And thus Europe is unceasingly at work to outstrip in aeronautical achievement America, the birthplace of the airplane and of the flying-boat. And yet, three years ago we had in the Navy-Curtiss four-engined flying-boats a type of air-craft which, with some modifications, could have inaugurated an aerial mail service between Europe and South America over the very route flown by the two Portuguese aviators.

In the last analysis this flight should call the attention of American seaplane constructors to the large field South America offers to their enterprise.

The seaplane *Lusitania*, which Captains Cabral and Coutinho were flying, was the special type of Fairey floatplane which was

recently launched in England and which is shown in the accompanying illustration at the moment of leaving Lisbon.

This seaplane is a modification of the Fairey C3D, and has a span of 62 feet and an overall length of 36 feet 6 inches. The engine is a 375 horsepower Rolls-Royce "Eagle" and the fuel supply permits of a continuous flight of 18 hours. At the trials in England the machine developed a high speed of 95 miles per hour with a wing loading of over 10 pounds per square foot and a power loading of 19 pounds per horsepower, and the low speed 48 miles per hour. The weight empty is 4,150 pounds, and the weight loaded 7,250 pounds.

Commenting on the Portuguese flyers' exploit, the *Troy* (N. Y.) *Record* observes that their inability to make a better landing was due to the strong surf and tides:

The disaster to the hydroplane came because of the aviators' inability to make a better landing on account of the strong surf and tides at the islets. Their course, as originally announced, did not include St. Paul's Rocks, and when it was learned that they intended to land there, attention was called to the unfavorable conditions there and the hazards that would be attendant on landing. It is possible that if they had held to their original program of flying from the Cape Verde Islands to the Island of Fernando Noronha, they might have completed their trip to Brazil without changing machines.

The Portuguese aviators, however, have made a brave try for it, and deserve to have the honor of being the first to cross the Atlantic by this course. Already they have crossed a poorly patrolled stretch of 900 miles of water, and merit the congratulations of the Portuguese Minister of Marine on negotiating this much of the distance stretching between the two continents. Their trip, however, has been less picturesque than other transatlantic attempts for two or three reasons. In the first place, it is not the first transatlantic flight. Alcock and Brown, in a British airplane, flew from St. Johns, N. F., to Clifden, Ireland, 1,960 miles, in 16 hours and 12 minutes, a feat that had not been accomplished before and that has not been accomplished since. The United States naval seaplane, *NC-4*, flew from Tepassy, British North America, via

the Azores, to Lisbon, 2,150 miles, in 26 hours, 45 minutes, actual flying time. Alcock's and Brown's flight was the more spectacular, as it was a non-stop flight, and the aviators did not have the elaborate patrol system prepared for the NC-4's flight. The latter, however, was a great undertaking and will remain as one of the notable landmarks in the history of aviation.

The Portuguese have made slow time, an average of 63 miles an hour, compared with seaplane flights like those of the NC-4, or with Clifford Webster, who flew from Palm Beach to New York at a speed of 123 miles an hour. On the other hand, the undertaking of the Portuguese is in no wise to be belittled; it has been hazardous, and only intrepid birdmen would undertake it. If successful, it will mark another mile-post on the road to what probably is to be the eventual establishment of regular transatlantic aerial schedules both for commercial and passenger travel.

That the Portuguese had the odds against them from first to last is the view of the Manchester (N. H.) Union, which points out not only that their plane was small and of limited fuel-carrying capacity, but that—

While Portugal did what it could to help them, it was not able to supply such a string of guiding ships as proved useful in the passage made by the American Navy's NC-4. With easily missed islands as the stopping places on the journey there was need of close navigating, especially as the fuel endurance of the machine promised to give little margin for search at the end of a run.

CARING FOR CHINA'S MOTOR-CAR INFANCY

IF "CHINA is in its motor-car infancy," as one of the standard reference books has it, the infant is not to grow up, apparently, without expert nursing from this country. Before the war European manufacturers were selling the Chinese about twice as many cars as our American firms were. During the war we secured more than 90 per cent. of this business and now, according to official Government statements, about three-fourths of the motor vehicles used in China came from the United States. Americans have in general Chinese good-will, and they have the additional advantage that the American cars recently sold in that country have made good, at least according to our Department of Commerce. Our automobile exporters are confronted with the fact that in dealing with China they have to sell motor cars to people who have no roads. So they have gone ahead and sold cars which have been making successful cross-country journeys, where there are not even paths, until the Chinese have come to the conclusion that if the motors can go first perhaps roads can follow. In a current issue of *Commerce Reports*, Trade Commis-

Is your baggage protected?

From the moment it leaves your home, your baggage is subject to a host of hazards and perils unavoidable in transportation.

A North America Tourist Baggage Policy will protect your baggage against practically every peril of transportation. Such protection costs but little and payments of claims are prompt and sure. Insure by the year.

For full details, fill out the memorandum below and mail it to us today.

Any insurance agent or broker can get you a North America Policy.

sioner L. W. Meekins reminds us that there are only 500 miles of improved city streets and roads in China, and only 1,200 miles of passable dirt roads in the country districts. Partly because of this there are probably not many more than 8,000 motor vehicles being operated in China. But our motor people are not discouraged. They see the good-roads movement advancing in, around, and between the great Chinese cities, and they look upon some 500,000 Chinese officials, bankers and merchants as prospective customers. Generally speaking, we are told, other native classes can not afford to buy cars. In the foreign colony Europeans prefer home-made machines, but there are ten thousand Americans, Russians and Japanese whom Mr. Meekins thinks may be persuaded to buy American cars.

If motor roads are few and short in China, motor fuel is expensive and in some places difficult to get. The price of gasoline varies from 40 cents a gallon in Shanghai to \$20 a gallon in Urga, Mongolia. "Urga receives its supply of gasoline by camel trains across the Mongolian plateau, the fuel being too bulky for transport by the existing motor-car lines which make the distance in one-eighth of the time required by caravans." Mr. Meekins goes on to tell why the Chinese are buying cars and what kind of cars they like:

Regarded at first as a luxury, the motor car is now recognized in China as a necessity for rapid transit in cities, for suburban and interurban communications, for connecting railways with waterways, for feeder lines to railways and water routes, and for temporary use on the graded right of way of railroad extensions before ties and rails are laid.

Another potent reason for buying is the fact that the Chinese like to make an impressive appearance, as the possession of an automobile carries with it exceptional prestige, as the native official or business man who owns a high-powered, richly appointed motor car is greatly respected. Electrical fittings, accessories, and any new, ornate features of practical value make a strong appeal. This liking for display has resulted in an increasing importation of chassis for which bodies are manufactured in China, thus reducing the cost of the car and enabling the purchaser to have incorporated all the special body features he desires.

In this connection it is interesting to recall a remark in the current "China Year-Book" on the insistent Chinese demand for luxurious cars:

Many are buying closed cars equipped with silk curtains, mirrors, Chinese vanity boxes and other accessories which are tabooed in other nations. Colors demanded are reds, blues, light yellows and others that are brilliant and extremely noticeable.

Returning to Mr. Meekins's instructions for would-be American nurses to the Chinese motor infant, we find this statement of the requirements which the car made for the Chinese trade should fill:

Road conditions away from the urban districts constitute severe tests on motor vehicles, and only the most substantial light cars can stand them. Peking's

The Pencil of business efficiency

Clear thinkers write it down. They reach instinctively for their Eversharp, as they would for their watch. At the conference table, in the drafting room, everywhere in the day's work you find Eversharp making its mark smoothly, yet with firmness and exactness that reminds you no other pencil can be like Eversharp.

Efficiency did it! Eversharp is a time-saver; no sharpening, no interruption to your thoughts. Examine Eversharp and you wonder how such mechanical precision can be obtained in such small space.

Many styles in gold, silver and enamel, at 65c to \$65. Matched by the Wahl Pen with the famous all-metal barrel that holds more ink. Sold everywhere.

MOToring AND AVIATION

Continued

frequent dust storms and cold winters make closed vehicles popular. Cars with a short wheel-base and with gears permitting easy change from medium to low speed are best adapted to the city streets, which are narrow and used by a great number and variety of native vehicles. The Chinese are skilled chauffeurs and excellent judges of distance, but because they do not pay adequate attention to the upkeep of their cars, it is essential to make the mechanism as simple as possible.

The 20-passenger motor bus seems to be the most popular type for suburban and interurban transportation.

Taxicabs are gaining favor in Shanghai and Peking, which cover extensive areas and lack other facilities for rapid transit.

A fair number of electric passenger cars have been sold in Shanghai, where there are no steep grades; and this is practically the only type of motor car that to any great extent is owner-driven. Electrics are liked by the foreign community, as the expense of their maintenance in Shanghai is lower than that of gasoline cars; but for the Chinese, who like high speed for pleasure rides, they are too slow.

A few motor trucks are employed in Shanghai for general hauling purposes. Among the users are shipping and forwarding agents, flour mills, lumber companies, publishing houses, the Chinese Post-offices, and the Municipal Electrical Department.

Both the international settlement and the French Concession have motor fire-fighting equipment.

A good market for motorcycles may develop from the fondness of the Chinese for bicycle-riding; so far, however, sales have been limited by the absence of good roads, lack of mechanical ability among those who are able to purchase motorcycles, and the preference of Chinese for riding in parties of five or six that can not be accommodated by a motorcycle with either rear seat or side-car.

Motor boats and airplanes are not yet popular in China, according to the authority we are quoting, in spite of the elaborate system of Chinese waterways and the apparent suitability of the country for aerial transportation. He says:

Apparently China, with 25,000 miles of waterways, should be an excellent market for marine motors; and many of them have been sold in South China and in Canton, where local establishments also manufacture them. The native boatman of the Yangtse river section, however, is reluctant to invest money in a marine motor with a constant appetite for fuel. Furthermore, the narrow canals and creeks in China do not permit speed.

Chinese experiments with airplanes have not been very satisfactory, altho it would seem that a country of such great distances and with only 7,000 miles of railway, aviation would greatly improve communications. The difficulty lies chiefly in the fact that long-distance aerial routes require numerous landing fields, supply stations, and equipment distributed all along the line. In June, 1921, an air-mail service between Peking and Tsinan was inaugurated in order to save 10 hours of mail time between Peking and Shanghai. The extra postal charge on each letter was Yuan \$0.15 (about U. S. \$0.75, at normal exchange).

After a few weeks' trial, however, the service was abandoned.

As airplanes may be used for military purposes, it seems likely that the present political situation may cause the Inspector-General of Customs to place them under the embargo covering importation of arms and munitions of war.

American motor manufacturers are advised by Mr. Meekins that "the good-roads idea will not be thoroughly sold in China until the Chinese can be induced to maintain their roads in good condition." American motor experts should work with and advise Chinese promoters of motor transport, but Chinese financiers should be made use of and Chinese Chambers of Commerce should also be utilized in sales campaign. As far as meeting competition in China itself is concerned, it is observed that altho "there are now thirteen plants building motor-car bodies in Shanghai, and one concern which has manufactured a complete passenger car, there is little probability that China will develop a motor-car manufacturing industry."

Last year less than 600 American cars were exported to China, but the outlook for 1922 is more favorable, particularly in view of the success of the Shanghai automobile show at the end of 1921, which "drew 25,000 visitors and resulted in 120,000 dollars' worth of business."

SAFETY ON THE ROAD

SKULL and cross-bones, with the legend, "SLOW AND CAREFUL!" adorn a sign put up to mark a danger point by the American Automobile Association. It is one of many signs, all standardized, so that they who speed may read. A glance catches the meaning. Other organizations, too, are marking public highways for safety's sake, and the *National Safety News* (Chicago) observes:

Proper safeguarding of the public highways through the posting of warning signs at all dangerous spots is most important in any program for the elimination of automobile accidents, and is a subject to which every man interested in public safety should devote his attention.

Many organizations, especially motor clubs and State highway departments, are doing good work in this phase of accident prevention, but the fact remains that there are still many districts in which there are few if any warning signs to protect the motorist from hazards on roads not familiar to him. A highway should have proper signals at every dangerous hill, curve, and railroad crossing.

The experiences of organizations and State departments who have adequately posted highways with danger signs, as related herein, will be of value to those communities where there is need for this work. The ever-increasing number of automobiles and the resulting increase in accidents call for strenuous efforts toward better highway protection. No road can be termed a "safe highway" until the motorist is warned, in advance, of every danger spot ahead.

Road signs are rapidly becoming standardized. The American Automobile Association has adopted and recommended a series of danger signs for general use by all

Tanks for leaching copper uninjured by solutions that make it necessary to protect the steel hoops with lead coverings.

Tanks that hold hot water and hot muriatic acid without injury.

Tanning vats installed in 1852 and still sound.

Where tank service is severe Redwood has won preference

COPPER leaching, soap making and leather tanning give tanks and vats the severest tests of service. The Redwood tanks and vats shown here have been in service from 6 years to over half a century and they are still sound and good for many years to come.

A natural, odorless preservative which permeates every fibre of Redwood during the tree's growth gives Redwood unusual resistance to the action of acids and alkalies. It also protects Redwood against wood-de-

stroying fungus, boring worms and insects.

Properly seasoned, Redwood does not warp, swell or shrink, and because of the absence of pitch or other inflammable substances Redwood tanks and vats reduce the fire hazard wherever used.

Where dependable service is required, Redwood tanks are most economical. They have earned the preference of many leading industrial engineers.

In every industrial center are established tank manufacturers prepared to give immediate prices and service in the erection of Redwood tanks.

For the convenience of engineers and executives we have issued two Redwood booklets which our Chicago or New York office will gladly forward to you on request. Please ask for our "Construction Digest" and our "Engineering Digest." To prospective home owners we will gladly send our "Redwood Home Booklet."

A Book You Should Read

Of the \$20,000,000 spent in this country annually on insect screen cloth for windows, doors and porches, a large proportion is unprofitably spent. If you want to know how to spend your share more efficiently, read "A Matter of Health and Comfort."

This book explains in detail the advantages of using pure copper (such as the copper 99.8% pure, used only in Jersey Copper Screen Cloth) for screens where permanent protection at low cost per year is desired. It tells what the government recommendations are concerning material and mesh for the most permanent and efficient screens.

In the prevention of the spread of disease by effectively keeping out insects, you can not overrate the importance of using a durable insect screen cloth.

If you can not get Jersey Copper Screen Cloth from your own dealer, write our main office (given below) and we will see that you are taken care of. Stores and agencies in many cities.

MOTORING AND AVIATION

Continued

associated clubs. Makeshift road signs—small wooden boards with crude lettering—which offered a fine target for the passing hunter and the rocks of the mischievous small boy, are disappearing; replacing them are substantial, metal signs to attract the eye of the motorist and give him the information he needs concerning conditions just ahead. The problem of making signs effective at night is solved by the use of flashing light signals or red reflectors which catch the rays from the headlights of an approaching car and warn of "danger ahead." The standard signs recommended by the A. A. A. and reproduced here are

From the "National Safety News."

STANDARD SIGNS OF THE ROAD.

They carry easily grasped and pungent messages—especially the one ornamented by the skull and cross-bones.

Painted black on a chrome yellow background.

Conditions in many localities call for special signs. It is now a general practise to warn the motorist that certain hills should be descended in second gear. A special sign, erected at a safe distance from the brow of the hill, tells the motorist that a dangerous hill is beyond; GO INTO SECOND GEAR HERE, it says. The motorist who heeds the warning gets down the grade without trouble. THIS ROAD IS SLIPPERY WHEN WET, is another special sign of great value to the motorist.

Warnings to speeders have been left principally to local communities and, as a result, many freak signs have been developed, such as, DRIVE SLOW AND SEE OUR CITY—DRIVE FAST AND SEE OUR JAIL. There is nothing, however, to prove that deviations from the plain "speed limit" warning have been particularly effective in stopping speeders. Many cities add a courteous WELCOME to the familiar sign, CITY LINE—SPEED LIMIT 15 MILES PER HOUR. Occasionally a sign declares that the speed limit is "positively enforced."

Three hundred motorists' organizations are federated in the A. A. A., and their adoption of standardized signals is fast thinning out the once innumerable and

often needless signs along the road—signs, it may be added, which motorists commonly disregarded. Further:

The Automobile Club of Southern California is one of the few organizations in the country which have installed electric flash warnings on sign boards at places where conditions are unusually hazardous. These signals flash intermittently and attract the motorist's attention.

The red bull's-eye, placed at a lower point on the sign standard to catch and reflect the rays from headlights, is also used by the California organization and by the Reading Automobile Club, Reading, Pa., the Inland Automobile Association, Spokane, Wash., the Wyoming Valley Motor Club of Northern Pennsylvania, the Bureau of Roads and Bridges, State of Nebraska, and many other associations and State departments.

The executives of motoring associations are most enthusiastic safety workers. "During the past year," says Miss A. Forman, Secretary of the Tidewater Automobile Association of Virginia, "we have erected 600 metal warning signs and about 200 wooden signs of various sizes and with warnings to suit particular hazards."

The Lehigh Valley Motor Club is financing the erection of permanent signs, at a cost of \$25 each. The work of placing them is being done by the Pennsylvania State Highway Department.

"There is no danger spot in our territory which is not posted with a sign and no expense is spared in the erection and maintenance of our sign system," says Harry E. LaVier, Executive Secretary of the Automobile Club of Syracuse (N. Y.).

The Reading (Pa.) Automobile Club recently started installation of reflecting signals on all signs in its territory, first taking care of the worst curves and hills. "We now have a special committee planning an extension of this program," says Theodore M. Sembach, secretary of the organization, "we intend to push our efforts for safety to the limit of our financial ability."

"We have found many danger signs placed on not particularly dangerous curves," said Frank W. Gilbert, Secretary of the Inland Automobile Association, Spokane, Wash., "and on account of this, drivers have disregarded warnings not only at these curves, but also at really dangerous curves. We feel that too much marking is just as bad as no marking at all, and that the danger spot marked should actually be a menace. We have therefore placed the highest type of reflecting signals at the really dangerous spots and will carry the plan further this year."

The Chicago Motor Club during 1921 spent many thousands of dollars in the erection of suitable road signs in Cook county and contiguous territory, according to Royal N. Allen, Manager of the Accident Prevention Department. More than 3,000 signs were placed at dangerous places on 400 miles of highway. Some of the signs placed by this club cost \$100 or more.

"Our highways within a radius of 30 miles are posted with signs calling attention to dangerous hills and curves," says P. G. Rimmer, President of the Wyoming Valley Motor Club of Northeastern Pennsylvania. "We have some bad hills in Pennsylvania, and for the benefit of the tourist we erect signs giving preliminary warning of an approach to a dangerous hill. Within a safe given distance of the hill another danger sign is posted, on which is painted a white skull and cross-bones on a red background, informing the driver as

End the Re-pumping Nuisance!

*Put on the new Trex Lock and
pump your tires Only Once*

ACTUAL SIZE

All you need are your fingers, pair of pliers, and three minutes to attach a Trex Lock to your tire.

Simply unscrew the ordinary valve inside and throw away. Then attach the Trex Lock onto the regular valve stem.

Fits any tire; any motorist can attach.

Price \$1 for
each tire

Until recently the only way to keep *proper inflation* was the regular trip to the Service Station every week or two for air—waiting in line—half an hour's time—grease and dirt—washing up—and all the rest.

No wonder all this work was neglected. But the neglect meant soft tires, rim-cutting, and the early ruin of expensive tires.

Then came the Trex Lock. This wonderful invention is simple and effective. *It positively locks the air in the tire.*

It keeps perfect inflation, which adds greatly to the life of the tire. It affords all the increased mileage—but with no irksome duty for the motorist. There is nothing to take care of.

Put a set on your tires today, and eliminate the most disagreeable part of motoring. Sold by dealers everywhere. In sets of five, or singly if you desire—only \$1 for each tire.

If your dealer has not yet put in his stock, write direct to us.

THE TREXLER COMPANY, Philadelphia, Pa.

AIR VALVE LOCK

fully as possible of conditions to be met and in what gear to take the hill."

The Wisconsin Highway Commission, which has for a long time used a standard sign—an inverted triangle—is now changing this style at railroad crossings to the A. A. A. standard railroad-crossing sign. This sign, being different in color and shape from the others in use in Wisconsin, draws the attention of the motorist where caution is most necessary.

In addition to the work done by the New York State Motor Federation, the State Highway Commission marks the danger spots on main arteries of travel with a special warning board—a large, white board from three to eight feet square with a checker-board background and the warning in heavy black letters. These boards are so placed that the rays of automobile headlights illuminate them at night. Each of these signs points out a specific danger at the spot where it is erected.

The Missouri State Highway Commission is planning warning signs along 7,700 miles of highway.

As a large number of highway accidents occur at night, a constant problem is to make night driving more safe, either by the introduction of the red reflecting signals mentioned here, or by the installation of high-powered white lights to illuminate the face of the boards already installed. The accompanying illustration shows one of these installations at a spot where a sharp turn occurs at the edge of a steep declivity. The sign is placed at a spot where a reckless driver might plunge from the road, and is illuminated, not only by the headlights, but also by an electric light at a near-by corner.

Many other States and motorists' organizations are taking up this work so that roads of principal travel may be made safe.

Still, warnings are not everything, and "A Chauffeur" sends the New York Times an article in which a large share of the responsibility for accidents is lodged with the automobile owners' predilection for cheap chauffeurs. We read:

A graduate of an automobile school, after he is told his course is finished, will naturally jump out and look for a driving position; if an owner advertises for a chauffeur, he will naturally compete with an experienced man for the position and offer his services for \$5 or \$10 cheaper, and naturally gets the position. The owner pats himself on the back, thinking he has saved \$5 or \$10 a week by employing this type of man, and naturally tells his friends who may think they are paying too much to their chauffeurs and either try to cut their chauffeurs' pay or let them go and employ cheaper men.

Now, this type of owner is not only fooling himself, but is doing a grave injustice to his family as well as the car; besides, when he figures up his expenses for the maintenance of his car at the end of the year he will find that he has paid more than the difference between an experienced chauffeur's wages and an inexperienced one to the repair shop, besides losing the comforts of his car during the time it is laid up for repairs; at the same time the automobile school graduate is getting his experience at the expense of the owner.

This same type of owner will think nothing of going out to some roadhouse and get liquored up on a lot of bootleg and keep his chauffeur out until 3 or 4 A. M., and when leaving said roadhouse will hand out \$5 and \$10 tips to waiters, hat-check girls and jazz musicians, and still neglect to pay his chauffeur a fair living-wage. What regard has a man for his wife and family who will permit them to ride through traffic in New York, and jeopardize their lives in the hands of an inexperienced chauffeur? Is it not better for a man to go to his business in the morning in a peaceful frame of mind and conduct his business all day in this same frame of mind instead of worrying every time the telephone bell rings that it may be a call for him to hurry home or to some hospital as his wife and family have met with an accident while riding in his car? On the other hand, when you figure it out, the chauffeur, as a rule, is the most underpaid man to-day.

TOTAL NUMBER OF MOTOR CARS AND TRUCKS IN THE WORLD—12,588,949

IF ANY FIEND FOR FIGURES wants to know precisely how many motor vehicles there are in the world, exclusive of motoreycles and tractors, *Automotive Industries* has gone into the matter and is prepared to furnish statistics accounting for the last car and truck. Of the total number of cars in the world, it appears among other interesting sights, 83 per cent., or 10,505,660 to be exact, are in the United States. It seems also that, at the present time, Mexico is the foremost market for the Ameri-

ean motor cars in the world, its imports in 1921 exceeding those of any other country. While "at present it is becoming clear," comments Edward Neville Vose in *Dun's International Review*, "that in some of our own States the saturation point is being approached," in most parts of the United States, as well as in the other parts of North and South America, there is still room for a large absorption of motor vehicles. One of the striking details brought out by *The Review* is that there are only a little more than a million cars in the whole of Europe as against more than eleven million in the Western Hemisphere. The following table gives the total number of motor cars in use in Europe, as compiled and estimated by *Automotive Industries*:

Great Britain	497,582	Norway	14,340
France	236,146	Sweden	14,250
Germany	91,384	Holland	13,500
Italy	53,000	Poland	10,700
Spain	37,560	Roumania	8,500
Russia	35,000	Portugal	5,000
Belgium	33,200	Czecho-Slovakia	4,138
Denmark	22,260	Azores	80
Switzerland	18,001		
Austria	16,350	Total	1,110,996

Figures for North and South America are presented in this table:

United States	10,505,660	British Guiana	1,050
Canada	463,448	Barbados	1,000
Argentina	75,000	Newfoundland	600
Brazil	25,000	Paraguay	500
Mexico	25,000	Ecuador	500
Cuba	20,000	Guatemala	500
Chile	10,000	Guadeloupe	500
Uruguay	10,000	Salvador	400
Porto Rico	6,500	Nicaragua	370
Peru	3,343	Bolivia	300
Venezuela	2,500	Honduras	200
Trinidad	2,221	Costa Rica	200
Colombia	2,000	Bahamas	150
Panama	1,950	British Honduras	68
Dominican Republic	1,800		
Jamaica	1,350	Total	11,162,110

South America, Canada and Mexico are expected to increase their use of cars as rapidly as better roads permit. As for the European situation, Mr. Vose says, in *Dun's International Review*:

The total for Great Britain is exclusive of motoreycles, of which no less than 173,200 are in use, mostly of domestic manufacture. The number of passenger-cars is stated to be 242,500; trucks, 128,200; hackneys, 82,800; other vehicles, including tractors, traction engines and ambulances, 17,482. In other words, less than half of the motor vehicles in use are passenger-cars. The average number of motor vehicles of all kinds is approximately one for every 192 persons. This is clearly far below the saturation point, when we consider the number per capita in countries like the United States and Canada. No country has finer or more beautiful roads, and as the weight of taxation resulting from the war is gradually lifted, the number of cars in use in this market, already the second largest in the world, is likely to be vastly increased. In France a similar situation exists.

PACKARD TRUCKS

It is perfectly plain that the Packard Truck never could have attained outstanding leadership were it not a sound, saving investment, from every viewpoint of truck operation.

The comparatively low purchase price of Packard Trucks—generally lower than prices of other

trucks of comparable quality—adds great emphasis to Packard value.

The seasoned and stable organization building the Packard Truck will continue to advance and fortify still further its leadership and its reputation for lower-cost haulage.

Packard Trucks range in capacity from 2 tons, to 7½ tons and in price from \$3,100 to \$4,500

Packard Service—In 585 cities and towns throughout the United States, Packard Truck Service Stations give owners highly skilled service at a reasonable cost. Packard Truck costs, always low because sound, Packard construction minimizes need of repair, are held still lower by this expert, broadcast service.

INVESTMENTS AND FINANCE

WHAT THE GERMAN GETS FOR HIS MARK

WHAT the collapse of the mark means to the German in the way of high prices is vividly shown by a tabular comparison of the value of the pre-war and post-war mark, translated by *Export Trade* from *Tägliche Korrespondenz* and appearing in the current *Nation's Business*, Washington, D. C. This table, prepared a few months ago, is valid to-day, the contrast having grown more striking, if anything:

Marks: Formerly: 1914.	Marks: Now: 1921.
1 A good plain dinner.	1 Two rolls.
2 Bottle good Rhine wine.	2 Bottle of soda water.
3 Best seat in "Philharmonic."	3 A program.
5 Dinner at Adlon, consisting of hors d'œuvres, two courses, dessert.	5 A sausage roll at a carmen's "pull up."
10 Elegant dress shirt.	10 A collar.
20 Express fare between Berlin and Munich.	20 Hardly a cab-fare between two Berlin stations.
25-30 Board and breakfast for a student for a month.	25-30 Tip for a landlady for preparing the breakfast.
50 Winter overcoat.	50 Velvet collar for it.
55 Suit made to measure.	55 Cleaning and pressing of a suit.
100 Month's board and lodging in a small seaside town.	100 Bed (for one night) in a Berlin inn.
500 Month's allowance for a University student.	500 Pair of shoes for a young girl.
1,000 Monthly income of army major.	1,000 Daily income of a wine steward.
5,000 Yearly income of a comfortable middle-class man.	5,000 Price of an ordinary carpet.
10,000 Cost of nice little country villa with orchard.	10,000 Cost of small repair of roof.
100,000 Ambition of a thrifty citizen to possess this amount.	100,000 Yearly income of "Beginner" of a profiteer's "clique."
1,000,000 Possession of this sum only considered possible in fairy-tale.	1,000,000 Pocket money of daughter of high-class profiteer in Berlin W. W.
1,000,000,000 Amount collected with difficulty by "voluntary" contribution—given under protest—to build fortresses.	1,000,000,000 A very small fraction of the usual deficit of any of the government departments.

On the other hand, we are warned by a British observer to beware of superficial impressions of conditions in Germany, based upon our knowledge of the calamitous descent of the international value of the mark. We are reminded that the mark is worth more, relatively, in Germany than abroad. That is, German prices have not risen proportionately as the German mark

has fallen in the foreign exchange quotations. As this writer, a correspondent of the *London Saturday Review*, explains in *The Review's* financial supplement:

Within the last fortnight the paper mark fell to fully one-seventieth of its gold value, but the cost of living in Germany has in very few cases risen to more than twenty to thirty times its pre-war level, while some public services are rendered at only fifteen times their cost in 1914. Wages and salaries, now twelve to fifteen-fold, exhibit no corresponding advance, with the natural result that the working classes are unable to provide themselves with all necessities of life.

It needs only a stroll through the meaner streets of an industrial town in Germany in order to grasp the fact that to a German worker, and particularly to his wife, the paper mark is still a mark, not one-twentieth and still less one-sixtieth or seventieth of the vanished silver coin of pre-war days. In the poor quarter of Frankfurt-on-the-Main, around the "Roemer" (where the Emperors of the Holy Roman Empire were nominally elected), prices of essential foodstuffs are still quoted in pfennigs, and there the writer overheard intending purchasers discuss, outside the shop windows, the necessity of some minutes' stroll in order to save four, six or eight pfennigs, which at only 1,000 marks to the £, represent the twenty-fifth, sixteenth or twelfth part of— $\frac{1}{4}$ d.! No other argument is required—especially coupled with a comparison of present and pre-war earnings—in order to understand the error of comparing British and German taxation at the current exchange of the day.

But "superficial views of quite another kind lead to equally wrong conclusions":

On Sundays, local railways and municipal tramways are most uncomfortably overcrowded with excursionists to woods, rivers or lakes. This national habit is largely due to the German's love of his children, but the mysterious paper parcels taken on these picnics have shrunk since 1914. The family wardrobe has become the chief sufferer; boots, even those made of leather substitutes, are not replenished as often as the climate demands, and woolen and cotton garments, for underwear and clothes, are to-day beyond the reach of the purse of factory-hand or agricultural laborer.

This contrast between earnings and cost of living explains the spirit of unrest among the working classes, of which naturally the most is made by German politicians, who resist the demands of the Allies for increased taxation. In spite of the fact that a so-called Socialist Government is in power, the graduation of direct taxes still favors the well-to-do, and especially the big landowners. The lack of political training of the German masses is no less in evidence to-day under the Republic than it was in the days of the Emperor. For this reason, the uprooting of the bad old fiscal system presents almost insuperable difficulties, while the demands of Allied statesmen for larger cash payments are made the pretext for threats of new indirect taxes to be borne mainly by the impoverished workers.

TO INSURE SOUTHERN PROSPERITY BY CROP DIVERSIFICATION

IF I were Czar of North Carolina instead of the Governor, I would issue an edict declaring that from and after five years from date any man who imported into North Carolina any corn or meal, wheat or flour, beef or bacon, should be forthwith hanged and without benefit of clergy. Of course, in the beginning I should be denounced as an infamous tyrant, but after the law had been in effect for ten years the richest State in "the Union would build a monument to me as the financial redeemer of the people." So *The Banker-Farmer* (Champaign, Ill.) quotes a statement made by ex-Governor Bickett while in office. More powerful than any Czar, however, are hard times and financial needs. A New York *Tribune* headline over a Chattanooga letter from a financial correspondent tells a volume:

"Last Two Disastrous Years in Cotton Have Driven Farmers into Fruit and Potato Growing, Hog Raising and Dairying."

In the "drive for diversification" now on in the South, help is being given by various new cooperative marketing associations and creameries, and the writer from Tennessee says in his concluding paragraph:

The last two disastrous years in cotton and experiences with the boll weevil have convinced most raisers of the fleecy staple that they must have a subsidiary crop, and the rapid increase in fruit and corn growing and potato raising shows that cotton is no longer sole possessor of the Southern farmer's heart. While still the big money crop, the others are rapidly approaching it.

Arkansas has some 450 banks, and it is a predominantly agricultural State. The Arkansas bankers have decided to force Arkansas farmers to diversify by offering credit on a "no food and feed crops, no credit" basis. In Arkansas, we read in *Commerce & Finance* (New York):

A farmer with hay in the barn, corn in the crib, meat in the smoke-house, and with poultry, eggs and cream to sell, will be in good standing with his bank this year.

If he raises his feed and food he can raise all the cotton he pleases and borrow money on it.

The Arkansas Bankers' Association has, through its committee on agriculture, sent the following poster to every banker in the State, and it is everywhere being posted conspicuously. If the program outlined in the poster "could be adopted by banks all over the South and honestly and earnestly lived up to, the cotton farmer's troubles would be somewhat relieved." The poster reads:

Our Credit Policy

While this bank is vitally interested and affected by the crop plans of this community we do not presume to have the right to direct the farm plans for this locality.

We feel that we have a right, however, to determine fundamental policies that are

The Swivel Says It's a Simmons

INVESTMENTS AND FINANCE Continued

necessary in order for this bank to give the farmer credit.

No money will be loaned the farmer for the purpose of buying feed.

No money will be knowingly loaned the merchant for the purpose of buying feed that is to be sold to the farmer.

This bank will loan money to the farmer only when his crop plans provide for ample acreage necessary to produce food for the people on the place and the feed for the animals.

This policy is necessary to protect the interests of our depositors, whose money we are lending. The above policy has proven safe and sound.

A suggested base for feed acreage as taken from Government reports is as follows: Corn, five acres, and hay crops, two acres for each work animal, and ample acreage in feed and hay crops and pasturage for the cows, hogs, and other animals on the place.

This bank will do all it can to aid farmers who are entitled to credit in the purchase of milk cows, hogs and poultry necessary to provide milk, meat and eggs for family consumption.

A farmer with hay in the barn, corn in the crib, meat in the smoke-house, and with poultry, eggs and cream to sell, is usually in good standing with his bank.

These principles are in conformity with policies as adopted by the farmers in convention in Little Rock.

PLAY SAFE—DON'T GAMBLE.

IN DEFENSE OF STOCKHOLDERS

STOCKHOLDERS—Henry Ford sneers at them as "unproductive"; certain newspapers are fond of denouncing them as "idle"; "demagogic orators picture stockholders as robbers, reaping where they have not sown." Well now, continues Mr. B. C. Forbes in a recent number of his *Forbes Magazine*, let's see about it. Is it really right to throw stones at stockholders like this? And he answers with a most decided negative by the simple process of asking a few questions in turn:

Who made Henry Ford's own automobile company possible? The stockholders who originally advanced money to him. Who makes it possible for you and me to be carried to and from business by train or street car? Stockholders. Who made it possible for farmers to obtain reapers and binders and tractors to relieve them of the hardest work of the farm? Stockholders. Who makes it possible for us to avail ourselves of the services of a bank? Stockholders. Who made our vast telephone and telegraph service possible? Stockholders. Who makes it possible for us to buy ready-made clothing, shoes, watches, and a thousand other things, at relatively low cost? Stockholders. Who has made it possible for us to press a button and flood our homes with light? Stockholders.

Were stockholders all over the country to try to withdraw their funds from the enterprises in which they are invested, there would be a panic, there would be unemployment, there would be distress, on a scale never before known. All material progress springs from the saving of money by some one.

THE EVOLUTION OF JEWELRY

SEVEN thousand years ago there were the beginnings of jewelry, which had its origin not so much in the desire for personal adornment as in the belief in magic. The earliest jewel was a talisman of some sort, often a stone of no intrinsic value, we are told by a writer in *The National Jeweler* (Chicago). According to this paper the development of jewels as ornaments has played an important part in the evolution of the human race. No other single form of human expression, save speech itself, has contributed so long and so varied a share to this end. Jewels began to be objects of ornament as well as of magic about the time when stones possessing some inherent beauty began to be used, which the writer places at some indefinite period prior to 5000 B. C. He says:

The period from 5000 to 2500 B. C. was marked by wonderful advances in the making of jewels, and the art reached its highest point in Egypt at about the latter date.

Down from the paleolithic period had come the necklace, and, with the early Egyptians, jewels were still necklaces. These had developed in three forms: tubular beads, probably bones; spherical beads, such as drilled pebbles, etc.; and disk beads made from ostrich egg-shells cut into small disks which were pierced and strung. But these crude forms began to be rapidly replaced by attractive stones to which certain magical virtues were also attributed.

One of the earliest of these, and one of the most commonly found right up to the climax of the Egyptian period, was the carnelian. The carnelian was used as a cure for red eyes, and for certain other sores, and was very highly prized. Even to-day among certain of the savage tribes of Syria and northern Africa the carnelian is to be found tied to the hair, suspended above one of the eyes.

Another stone greatly admired and widely used was the turquoise. Throughout the east, even to-day, there exists an intense tho still unexplained love of the turquoise. It has been so admired since some time prior to 5000 B. C.; and was intimately associated with Hathor, goddess of motherhood, one of whose names was "The Lady of the Turquoise."

Throughout this period the question of rarity did not enter into the value of a stone. The carnelian and turquoise were both common enough, and the imitation turquoise, when invented, found just as great favor.

Later, at some time during the paleolithic period, the idea of "sympathetic magic" arose, making one of its appearances in the form of a jewel or charm. The beetle was the symbol of immortality, and must not be harmed. But some genius conceived the idea of carving a beetle out of stone and wearing it, which would then give him a hold over the sacred beetle, and a claim to its protection.

The first important advance in the development of jewels, from our standpoint, was the gradual addition, during some unknown period, of stones which in themselves possess some elements of beauty. The second step comes when carving appeared.

THE COLLECTOR and the ART CRITIC. The Collector may be attracted to a certain picture, but he needs the judgment of an experienced and reliable Art Critic when he buys for intrinsic values.

The Art of Judging Investments

THE SECURITIES brought to your attention may or may not have intrinsic value.

SCIENCE AND INVENTION Continued

To the beetle (the scarab) were quickly added the frog (sign of the resurrection), and either the whole or some part of the wearer's favorite god. Portions of the human anatomy were also reproduced and added to what by now was becoming a pretentious and varied chain of beads.

There were now three forms of magic jewels: the stone which was worn for the sake of its powers, the stone, itself ineffective, which possessed magic by virtue of the shape into which it was carved; and the combination of these two, a potent stone carved into some potent image.

About this time metal comes upon the scene. Hitherto the only uses to which it had been put were practical. Silver was highly treasured for its beauty and scarcity, being more difficult to obtain than gold. Gold had been used as an ornament since the neolithic period. It was beaten into disks and sewn on clothing. Being of no medicinal or magical value, however, it was subservient to even the commonest stones to which magical powers were attributed. But now that shape as well as substance had magical value, its value increased immensely, and it was produced in large quantities. We read further:

Here entered a new form of jewel: the bangle, bracelet, and ring. This constitutes the fourth step.

In any event, we find gold, which had constituted the only jewel of the ancients with a purely decorative origin—in the shape of disks sewn to the clothing, as previously mentioned—now becoming the most potent "magic" jewel of them all. Not only was it used in serpent bangles and rings, but it was also made into tiny cases to carry magical things. This originated the "gold mounting"—the fifth important step.

Meanwhile the evolution of the jewel was responsible for another and highly important custom—one which has become a vital and seemingly ineradicable feature of our present-day civilization. It was the adoption of gold as the standard medium of exchange. Gold not only filled the bill, but was conveniently carried, especially since the invention of the serpent ring and bangle.

Thus the jewel was developed from its lowest form to its highest in Egypt—from a plain, unattractive stone to bangles and necklaces twenty times more elaborate than any that have been made for centuries. Yet never during this period did the jewel lose its primary use and importance as a thing of magic. It did in passing, however, give expression to some early forms of religion, if they may be so called; it aided in the rise of sculpture; it made possible the later development of science by originating the use of glaze; and last, but by no means least, it paved the way for the world trade which came with Alexander, by providing a medium of exchange.

No other single form of human expression, save that of speech itself, has played so long, so varied, and so important a part in the evolution of the human race. It deserves the best reward that can be given it—to be reproduced and made beautiful in all the various forms of its

Corns Lift Right Off

Drop a little "Freezone" on a touchy corn or callus for a few nights. Instantly it stops aching, then shortly you lift it right off. Doesn't hurt a bit.

You can lift off every hard corn, soft corn, corn between the toes, and the "hard-skin" calluses on bottom of feet. Just get a bottle of "Freezone" at any drug store, anywhere.

progress; to be housed in the best that art and skill can devise and execute; to be worn with taste and without ostentation, and to be accorded the respect and reverence due one of man's oldest valued possessions."

DIAMONDS AS CUTTING EDGES

THE diamond is valuable not only as the "business end" of edged tools intended to cut very hard substances like hard steel, glass and its own sister gems, but it is widely used also with softer materials—brass, hard rubber and the like, because, altho expensive, it far outlasts similar edges of steel, and is, therefore, actually cheaper. This we are told by Ellsworth Sheldon, New England editor of *The American Machinist*, in an article entitled "Manufacture and Use of Diamond Cutting Tools," contributed to that magazine (New York, Jan. 12). The use of diamonds as cutting points for rock-boring tools, stone saws, etc., is a matter of common knowledge, Mr. Sheldon says. As tools for cutting and drilling where the material to be worked is too hard to yield to the cutting edge of steel, their superiority has long been recognized. That the diamond has a far wider application in certain of the industrial arts where the material to be worked is comparatively soft is not so generally known. We read further:

Every machine-shop man is familiar with the diamond as a means of dressing grinding wheels; but the same diamond may be converted into a cutting tool to do much of his work without having to be reground at all, and thus reduce the grinding-wheel to a matter of secondary importance. There are many materials represented in modern manufactured products such as fiber, rubber, paper, bronze, etc., that of themselves offer little resistance to steel tools; yet they present certain characteristics that render the cutting and shaping of great numbers of pieces a difficult and annoying proposition because of their tendency to break down quickly and wear away the keen cutting edge of steel.

Let us consider the manufacture of small articles of fiber, or of the material that is so rapidly superseding it—bakelite. Millions of small parts are being turned out every day by automatic machines using tools of hardened steel which require constant attention, regrinding, resetting, and re-adjustment.

The cost of making a simple forming tool of steel for such a machine may be only a few dollars while a similar tool in which the cutting edge is a diamond might cost a hundred times as much; yet the life of the steel tool is a matter of days, at best, while the tool of diamond will run for months. When the number of replacements, the cost of skilled supervision, and the annoyance and expense due to variation of product are considered, it is evident that the diamond will repay its initial cost in a very short time.

Another saving to be effected by the use of the diamond will come through doing away with the necessity for subsequent finishing operations. There are few products made by the use of steel tools that do not require filing, polishing burnishing, or other methods of improving their appearance; while the product of the diamond in

Pleasing to the buyer's eye

YOUR customer may not know exactly what she would like. Display suggests the article and flashes a message of desire to her mind.

The eye is pleased by goods shown in McLean Units. They sell readily, because the merchandise looks richer against the warm mahogany background of the showcase. Even dull goods seem to sparkle brilliantly under the genuine plate glass. Good merchandising, sir. Every inch is fascinating display.

McLean Units set flat against the wall, leaving your floor space open for customers. Your store seems twice as large. You stand beside your customer, where you can quickly see her choice and close the sale.

Enthusiastic reports come to us constantly from merchants who have made more profit in six months on extra sales than they spent on McLean Units.

These units are easy to trim, clean, rearrange, move or sell to advantage in the event of business changes.

WRITE FOR OUR CATALOG

It illustrates the full line of McLean Units; shows how simple they are to set up without skilled help; how readily they fit in with old fixtures; how easy they are to trim and keep clean. Start with one unit; add more as extra profits are earned by first unit. Keep your cash reserve for discounting bills. Divided payments can be arranged on these units, because we have faith in their profit-earning capacity.

Prevented Strikes For Twenty Years!

The famous Brooks Agreement, "the finest example of industrial statesmanship yet framed," has prevented strikes in the cotton manufacturing industry of England for twenty years. This document was written by Sir Charles W. Macara, Bart., and in his fascinating new book, "RECOLLECTIONS," he reveals his conciliatory methods of stopping strikes and bringing Capital and Labor harmoniously together. Sir Charles also throws attractive sidelights on manners and personal characteristics of some great men, besides giving a survey of conditions in the cotton manufacturing industry throughout the world. To any one this book will be interesting; but if you are concerned in any way with Labor, Capital or Cotton, it will have extraordinary significance.

For Violin Lovers

At last! A new violin with the true Cremonese tone of the great Stradivarius! For centuries the art was lost. Now it has been recovered and a noted violin maker of England, W. J. Farrell, in his remarkable new book—

The True-Tone Violin

just from the press—tells of the wonderful discovery—how the new violin is fashioned and finished to produce the right tone, with detailed specifications of construction, illustrations of parts, etc. The author also points out wherein the new instrument differs from the "factory fiddles" of yesterday. All lovers of the violin, as well as those engaged in the manufacture, will find this book all-absorbing.

12mo. Cloth. 96 pages. \$1.50, net; \$1.58, postpaid.

God and Evolution

MOSES vs. DARWIN

By William Jennings Bryan

Mr. Bryan says that the objection to evolution is that—"It undermines faith in God, robs his word of divine sanction, and reduces the Savior to the stature of a man, with an ape for an ancestor on his mother's side at least, and, as most evolutionists believe, on his father's side also."

Darwin's Theory of Natural Selection

By Dr. S. Parkes Cadman

Dr. Cadman says: "The Biblical account reflects the primitiveness of its age, the Darwinian explanation appeals to me as the greatest I have ever known as regards the attributes of the Presiding Mind. The development of man's ethical and intellectual nature proceeds from the empire of spirit in which that Mind presides."

SCIENCE AND INVENTION Continued

most instances is finished when it leaves the tool.

Brass may be considered a soft material indeed, and is readily worked with steel tools; yet all brass parts produced upon automatic machinery require finishing operations either to improve their appearance or to fit one part smoothly and snugly into some other part.

Hard rubber is by no means hard; but it is a very difficult material to finish with steel tools, and it is almost impossible to turn a piece parallel because of the rapid and uneven wear of the cutting edge. Parts of fountain pens have their surfaces left so true and smooth when turned with the diamond that no subsequent fitting is necessary, and the diamond runs for months upon this work without attention.

The diamond, Mr. Sheldon goes on to tell us, is practically the only thing of which a tool can be made to cut materials harder than steel. Glass, marble and porcelain are commonly cut with diamond tools. By the same means rubies, sapphires, and other so-called precious stones are drilled, cupped, and formed to take their places as bearings in intricate and precise mechanism. He continues:

The diamond is the hardest known substance. Chemically considered it is pure carbon, but this element is somewhat peculiar in that it may exist in several forms. One of these is represented by what is called the "black diamond." Black diamonds are but partly or imperfectly crystallized, are of a rather porous nature, and possess practically no cleavage grain. They are of about the same degree of hardness as the white diamond, but as they do not lend themselves readily to the process of shaping, they are used principally as cutting points in rock drills, marble saws, etc., where little alteration of the original form is necessary.

The structure of the diamond is of great importance to the manufacturer of diamond tools. The crystal presents a sort of grain, along which it may be split, and in making cutting tools it is necessary to study the structure in order to determine at what places the crystal may be cleaved to obtain in rough outline the shape desired. Owing to its brittleness, any attempt to divide it in a direction not in the line of cleavage is certain to result in shattering the stone. The diamond cleaver may study a crystal for hours under the microscope before making any attempt to cleave it.

A characteristic peculiar to the diamond is that one diamond will cut another diamond. A man might take two pieces of steel of equal hardness and scrape them together until his hair was gray without affecting anything but his disposition; but let him, with proper knowledge of the art, scrape one diamond with the sharp corner of another and, altho he will wear away the keen edge of the cutting diamond and have to turn it around from time to time to keep it cutting, it will not be long before he has an appreciable groove in the other stone. The groove need not be very wide or very deep but it must be in exactly the right place—it must coincide with the lines of cleavage.

The diamonds are seldom cleaved or otherwise divided solely for the purpose of getting smaller pieces. Usually a stone is selected as nearly as possible to the size of

the tool to be made, in order to reduce the cost per carat.

In one of the illustrations may be seen some samples of diamond tools. If this picture be examined with a glass it will be noted that each tool has one or more cutting lips formed of pieces of diamond crystal brazed to the steel holder. The first tool to the right of the center of the group is a forming tool, having an exceptionally large diamond.

The value of this particular tool is around three hundred dollars, but when one considers that its counterparts have run from six to nine months, forming the edges of thousands of fiber disks daily, *without resharpening and practically without readjustment*, one may see that the tool cost per piece is insignificant when compared with the performance that could reasonably be expected from a steel tool of similar shape.

STAINLESS METALS

A METAL with a smudgy colored oxid is not a good one to use with leather on textile fabric, or any material that will stain easily. Of course the worst of such metals is iron. Iron rust not only stains badly but its color is nearly indelible. Copper, brass, and other metals, either pure or alloyed, have also this objection. Inventors have been at work for some time on the problem of "stainless" substitutes, and an editorial writer in *The Iron Age* (New York) now tells us that in Great Britain developments are following fast, one upon another. The appearance of a so-called "stainless iron," and its possibilities, have spurred non-ferrous producers to new achievements. If all reports are to be given credence, he says, important results to industry may be the outcome. We read:

"Stainless iron" is really low-carbon stainless steel which can be rolled and forged into sheets, wire and other products, a property not characteristic of the regular stainless steel. The principal drawback is its cost because of the expensive low-carbon ferrochromium necessary to its production. According to the latest reports, however, a new process has been discovered by an Englishman whereby this important low-carbon ferroalloy can be produced at around 20 cents per pound and with a carbon content of about 0.25 per cent. as compared to about 55 to 60 cents for the present product made here. The inventor has recently been in the United States looking after the rights in this country. Wide interest, amounting to enthusiasm, prevails in England because the possibility of cheap commercial production of a low-carbon, stainless steel is believed to open up wide uses for it as sheets, wire and many other materials, the results of which are obvious.

In the non-ferrous field, British research is reported to have developed a stainless alloy which threatens to supersede copper, brass, nickel and aluminum for many purposes. More details of this appear elsewhere in this issue. It is an improved form of nickel-silver containing a much larger percentage of nickel than ordinary nickel-silver and therefore harder, more durable and more nearly approaching silver in color, with the added claim that its price can be reduced to about one-third that of stainless steel or iron as now made.

Write for "Parsons Tests"—a series of 7 simple paper tests that will make you a judge of good business papers

A Few Extra Hours in the Making Adds Years to the Life of Defendum

IT takes time to make good ledger paper. It takes time to make paper that will stand long years of hard usage; paper that does not sag in the binder; paper that does not tear or "turn up its ears." It takes time to make Parsons Defendum Ledger—the most popular and largest selling ledger paper in the world.

Will your present ledger paper give you the service you have a right to expect? You can easily find out. Write for a copy of "Parsons Tests"—a series of 7 simple paper tests that will make you a judge of good business paper. We will also send a liberal sample book of Defendum paper, both white and buff, as the latter is becoming increasingly popular.

CURRENT EVENTS

FOREIGN

May 3.—The French cabinet withdraws the French delegation's provisional approval of the note from the Genoa Conference to Russia and determines to stand by Belgium in opposing any encroachment upon private property ownership in Russia.

The Dail Eireann orders a two-days' truce between the opposing factions of the Irish Republican Army.

All the nations represented at the Genoa Conference agree to plans for other international conferences to continue the work of European reconstruction. The conferences will be held in London.

The Venezuela Congress unanimously elects General Juan Vicente Gomez constitutional President of the Republic. His term is seven years.

May 4.—The forces of General Chang Tso-Lin have been defeated on three battle points and have suffered heavy losses, according to consular advices received in Peking.

News of the Irish truce comes too late to prevent the blowing up of Castle Pollard Barracks, near Mullingar, by Republican malcontents and a conflict between Irish Republican army regulars and irregulars on the Free State side of the Londonderry-Donegal border in which three Free Staters are killed and three seriously wounded.

The Allied Reparations Commission notifies the German Government that there is nothing in the Russo-German agreement, recently signed at Rapallo, that seems to violate the Treaty of Versailles.

Four American relief workers have been deported from Kharput, Turkish Armenia, it is announced from Constantinople. The Americans charge the Turks with unjust treatment of themselves and cruelties against Christians in Asia Minor.

May 5.—The forces of General Chang Tso-Lin, the Manchurian leader, have been driven from the region of Peking, and General Wu Pei-Fu is in control of the situation, according to a dispatch from Peking.

The Irish truce is extended to May 10, and all political meetings are called off for the time being.

May 6.—Following the successes of General Wu Pei-Fu, President Hsu Shih-Chang, of the Peking Government, removes the Premier and two other cabinet officers and orders their arrest, and dismisses General Chang Tso-Lin from his office of Inspector-General.

Explaining that its purpose is "to explore every possibility of reaching an agreement," the Dail Eireann indefinitely prolongs the truce.

The Supreme Revolutionary Tribunal of the Soviet Government issues an order for the trial of the Patriarch of the Russian Church, Archbishop Tikhon, and Archbishop Nikandei, charged with opposing the requisitioning of church treasures by the Soviet Government.

May 7.—Disorders in Ulster during last week result in thirteen deaths, according to a dispatch from Belfast.

May 8.—The Bulgarian Government requests the economic conference at Genoa to postpone payment of reparations due from Bulgaria, to arrange a large international loan for her and to give her an outlet to the Aegean Sea.

General Chang Tso-Lin, the Manchurian leader, has ordered his troops to withdraw behind the Great Wall, according to a dispatch from Tientsin.

May 9.—The Croats have proclaimed an independent republic of Croatia, naming as President M. Reiditch, according to a dispatch from Bari, an Italian sea-coast town of the Adriatic.

DOMESTIC

May 3.—United States Senator Harry S. New, Republican candidate for renomination from Indiana, is defeated by former Senator Albert J. Beveridge.

The German Embassy requests the American Government to leave a garrison on the Rhine, following similar requests from the Allied Governments.

The Senate passes the agricultural appropriation bill for \$36,774,000, and sends it to the President.

The Senate adopts a resolution authorizing the President to revive between the United States and Austria and Hungary the former extradition treaty with the Austro-Hungarian monarchy.

May 4.—Dr. John Bassett Moore, a member of the International Court of Justice, is appointed American member of the Allied Commission of Jurists established by the Washington Conference on Armament Limitation to arrange the new rules of warfare.

President Harding sends to General Pilsudski a message of felicitation on the anniversary of the independence of Poland.

May 5.—Lieutenant Harold F. Selden, of Washington, and Ensign Frank Miller, of Indiana, are killed when their hydroplane crashes into another over the Potomac River.

May 6.—Henry P. Davison, internationally known banker and philanthropist, and Chairman of the War Council of the American Red Cross, dies at his home in Long Island, in his 55th year.

The Chinese Government has ratified the Washington Conference treaties to which China was signatory, according to a Washington dispatch.

May 7.—The patent convention concluded with Germany in 1909 has been revived, it is announced by the State Department.

May 8.—A mutiny of 150 prisoners in the South Carolina State penitentiary is quelled after fourteen prisoners are wounded by guards.

May 9.—President Harding sends to the House of Representatives a statement by Attorney-General Daugherty showing that the Government is preparing to prosecute perpetrators of war frauds, with the possibility of recovering \$100,000,000.

President Harding summons fifteen leading transportation executives to a dinner at the White House, May 20, to consider the possibility of adjusting railroad freight rates downward.

The Tacna-Arica conference called to settle the dispute between Chile and Peru will begin in Washington on May 15, it is announced.

THE ▾ SPICE ▾ OF ▾ LIFE

Dangers of Handshaking.—(From a story)—"She held out her hand and the young man took it and departed."—*Boston Transcript*.

Dark Evidence.—MOTHER—"Son, I don't believe you washed your face at all."

SMALL SON—"If you don't believe me, look at the towel."—*Judge*.

Literature and Reading.—NEWBICH—"Now, le'see, I've ordered sets of Scott, Dickens, Irving an' all them boys. Now show me somethin' to read."—*Life*.

Too Much Decoration.—Ireland, we are assured, has turned over a fresh page in her history. All very well, but it would look better without a black Border.—*London Opinion*.

Those Peaceful Days.—The oldest inhabitant remarks, "I can remember when our casualty list was published only on July 5 instead of every Monday morning."—*The Christian Register (Boston)*.

A Husband's Privilege.—"The cook is leaving us to get married."

"Good. She'll soon know from somebody who won't be afraid to tell her how punk her cooking really is."—*The Christian Evangelist (St. Louis)*.

Danger!—HE—"I had a good joke to tell you this evening, but I see you are not in a condition to receive it."

SHE—"Why?"

HE—"Because if your face lights up, the powder will go off."—*Goblin*.

Quite Another Matter.—IRATE PAPA—"No, sir. My daughter can never be yours."

BRIGHT SUITOR—"Quite right, sir. She can not possibly be my daughter. I only wanted her to be my wife."—*Colorado Dodo*.

A Point in Doubt.—"Leonidas," said Mrs. Meekton, "I must give you credit for one thing. In all our married life you have never spoken an unkind word to me."

"No, Henrietta."

"And what I'm wondering is whether to give you credit for a lovely disposition or mere lack of courage."—*Washington Star*.

Enough Is Enough.—"Do you think posterity will put up statues to your memory?"

"I hope," replied Senator Sorghum, "that nobody will encourage such an idea. After a public man has gotten through with the caricaturists the modern sculptors ought to be made to let him alone."—*Washington Star*.

Not in a Hurry.—An old Scotchman, David Gordon, was seriously ill, with scant hope for recovery. He had been wheedled into making a will by relatives, and these were now gathered about his bedside watching him laboriously sign it. He got as far as D-A-V-I—then fell back exhausted.

"D, Uncle David, D," exhorted a nephew.

"Dee!" ejaculated the old Scot feebly, but with indignation. "I'll dee when I'm ready, ye avaricious wretch!"—*The Forest*.

Impossible Impasse.—"What happens when an irresistible woman meets an immovable man?"

"She never does."—*Life*.

Where He'd Been.—FIRST FLEA—"Been on a vacation?"

SECOND FLEA—"Nope; been on a tramp."—*Pacific Weekly*.

Could Move an Audience.—"Do you know what it is to go before an audience?"

"No. I spoke before an audience once, but most of it went before I did."—*The Epworth Herald*.

Grand Little Money-Saver.—Beer, we read, was taxed in Egypt over two thousand years ago. Which perhaps explains why Cleopatra found it cheaper to drink pearls.—*London Opinion*.

Good for the Mental Kind.—A man walked into the store of the Nixon-Oliver Drug Company, Lebanon, Tenn., the other day and asked for "four ounces of Literary Digest for indigestion."—*Parke, Davis & Co.'s Bulletin*.

The Best Policy.—LAWYER—"Now be perfectly frank with me. Are you innocent or guilty?"

CLIENT—"I am guilty."

LAWYER—"Ah, an honest man! I shall be able to acquit you."—*American Legion Weekly*.

Insidious Propaganda.—"How do you account for the fact that a beginner is sure to win in a poker game?"

"Confidentially speakin'," said Cactus Joe, "the explanation is that it ain't a fact. We encourage the superstition so as to get tenderfeet interested."—*Washington Star*.

Both Handicapped.—FIRST LADY—(in village shop, speaking to another patron)—"Would you mind if I made my small purchase first? We have a horse outside and he won't keep quiet."

SECOND LADY—"Certainly; but you won't be very long, will you? I have a husband outside and he's rather restive, too."—*Punch*.

Neutrality.—It was during the impaneling of a jury; the following colloquy occurred: "You are a property-holder?"

"Yes, your honor."

"Married or single?"

"I have been married for five years, your honor."

"Have you formed or exprest any opinion?"

"Not for five years, your honor."—*Journal of the American Medical Association*.

Slight Favor Requested.—An Eastern college graduate applied for work in a Michigan lumber camp and was assigned to one end of a cross-saw, the other end being in charge of an old and experienced lumberman. At the end of an hour the veteran stopt sawing and regarded his weary partner with pitying eyes.

"Sonny," he said, "I don't mind your riding on this saw, but if it's just the same to you, I wish you'd quit scraping your feet on the ground."—*The Forecast*.

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the current use of words, the Funk & Wagnalls New Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"E. G. C.," Dallas, Tex.—"Please let me know the history of the song 'International' which we see mentioned so frequently in the dispatches as being sung by strikers and similar organizations. The writer has contended that this song is more or less of a revolutionary song, but would like to have this contention substantiated by positive proof."

The poem "International" dates from 1871 and was written by a man named Eugene Pottier, who was one of the Paris Commune, and the music was written by Adolphe Degeyter. The sentiments are highly revolutionary.

"W. H. McK.," Mt. Pleasant, Tex.—"Please inform me if the word *boughten* is one in common use."

The word *boughten* is a localism used to distinguish goods purchased in a store or a shop from those that are home-made. Inasmuch as the shorter word—*bought*—expresses the idea correctly and without ambiguity, there is no reason for perpetuating the longer and more confusing *boughten*. The imperfect and past participle of *buy* is *bought*, not *boughten*. Why not use it?

"A. S. A.," Athens, Pa.—"When writing a numeral with a suffix, as *4th*, is it ever necessary, or is it correct, to place a period after it? Is it an abbreviation?"

When the forms *1st*, *2d*, *15th*, etc., are used, no period should be placed after them, as they are not abbreviations.

"P. R. J.," North Garden, Va.—"Kindly tell me if Ben Jonson wrote a dictionary, and if so, was it the first one written?"

Ben Jonson did not write an English dictionary, but Samuel Johnson published April 15, 1755, "Johnson's Dictionary," which contained 50,000 words. Richard Huloet was the first to produce an English dictionary. This work, the "Abecedarium," which he issued in 1552, was the first in which the meanings of English words were explained in English. The first American Dictionary was compiled by Samuel Johnson, of Guilford, Conn., and published by Edward O'Brien at New Haven, Conn., in 1798.

"J. B. B.," Fort Story, Va.—"Please inform me whether the word *courtesy* can be correctly pronounced as tho it were spelled *curtsy*. Is there more than one way to pronounce *courtesy*?"

The word *courtesy*, meaning 'politeness,' is pronounced *kur'ti-si-u* as in *burn*, *i's* as in *habit*. The word *courtesy*, meaning "A gesture of civility in salutation," is pronounced *kurt'si-u* as in *burn*, *i* as in *habit*.

"E. M. F.," New York, N. Y.—"Which is correct—'His whereabouts are unknown,' or 'His whereabouts is unknown'?"

The word *whereabouts*, altho plural in form, is singular in construction and always takes a verb in the singular. Your sentence should read—"His whereabouts is unknown."

"O. L. B.," San Francisco, Calif.—"Has the word *groceteria* a well-defined meaning, and to what extent is it used?"

The word *groceteria* is of recent origin, and connotes a store where customers wait on themselves to articles put on sale, and then take them to the counter to pay for them or have them charged and packed. It is a proprietary term, copyrighted and used as a duly protected trademark.

"J. P. K.," Brookland, D. C.—"Is the following sentence correct: 'The Chinese Foreign-Missionary Society will meet to-night,' meaning local supporters of missionaries to China? Please give the rule governing the hyphen in this case."

The rule, "Join by a hyphen two or more words abnormally associated to express attribute," usually applies. But, in the case of proper names, such as incorporated societies or even voluntary associations, it becomes a question of fact, and the hyphen should or should not be used depending on the name the society, association, or the like was given when it was incorporated or organized.

"A. H. R.," Washington, D. C.—"What is the correct pronunciation of the name *Sarah Bernhardt*?"

The name you give is pronounced *burn'hart*—*u* as in *burn*, *a* as in *art*; or French *ber'nar*—*e* as in *get*, *a* as in *art*.

Protect Your House

Whether you are building a new house, or repairing an old, keep out rust by using Copper and Brass.

Use Copper in your roof, Copper leaders, Copper gutters, Copper flashings, Copper valleys.

Use Brass, Copper's principal alloy, in plumbing pipe, Brass in hardware, Brass in fixtures.

A Startling Figure

Everybody abhors waste.

Yet home-owners in this country waste \$626,500,000 annually in avoidable repairs and renewals to leaders and gutters, flashings, and plumbing pipe alone.

Rust is the cause—Copper and Brass are the *certain* preventatives.

People have known for centuries that Copper is durable, dependable, rust-proof, certain—that Copper is really Everlasting.

Copper is now available to everybody—at attractive prices. During the war it may have been necessary to use substitutes. But you can save money now by using Copper.

Copper lasts for generations without painting, patching, repairs or renewals.

Copper and Brass are cheaper because you pay for them only ONCE

Sheetrock is
wall plaster
— cast in
sections!

Insert shows the actual thickness of Sheetrock

SHEETROCK has the great advantage of being *a fireproof wallboard*. It is gypsum plaster, made from rock that is mined and ground and factory cast in broad, ceiling-high sheets. It cannot burn, ignite, or transmit heat. On the walls and ceilings of your building, it furnishes a fire-resisting protection to the studs and joists to which it is nailed. It makes rigid, tight-jointed, standard walls and ceilings that will not *warp, shrink or buckle*, and will last as long as the building stands.

There are many economical uses for Sheetrock in new construction, alterations and repairs. It saws and nails readily, and any good carpenter can do good work with it, easily and quickly. It offers a perfectly flat, smooth surface for any decoration you want—wallpaper, paint or panels. As soon as it is up, you can decorate and move right in. Lumber dealers and dealers in builders' supplies sell Sheetrock. Its cost is low. Write for our free illustrated booklet about Sheetrock; "Walls of Worth."

We furnish all text material, including fourteen-volume Law Library. Get our valuable 120-page "Law Guide" and "Evidence" books FREE. Send for them—NOW.

LaSalle Extension University, Dept. 552-LC, Chicago

STANDARD DICTIONARY superiority quickly becomes plain to the man or woman who investigates.

Toy-Making Secrets

No longer will the Germans and Japanese monopolize the toy-making business. Formerly guarded secrets of this profitable industry are now published in a new book, by J. F. Makinson, entitled—

"TOY MANUFACTURE"

which tells you how to begin commercial toy making, on a large or small scale; shows how to make picture blocks, "living beans," and all sorts of wood and metal toys, beautiful dolls, beads, marbles, balls, bats, dominoes, etc.; tells what mechanical equipment and materials you need and describes every detail of manufacture. The author had years of experience as a craftsman in German toy factories and his 268-page book, with its 200 illustrations, will guide you to success in the toy-making industry.

Crown 8vo. Cloth. \$1.50, net; \$1.62, postpaid.

FUNK & WAGNALLS COMPANY, 354-360 Fourth Avenue, New York

Bible Words in Their True Light

Ministers, teachers, students, and laymen can now be their own Bible commentators without knowing Hebrew or Greek. The fine shades of meaning of biblical words, not apparent in the English version, will reveal to you all passages in their true light, and give added strength and beauty to them. These and many other advantages will accrue to every earnest preacher and student of The Word through

Young's Analytical Concordance

Latest Revised (21st) Edition, by Robert Young

This truly remarkable work, the most comprehensive, exhaustive, and accurate Concordance to the Bible, has proved valuable to thousands of readers. The *Episcopal Recorder*, Philadelphia, says: "It is undoubtedly the best and most complete work of the kind ever published."

Six Fundamental Features

1. Every word is arranged in alphabetical order.
2. Every word is classified under its own Hebrew or Greek original.
3. Every Hebrew and Greek word is printed in the original characters, and the correct pronunciation given in English letters.
4. Each proper and geographical name is arranged in its place with the latest information in biblical and historical antiquities given.
5. The prominent feature is the analytical character of each reference. The Bible student can find (a) What the original Hebrew or Greek of any word is; (b) its literal meaning; (c) a correct and trustworthy exegesis, and (d) what are really parallel passages.
6. A valuable summary of chief results from recent topographical and archeological research of Scripture.

Far-Reaching Value of Plan

Comprehensiveness—Young's Analytical Concordance provides 311,000 references, 118,000 of which are not to be found in the best known of the older concordances. It gives 30,000 readings and 70,000 Greek and Hebrew words.

Discriminateness—Every passage in the New Testament noted as doubtful or as having a various reading has been marked by brackets.

Proper Names—All proper names of persons and places have been given with literal meanings.

Dates—The date or era of every person is noted so as to distinguish between two or more of the same name.

Geography and Gazetteer—The location of every place in its tribe with modern name is afforded.

Latest Data—The sketch of RECENT EXPLORATIONS IN BIBLE LANDS, by Professor Nicol, is brought down to date.

Other Special Merits

Not only has the work of REVISION been thoroughly gone into with scrupulous care—but valuable and important SUPPLEMENTS in the Index Lexicons to the Old and New Testaments have been made, which will prove of great service particularly to those unacquainted with Hebrew or Greek. Also a Complete List of Scripture Names, showing their MODERN pronunciation, has been given.

It Is a Handsome Volume

"Young's Analytical Concordance" contains 1,224 pages. It is 11 1/4 inches high, 8 3/4 inches wide, and nearly 3 inches thick. Printed in clear, easy-to-read type on excellent white book paper, strongly and handsomely bound in black cloth. A book that will last a lifetime!

Send Only \$1

And this supreme Concordance will be sent to you for 10 days' examination. If you decide to keep it, send us \$1.50 in 30 days, and \$1 a month for 5 months thereafter until \$7.50 has been paid. If you do not keep it, return it at our expense, we will return your \$1 and you will owe us nothing.

Read our attractive offer in the coupon.

You're missing a true, colorful, gripping story of a real man, if you fail to read

Sergeant York and His People

by Sam K. Cowan

With all the tense interest and swift action of a novel, this new volume, *just off the press*, brings you a true story stranger indeed than fiction—a story of home, work, war, faith in God, and love told about the type of man whom we call an American with a thrill of pride. The scenes range from the stern, sun-kissed mountains of Tennessee where Sergeant York was born to that perilous, shell-ridden battlefield in France where this young Tennessee mountaineer amazed the world with his almost unbelievable feat of individual skill and lion-hearted bravery.

Read this book and you'll agree with the Literary Editor of the *Chicago Daily News* who says, "Whew, but this book about Sergeant York has hit us in a tender spot! If it doesn't hold a thrill and a smile and a tightening of the throat for you, then you're not the reader for whom we are editing this book page, that's all."

At booksellers, \$2.00, net;
by mail from the publishers, \$2.12.

NORMAN HAPGOOD
Editor Hearst's International

IF you think well of this Ford Article, I would like particularly to have you read my two pages of very short Editorials. They are as frank and independent as I can make them. And because we have Editorials, Articles, and Departments of Business, Science, Plays, Art, Books, please don't think I want you to read a long-winded tiresome magazine. On the contrary, my idea is: *Have FUN while you read, but KNOW something when you get through!*

Norman Hapgood

MAXIM GORKY on "The Menace of Asia"; Frazier Hunt on "The Folks of New Ireland"; Gilbert K. Chesterton on "What Is a Joke?"; W. L. George on "The World Is All Right—Except for Pessimists" and James H. Collins' timely warning "Beware of Foreign Wallingfords" are articles not too long or serious, by men who have a definite message written particularly for the readers of this International Magazine. "Have We a New Ballinger Case?" gives the real facts of the troubles in the Department of the Interior. Don't miss the June number, the first in the new and more convenient smaller size.

Hearst's International
A LIBERAL EDUCATION
119 WEST FORTIETH STREET, NEW YORK

Why Henry Ford Attacks the Jews

NORMAN HAPGOOD'S "Inside Story of Henry Ford's Jew-Mania" is more than a revelation of motives of a quixotic millionaire who starts out single handed to destroy an entire race. It is a blow for American liberty! More fascinating than any fiction, the true story of how an ex-Russian spy, with the brother of ex-Secretary Daniels and a New York detective agency, all worked together with Henry Ford to discredit the Jews and restore the Romanoffs to the Russian throne. Read it for yourself in Hearst's International for June.

Can a Bad Woman Make a Good Wife?

Gouverneur Morris asks that question in "The Better Wife," his newest and best story, just starting in this June number. His answer makes one of the greatest novels of 1922. You will find running also two other splendid novels: Sir Gilbert Parker's "Carnac's Folly", and Robert W. Chambers' "The Talkers". These three writers alone are worth many times the 35 cents you spend for the magazine.

For Fiction that is *different* get Hearst's International. Written not merely for entertainment, its short stories and novels have a quality of vitality—of definite purpose—that is educational. E. Phillips Oppenheim, Owen Johnson, William MacHarg, Courtney Riley Cooper, Bruno Lessing—all in stories that make you *think*. And wonderful illustrations too: more than 60 pictures in the June number—many of them in colors.

ON every newsstand of the better sort, at thousands of the more enterprising drug stores, everywhere the best magazines are sold, you can get Hearst's International. But if, by any chance, your dealer hasn't got it and cannot get it for you, send us his name and address; we will see that a copy reaches you at once with our compliments. Better still, to be sure of getting every number, fill out the coupon below and send it in for a year's subscription starting with a FREE COPY OF THE JUNE NUMBER.

**TO MAKE SURE OF YOUR COPY—
USE THIS COUPON**

HEARST'S INTERNATIONAL,
119 West 40th Street, New York

Please send me without charge a copy of the new June issue of Hearst's International. I enclose \$3.00 for which you will enter my name for a full year's subscription, starting with the July number. This special offer in connection with the Henry Ford story is to give me 13 months of your 35c magazine for \$3.00—a saving of \$1.55 on the regular newsstand price for these issues which will contain both the new Gouverneur Morris and the new Upton Sinclair novels.

LITERARY DIGEST readers seeking private institutions of learning will find in our pages between May 13th and September 9th, the following Classified Directory containing the names and addresses of some distinctive residential schools; vocational, professional, special schools; colleges, and supervised camps. Advertisements describing these institutions will be found in the first issue of each month from May to September.

You are invited to write for information to any of the institutions in which you are interested. We list only such schools as we believe are under highly trained and public-spirited executives. Our School Advisory Department continues to serve, as it has for many years, our readers and the schools without fees or obligation. It is necessary for inquirers to give specific information that may aid us in giving prompt service.

Digesting the Foreigner

America's big problem. Congress has wrestled with it for generations. The United States Immigration Commission spent four years studying the effect of immigration on American civilization and Jeremiah W. Jenks, Ph.D., LL.D., Research Professor of Government and Public Administration, New York University, and W. Jett Lauck, Director of the Bureau of Applied Economics, Washington, who were officially associated with the Commission, have given the gist of its 42-volume report in their wonderfully comprehensive and interesting book—

THE IMMIGRATION PROBLEM

(New and Revised Edition)

After passing through four editions, the book is now coming from the press in a fifth edition, revised, enlarged, and strictly up-to-date, by Rufus D. Smith, M.A., Associate Professor of Public Economy, New York University. The book now contains immigration laws and regulations up to May, 1921, and all available new data and statistics, based on the 1920 census. Prof. Smith has added three important chapters—Immigration Problems of Other Countries, The Race Problem in the Pacific, and Present and Future Restrictions. The book is a most admirable survey of the immigration situation, and the recommendations of its authors will go far toward solving the problem.

Cloth, 8vo, 682 pages

In London Town

By F. BERKELEY SMITH

F. Berkeley Smith had access everywhere. He shows you all sorts and conditions of people, in the splendor of the Savoy and the misery of Piccadilly; in theater and music hall; at Brighton and on the Thames; in Hyde Park; in a country house. He hobnobs for you with cabbies, barmaids and tailors. In all, he has produced as fascinating and entertaining a book as you'll be likely to find about London—not a cold, dull, guide-book, but a sprightly, interesting volume that gives you the true features of London town and describes the real British character.

Profusely Illustrated. Cloth, 272 pages
Price \$1.50; by mail \$1.62

HEART TROUBLES

Their Prevention and Relief

Here is an informing and authoritative discussion of this very important subject, written in an easy popular style and avoiding the use of obscure and confusing technical terms. It is by the well-known authority in this field,

Louis Faugères Bishop, M.D.,

Professor of Diseases of the Heart and Circulation, Fordham University; President of the Good Samaritan Dispensary and Physician to Lincoln Hospital, New York, etc.

Intended primarily for sufferers from heart affections, for their near relatives and friends, and especially for the nurses in charge of such cases, it describes the various types of heart ailments in a most lucid manner and tells exactly what should be done in each case, the mode of life best suited to the trouble, the most beneficial diet, etc. This book is highly recommended to physicians, who can obtain much valuable information from it.

Crown 8vo. Illustrated by photographs and diagrams.
\$3.50 net; by mail, \$3.62

Cloth

MODERN TENNIS

The famous French player, Max Decugis, says: "No study more complete, more practical, more authoritative, and at the same time more simple in its intelligibility, has been published." The author, P. A. Vaile, is an international authority.

In an easy, agreeable style, lucid and thorough, tennis is here explained and made absolutely clear from the simple forehand stroke to the most complicated cut services, with detailed treatment of volleys, smashes, lobs, drives, chops and their compounds.

Illustrated with 50 full-page action-photos of great players, and 34 text-drawings.

Postpaid, \$2.16.

LEARN SPANISH In a Few Days

It is by far the most important foreign language today for all Americans who are developing their South American trade. Whether you are a traveler, teacher, business man, or professional man—whatever you are, in fact—a knowledge of Spanish will be an immense advantage to you at this time. It will make things easier for you in a hundred ways and will put many dollars in your pocket. Remember that new avenues of trade are opening up every day with the Latin-American republics, and the man who can speak Spanish will be at a premium. You can soon become fluent—a little spare time daily makes you so—The Rosenthal Common-Sense Method of Practical Linguistics will teach you to speak, read, and write Spanish readily if you will devote ten minutes of your leisure time each day to this wonderful system which teaches you in the way a child learns to speak, by nature's method. Write NOW for free booklet, "Revolution in the Study and Teaching of Foreign Languages." FUNK & WAGNALLS COMPANY, 591 Hess Bldg., New York

BECOME AN EXPERT ACCOUNTANT

Executive Accountants command big salaries. Thousands of firms need them. Only 3000 Certified Public Accountants in U. S. Many are earning \$3,000 to \$10,000 a year. We train you thoroughly by mail in spare time for C. P. A. examinations or executive accounting positions. Knowledge of bookkeeping unnecessary to begin. The course is under the personal supervision of William B. Castenholz, A. M., C. P. A., former Comptroller and Instructor, University of Illinois; also former Director of the Illinois Society of C. P. A.'s, and of the National Association of Cost Accountants. He is assisted by a large staff of C. P. A.'s, including members of the American Institute of Accountants. Low tuition fee—easy terms. Write now for information. LaSalle Extension University, Dept. 552-HC Chicago

Just Published

The Fourth Revised Edition of

HAY FEVER

Its Prevention and Cure

By

Wm. C. Hollopeter, M.D.

Since the last edition of this book was published six years ago great advance has been made. We know that the emanations of vegetable matter actually cause hay fever, that different parts of the United States produce different pollen, so the treatment of hay fever in one portion will be different from the treatment in another. The West, North, and East, will call for a different immunizing process than that of the middle states, yet any one can prevent his annual suffering by selecting the proper anaphylactic reaction from inhaled atmospheric pollens. Hay fever is now successfully treated by immunizing the patient in advance of the attack, by the use of the same pollen that creates his trouble. The 4th edition now offered has been completely revised and enlarged and gives the results of the most modern and efficacious treatments.

Commence Treatment Now

Dr. Hollopeter is a well-known specialist who has had unusual success and any one who suffers from rose colds, sneezing spasms, asthma, or hay fever, should get this book immediately and carefully consider the immunizing treatment which, among other successful methods, is so carefully outlined.

God and Evolution

Moses vs. Darwin—By William Jennings Bryan.

Mr. Bryan says that the objection to evolution is that—

"It undermines faith in God, robs his word of divine sanction, and reduces the Savior to the stature of a man, with an ape for an ancestor on his mother's side, at least, and, as most evolutionists believe, on his father's side also."

Darwin's Theory of Natural Selection—By Dr. S. Parkes Cadman.

Dr. Cadman says:

"The Biblical account reflects the primitiveness of its age, the Darwinian explanation appeals to me as the greatest I have ever known as regards the attributes of the Presiding Mind. The development of man's ethical and intellectual nature proceeds from the empire of spirit in which that Mind presides."

Duval's Artistic Anatomy

For Students of the Human Body

Epitome of a course of popular lectures on anatomical structure delivered at Ecole des Beaux-Arts by Prof. M. Duval, which he continued for ten years. Illustrated.

A reliable text book that accurately portrays by word and picture the lines of the human structure and its bones, muscles, tendons, ligaments, various viscera, etc. The first part relates to the skeleton, articulations, and proportions; second part, to muscles. Introductory chapter on plastic anatomy; final chapter on muscles of expression. A book that every art student should keep handy for reference.

8vo. Cloth. New and revised edition.

362 pages. \$1.75, net; \$1.87, postpaid.

FUNK & WAGNALLS COMPANY, Publishers, 354-360 Fourth Avenue, New York

What's Wrong In This Picture?

Can you find the mistake or mistakes that are being made in this picture?

Can you point out what is wrong?

Do you know the little rules of good conduct that divide the cultured from the uncultured, that serve as a barrier to keep the ill-bred out of the circles where they would be awkward and embarrassed? Do you know all the important rules of etiquette that men of good society must observe, that women of good society are expected to rigidly follow?

Do you know how to introduce men and women correctly? How to answer a dinner invitation? How to greet a man or woman acquaintance in public? How to plan Church and house weddings? How to use table silver properly? How to word invitations and acknowledgments? How to avoid blunders at the Theatre and Opera? How to always do the correct and cultured thing at all times?

It is a mark of extreme good breeding and culture to be able to do at all times exactly what is correct.

The Book of Etiquette

Recognized as one of the most dependable and reliable authorities on the conduct of good society, it has solved the problems of thousands of men and women. It has shown them how to always be well-poised and at ease, to meet embarrassing moments with calm dignity and what to do—what to say—what to write—what to wear at all times. The Book of Etiquette—two large volumes—covers dinner and dance etiquette—engagements and weddings—teas, parties, and entertainments of all kinds. Authoritative information on the wording of invitations, visiting cards, and all social correspondence. Each chapter is filled with interesting and valuable information that will enable you to become known as a person of poise and charm, one who can always be depended upon to know what to do under all conditions of social intercourse.

Sent Free

For 5-Days' Examination

Without being obliged to buy, you can examine and read both volumes of the Book of Etiquette in your own home, absolutely free of charge. Simply fill in and return the coupon and both volumes will be sent you for your personal 5-day examination. If, at the end of 5 days, you decide you don't want the books, you may return them without obligation.

On the other hand, if your examination convinces you that here at last are the books you have always wanted, simply send the small sum of \$3.50 for these beautiful, cloth-bound, gold-decorated books. Mail the coupon NOW, to Nelson Doubleday, Inc., Dept. 395, Oyster Bay, N. Y.

NELSON DOUBLEDAY, Inc.

Dept. 395, Oyster Bay, N. Y.

Without obligation on my part, and without any money in advance, you may send me the complete two-volume set of the Book of Etiquette for free examination. Within 5 days after receipt I will either return the books or send you \$3.50 in full payment.

Ye Hall of Discomforts

Containing
ye following Collection of
Quaint and Curious
Antiques, namely
and to wit:

[1] Starched Ruff

Because its starched points wrought grievous injuries to both wearer and spectators and thereby caused unseemly brawls and bloody encounters at her Court, this picturesque neckwear was forbidden by the Good Queen Bess.

[2] Hard Boiled Shirt

Men have attacked and conquered this fearsome monster alone and unaided, but it was customary to call in the neighbours to help. The Society for the Suppression of Profanity abolished it when the soft shirt appeared.

[3] The Dickey

Some historians contend that this quaint device was an article of fashionable attire, while others insist that it was a means of defence in time of war.

[4] Detached Cuffs

When stiffly starched these primitive and cruel fetters caused great woe and misery to malefactors and the ungodly. Said to have been impossible to keep them in sight when clean or to hide them when dirty.

[5] Beaver Hat

Originally modelled on the lines of the Mississippi steamboat funnels. Walked the plank when the soft felt hat arrived.

[6] Coat with Padded Shoulders

The padded shoulders of these coats [which bear a remarkable resemblance to the New York Public Library] often provided sufficient horse-hair to make a sofa, when the eldest daughter was married.

[7] An Uncomfortable Collar

Any ordinary collar, stiff or soft, which does not afford comfort with *dressiness* may now be replaced by A Collar With Character—not merely a more comfortable collar—but a new collar with style and comfort both *woven* and *tailored* into it.

YOU wear a soft shirt,
with a soft bosom,
and soft cuffs; a
soft hat; a coat with soft
rolling lapels. Why?

They're more comfortable,
and better-looking.

Yet not one of these
things is nearly so com-
fortable as is the VAN
HEUSEN compared
with a starched collar—
nor nearly so good-look-
ing as is the VAN HEU-
SEN compared with or-
dinary collars—soft or
starched.

The VAN HEUSEN
is the World's Smartest
Collar because—it is the
only collar with style
woven into it—and com-
fort tailored into it.

For immediate delivery—9 styles, $\frac{1}{4}$ sizes 13 $\frac{1}{2}$
to 20, boys' sizes 11 to 13. Price fifty cents.
Will outwear half-a-dozen ordinary collars.

If your dealer cannot supply you with the
VAN HEUSEN Collar and VAN CRAFT
Shirt [a soft white shirt with the VAN
HEUSEN Collar attached] write us for
address of one that can.

VAN HEUSEN

PATENTED

the World's Smartest COLLAR

CHICAGO'S WAR ON LABOR TERRORISM

"THIS IS WAR," declared Chicago's Chief of Police, when a long series of thuggeries, instigated, it is charged, by certain labor union bosses, disgruntled by the terms of the Landis wage award, culminated one night in the dynamiting of three buildings and the murder of two policemen. "Nothing can stop us until crime and criminals are destroyed in all the unions," avers the head of Chicago's Citizens' Association. "We are virtually in a state of war," says a Chicago judge; "a group of men have organized to wage war on law and order in this community." "It is humiliating to confess it," agrees the *Chicago Tribune*, "but the city is at war. A community of nearly three millions is defied by a handful of criminals and their allies." "It is full time to use drastic methods to free Chicago from the terror of men who care nothing for law, life or property; who care nothing for the real interests of labor; whose sole aim is to perpetuate conditions under which they can live easily by graft and extortion," explains the *Chicago Evening Post*, which adds that to such men "organized labor is but a blackjack with which to beat tribute out of business and industry." "There is in Chicago a small number of men who pose as leaders of labor, and who have undertaken to prevent all building construction in the city unless it is carried on under terms and conditions that will yield them tribute," declares the *Chicago Daily News*. It goes on to say:

"To enforce their will they employ sluggers, bombers and gunmen, who destroy property and take human life ruthlessly and unhesitatingly. All these men must be driven from Chicago. Joliet is the proper place for some of them; the gallows is more fitting for others. The four men who murdered two policemen and wounded another Tuesday night should be caught and convicted and hanged, and the full limit of punishment should be given to those who employed and directed them. Chicago has meekly and timidly tolerated bombing outrages until they have led up to murder. It can tolerate them no longer without confessing its powerlessness before an organized gang of criminals.

"Clearing the town of bombers and sluggers will not be what some false union leaders are trying to make it appear—a war on union labor. It will be nothing of the sort. Labor is not guilty

of the crimes that have been committed by the exploiters of labor and labor unions. The overwhelming majority of union workers are law-abiding and orderly. They do not employ gunmen. They do not exact and receive blackmail. They do not hire criminals or pay for criminal deeds.

"In some labor unions, however, there are crooks and criminals who pose as union leaders. To them the police attribute responsibility for the bombings and murders committed in the fight against the Landis award. Those men must be hunted out

and their guilt must be fastened on them. Working together, the police and the State's Attorney's forces ought not to find that task difficult. Honest and thoughtful labor should earnestly cooperate in the task. Organized labor needs nothing more now than to be rid of crooks who pose as labor leaders. And Chicago must win the fight now against the dynamite crew that for months has held up progress in many directions by spreading terror through the town."

The "labor terrorists" accused of inciting these crimes against life and property, agrees Chief of Police Charles C. Fitzmorris, "no more represent honest labor than the Haymarket anarchists did." As proof of this he

tells us that "the rank and file of the unions in Chicago, far from opposing the steps to crush terrorism, are behind the Police Department." In a statement telegraphed to the *New York Evening World* the Police Chief explains further that—

"For several years past a gang of professional thugs have gradually gained executive control of a number of Chicago labor unions. Through intimidation and violence they have worked their way into the inner councils of certain unions until they have become absolute dictators of the terms on which a man may work, for whom he may work, when and where. This grip is so tight that by systematic blackmail of workers and their employers alike they have accumulated large sums of money, which they have used in bribery and corruption on a scale so enormous that they have been almost immune from successful prosecution. . . .

"The war in which the Chicago Police Department is engaged to-day is not a war upon organized labor. It is a war upon hired assassins, paid vandals and unscrupulous blackmailers. Within twenty-four hours of the latest outrages 150 alleged labor leaders, among them many professional sluggers, bombers and blackmailers, were under arrest. Within less than three days 'Big Tim' Murphy, Fred Mader and Cornelius (Con) P. Shea are under indictment and held without bail on charges of murder.

BREAKERS AHEAD!

—Brown in the *Chicago Daily News*.

Several others are also under indictment on various charges growing out of the same conspiracy. Murphy is the President of the Gas House Workers' Union, has been arrested scores of times and is under conviction in the Federal Court for conspiracy to rob the United States mails.

"Mader recently was elected President of the Chicago Building Trades Council. He is an ex-convict, having served in Joliet Penitentiary following conviction of conspiracy to obtain money by threats. Shea is also a convict, who served in Sing Sing, and first gained prominence in Chicago's labor circles as head of the Chicago Packing House Teamsters' Union in 1904 in a strike marked by bloodshed and riot. . . .

"The Citizens' Committee to Enforce the Landis Award, the

Murphy, Shea and Mader, the "Big Three" of the indicted labor leaders, proclaim their innocence and ridicule the charge against them. Their lawyers have asked for an immediate trial, and Mader, President of the Building Trades Council, has offered a reward of \$1,000 for the apprehension and conviction of the murderers of policemen Lyons and Clarke. A correspondent quotes him as saying:

"I think this is all a mistake. I've been trying to play clean. We regret the death of the policemen as much as the officers, and when the results of the investigation are sifted I believe they will find that other than labor men were to blame for the crime."

Says "Big Tim" Murphy, as quoted by the *Chicago Journal*:

"This is a joke. Fitzmorris pinched all these fellows because he is sore at me. They are trying to chase me out of Chicago, but I'll be here a long time.

"There are thirty-four different locals that report to the Building Trades, and if some member of one of those locals goes wrong, why should the members of the entire thirty-four suffer? I suppose that if a reporter went wrong, they would go over and pinch the Press club.

"I am a friend of a policeman, not an enemy, and have never had any trouble with a policeman in my life. It doesn't take a dozen policemen to arrest me; they could send the office boy over from the detective bureau and tell me Hughes wanted to see me and I wouldn't offer any objection. But this run-around that they are giving me is absolutely uncalled for. I am willing to stand the gaff and will be in Chicago when a lot of these fellows who are trying to drive me out will be out of office."

Murphy characterizes "poor old 'Con' Shea," as "too old to conspire with anybody"; and he declares that "the whole thing is just a big splash." Shea himself contributes the remark that "there is a lot of talk, but they have nothing on me."

Edward Nockels, secretary of the Chicago Federation of Labor, denounces the wholesale arrests of union heads as "police terrorism to discredit union labor." He charges that police and prosecutors are working "hand in glove with the open-shop advocates"; and he avers that "private

detectives in the pay of the Citizens' Committee have made every effort to 'frame' evidence on the labor chiefs." In a Chicago dispatch to the *Socialist New York Call*, he says further:

"The sole aim of the committee is to discredit organized labor and to break the Chicago Federation of Labor. The wholesale arrests of labor heads is merely an alibi for the Chicago crime wave, which the police are powerless to stop and with which labor heads have no connection.

"When two policemen are killed under mysterious circumstances and three buildings dynamited, labor officials are arrested by the dozen and held in jail without bail. There is no question but that 'Big Tim' Murphy, 'Con' Shea and Fred Mader, who now stand accused of murder, had no knowledge of the outbreak."

Nockels declares that Chicago labor will continue to fight the Landis award in a "lawful manner"; and he adds: "Our chief efforts now are to prevent ourselves being made victims of framed evidence." Robert M. Buck, editor of the *Chicago New Majority*, also regards the arrest of the labor leaders as an episode in the open-shop war. In a statement telegraphed to the *New York Globe* he says:

"Labor is concerned to preserve law and order, but labor is not stampeded by the antics of the chief of police, the State's attorney, and the 'Citizens' Committee.' It is going on its way doing its work, which is the organization of the workers for mutual defense and advancement. It accepts all responsibilities which rightfully devolve upon the workers, but it repudiates responsibilities that are not its own. Nothing can stop organized labor in its onward march, for it is the only authoritative ex-

A LEGITIMATE WAY TO PROTEST AGAINST THE LANDIS AWARD.

On April 29, twelve days before the murder of policemen Lyons and Clarke, one hundred thousand representatives of various building-trade unions paraded the streets of Chicago, carrying hundreds of banners with such legends as "Would Landis Work for 95 Cents an Hour?" "Landis Needs \$50,000 to Provide for His Old Age. Does a Painter Grow Old?"

Chicago Association of Commerce and the Chicago Crime Commission have spoken through their proper officials on behalf of the citizens of Chicago, pledging to the Police Department and the States' Attorney the solid support of the community. In the past forty-eight hours, with the known leaders of the conspiracy under lock and key, robberies, burglaries and other crimes immediately dropt to a figure which is negligible from the standpoint of police administration of Chicago's size. With this support behind it the Chicago Police Department in lawful manner is ready to meet the issue."

"We have sufficient evidence to hang Murphy, Shea and Mader, if the same law used in the Haymarket case is followed," declares Assistant State's Attorney George F. Gorman, according to a Chicago dispatch to the *New York Evening Post*. In the *Chicago Journal*, Mr. Gorman is further quoted as saying:

"At present in Chicago there is a small group of men at the head of labor organizations which is frantically trying to keep control. The Landis award was a death-blow. But they would not bow to the inevitable.

"Rather, they proposed to sweep all law but their own aside and rule by might and violence. The honest element in the labor circles, however, was against such a move. Perfectly satisfied with the award, the men began returning to work.

"It means that they had broken with their leaders—that the jobs the leaders had made fat with graft were going, and going fast. So the leaders organized gangs of thugs and went out and beat workmen who refused to do their bidding. They began a rule of fear. It has led to continued slugging, bombing and murder. But this is the end. Those men will pay the penalty—which is hanging."

Copyrighted by Underwood & Underwood.

THREE CHICAGO LABOR LEADERS INDICTED FOR MURDER OR INCITING TO MURDER.

They are, from the reader's left, Timothy Murphy, Cornelius P. Shea, and Fred Mader. They declare their innocence.

pression of fundamental human progress. Sensational episodes, however unfortunate, whether originated by its enemies or only magnified by its enemies, are, after all, episodes."

That "labor's name has been besmirched," by these dynamitings and murders, is the opinion of the *Chicago Journal of Commerce*. "Union labor should set itself to the task of cleaning up every labor organization infested with criminality or showing any laxness in its attitude toward agreements," believes the *St. Louis Star*; and the *Washington Herald* deplores the fact that "the unenviable light in which Chicago labor unions have been placed is liable to cast an unjust reflection upon labor organizations throughout the United States." "The labor unions need to clean house if they do not wish to be destroyed by a small minority of traitors in their ranks," declares the *Philadelphia Evening Public Ledger*. And in the *Socialist New York Call* we read:

"Decent and progressive men in the unions of Chicago have for years waged a losing battle against a type of criminal who has fastened himself upon some unions. This type has continued in power through terrorism maintained over the members. The active member who rebelled against the criminal type often took his life in his hands, and many such men have been brutally beaten by 'sluggers.'"

Other happenings in Chicago that indicate to the *Chicago Journal* a connection between graft and murder are given by that paper:

"While sluggings and bombings have been running riot the last few months, other facts have transpired. Taxes have climbed like scared squirrels without any visible returns to the taxpayer. Approximately \$5,000,000 has been assigned to five city hall 'experts' for work worth—perhaps—one-thirtieth of that sum. Fourteen new 'experts' have been employed at \$5,000 each per year, and their chief duties are to sign their names on the dotted line. Charges of million-dollar irregularities have been made against the school board.

"There is a direct, unbreakable connection between such mishandling of public money and the orgy of violence which culminated in the murder of Policemen Lyons and Clarke. No city can clean up its jungles of the streets unless at the same time it cleans graft and waste and extravagance out of administration."

In similar vein the *Chicago Tribune* points out that a great city could not be defied by a handful of thugs if it took a proper interest in its civic affairs:

"It could only happen where the laws have been successfully

and habitually defied. That is the truth about this town, and it is coming home to us with a vengeance.

"We have condoned malicious mischief and the destruction of property, because in each case it was not our property. We have ignored beatings and assaults, because our heads were not broken. We have been indifferent to robberies, because our homes have not been reached. We have forgotten murders and the escape of murderers, because our families have been safe.

"We are shamed by the insolence of a few who count upon their daring and our weakness. We are shamed by their defiance, their confidence that to-morrow that we shall forget the murders of yesterday, the burnings and destruction of to-day. They think they can terrorize us. They count upon our futility.

"Are they right?"

The story of the Landis award, which plays so big a part in Chicago's labor war, is outlined by the *Newark Evening News*. This paper reminds us that last year Chicago sought to bring down the cost of building, so that much needed construction of homes and factories might be resumed, but labor resisted lower wages, insisting upon war-time levels. We read:

"The resulting deadlock was submitted, by mutual consent, to Kenesaw M. Landis, then a Federal judge. Both sides agreed to abide by his decision. He gave deep study to the problem, as his resulting report showed. He found that wages were less important than wasteful practices, even in ultimate costs. To meet the situation as he analyzed it, he made alternative awards.

"Wages were to be reduced in both cases. But where the union would assent to elimination of waste, enforced by union rules, the decrease from war wage-rates would be relatively small, and where such assent was not given, wages would be made lower to compensate for the extra costs of the waste-compelling rules.

"The majority of the unions took the first alternative. The carpenters and a few others revolted against the award, because they would not yield their restrictive practices, which Landis had said made for 'waste for waste's sake.' A Citizens' Committee was formed to enforce the award, and twenty-two building trades stuck by it. In those which did not, open-shop conditions were installed, the award having provided for such conditions where a union failed to supply men as required under the terms of the award.

"Backed-up building went forward. Then some contractors, seeing a labor scarcity developing, threw overboard the Landis wage-rates and offered higher ones. This strengthened the revolting unions and weakened the position of those which had lived up to the Landis agreement. The carpenters threatened to quit the Building Trades Council if it did not jettison the award, and the council, sensing a growing spirit of revolt, apparently threw its influence to the insurgents."

WHY PENNSYLVANIA PICKS PINCHOT

AS POLITICAL TIMBER, nothing less than the nation's most famous forester will do, it seems, for the Republicans of Pennsylvania. In Pennsylvania, observes a New York editor, they know Gifford Pinchot "as a forester who has done more in a few years to repair the ravages wrought on the State's forests than has been accomplished in a similar way in any other section of the country." But the ravages on the forests are hardly a circumstance, to judge from the Pennsylvania press dispatches, compared to the ravages Mr. Pinchot made on the powerful State Republican machine last week, when he defeated the organization candidate for the gubernatorial nomination, carrying practically every county outside the two big cities, after an exciting canvass which aroused every hamlet in the State.

Such a political overturn has its national bearings, and all over the country people are asking why Pennsylvania Republicans did it. The answer should come from Pennsylvania itself, and we therefore look to the Pennsylvania papers for their interpretation of the result of the voting on the 15th. First of all, the nomination of the distinguished forester is a great personal triumph, the Harrisburg *Telegraph* (Rep.) in the State capital joins with Governor Sproul in declaring. Many other factors, it goes on to say, entered into the primary campaign, "the most potential being the industrial unrest in certain lines, the recent passing of recognized party leadership, the disturbing features of an official audit of the State Treasury, and opposition here and there of dissatisfied elements of the party resulting from local dissensions." The Pinchot nomination is described by the Philadelphia *Bulletin* (Rep.) as "a revolt of the rank and file of the party against undesirable leadership." It denotes, in the judgment of the Scranton *Republican* (Rep.), "the passing of the scepter of power from the organized leadership of a few to the hands of the people." It will be remembered that Pinchot carried every one of the rural counties of the State, thus rolling up a majority which overtopped the organization majorities in Philadelphia and Pittsburgh, Pennsylvania's two largest cities. Such representative Republican dailies as the Philadelphia *Inquirer* and Lancaster *Examiner-New Era* offer an explanation for the Pinchot victory which appears as follows in the editorial columns of a third Republican daily, the York *Dispatch*:

"When the Republican voters of Pennsylvania fully realized through the investigation of Auditor-General Samuel S. Lewis, the loose, not to say criminal, conduct of State business affairs by members of their own party, they decided to clean house. The success of Pinchot will enable them to do so without changing the political complexion of the State government."

A Republican paper from the western end of the State outlines a view-point likewise expressed by the Wilkes-Barre *Record* (Rep.) and the Philadelphia *Public Ledger* (independent with Republican leanings), in the eastern end, when it shows that there is both a State and a National angle to this Pinchot victory; that Pennsylvania, at least, is in revolt. Says the Erie *Times*:

"The Republican voters of Pennsylvania probably did go to the polls with a determination to overthrow the old organization leaders in the State and bring about certain reforms, the need of which was made so much of by Pinchot in the campaign. But there was something deeper and of far greater import behind the stand they took. Pennsylvania Republicans took their cue from the recent Indiana United States Senate fight. They overthrew the Old Guard, and in doing it served notice on Congress that they are not going to stand for the dilly-dallying, do-nothing tactics of legislators, both State and National. They have felt the stringency of the times without receiving any relief in the way of lower taxes. The soldiers are still clamoring for the bonus, and farmers for the assistance promised them so long. What the Republicans of Pennsylvania did on Tuesday the Republicans of other States are going to do when they get the opportunity unless we are badly mistaken.

"Those who were astounded by the victory of Beveridge in Indiana are even more upset undoubtedly by the victory of Pinchot in Pennsylvania. Unless there is an awakening soon on the part of the Old Guard leaders in Congress, surprises such as Indiana and Pennsylvania afford will cease to be surprising at all."

For two reasons, says the Philadelphia *North American*, one of the most militant and outspoken Roosevelt papers in the East in the days of the Bull Moose movement, "the

inspiring result" of the primary "will influence profoundly the course of political events in the State and throughout the nation":

"It vindicated the enfranchisement of women; for to the women of Pennsylvania, first of all, is due the lifting of this sunken State. And it demonstrated in memorable fashion the supreme value of the open primary as an instrument of democracy."

When we turn to the Democratic press we find the Philadelphia *Record* calling the Pinchot victory "a triumph of the better element of Republicanism." In the other end of the State the Pittsburgh *Post* calls it "a protest vote." The *Post* is inclined to think, however, that the Pinchot victory can be largely ascribed to the fact "that with the death of Penrose, the last of the big bosses, no one proved capable of running his machine." The Scranton *Times* (Dem.) predicts "a complete reorganization within the Republican party," while the Harrisburg *Patriot* (Dem.) in the State capital looks for a more complete Pennsylvania revolution in the shape of the election of a Democratic Governor in November in order to "clean out the entire system which has throttled the political life of this Commonwealth for a generation or more."

Copyrighted by Underwood & Underwood.

MRS. PINCHOT SAYS THE WOMEN DID IT.

Gifford Pinchot, Republican candidate for Governor of Pennsylvania, whose wife agrees with his opponent's campaign manager that the women of Pennsylvania were chiefly responsible for her husband's success in the Republican primaries.

THE CHILD-LABOR LAW QUASHED

THE CHILDREN OF MANY AMERICAN STATES are worse off to-day than they have been since 1919, when the Federal Child-Labor Law was enacted, in the opinion of several American editors, for the Supreme Court now declares this law unconstitutional. "This means that little boys and girls who should be in school must go back to mines, mills and factories," notes the secretary of a large textile union. "In most cases they will work far longer hours at harder labor than their years or strength justify," observes the *New York Daily News*, which, however, reminds us that since many Southern mills are owned by Northern capital, "the blame can not be laid entirely on the South."

The Child-Labor Law was intended to regulate the employment of children under the age of fourteen years in any mill, workshop, or manufacturing establishment, or those under sixteen years of age in any mine or quarry, by imposing an excise tax of 10 per cent. upon the net annual profits of those employing such labor. The law is held invalid, in the opinion delivered by Chief Justice Taft and concurred in by the other Justices, as an attempt by Congress to regulate, through its taxing power, something that is entirely within the jurisdiction of the various States. In the words of the Chief Justice:

"Grant the validity of this law, and all that Congress would need to do hereafter in seeking to take over to its control any one of the great number of subjects of public interest, jurisdiction of which the States have never parted with and which are reserved to them by the Tenth Amendment, would be to enact a detailed measure of complete regulation of the subject and enforce it by a so-called tax upon departures from it. To give such magic to the word 'tax' would be to break down all constitutional limitations of the powers of Congress and completely wipe out the sovereignty of the States."

Thus, remarks the *Wall Street Journal*, "we have a victory for States' rights; Congress has not the constitutional power to regulate child labor, either directly or indirectly." "The opinion of the Supreme Court is not to be mistaken for a sentence of children to labor," says the *New York Times*; "the Supreme Court merely declares invalid unsound legislation, and refers the subject of child labor to the States, where it properly belongs." In the South, we are told in a Charlotte, N. C., dispatch to the *New York News Record*, "the Supreme Court decision was received with much satisfaction by mill owners." But contrary to the general belief, the dispatch continues, the ruling will not increase the number of children employed in Southern cotton mills because, with the exception of Georgia, the State age limits on child labor are identical with those in the Federal law.

The opposite view is that, since the annulment of the first Federal child-labor act was followed by a considerable increase in the employment of children in those States which did not

forbid it, the latest decision will have a similar effect. As the *New York Tribune* sees the ruling:

"It says in effect that little heed can be paid in this country to the bitter cry of the children who are denied their birthright by being caught early in the wheels of industry. For it is obvious that forty-eight States can not be brought to enact parallel legislation, and that factories will tend to be located where regulations are the most lax. Inexorable economic law will exert its steady pressure to make all States standardize at the lowest level."

Before the law was declared unconstitutional, however, it registered several victories, in the opinion of the National Child Labor Committee, of New York. According to this organization:

"Six years ago, there were ten States that had no prohibition of night work in factories for children under sixteen; now there are only seven such States. Then there were twenty-five States which did not have the eight-hour day for children under sixteen in factories; now there are only sixteen. Then there were twenty-seven States that did not have the sixteen-year age limit for employment in mines and quarries; now there are only six such States."

The recent ruling of the Supreme Court is the second of the kind, the Court having previously held unconstitutional a law which directly prohibited employment of minors in the manufacture of any products entering interstate commerce. "The taxing power can not be used to protect child slaves from the

exploitation of manufacturers, but it may be used for the protection of said manufacturers," sarcastically notes the Socialist *New York Call*, while the *New York World* declares that—

"If the Supreme Court decision is sound, then the decision of the same court sustaining the tax of 10 per cent. on State bank notes was unsound. Then the decisions upholding the Federal taxes on oleomargarine and on matches made from poisonous ingredients were wrong."

"What do the American people think of a state of law which allows children who should have a chance to grow up in health to become cripples through working long hours before their little bodies can stand the strain?" asks the *New York Evening Mail*. The 1920 Republican platform declared that "if the present [Child-Labor] law be found unconstitutional or ineffective, we shall seek other means to enable Congress to prevent the evils of child labor." The "other means" is interpreted to mean a Constitutional amendment, which women's votes are expected to make possible. "It is plain," observes the *New York Globe*, "that a Constitution drafted in 1791, before the rise of the factory system, is not adequate to meet the necessities of a nation as completely industrialized as is the United States of 1922." Where, to quote Charlotte Perkins Gilman—

We are the Wisest, Strongest Race—
Loud may our praise be sung!
The only animal alive
That lives upon its young.

BEFORE THE FEDERAL ANTI-CHILD-LABOR LAW.

Will such scenes as this again be the rule?

THE SCRAMBLE FOR RUSSIAN OIL

FOR A BRIEF MOMENT the clouds lifted at Genoa early in May, and the great oil companies of the world—Dutch, English, American—held the center of the stage. There was a rumor that the Russian Soviet had granted to the Shell group of British oil companies the privilege of controlling all sales, and, under certain conditions, all production of oil in

sory their oil interests will be turned over by the Soviets to one of the larger and more powerful groups, such as the Shell or the Royal Dutch."

The attitude of the United States, as cabled by *The Tribune's* London correspondent, "is that in any case there must be recognition and protection of American shareholders in Russian companies." Moreover, notes the Genoa correspondent, "with the Allied debts to the United States as a club, together with a refusal to give Europe any further financial aid, America is likely to carry her point."

The Baku oil-fields mentioned above are said by *The Lamp*, the monthly publication of the Standard Oil Company of New Jersey, to be the most prolific in the world. Moreover, Baku is said to be the best port on the Caspian Sea. From time immemorial, says *The Lamp*, Baku has been the "door in the wall between Europe and Asia, and thus so coveted that Russians, Arabs, Persians, Tartars and Byzantine Greeks have all fought for it, and given it as cruel and bloody a past as is possessed by any spot on earth." Continues *The Lamp*:

every part of Russia for a period of five years. This was immediately denied by the parties concerned, but, notes the Charleston (W. Va.) *Gazette*, "that does not dispose of the report; if it were perfectly true it would have been stoutly denied." "There are lots of treaties," adds this paper; "why may not one of them be between the Soviet and the Shell interests?"

The interjection of the oil question at Genoa, says a Conference correspondent of the New York *Tribune*, "gave the Bolsheviks a chance to play their best card—oil. Oil, therefore, became the question of paramount interest, overshadowing Europe's struggle for peace and reconstruction." Belgian and French holders of small oil properties in the Caucasian fields began to fear that they would lose their valuable holdings in the shuffle, and that firms such as the Shell companies would get their properties. The situation at Genoa was described in a cable to the Socialist New York *Call* as "a fight for the control of Russian petroleum fields between American, French, British, Belgian and Dutch groups." According to this cable:

"The Belgians declare that Lloyd George's plan, under which the Russians need not restore original property provided they offer equivalent compensation to the former owners, is a scheme by which the Soviets, having corralled the big Russian oil-fields from their private owners, some of whom were foreigners, could turn them over to a single oil syndicate. The fight that would result for these concessions under the proposed plan would be avoided entirely by requiring the Russians to restore the property to its original owners. The Belgians fear that unless this is made compul-

"In 1722 Peter the Great of Russia, who had long coveted Baku for its strategic position as the gateway to Asia and for its oil-fields, sent an expedition from Astrakhan to Derbent, which town was captured. The next year the Russians entered Baku.

"In 1863 the first refinery at Baku was founded by the Armenian, Melikoff. Eight years later the first well was drilled in

the valley of the River Kondake, and two years after that the first 'fountain' or gusher was struck."

"It is not to be wondered at that nations covet a share of Baku's oil," remarks one editor. "The industrialized world is crammed with power-driven machinery," observes the Boston *Christian Science Monitor*, "and fuel has become the obsession of nations."

AFTER GENOA

THAT SENSE OF DESPAIR which Lloyd George said was to sweep over the whole world if the Genoa Conference failed does not seem to find its way into the press dispatches. Newspaper writers in various world centers admit the partial or total failure of the Conference—"fiasco," some call it—but instead of agonizing, they calmly proceed to balance the good coming from the Conference against the bad and to apportion the responsibility for the lack of success. Tho the desired objectives were not reached, the leaders at Genoa are reported by press observers to have found a way open for orderly retreat to other conferences and to be solacing themselves with retention of certain strategic points. "The Conference has not entirely failed," says Senator Schanzer of Italy; "contact has been established." A less sanguine official at Genoa, however, says the outcome is as if Lloyd George had set out to raise \$1,000,000 and had compromised his chances at the last for \$25.

Lloyd George went to Genoa, as the *Boston Transcript* reminds us, to achieve three chief objects: "A general European settlement with Russia; the restoration of Germany into the family of European nations; and a pan-European pact of non-aggression to continue in force for a given number of years." The Conference opened on April 10. The Allies prepared a program giving Russia a chance to win recognition and credit for reconstruction on the basis of recognition of old debts and certain fiscal and economic reforms. The Russians made counter-claims. While these documents were under discussion a bomb was thrown into the Conference in the shape of formal announcement of the signing of a treaty of peace and commerce between Russia and Germany. Belgium and France finally refused to make concessions to Russian desire to uphold the principle of nationalization of property, and the Russians practically brought the Conference to an end by standing by some of their most extreme demands in an argumentative reply to the Allied proposals. Since no arrangement could be made with Russia, Mr. Lloyd George's plan for a ten-year truce was also dropt. The Allied Premiers, however, decided to hold a later conference at The Hague, and appointed a commission to study the Russian problem: a truce is to be kept in the meantime, and no separate agreements are to be made with Russia. To this Russia has acceded. The United States was asked to participate in the coming negotiations, but declined, the Government reiterating its adherence to the policy of non-recognition of the Bolsheviks laid down by Secretaries Colby and Hughes.

If the Genoa Conference failed, or at least came short of full success, whose fault was it? A *New York Tribune* correspondent reports the general consensus of opinion at Genoa to be that the Russians are to blame because of their uncompromising answer to the Allies' final proposal. Their "desire to play a strong political hand cost them all hopes of reopening immediately the channels of European commerce."

Lloyd George does not entirely escape. Frank A. Vanderlip writes to the *New York World* that "the fundamental reason for the failure at Genoa lies in the moral fiber of the British Premier. He undertook to deal with a situation in a spirit of compromise where compromise is impossible." The *New York World* editorially, however, credits Mr. Lloyd George with having used his opportunity with a skill that surprised even his admirers. But unfortunately, it adds, like every one else at Genoa, he had "to spend a great deal of his energies on dealing with enemies at

home rather than on the task of making peace in Europe." The *New York Globe* accounts for Lloyd George's failure somewhat differently, saying, in homely phrase: "His plans were fully formed, and probably they would have been carried to a successful conclusion had not the treaty between Germany and Russia been thrown at his feet like a dead cat from a disgruntled gallery god."

A careful if somewhat pessimistic analysis of the causes of

Wide World Photo.

"OUR FLAG WAS STILL THERE."

Altho America ignored the Genoa Conference, Genoa seems to have recognized America. Count the American flags in this narrow Genoese street.

failure at Genoa as seen by a Britisher is made by Sir Philip Gibbs in one of his London dispatches to the *New York Herald*:

"First of all, the absence of the United States, for inevitable reasons, no doubt, deprived this world council of a power which might have thrown its weight on the side of conciliation and common sense in a spirit of arbitration which would have been respected by all nations.

"Secondly, Lloyd George, who called and inspired this Conference with the generous idea of lifting Europe out of a morass of international rivalries and ruin by a new plan of cooperation and peaceful organization, was harassed and menaced by the political agitation behind him in England.

"Thirdly, the decision forced by France to forbid all discussion or consideration of German reparations or general demobilization made any economic or political stabilization of Europe impossible.

"Fourthly, the disagreement between Allied and neutral Powers on the subject of Russia before the Conference began gave the Russian delegates a chance which should never have been allowed of making separate treaties with single Powers and playing one against the other.

"Fifthly, and most sinister of all that has happened, Lloyd George's program of conciliation and cooperation for the sake of world peace and the European family as a whole has forced into the open the political philosophy of the present French Government, which is not based upon the interests of the European family but upon the deliberate intention of using the military strength of France to crush Germany and dominate Europe."

Sir Philip believes that "we are in a worse state now than if the Genoa Conference had not happened, for it has intensified perils which lay dormant, speeded up hostilities and policies which were playing a waiting game and forced forward certain

grave issues which might have been postponed and in the course of time eliminated."

That is the dark side. But many observers in this country as well as abroad feel that at least half a loaf was obtained at Genoa. The failure at the Genoa Conference is far from meaning "that Europe will again be plunged into war and misery," says the *New York Globe*, adding:

"Mr. Lloyd George will attempt to put through the Russian suggestion for a committee of experts to study the problem of recognition. There is a manifest eagerness, even at Washington, to avoid separate treaties with Russia, and it is quite apparent that the only way to prevent separate treaties will be, sooner or

later, to make a joint treaty. M. Poincaré is showing signs of greater moderation than he was credited with, and perhaps may not invade the Ruhr when, as is expected, Germany defaults on her May payments. What we are witnessing, therefore, is probably a postponement rather than an adjournment of the attempts to procure a lasting peace."

And in *The World*, Mr. Arnold Dösch-Fleuret, a correspondent at Genoa, thus sums up the real accomplishments:

"Genoa has broken in upon German and Russian isolation. They are back in the world morally.

"The Conference has brought to an end the nasty period which followed the war—the period where every country stuck bayonets in each other's faces. Whether there is a non-aggression pact or not, aggression can not morally occur on the basis of the old war. There must be a new war to justify it.

"So Russia, despite herself, is herself again.

"The best work here has passed almost unnoticed, such as the agreement of mutual confidence reached by the Transportation Commission. Under this agreement all countries are obliged to let freight cars pass across Europe without holding any hostage cars to insure getting their own back.

"The Financial Commission did a similar piece of moral work. It proved that Europe lives or falls together. It proved that every country is interested in its neighbor's currency.

"These things may seem vague in America. To those living in Central Europe, where dwell most of the sinners, the reform is real."

BAD NEWS FOR WAR GRAFTERS

WHOLESALE INDICTMENTS against war profiteers and grafters, covering every section of the United States, say Washington dispatches, are soon to be made by Attorney-General Daugherty, who has been allowed an additional \$500,000 for the purpose of prosecuting "these Benedict Arnolds," as *Capper's Weekly* (Topeka) calls them. The total amount involved in the 276 cases which are being handled by the Department of Justice is said by the Attorney-General to be \$192,000,000, all of which will be recovered, we are told, "if the Government is successful in each case." Prest by Republicans and Democrats alike for an explanation of his failure to take earlier action in war fraud cases, the Attorney-General declares that he has been handicapped by lack of funds and the failure of the Wilson Administration to start investigations or prosecutions. This explanation, however, is not entirely satisfactory to Representatives Woodruff, of Michigan, and Johnson, of South Dakota, who have launched an attack upon the Department of Justice for what they consider laxity in instituting suits. These Republican members look upon the demand for the additional \$500,000, coming as it does after their announced intention to seek an investigation of the Department of Justice, as an attempt to head off such an inquiry. "The Attorney-General should have made known his needs fourteen months ago," maintains Representative Woodruff.

The Woodruff-Daugherty controversy is rapidly becoming a political issue, reports the Washington correspondent of the *New York Times*. "Never before," agrees the *Dayton News*, "has a member of one party suspected that party of wrongdoing and asked for a Congressional investigation." "It is an ugly and unpleasant mess," admits the *Washington Star*, "but it must be gone through with to a thorough cleaning." The *Baltimore News*, however, wonders a bit satirically whether the cases will be those of "the United States vs. the Profiteer, or those of the Republicans vs. the Democrats." Furthermore, notes the *New York American*, "every day of delay makes it more difficult to reclaim sums unlawfully extorted from the people by war profiteers, and increases the difficulty of putting the guilty parties in jail, where they belong."

No editor, it should be said, be he Democrat or Republican, criticizes Congress for appropriating half a million dollars for the use of the Attorney-General. In fact, many of them look upon this amount as an investment.

In a letter to President Harding, answering charges of members of Congress that the Department of Justice has been lax in performing its duties, and calling attention to the Department's lack of funds, Attorney-General Daugherty says:

"All patriotic citizens are agreed that the persons and corporations who took advantage of the extraordinary opportunities afforded by the war to defraud and despoil the Government should be vigorously prosecuted to the full extent of the law, and should be made to disgorge the unholy profits of their treasonable conduct. These crimes and offenses are all the more reprehensible when committed or connived at by sworn officers and employees of the Government.

"The transactions out of which these cases grow in a vast majority of instances took place during the preceding Administration. Naturally little or nothing was done during that Administration to bring these matters to light. It is not to be wondered, therefore, that upon coming into office I found not only that practically nothing had been done in the way of investigating and prosecuting these offenses but that no machinery had been set up for handling the cases in an orderly way.

"The task of creating an organization for this work came coincidentally with the well-founded popular demand for retrenchment in Governmental expenditures. The Department of Justice, in common with the other Government establishments, has felt the effect of the laudable efforts of Congress to meet this demand. Because of this, I have not been able to realize the ideal I have had in mind of an adequately equipped separate division for the handling of all cases of this general class."

OPEN SEASON FOR WAR-TIME GRAFTERS.

GATHERING CAMPAIGN MATERIAL.

—Cassel in the New York Evening World.

TWO VIEWS OF THE GRAFT HUNT.

"The Attorney-General ought to be encouraged and sustained, not criticized and attacked," declares the *New York Times*. In this paper's opinion—

"Mr. Daugherty and his assistants were wise in preparing their cases carefully. They were entitled to ample time. The ends of justice, not of the fall elections, are to be served by their act. When your pocket is picked, you don't ask whether the man who did the job is a Republican or a Democrat. You want him arrested, indicted, tried, convicted, if the evidence shows that he is guilty. The Attorney-General is the lawyer of the people, the prosecutor of crimes committed against them. Without political intention, prejudice or passion, these cases should be heard and tried."

The *New York World*, altho Democratic like *The Times* in politics, is less sympathetic where Mr. Daugherty is concerned. "No sooner is the Attorney-General criticized by members of his own party than he runs whimpering to the President," notes *The World*. We are told, moreover, that—

"Mr. Daugherty has been Attorney-General for fourteen months and there have been no prosecutions for war frauds. Not long ago two Republican Representatives assailed him in sensational terms on the floor of the House and cited specific cases in which he had failed to act on evidence that was in his possession. Later a special agent of the Department of Justice was removed by Mr. Daugherty for 'disloyalty' in having given information to members of Congress.

"Under fire himself, the Attorney-General is now busily engaged in shifting responsibility. First he complains of the formidable nature of the task. Then he tries to smear mud over the Wilson Administration. Then he demands another \$500,000 to carry on the investigations. That is as far as the Republicans have gone with the war-fraud scandals after three years and two months of hullabaloo on the part of their leaders."

"There has been time for the Government to be ready in some case," asserts the *Ohio State Journal*, which is published in Columbus, Mr. Daugherty's home city. "Delay weakens the cause of the Government and undermines public confidence," adds this Ohio paper. At present the situation "smells as much

of politics as of justice," thinks the *New York Evening Post*, which adds pointedly:

"Sensational accusations against political opponents are ill-becoming in a department of the Government which is concerned with the impartial administration of the law. If there has been fraud, no matter whom it touches, let it be uncovered and let the guilty parties be punished. But let them be punished for their crimes and not for their politics."

How about the proposed investigation, then? "In view of Attorney-General Daugherty's evident intention to prosecute the more important of these cases at once, it is advisable for Congress to keep its hands off," believes the *Buffalo Express*. "Congress has plenty of other business to occupy its attention," notes the *Troy Record*. "Besides, one of the most futile things on earth," remarks the *Philadelphia Inquirer*, "is a Congressional investigation."

Nevertheless, agree the *New York American*, the *New York Globe*, and several other papers, the investigation proposed by Representatives Woodruff and Johnson should be made, despite the activity shown by the Department of Justice. "A bipartisan investigation is the best way to get all the facts, and the issue is too vital to be perverted into a partizan matter," avers *The American*, while we read in *The Globe* that—

"Congress will be foolish indeed if it drops its proposed investigation. Its duty is plainly to put Mr. Daugherty to both tests—the test of prosecuting the war fraud cases and the test of a thorough overhauling for possible procrastination or indifference. And Mr. Daugherty must come through both ordeals if he expects to vindicate his official conduct. Some blame he puts on the Wilson Administration. The public has a right to know if his charges against this régime are just. He also makes the excuse that the preparation of the cases has been especially difficult. This explanation—in view of fourteen months of inaction—also needs inquiry.

"The public wants to know what he can do. It also has a right to discover through its representatives exactly what he has done."

FOREIGN - COMMENT

WHAT OF THE NIGHT IN IRELAND?

OUT OF THE NIGHT that covers Ireland some journalist watchmen profess to see faint gleams of dawning peace, and one is the rumor that two prominent members of the anti-Treaty section contemplate resignation as a step toward harmony. Dublin dispatches hint at further important developments, while coupled with such hopeful expressions comes news of the intention of the Provisional Government to hold elections for the Free State Parliament early in June. At these elections, according to Dublin press advices, the voters will be asked to decide "for or against the detailed constitution prepared for the Free State" and "not merely for or against the Treaty" as was originally planned. The later scheme, says an American correspondent, has been forced upon the Free Staters by de Valera and is "unwelcome to the Labor Party, which formed a large portion of the Sinn Fein strength and which is mostly favorable to the Treaty." The Labor Party leaders, it is said, fear that the constitution may be too conservative in form for them, and would prefer that the issue be confined solely to the Treaty.

A fundamental difference between the opposing sections in Southern Ireland, we read further, is their attitude toward Ulster, for the Free Staters "favor methods of conciliation and removed the boycott on Belfast goods"; but their opponents "reimposed the boycott and destroyed goods from Belfast and other northern towns." The *Belfast Weekly News* insinuates that the "comedy or tragedy" between the Free Staters and the Republicans may last "a little too long, and that they may wake up some fine morning to find that the Labor Party have taken over control." The Labor Party, this ardent Ulster organ says, is "simply the Irish Transport Union under another name, and its members are pledged to a policy of a Workers' Republic," and we read:

"Militarism in their eyes is a terrible thing so long as it is at the disposal of the other party, but it is all right when they themselves wish to or are in a position to use it. At the present moment the Red Flag is flying over a good many concerns in Southern Ireland, all seized and held by members of the Irish Labor Party. The members of that Party are extremists almost to a man. . . . The present conditions in the South can not continue, one party or other will gain the ascendancy, and then the testing time for Ulster will come."

Another Ulster journal, the *Belfast Northern Whig*, avers that the members of the Provisional Government are "taking the

wrong way with Ulster," for unity "as they understand it—that is, forcible incorporation in the Free State—is out of the question." Every effort to bring that about must result in "further alienation of the people of Ulster from their fellow subjects in the Free State," but, on the other hand, we are told:

"Friendly cooperation between North and South is not only perfectly practicable but necessary in the interests of the populations on both sides of the border. Ulster's refusal to submit to the authority of a Dublin Parliament does not involve refusal to recognize the palpable fact that the Six Counties and the Twenty-six have much in common, and that it is their duty to help each other to the extent of their capacity. The Northern Government have done their best to give effect to the principle of mutual helpfulness since Mr. Collins and his colleagues assumed office. They have endeavored to arrange working agreements for joint action in matters which concern both communities. If so far they have met with no success the fault is not theirs."

Pending the efforts to bring about something like concord between the Provisional Government and Ulster, we learn from press dispatches of the problem that faces this government in the factional divisions of the South and, more immediately, the stumbling-block of the voters' register, which may have an evil effect on the elections. It appears

that Mr. de Valera challenges the register as "obsolete and unfair" because it "not only disfranchises 300,000 voters in the North, but in the South omits classes on whose support de Valera can count." To prepare a new register would take several weeks, say the de Valera supporters, while Mr. Arthur Griffith contends it would take months and "as a speedy election is desired by the Government the present decision of Mr. Griffith is to adhere to the existing register." A Dublin correspondent of a New York newspaper writes that this decision "may lead to the refusal of the Republicans to stand as candidates for any of the seats, and in that event the section of the army opposed to the Treaty may think itself justified in preventing the elections by force." This informant proceeds:

"The Free State Party is composed of three sections. It has all the Sinn Feiners who regard the Treaty as a victory, and as furnishing to Ireland, if not absolute freedom, the means of eventually attaining all its demands. The Free Staters are also supported by all the mass of voters formerly identified with the constitutional agitation for Home Rule and by many men who were formerly Unionists but who now gladly accept the Treaty as the way to peace. The third section of the Free State Party is composed of extreme Republicans who will be satisfied with

AN ENGLISH VIEW OF IRISH FRICTION.

"How do ye expect me to be peaceful when that quarrelsome spalpeen is making faces at me all the time?"

—The Bystander (London).

nothing short of an absolute isolated republic. They say the quickest way to an eventual Irish republic is to make use of the powers of the Treaty to enforce it. They are understood to be in association with the Irish party in America which differed with Mr. de Valera when he was in the United States.

"Tho the anti-Treaty party is more homogeneous than the Treaty party, it, too, is not quite uniform in opinion. A determination to resist the Treaty by all legitimate means is common to the whole party. Some of it would include armed force among the legitimate means. But the whole party is not committed to the plan of de Valera for a republic externally associated with the British Empire. That plan was an attempt to make the London negotiations fruitful without sacrificing the republican principle. But the main force of the anti-Treaty party is in its assertion of undiluted and unqualified republicanism. The most conspicuous figure among the undiluted republicans is Liam Mellows.

"Though the de Valera party long remained undecided whether to consent to contest the elections, or even whether the election will be permitted, it prepared sheafs of election leaflets.

"Probably this was the first time when electors have been threatened with war by both sides. The Free Staters' argument was that the alternative to the treaty was war with England, and their opponents reported by saying that if Griffith and Collins won the election civil war would destroy the country."

The *Dublin Sunday Independent* quotes with approval the utterance of a speaker at a Dublin gathering that the Irish people are "sick with disgust at the spectacle of Irishmen bitterly quarreling and reviling each other; and they are dangerously angry at seeing the cowardly and condemned methods of violence of the British Force imitated by men and youth calling themselves Irishmen." But the *Londonderry Derry Journal* observes ominously that, the "continuance of lawless and sinister occurrences must mean in a comparatively short time complete wreckage of the social fabric in Ireland and the production of chaotic conditions which personal liberty as ordinarily understood would cease to exist and even life itself would be in constant jeopardy." This daily continues:

"It is no over-statement to say that for ten long years—dating from the period when Lord Carson trampled upon the customary modes of Constitutional action, and at the point of the pistol invoked the aid of Direct Action to enforce his reactionary gospel—the Irish people have been subjected to continuous and most severe strain. Heavy losses and crosses have come to them year by year since then without solid respite or reliable easement.

"The people as a whole yearn now for an honorable opportunity to cultivate as far as may be the arts of industry, peace,

and concord.' A Cork contemporary clearly confirms this view of the situation by declaring during the week-end that the country has undergone trials and vicissitudes and made innumerable sacrifices, so that the citizens of Ireland may live in freedom and enjoy the peace that is essential to progress. The present strain has been so prolonged and differences have grown so acute, that the people have grown wearied of dissensions, and are heartily sick of the rivalries and bitterness that have in various forms and places replaced the friendship and comradeship that formerly existed between brother Irishmen. If the matters in dispute were left to the people themselves for settlement, and a free election enabled them to express their judgment, there can be no doubt that they would speedily prove their fitness for self-government, and with a splendid gesture brush aside all pettiness and irrelevancies, and restore to their country the spirit of good-will which is naturally characteristic of Ireland."

In violent contrast is the attitude of journals supporting Mr. de Valera, among which is the *Dublin New Ireland*, which hails the Republican leader as "standing fast" and having with him "all who are prepared to finish the journey to the Promised Land or die in the wilderness rather than to return to the flesh-pots." And an Irish-American weekly of similar views, *The Irish World* (New York), observes:

"The coming election in Ireland far transcends in importance any other event with which the Irish people will have to deal in the immediate future. If it were a true expression of the will of the Irish Nation, it would decide the fate of the Irish Republic. But the managers of the Free State have determined that it shall not represent the wishes of the entire Irish electorate. They announce that the election will be held next month, which means that an antiquated election register will determine who shall exercise the franchise in regard to the most vital question upon which Irish voters of the present generation have ever been summoned to record their will. An election held in June would mean that thousands of Irishmen and Irishwomen would have no say as to whether their native land should be an absolutely independent country or an annex of the British Empire.

"The Free State would have neither a legal nor a moral sanction for its existence should it be based on an election at which a great part of the Irish electorate would be debarred from the ballot-box. Resistance to such a government exercising the functions of a legitimate government would be every bit as justifiable as that which Irish patriots ever offered to Dublin Castle rule."

AMERICANS AS BOOSTERS

AUSTRALIANS ARE PRONE to advertise themselves to the world only at their worst, it is charged by some of the Australian public men who since the war years have been representing their country in various lands. So they are urged to emulate the American habit of telling only what's good about their country and leaving adverse criticisms of it to the envious and antagonistic. These Australian critics say that all the outside world knows about Australia is that it is "a land of strikes, pests and droughts," for Australians away from home "gloomily proclaim their homeland not as God's own country but as a devil of a country." It would seem that once beyond the three-mile limit Australians become "bad citizens and bad advertisers." Now, remarks the *Sydney Sun*, "nobody has ever heard an American citizen abroad run down his country," and tho he "may object to its government, he is nasally proud of the people." This daily tells us further that:

"Even when an American visiting Sydney is amazed at the beauty of our girls, does he gloomily admit it with groans? No; he boosts the girls he left behind him. He may not be an accurate observer, but he is a good and patriotic American citizen. And tho Senator Pearce was doubtless shocked at the make-up of the American drug-store beauty, he probably publicly refrained from pæans of praise of the outdoor Australian girl.

"Tho the Senator accuses Australia of sending out the wrong sort of news, this continent is no worse than any of the others. At the present moment America, through its news channels, is engaged in a world-wide advertising campaign of its great miners' strike. Recently it just as thoroughly boosted its film morals and horrors. To Australia the United States seems a place full of immorality, bootlegging, Tammany politics, and industrial unrest.

"Despite the pride that Americans have in their own country, this sort of news always comes out. The plain fact is that any sensational news, any remarkable divorce or murder cases, whether they happen in Australia or in less fortunate places, must be advertised through the world."

Nevertheless the *Sydney Sun* returns to the fact that Americans abroad do not talk about horrors at home, but advertise the pleasant side of their country. On the other hand—

"The Australian abroad has made himself unpopular by his insistence that Australia is a better country than England; that gum-trees are better than oaks; that St. Paul's is an inferior sort of shanty compared with the Presbyterian church at Woop Woop. A few 'naïve' folk, to impress the English, do talk of our rude 'colonial' customs and manners, but these are an infinitesimal minority.

"There is no need for Australians to think that Australia is regarded abroad as a poor place of pests and strikes, and no need to worry what the world thinks of us. Unconsciously Australia has been put on the map, and for all time, by a little advertising stunt that we worked unconsciously. When our Diggers traveled abroad in the Great War they put Australia into the atlases as the place where those magnificent men came from. What finer advertisement could any country want? Here Senator Pearce is right.

"We do not need to talk about the Diggers when we go abroad; the other nations will do that."

HOW GENOA WENT WRONG

HUNDREDS OF CORRESPONDENTS at Genoa are sending messages to all parts of the world explaining, according to their individual view, why this nation or that is to blame for the turmoil and confusion that seemed to swamp the Conference designed to save perishing Europe. But they all are wrong in their diagnosis, flatly asserts the *Sofia Echo De Bulgarie* which tells us that the trouble at Genoa is "organic and as old as the malady of the first Napoleon." The fight is on, according to this daily, "not so much for the reconstruction of Europe as for the domination of Europe"; and it seems a pity that the Powers at Genoa should not remember in time that the history of Europe shows that every attempt by any Power to dominate the Continent has ended in catastrophe. The Imperialist dreams of a Nicholas, or a William, we are reminded, developed into nightmares of reality, for "there seem to be latent forces in the nations that

inevitably tend to overthrow lasting supremacy, and if these hidden forces do not materialize, the attempted hegemony of Europe collapses apparently through seeds of decay within itself." We read then:

"During the short periods of hegemony on record, it has been observed that a certain spirit of democracy grew up among the peoples of Europe. They were all oppressed by the same imperialist tyranny and so, great and small, they felt themselves peers in misery. It was thought that with the downfall of the various imperialist régimes, there would come into being a régime of equality among the

nations, with mutual respect and tolerance for the various sovereignties. But the victorious coalitions of the greater nations unfailingly organized a system of international oligarchy, which finding itself sufficiently strong to impose its rulings, undertakes the ungrateful task of reapportioning the territories of the Continent and redrawing the map of Europe in an atmosphere of exasperated national tempers, contradictory interests and compromise. We have once more an era of conferences of three or four Powers, of supreme councils and of reunions among ambassadors. The events of 1815 were reproduced in 1919, for throughout the course of a century, political Europe learned nothing and apparently forgot everything. The Congresses of Vienna, Paris and Berlin contained the seeds of the World War."

This *Sofia* daily goes on to say that three years after the signing of the Treaties of Peace "imposed by the aristocracy of the great Powers victorious," the inauguration of the Genoa Conference seemed to indicate a movement of reaction against the system of oligarchy brought back into Europe in the full swing of the twentieth century. It was understood that all the nations, including the neutrals and the vanquished, would attend a great international meeting to take their common part, in proportion to their strength, in the great labor of rebuilding Europe, materially and morally. When humanity is utterly prostrate from some shock, it soon begins to hope because of its undying faith, and in Genoa poor humanity thought it saw the dawn of a democratic régime among the nations, but, we are told:

"With all the eloquent discourses of the inaugural meeting at Genoa, in which the orators tried to erase all trace of war by

saying that there were no longer friends and enemies among the nations, neither conquerors nor conquered, how terribly disappointing it was to see a new dominant oligarchy rise in the very midst of the nations assembled under the new label of the 'Inviting Powers.' These Powers arrogated to themselves rights that are incompatible with the complete equality of the nations represented at Genoa. By this procedure the invited states from the first found themselves in an inferior position, which was very painful to those that are bound together in groups, but

quite irremediable for those present as isolated factors. By no custom in the world can those invited have equal rights with those who issue the invitation; and this method from the first boded ill for the work of the Conference."

CHEER FROM WESTERN CANADA—During the next few months we shall see a realization of the good times that are everywhere indicated at present in Western Canada, we are told, and the banks and loan and mortgage companies are said to be convinced that the new turn in business is nearly reached. An industrial agent of the Canadian Pacific Railroad, who has spent weeks in touring this section of the Dominion, found that in cities and towns as well as in country districts greater confidence is based on the "distinct effort to increase trading and the greater necessity on the part of the consumer to purchase." In *Agricultural and Industrial Progress in Canada* (Montreal) this informant tells us further:

"The outlook for investment of capital in the development of resources and the construction of branch factory plants is not yet showing any activity, altho many prospects are in sight, waiting possibly a more favorable opportunity to carry out extensions and open up new mining, lumber and other development. Recent oil discoveries south of the international line in Montana have caused considerable activity in the Lethbridge and south area and undoubtedly some wells will be put down on the Alberta side of the line during the summer. It is early yet to express an opinion of the prospects, but the situation appears to justify the investment of some capital in this area. At the present time it is being thoroughly investigated with a view to determining prospective locations for drilling.

"While on the Pacific Coast the writer noted an improvement in general conditions with a somewhat extensive building program in sight.

"The export lumber business is on the up-grade and while the interior mills are not yet very active, some orders are coming along that will help the situation in the near future. Mining is distinctly better and should produce a remunerative season, with activities in new districts of considerable dimensions. In shipping circles, better and more trade is being looked for and there appears to be a likelihood of good tonnage both for Pacific and Coast business."

JAPANESE COMPLAINT OF CALIFORNIA

IMPROVED RELATIONS between Japan and the United States are an important outcome of the Washington Conference, it is noted by Japanese newspapers which recall that before this event the governments and people of both countries "used to misconstrue each other's foreign policy." Now cooperation and harmony have been set in motion, yet to their deep regret the new order prevails only over Pacific and Chinese problems, and does not reach the "anti-Japanese question along the Pacific Coast." Altho most Japanese editors speak of anti-Japanese sentiment in the United States as "a local issue," they are none the less convinced it needs national attendance. The Tokyo *Nichi Nichi* cites American newspapers as informants of the antagonistic feeling of Americans on the Pacific Coast with regard to the Japanese, and remarks that "the attitude of the anti-Japanese party is coming to put on a more dangerous aspect." In confirmation of this statement it relates:

"According to a San Francisco special to *The Nichi Nichi*, four Japanese residents in central California were instructed to quit their residence under threat of anti-Japanese Americans. An American newspaper in central California devoted its columns to the publication of anti-Japanese news. We do not suggest that this single accident necessarily speaks for the feeling and intention of all the Californians, much less of the United States of America, but supposing that American residents in Japan were forced to quit their houses under intimidation, what attitude would the American Government and people assume towards Japan? They would not pass the accident as a mere local problem but would bring the matter to open discussion. The Washington Government might file a stout protest with the Japanese Government on account of the transgression of the civic right. But so long as the American-Japanese Commercial Treaty guarantees the absolute freedom of commercial residence for the people of both countries, the above measures are necessary procedures, otherwise the national prestige and the safety of people can not be maintained. No matter how the Pacific and Chinese problems be solved and how the relation between the two countries become worse, these have nothing to do with the anti-

Japanese Americans. Their sole purpose lies in ousting the Japanese residents from California and nothing more. To the Americans at large the above accident may be nothing but a petty local affair, but from the standpoint of national prestige and the safety of life and property of the Japanese residents in California we can not recognize it as a mere passing occurrence."

SCIENCE - AND - INVENTION

THESE POLE PIECES SET THE BRAKES.
When the locomotive approaches a protected block.

A RESET MAGNET.
Near the exit end of the block.

HELPING THE ENGINEER AVOID DANGER

IN A NEWLY INVENTED SYSTEM of train control, devised by Frank J. Sprague, the engineer is not ignored entirely, but has his part in the operation of the train at the points where the control is effective. The system is therefore not purely automatic, but is auxiliary. In effect the engineer is warned that he should slow up. If he does not choose to do so, he may nullify the warning. There comes a time, however, when if his actions amount to rashness, brakes are set and the train is brought to a stop whether he wants it to be stopt or not. In other words, the system becomes automatic only when the engineer is obviously neglecting his duty. This system, we are told by a writer in *The Railway Age* (New York), is now undergoing a series of daily tests on a section of New York Central track. Says this writer:

"The Sprague system of auxiliary train control is not an automaton in the place of an engineman, but an auxiliary system which, while fully protecting the train and reinforcing the engineer's intelligence, leaves him practically undisturbed in the handling of his train so long as he performs his duty.

"All apparatus on the track, as well as on the locomotive, is operated on the normal danger plan. Assuming a train in the block section approaching the block to be protected (which may or may not be occupied by a preceding train) it encounters two normal-danger, brake-application magnets, one near the entrance end and one at the critical point in the block, and there is a differential reset magnet near the exit end.

"All of the magnets are controlled by the track circuit relay of the section in advance, the brake-applying magnets being normally alive and the reset normally dead.

"When a train enters this approach block, and the block ahead is clear, the application magnets are made inactive by neutralizing coils, thus permitting the magnetically responsive receiver on the locomotive to pass through the space over the magnet poles without being affected. If the advance block is not clear then the application magnets will remain normal, or active, and the magnetic receiver on the locomotive is subject to their influence.

"The track magnets are enclosed for protection in sealed manganese steel casings which are supported in the ballast, between

adjacent ties, by extension arms resting upon and secured to the ties. This insures proper registration and operation of the apparatus on the locomotive regardless of the direction of motion or heading of the locomotive.

"A double receiver is hung under the forward end of the tender on adjustable supports. When a locomotive is running at a high speed the receiver will pass over the track magnet in less than 1-100th of a second. During this time the small armature in the receiver breaks contact momentarily.

"The momentary breaking of contact by the armature in the receiver is translated into action by relays mounted in a box

located on the running-board. The impulses picked up by the receiver and passed on by the relays result in influencing the action of two pilot control valves which control the movement of a ported slide valve. The operation of this valve will effect any required combination light and heavy service and emergency brake applications under speed control, with or without enforced stop if the automatic brakes come on, or with the privilege of proceeding under limited speed until released. The operation of this valve assembly may cover any one of a number of different possibilities, depending upon the conditions of train make-up and of operation met in practise. Under usual conditions of operations, caution and stop signals will cause two-

Illustrations by courtesy of "The Railway Age."

THE RECEIVER, UNDER THE TENDER.

brake applications, called primary and secondary.

"On entrance to every block the cab signals indicate whether or not the next block in advance is occupied. If the signal at the entrance of the advance block is at caution, then, on passing over a live distant magnet, the green light disappears, an audible warning is given and a service brake application is initiated. The yellow proceed light appears if braking is sufficient to forestall secondary braking at the home magnet.

"The engineer's brake handle will be moved to lap position, but it can then, with effort, be pushed back to the release position, against the pressure on the motor pistons, which pressure will then be promptly released if the train is not running above the predetermined caution entrance speed. If the engineer is attending to his duty he may, therefore, forestall actual braking of the train or he may promptly release his brakes in response to a change in roadside signal indications.

"If the engineer, while approaching the home magnet, makes a service brake application, the yellow light will appear in the cab whenever there is sufficient braking to insure reducing the speed 'control' speed in a suitable distance

after passing a live home magnet without automatic secondary braking.

"If the danger condition persists when passing the home magnet, a second service braking will be initiated, which may likewise be released by the engineer.

"If when getting the second impulse at a live home magnet the locomotive is running without braking and below the determined control speed, say 15 or 20 miles an hour, as indicated by the yellow lamp, and so continues until reaching the reset magnet, there will be no secondary brake application, but if the speed is increased and goes above the control speed before passing an active reset magnet, the brakes will be applied.

"If the engine when passing a live home magnet is running below the predetermined speed limit, say 45 or 50 miles an hour, and the train as a whole is being properly braked under manual or automatic service application, the secondary braking will not take place; but if the brakes are released before reaching the control speed, then a heavy service or emergency braking will occur. The secondary brake can not be released, however, until it has completed its function, no matter how short the initial impulse or whatever the engineer attempts to do with his brake handle.

"When the speed has been reduced to 'control,' the brakes may be released, but if the speed is later increased above the low limit before passing an active reset magnet, the secondary or emergency braking will again take place.

"If the conductor unlocks a control switch he can temporarily give to the engineer and fireman the privilege of joint action to establish an early reset, if and only when the proceed cab-light is in evidence.

"Seconds under speed control, as, for example, dangerous curves or bridge or crossing approaches, may be treated as permanent signal blocks, each being provided with one or more permanent application magnets to initiate service braking at the proper point if the speed is excessive.

"The brakes once applied, the actuating pressure on the brake valve handle persists until the speed is reduced to a predetermined limit, which is individual to each class of locomotive.

"Tests are now being carried on for seven hours a day, six days a week, on a section of the New York Central, covering six signal indications, about thirty miles from New York. All other trains are temporarily excluded from this section and several hundred recording operations, under varying conditions, are made each week."

TO KILL PESTS WITH WAR GASES—Experiments on the use of poison gases for exterminating obnoxious birds, rodents and insects will be undertaken this fall by the U. S. Biological Survey, in cooperation with the Chemical Warfare Service. The method will first be tried on blackbirds in the Imperial Valley of California. In that region, we are told by *Chemical and Metallurgical Engineering* (New York), these birds are said to do at least \$50,000 worth of damage each year. It is impossible to destroy them with poisoned baits, but, as they roost on the reeds in the marshes, it is thought that they can be killed by a gas cloud at night when the wind is favorable. Says the paper named above:

"The blackbirds are migratory and return to the same places year after year. It is thought that a big killing in a certain locality will probably free it of the pests for many years. A few other birds in the blackbird-infested marshes will be killed at the same time, but the Department believes that these local birds will soon reach their normal numbers again. Arrangements also are being made by the Biological Survey with the Chemical Warfare Service for investigating the possibility of using poison gases on such burrowing rodents as rats, prairie

dogs, ground-squirrels and woodchucks. Tests on pocket gophers and ground-squirrels by these two cooperating branches of the Government in California show that chlorine may be used with good results, if handled properly. The Chemical Warfare Service used phosgene on rats in Porto Rico with promising results. Some of these war gases will be compared with carbon bisulphide for the killing of woodchucks and other rodents in their burrows."

SYMPHONIES OF PERFUME

PERFUMED PRELUDES AND SCENTED SYMPHONIES composed from a "scale" of odors were suggested by Dr. Marston T. Bogert, professor of organic chemistry at Columbia University, in a recent public address before the

American Chemical Society. Instead of music from the organ, piano, or violin, Dr. Bogert would draw from tiny vials in the laboratory perfumes which would blend into an olfactory harmony. We quote from a report in Science Service's *Science News Bulletin* (Washington), which says:

"Symphonies of light recently made their appearance in New York. Dr. Bogert's suggestion looks forward to renditions which fall upon the nose instead of the ears and eyes. Dr. Bogert said that Dr. Septimus Piesse, a French chemist, maintained that every perfume produces its own peculiar effect on the olfactory cells just as every musical note has its characteristic effect upon the ear, and that therefore all odors can be arranged corresponding to the musical scale.

"Dr. Piesse composed a scale of odors corresponding to the musical scale. The heavy odors are assigned to the low notes and the sharp, pungent odors to the high notes.

"Starting with the bass clef, three octaves below middle C, the musical notes and the odors assigned to them by Dr. Piesse are: Do, patchouli; Re, vanilla; Mi, clove bark; Fa, benzoin; Sol, frangipane; La, storax; Si, clove; Do, sandalwood; Re, elematis; Mi, rattan; Fa, castoreum; Sol, pergulaire; La, balsam of Peru; Si, carnations and pink; Do, geranium; Re, heliotrope; Mi, iris; Fa, musk; Sol, pois de senteur; La, balsam of tolu; Si, cinnamon; Do, rose.

"The perfume of rose on this scale corresponds to middle C, and from it the treble clef continues with Re, violet; Mi, Cassia; Fa, tuberose; Sol, orange flowers; La, newmown hay; Si, aurone; Do, camphor; Re, almond; Mi, Portugal; Fa, jonquil; Sol, syringa; La, tonka bean; Si, mint; Do, jessamine; Re, bergamot; Mi, citron; Fa, ambergris; Sol, magnolia; La, lavender; Si, peppermint; Do, pineapple; Re, citronella; Mi, vervain; Fa, civet.

"Dr. Piesse also pointed out that when the perfumer wishes to combine the simple odors he must use those that combine into a harmonious mixture. His scale of odors tells which perfumes will harmonize and which will discord. As a painter blends colors, in the same way a perfumer should blend the aromas. When a bouquet of several perfumes is made, it is necessary to mix them so as to introduce a slight contrast.

"Dr. Piesse gives the following examples of perfume bouquets:

"These perfumes harmonize into a bouquet based on 'Sol': Sol, pergulaire; Sol, pois de senteur; Re, violet; Fa, tuberose; Sol, orange flowers; Si, surone.

"The following is a 'Do' bouquet: Do, sandalwood; Do, geranium; Mi, cassia; Sol, orange flowers; Do, camphor.

"The total effect of these odors is 'Fa': Fa, musk; Do, rose; Fa, tuberose; La, tonka bean; Do, camphor; Fa, jonquil.

"That odors play the same part in the world of the ant that light does in the human world was suggested by Dr. Bogert.

"If we imagine ourselves either blind or in total darkness," he said, "but possess of exceedingly delicate olfactory organs in our finger-tips, we can get an idea of the sensations an ant experiences as he moves about."

PROFESSOR BOGERT,

Of Columbia, who would regale the senses with symphonies of perfume.

FACTS THAT MAR THE THEORIES OF MARS

MARS WILL BE NEAR US during the next two summers, and astronomers who believe that the markings on that planet are canals built by rational beings will be heard from frequently. That the more conservative school of astronomers believes neither in the canals nor in the habitability of the planet is evident from an article on the subject contributed to *Popular Astronomy* (Northfield, Minn.) by J. G. Porter of the Cincinnati Observatory. Mr. Porter believes it to be certain that the true interpretation of the surface markings on Mars can not be arrived at by visual or photographic observations alone. He writes:

"The nearest approach of Mars to the earth is about thirty-five million miles. At the next opposition it will be forty-one million miles away. Assuming that a magnifying power of one thousand diameters can be employed, this still leaves the planet thirty-five thousand miles distant, or considerably more than the circumference of the earth. Of course higher magnification is possible, but beyond a certain point the advantage of increase in size is counterbalanced by the indistinctness and wavering of the image. It is safe to say that we can not at present, and probably never shall be able to, see Mars in the telescope as clearly as we should with the naked eye at a distance of twenty-five thousand miles.

"But what ought we to see in a landscape as far away as the whole circuit of the earth? Most persons have at some time looked off from a high hill or mountain. At thirty or forty miles all but the most salient features of the view disappear. It is true that conditions in viewing the moon or Mars are more favorable than in looking across the earth's surface at a distant landscape; for in the former case our line of sight traverses less of the denser portions of the atmosphere. Nevertheless the improbability that at a distance of several thousand miles one can see planetary details with sufficient clearness to judge of their true character must be perfectly evident to the candid mind.

"This point can be brought out in another way. Mars at its nearest is more than 140 times as far away as the moon. A magnifying power of seven applied to the moon would be equivalent to a power of one thousand in the case of Mars. Look at the moon with a small opera glass, and compare the view with that shown by a powerful telescope. Then one will realize how little it is possible to actually distinguish on the Martian surface. A comparison of the drawings of the planet made by different astronomers gives further confirmation of the difficulty of depicting the true character of the shadings which diversify the disk of Mars.

"Dr. Campbell, Director of the Lick Observatory, after comparing the views of W. H. Pickering and Percival Lowell in parallel columns, remarks, 'The really serious consideration is that the canals as observed by Pickering and the canals as observed by Lowell are just about as different as two observers could make them. . . . If two observers so advantageously situated, so capable and so enthusiastic as Pickering and Lowell can not agree better as to the basic observed facts of the Martian surface features, by virtue of studies extending through 27 and 23 years respectively, what hope is there for ordinary observers to unravel the mysteries of the Martian canals? Is it possible that any one has been trying to see surface features on Mars which exceed the powers of existing telescopes and human eyes?'

"If we had no means aside from telescopic observation of judging what the physical conditions on Mars really are, we should be as ignorant concerning them as Galileo was of the lunar surface when he viewed it through his first optic glass. It is well known that he supposed the dark areas on the moon to be seas. Fortunately there are other ways of learning about the physical state of the planets.

"Thus we learn that Mars receives less than half as much solar heat as the earth, and that it has probably not more than one-fourth as much atmosphere per unit of surface. Under these

conditions the planet must naturally be extremely cold. Moulton finds a mean annual temperature of 39 degrees below zero, on the supposition that the surfaces of Mars and the earth radiate heat similarly. It is likely to be even lower on account of the rarity of the Martian atmosphere."

An attempt was made by Percival Lowell some years ago to prove a higher temperature. This was based on the fact that the solar heat would penetrate to the surface of Mars much more readily than to the surface of the earth. This Mr. Porter concedes to be true; but it is also true, he says, that the heat would be lost more rapidly. Assuming the constitution of the atmosphere to be similar, the conditions on Mars would be like those on a lofty mountain peak on the earth. The direct rays of the sun are very hot, but they do not melt the snow, which even in the tropics lasts the year round. He continues:

"An excess of water vapor or an excess of carbon dioxide in the atmosphere would absorb the heat and raise the temperature of the planet. It is very doubtful whether water exists at all upon Mars, the surface gravitation of the planet not being sufficient probably to retain the particles of water vapor in the atmosphere. Professor Stoney not only shows that water can not remain on Mars but that the polar caps are almost certainly formed by a deposit of carbon dioxide.

"The inclination of the equator to the orbit being practically the same for the earth and Mars, we should expect the annual range of temperature to be similar. The average temperature of the whole earth is about 60 degrees Fahrenheit. The average winter temperature of the Arctic regions may be assumed as 20 degrees below zero. Taking the average Martian temperature as 40

degrees below zero, we should then have the average winter temperature around the poles 120 degrees below zero. Carbon dioxide solidifies at 109 degrees below zero. Therefore the natural explanation of the polar caps would be that they are composed of precipitated crystals of carbon dioxide. Indeed, this seems to be the only plausible explanation if we grant the absence of water.

"We see then that a study of the physical conditions on Mars shows at once the absurdity of the popular views. Whatever the streaks on the planet's surface may be, they certainly are not canals.

"That seasonal changes take place is evident, but these probably have little in common with terrestrial changes. We must relegate Mars to the category of worlds long past their prime and already in the grip of approaching death."

THE SUPPOSED CANALS OF MARS.

From observations by Dr. Percival Lowell and Mr. E. C. Slipher at the Lowell Observatory at Flagstaff, Arizona.

DRIVING AIRPLANES BY KEROSENE—A Danish bicycle maker named Ellehammer has invented a kerosene carburetor which is used successfully both on motor cars and aeroplanes. In a recent test made near Copenhagen a Rumpler plane driven by a 150-horse-power Benz engine, was started from the aerodrome, using ordinary kerosene at about 12 cents per pound, whereas gasoline would have cost something like twice as much. The engine worked with perfect smoothness and started as readily as if the fuel had been gasoline. Moreover, less fuel was needed and there was no carbonization. Though the new carburetor was calculated only for a 60-horse-power engine instead of the one employed, the machine flew remarkably well, the only difference being that the engine made 100 revolutions per minute less than with gasoline. When gasoline was used, two gasoline carburetors had been used to feed the six cylinders. *The Guardian Commercial* (Manchester) states that the demonstration was so successful that the Danish Aerial Navigation Co. intends to have these new carburetors fitted to all of its machines. The kerosene underwent complete combustion, the new carburetor

being of the "dry" type and all risk of self-ignition being practically excluded. Other advantages were the entire absence of soot formation and of unpleasant odors.

TO OUTLAW OILED MILK

SKIM MILK ENRICHED with cocoanut oil, to take the place of the butter-fat of which it has been robbed, is now widely sold in condensed form, we are told by Russell McFarland, writing in *The Farmers' National Magazine* (Washington). The substitute oil, he says, lacks the vitamins that the original cream possesses, so that those who use "oiled milk" are not getting what they are entitled to expect. Results obtained from feeding babies and growing children are described by Mr. McFarland as "disastrous," and campaigns against its manufacture and sale, instituted in several States, have resulted in laws prohibiting it. Others are now being debated, and a national law has been introduced into Congress. Mr. McFarland begins his discussion with an anecdote, intended to illustrate the psychology that has promoted the sales of this product. He writes:

"Hester, go down to the store and get two cans 'vaporated milk,' said an East Side mother in New York to the 8-year-old girl at her elbow.

"The little girl danced away on her errand. The grocer smiled as he gave her two cans of 'oiled' evaporated milk and said: 'Somtings new I got in milks. Nice for babies. Better as any and cheaper one penny. What you tink? Eh?'

"Mrs. Sapiro smiled as she noted 'prices comin' down, eh? Dot's good.' And the baby got a new brand of goods that looked and smelled and tasted just like whole evaporated milk, *but wasn't*.

"The can was like all other cans of its kind; the label was 'pretty.' But inside was a thick fluid in which there was none of the natural butter-fats with vitamins which give life and preserve the body against disease.

"The cow's milk had been robbed and instead there was some cheap cocoanut oil, imported from the South Sea islands.

"The mother knew nothing of this, nor did Hester, because they didn't read the label, and they might not have understood it if they had read it. The grocer knew a little of it, but was indifferent because he made an extra profit of about three cents per can on this new line. So he was pushing out the new product and holding back on the old standard lines.

"For just such 'business' reasons 86,000,000 pounds of this imitation of milk were made and sold in 1920 in the civilized United States of America, and every growing baby and child that was fed on evaporated 'oiled' milk was definitely cheated out of important food elements, the butter-fats, which the Almighty meant them to have.

"That kind of business showed an increase of 5,000 per cent. in volume during the last five years, and very largely because the retailer got the stuff for \$1.25 to \$1.40 per case cheaper, and because manufacturers in addition to the profit on the imitation milk reaped a rich profit on the cream and butter-fats which they took out of the milk and sold to high-class trade.

"It was six years ago when the European War was on, and butter-fat, the vital part of the milk, was at a high premium, that some one had a bright idea. It was to skim the cream from whole milk, extract the butter-fat for the market, and then cover up the robbery of the whole milk, by adding cheap cocoanut oil. This imitation milk was widely advertised and distributed, and the majority of purchasers never knew the difference.

"It was found that when evaporated only experts could tell the difference by taste, smell, or appearance. The cocoanut oil cost only one-fourth what the butter-fats would bring, so it was a 'good business.'

"All this might do very nicely when soldiers needed the valuable butter-fats to keep them strong and free from disease. It was a time when the European populations were suffering from scurvy, rickets, tuberculosis and eye diseases, which only the vitamin-bearing butter-fats or fresh garden greens could cure. In consequence our people responded loyally to the Food Administration's slogan: 'DO WITHOUT BUTTER-FATS.'

"But after the emergency was passed, after the oiled-milk product had begun to oust the healthy whole-milk product, then the ill-effects began to be noticed in young children."

Dr. E. V. McCollum, an authority on diet and nutrition, has shown by carefully conducted experiments on small animals, whose digestive tracts are most like the human, that vegetable oils contain none of the life-giving, life-preserving factors. Mr. McFarland goes on:

"His most convincing experiment was made at Johns Hopkins University School of Hygiene and Public Health, when two young white rats, exactly alike as to breeding, age, weight and health, were fed a generous diet consisting of meat, potatoes, whole-wheat bread, water, peas, beans, turnips, etc.

"The only difference between the two was a difference in the kind of 'fats' fed to them. One was given its 'fats' in the form of evaporated or 'oiled' milk, which constituted 28 per cent. of its feed. After a few weeks it died. The other was given the same quantity of evaporated whole milk. It thrived, grew to normal size, made a fine specimen and is still living and thriving.

"It was the magic of the 'vitamin' in the whole cow's milk that saved the little animal's life and made it grow normally. The other grew only half size, became peevish, then vicious, suffered from eye inflammation, which ultimately destroyed the eye, and died of the rickets in a few months.

"Similar effects can be noted on school children who are under-developed or badly nourished. Medical officers commonly report many mild cases of scurvy, due to many canned foods; rickets in various stages of malignance, due to lack of dairy and garden products in their food; a wide-spread epidemic of 'bad teeth'; and an epidemic of pellagra in the South, which is due only to faulty, impoverished diet.

"Whole cow's milk, Nature's most satisfying and nourishing food for young children; also plenty of garden greens is the only remedy for these things. Dairy products and garden greens contain the largest percentage of vitamins.

"These facts, important to every teacher, mother and physician, are just becoming known to a considerable number of people, and everywhere are the signs of a campaign starting which will add 'oiled' milk to the list of drinks prohibited in this nation.

"Already the States of Ohio, Wisconsin, Utah, Colorado, California, Oregon, Florida, Maryland, New Jersey and New York have passed laws prohibiting the manufacture and sale of imitation milk.

"The States of Minnesota, Iowa, Kansas, the Dakotas, Washington, Pennsylvania, and the New England States are developing enough interest in the matter to make an issue of it in the near future.

"The most important national milk legislation now pending is the Voigt Bill, introduced by Congressman Voigt, of Wisconsin, which aims to prohibit all interstate and export trade in 'oiled' milk. It has been favorably reported by the House Committee of Agriculture, and will come to a vote in the next few weeks."

FALLACIOUS FANCY FLEAS—Fleas in skirts and trousers, said to have come from Mexico, are shown in various parts of the country, but, according to *The Guide to Nature* (Sound Beach, Conn.), these are base imitations. Says this paper:

"Through the kindness of H. E. Zimmerman of Kansas City, Missouri, we were favored a few weeks ago with what he regarded as a microscopical curiosity—that is, fleas in skirts and trousers. From time to time information has reached this office of some one who has been 'fleeced' by fallacious fleas. It appears that many of our friends think that somebody in Mexico or elsewhere has acquired remarkable manipulative skill in putting skirts and trousers on fleas so that they may look like bride and groom. Other characters are also imitated. The facts are that fleas are not thus clothed. A little black material is selected for the groom and a little whitish material, somewhat similar to pith, for a bride attired in white, and an entire flea is cemented on to represent the head. It requires only a casual examination, even with the low-power pocket lens, to detect the fraud. And as to skill, there isn't any. Any one who can use a pocket lens and a pair of pocket pliers could pull out material of almost any kind and arrange it in this way. At the very best, even if the fleas were thus clothed, the result would be crude in comparison with the delicate work that microscopists are accustomed to perform and consider as only ordinary operations. Microscopic objects, altho beautifully prepared, are not sensational enough to attract the average person's attention, but to them a flea in skirt or trousers is a wonderful thing, as it surely would be!"

RADIO • DEPARTMENT

A HELPING HAND TO THE NOVICE

THERE EXISTS IN THIS COUNTRY a very remarkable organization called the American Radio Relay League. The young men who compose that league are amateur radio enthusiasts. And the word amateur, as applied to them, should be understood in its original French sense; implying not merely love of the avocation, but the skill of an adept in its practical interpretation. This band of eager radio amateurs, numbering ten or fifteen thousand, scattered from Maine to California and from Lakes to Gulf, differs from any previous organization that ever existed, in that its members are in nightly communication with one another—direct and instantaneous communication—al tho hundreds or even thousands of miles of territory separate their respective homes and work-shops.

Directly or by friendly relay, California talks with Maine and Florida with Minnesota. The whole country is networked with radio messages. From sundown till midnight, every night in the year, the air is vibrant with them.

But tho they communicate primarily in this up-to-date fashion, the members of the A. R. R. L. do not ignore altogether the more conventional highway of the printed word. They have an official organ published at Hartford, Conn., which bears the odd name *Q S T*. Only the novice needs to be told that these letters are the symbol for the radio message: "Have you received the general call?" And this is the way in which the editor of *Q S T* extends the hand of good fellowship to the vast company of newcomers who have invaded the radio world through the doorway of the radio receiving telephone.

"We have a new term in radio nomenclature: *novice*, meaning one of the beginners in the fascinating game of wireless attracted by the phone broadcasts, as distinguished from the old-time *amateur*. We don't know who started the use of the word *novice*, and both classes, of course, are really *amateur*, but a differentiating word is a good thing to have and it will do as well as any.

"This, then, is a word to the novice. There are a few hundred thousands of you now, and there will be millions shortly. To all of you these lines are address.

"Won't you let us amateurs help you? We'll be glad to. We went through the mill ourselves, you know—every one of us—and we know exactly what you are up against. Forgive us if sometimes we can not repress a smile at some of your stunts. We do not grin in unkindness—we're only recalling the days when we used to try all the trick circuits we could hear of, when we used to ask a million questions, when we used to scratch our heads to figure out where this old telephone ringer or that old spark coil could be used to bring in better signals: the days when we used to be thrilled through and through at hearing a single signal!

"We all agree that it is the most fascinating game that ever

happened, don't we? We've fought it all out, you know, we amateurs, until to-day, honestly, we believe we are crackerjacks at short-wave reception. We've tried about everything under the sun and now we know just how to build our tuners and our amplifiers and how to adjust them to get the best operation out of

them. We'll be glad to help you in exactly the same way. We have radio clubs in every town, and we want you to feel welcome to come around and get acquainted. We regard you as much a regular fellow as ourselves, and we'll be darned glad to have you in with us!

"We amateurs have transmitting stations, too, most of us. And we are able to work perfectly amazing distances by dot-and-dash telegraphy, talking to each other often over distances of a thousand miles. In our American Radio Relay League we have a network of air lanes covering the entire country, and every night we handle hundreds of free messages for the sport of it, passing them on to the next fellow in the proper direction. Last month we had a definite record of 30,000 messages handled. This is a big business and it's valuable training, and we have a wonderful cooperative machine built up to make it possible.

"We would like for you to know when you hear our dots and dashes that it isn't 'the American small boy' playing around, but an organization of thousands of young men who are about a more or less serious business, engaged in mastering a complex art. With our amateur transmitters we have sent a friendly message from the Atlantic coast to the Pacific and got the answer back to the Atlantic in a total of six and a half minutes! We conveyed messages from the governors of the individual States to President Harding over our traffic system in early March. For months we lent our services to the Bureau of Standards and helped in the collection of a world of data on the cause of the mysterious fading-out of signals. And recently we carried on tests with amateurs in England, and nearly three dozen of our stations were heard over there! Really, we are doing things, and in doing them we are advancing the art and keeping ourselves ready to serve our country again as operators if ever again we are needed.

"We've been at this for fifteen years, and that experience is yours for the asking. Wireless isn't all success, and we can give a lift in the bad places.

"Do you realize that there are 15,000 of us amateurs transmitting, with most of us crowded together near 200 meters? It's about as if there were 15,000 telephone broadcasting stations working at the same time at that place on your tuner where you get the music. But we know from our experience that if you'll get a selective tuner you will very rarely hear an amateur or a ship, unless you tune for them.

"And some day we fear this listening business will begin to pall. You'll want to transmit. There's room for you, Old Man, and when you come to the place where you want to climb in with the rest of us in the dot-and-dash transmitting business, you'll be a regular amateur, and will find our gang waiting for you.

"To make a long story short, here's the helping hand of the American Radio Relay League, our national amateur organization!"

LAURENCE MOTT, 6XAD,
OF AVALON, CALIFORNIA.

Q S T the official organ of the American Radio Relay League, thus estimates Mr. Mott's work: "We believe we are safe in saying that Mr. Mott is doing the best work of any American amateur today in point of both transmission and reception, having repeatedly copied stations all up and down the Atlantic Seaboard and in turn having had his own signals reported many times from a larger number of points in the same territory. And it has not all been bare reports of signals heard—6XAD has frequently worked many of these stations, passing messages back and forth with the ease of local communication."

A PORTABLE SET FOR BOY SCOUTS

A SHARP DISTINCTION must be drawn, in speaking of portable sets, between "freak" receivers and those intended for practical use. A portable set of the latter kind is described by Mr. Eugene M. Riel, in *Radio News* (New York). Particular interest attaches to this set because it is to be used without aerial. As will be seen, it employs a triode (vacuum

tube) detector. A crystal detector could hardly be expected to respond to the feeble current generated in the small receiving coil. Mr. Riel describes the set as only in the experimental stage, but very useful for short distances. "A radio club or a troop of Boy Scouts on a hike always want to keep in touch with the nearby home station," he says; "and with this set all that is necessary is to raise the lid and connect the batteries; there being no aerial to unfold and hoist in the air." The latter point is of course the one that is especially to be noted. Here is the description of the set:

"The box is 10x10x18 inches over all, constructed of $\frac{1}{2}$ -inch hardwood with one side on hinges so that it can be raised when in use, the case lying on the other side. Brass corner-pieces and angle strips make the case stronger and add much to its appearance. It is also fitted with a handle for carrying and a hinge hasp.

"Two and a half inches from the top a $\frac{1}{4}$ -inch Bakelite panel is mounted by means of $\frac{1}{2}$ -inch cleats. On this panel are mounted the following instruments, as shown in the sketch: (1) The loop coil which is used for an aerial; (2) a variable condenser of .001 M.F. capacity for tuning; (4) a rheostat for the filament of the audion bulb. The bulb itself; (3), or, rather, the socket for the bulb, is mounted in a recess 4 inches below the top of the panel, as shown. Binding-posts are provided for attachment of A and B batteries and also the telephones, for which a space is provided by the setting of the panel below the top of the case.

"The coil (3) is preferably a Litz wire-wound coil of small distributed capacity, but not of the honeycomb or lattice type, because the zigzag winding of the wire will not permit a directional effect. Sixty-five turns of wire, bank-wound on a circular wooden form 2 inches in diameter, as shown, will be about right for 200 to 400 meters wave-length.

"The connections are self-explanatory, the condenser (5) being the grid condenser.

"If desired, there is room in the case for the B battery. Any amount of wire can be wound on the coil, to receive any wave-length desired.

"To receive, adjust the plane of the coil in the direction of the sending station and tune the signals in with the variable condenser. It must be understood, of course, that this set will not respond to signals transmitted from great distances. Good

receiving depends primarily on the power of the local transmitter, as well as upon the most effective tuning of the receiver and functioning of the vacuum tube."

HOW TO MAKE SOLDERED CONNECTIONS

WHEN THE NOVICE STARTS OUT to make a radio-receiving outfit, or even to install one that he has purchased, he finds that it is important to know something about the simple but very useful art of soldering. In *Popular Radio* (New York) Mr. Frederick Siemens gives practical directions that are worth the attention of every one who thinks of joining the radio ranks:

"When wiring up a radio set it is important that all connections be made so that a good positive junction is formed not only between the wires and the instruments but also between the wires themselves.

"There are four points to be remembered when making up a soldered joint: *First*, the surfaces of the parts that are being joined should be cleaned and polished; *Second*, the surfaces should be treated with a soldering flux; *Third*, the temperature of the soldering iron should be kept at the right heat; *Fourth*, the metal parts should be heated with the iron and just enough solder applied to cover the parts neatly.

"If these precautions are taken, every joint will be a real joint, and the apparatus thus connected up will function in a quiet, clear manner, without any of the hissing, scratching, or crackling sounds that always accompany a poorly connected set.

"All metal parts to be joined should be rubbed and polished to a bright, shiny finish, with emery cloth. All coverings such

as lacquer, grease or oxidization should be removed from the surface of the metal.

"The purpose of using the soldering flux is to cause the molecules of metal to amalgamate with the molecules of molten solder which will be applied later. There are a number of fluxes the chemical constituents of which cause this action to take place. This soldering paste may be applied with a small stick. Use only enough to cover surfaces with a thin film.

"A small one-half pound iron (which, by the way, is made of copper) should be used. To prepare the iron, clean the point with a smooth file or emery paper to a distance of about one-half an inch from the point, and then place the iron in a clear gas flame and heat it until a green tint is seen in the flame around the iron. Then apply the soldering flux to the point and rub a piece of solder over the cleaned surface until it is covered with

a coating of solder. Then place the iron back in the flame but keep the point out of the flame. The iron should never be heated beyond the temperature at which the solder begins to turn dull gray.

"When the iron is at the correct temperature, place the point of it on the surfaces of the wires or parts to be joined and heat them for a moment while the flux bubbles up; then place the end of the strip of solder on the parts until enough melts and flows over the surfaces to make a neat joint. Do not use any more solder than absolutely necessary. Work the molten solder around with the point of the iron, until every crevice is filled, and then take away the iron and refrain from moving or disturbing the joint until the solder 'freezes' or sets. Wipe off all excess soldering flux and the job is complete. The handiest kind of solder to use is a soft solder put up in the form of a wire about one-eighth of an inch in diameter."

MARRIAGE A LA AIRPLANE AND RADIO

MARRIAGE IN AN AIRPLANE up in cloudland, with a celebrated aviator to perform the ceremony and a radiophone to send the record of it to an audience on the ground some miles away might certainly be described as thoroughly up to date. Such was the method recently adopted by a couple in—or rather over—New York, who immediately started on their honeymoon, the trip being made by air to Albany, Schenectady, Syracuse, and Niagara Falls. In the plane were Belvin W. Maynard, the "Flying Parson" who won the transcontinental air race last year—officiating clergyman—Bert Acosta, pilot; Athletic Director Albert P. Schlafke, of the Veterans Mountain Camp, the bridegroom; Miss Sarah Cockefair, a Brooklyn nurse, the bride; and little Mary Louise Bobb, the tiny flower girl; and a mechanic. Parson Maynard married Miss Cockefair and Mr. Schlafke as the plane was flying through the air and thousands of radio fans tuned in and acted as witnesses. All this in aid of the fund campaign of the Veterans' Mountain Camp.

Prior to this interesting performance, Lieutenant Maynard radiophoned an address from the same machine, circling high above New York, appealing to perhaps 50,000 listeners at receiving stations in the Metropolitan district, for public support to carry on the American Legion Mountain Home; and Miss Jeanette Vreeland rendered a vocal program from the same vantage point for the radio audience.

Copyrighted by Underwood & Underwood.

A RADIO WEDDING.

The wedding party are in the plane, flying to New York, Niagara Falls and way stations on the wedding trip. Thousands of radio fans tuned in and heard the wedding ceremony.

The New York correspondent of *Radio Digest* (Chicago) gives the following account of the novel enterprise:

"The flight was made under the auspices of the American Legion as part of its campaign on behalf of the proposed Soldiers' Mountain Home. The route taken began at Hazelhurst Field at Mineola, Long Island, 18 miles from New York, and covered all Brooklyn, middle Manhattan and part of New Jersey.

"Lieutenant Maynard spoke about the aims of the American Legion Mountain Home. The home is to be built to provide members who are suffering from ailments requiring pure mountain air, a retreat during convalescence.

"Miss Vreeland rendered a vocal program which included the 'Star Spangled Banner,' 'Holy, Holy,' and also the well-known prayer from 'La Tosca.' Her accomplishment as a singer was doubly remarkable, because she was able to hold the correct pitch throughout the selections in spite of the din of the 200 horse-power motor that was carrying the party through the air. Finally, Miss Thais Magrane spoke on behalf of the Women's Auxiliary of the American Legion.

"Before and after the announced program, conversations were carried on with various stations and amateurs, all of whom reported clear signals. A Brooklyn amateur said that he could see the plane sailing through the air while speaking to the occupants.

"The transmitting set consisted of a C. G. vacuum tube transmitter of 300 Mfcs capacity. It was built for aerial radio transmission for the United States Navy. The wave-length was 500 meters and 300 foot drop antenna was used. The total weight of the apparatus was 147 pounds. It was fastened to two pine boards screwed to the floor of the roomy cabin. The reel was attached under the seats.

"The tests were in charge of E. W. Dannels, the radio engineer of Brooklyn, connected with the General Electric Company. Mr. Dannels was one of the leading radio operators of the U. S. Naval aviation.

"He is remembered by many as the man who, some years ago, was wrecked in a Blimp as it burst off Sandy Hook, while the occupants were watching the sailing races. His daring in sending messages until the machine struck the water received world-wide comment.

"The interesting part of the test was made possible through the courtesy of the army authorities of Mitchel Field, Long Island.

"By hooking a receiving set to the regular telephone system they enabled the officials and guests of the Fokker Company, assembled in the hangar, to follow the whole program. The test proved, too, that an ordinary gasoline funnel held against a telephone receiver with a handkerchief wrapt around the connection made a very acceptable loud speaking horn."

SNOODLES STARTS AN INVESTIGATION.

Hungerford in the New York Evening Mail.

LETTERS - AND - ART

LITERATURE DRAMA MUSIC FINE-ARTS EDUCATION CULTURE

NEW YORK TO FURTHER MUSIC IN THE NAME OF PEACE

IS A "PEACE MEMORIAL" also a "War Memorial"? New York proposes a twenty-million-dollar "peace memorial" in the form of "a center of education in music, drama and other arts in Manhattan." A memorial is a reminder of something that was, and New York now has no tangible evidence that once she had young men who gave their lives in the Great War. For a time a beautiful white Victory

heimer and quickly secured the approval of both houses of the New York legislature expressed in a bill providing that a "site for the structure shall be selected by the Mayor, subject to the approval of the Board of Estimate and Apportionment." To this has been added the approval of the Mayor of New York, so that nothing now seems to stand in the way of "the erection of a great building to be known as a 'Peace Memorial,' which shall provide facilities for education in and enjoyment of all the arts by the people," except—\$20,000,000. But the Hon. Philip Berolzheimer, the Mayor, and Architect John Wesley Miller have furnished the plans; it is now "the people's" duty to supply the money, for as *Musical America* states:

"For some time past, Mr. Berolzheimer had been formulating a plan to establish a municipal music center in New York, where promising young men and women could get a musical education without the necessity of going abroad. With this plan, other notable features were connected to make it New York's 'Peace Memorial.' . . .

"The proposition, however, to make the erection of a peace memorial an opportunity to build a municipal temple of music, drama and the arts, has unquestionably been most generally favored by the music world and all those interested in the cultural influences. . . .

"For the purpose of carrying out the provisions of the bill and for paying the expenses of the closing of the site, the Comptroller of the city is authorized by the said board to issue and sell the incorporated stock of the City of New York to such an amount as may be necessary and at such a rate of interest as may be fixed by the Comptroller.

"This means that the proposal has already secured legislative approval to the extent of securing a site. It has been stated that the site favored is one facing Central Park on Fifty-ninth Street.

"The report of the City Chamberlain and of Mr. Haag states that nowhere in this country so far does there appear to be a concerted effort to establish a center of music. In the judgment of Mr. Berolzheimer and Mr. Haag, there should also be included in the center provision for education in and the production of the classic drama. The building should contain an auditorium for the production of opera, another for concerts, another for classic drama and comedy and small auditoriums for chamber music and the intimate theater, practice rooms for vocal and instrumental work and rooms to accommodate a conservatory of music. The report further states that the City of New York could well afford to contribute the site. The

endowments that have already been made and may be made could well furnish the buildings, and its income could provide for its maintenance."

It is nowhere stated that the citizens of New York have been asked to pass on this method of memorializing their dead. A public hearing was held, and according to *Musical America*, "was attended by a number of prominent musical persons, as well as by educators, legislators and friends of general culture." The meeting opened in this wise:

"In spite of the inclement weather the large rooms of the Board of Estimate and Apportionment were crowded when Mayor Hylan came in to preside. The hearing began with the reading of the bill. The Mayor then asked

THE PROPOSED TEMPLE OF MUSIC AND ART.

John Wesley Miller's conception of a building designed to cover two New York blocks and house one opera auditorium, clubs, lodge-rooms, a grand ballroom, offices, studios, concert halls, a conservatory of music, rooms for dealers in art objects, musical instruments, and other purposes undreamed of.

Arch stood near Madison Square, but it grew dingy and dilapidated and was torn down. A mayor's committee has "sat" on the project of a permanent memorial from time to time, but they seem of late to have ceased to talk of this purpose. It has been asserted over and over again by Fine Arts commissions that memorials to our dead should be divorced from utilitarian institutions. Now the proposed memorial bears the name of "peace," as tho peace were no longer with us, and the divine art of music should be invoked in its remembrance. *Musical America* devotes a large amount of space to reporting the pleas made by distinguished citizens for this grandiose civic institution, but no one touches on its fitness as a memorial for our dead. But the idea sprang from the brain of City Chamberlain Berolz-

Mr. Berolzheim, 'Chamberlain, are you for or against this measure?'

" 'I am for it, your Honor,' replied Mr. Berolzheim. The Mayor then requested that any persons opposed raise their hands. 'Will you count them, Chamberlain?' he requested.

" 'I can't find any, your Honor.' "

Mr. Berolzheim then answered the Mayor's question as to the real purpose of the bill by saying it was "to create a public conservatory," and Mr. Haag, who had shared in proposing the measure—

"express gratification at the prompt action of the legislature. He eulogized the benign influence of music, saying that it was significant that music plays an important part in the rituals of every religion. He said that the city would be reimbursed for any expenditure by the increase in tax-value of surrounding properties, by reason of the existence of such a school. In addition, there would be the inestimable benefit to every lover of music. He voiced a belief that such an institution would sooner or later come to pass. Mr. Haag was applauded."

Mr. Otto H. Kahn was introduced as "one who had never failed to cooperate in civic art movements," and is thus reported:

"Music has a beneficent influence in providing constructive channels, instead of destructive, for their energies. I believe that much of the present 'crime wave' springs from that tendency to get away from dullness of life. I believe that it is a part of social statesmanship to give people access to that abundant source of wealth which is art. The man who goes to a concert with his heart open is better than the man or woman who sits chatting idly among friends in a box at the opera house."

Dr. Eugene A. Noble, Executive Secretary of the Juilliard Foundation, expressed this country's need of "a commanding institution to provide a musical training, foster creative ability and maintain standards." But he suggested some contingent features:

"For such an institution, Dr. Noble said, not only a splendid edifice would be necessary, but 'the best minds and the most generous spirits.' The cooperation of philanthropic organizations would be helpful, he said, in order to coordinate the project. He concluded with a statement of his opinion that what was most seriously needed was 'a center, an artistic clearing house belonging to and devoted to all the people.' Dr. Noble suggested that the conservatory should be governed not by a private organization, as the bill permitted, but by a self-perpetuating board of directors, so that the organization should be immune against changes in administration."

Mr. John C. Freund, editor of *Musical America*, dismissed the mortuary idea:

"The spirit of the times is not in accord with monuments, statuary. In these days we demand something that has life and something which will meet the needs of the great masses of the people. The basic thought upon which such an enterprise as has been proposed should be built is that recreation is as great a human need as the air we breathe, the clothes we wear and the bed we sleep in. This need has become more intense as the average man's job has become more and more monotonous. To meet the demand of those who go to see the plays, to the opera, to hear the symphonies, to the movies, the vaudeville shows, the cabarets, we have an army of professionals.

"This has developed a veritable tragedy for the reason that while we have provided ample opportunity for our young talent for the lower forms of entertainment, opening our arms to the pretty chorus girl, the vaudeville singer, the dancer, in the higher ranks we have closed the doors except to those who come to us with a foreign name and a foreign hallmark. And yet we have in this country the finest symphony orchestras and bands. We give the best opera. We have the finest singers and players. We have the best music teachers, while our musical industries lead the world in quality as well as quantity."

Following other speakers, "there was great applause when the Mayor announced that he would approve the measure. . . . The city executive advised that a committee be formed at once, authorizing the Chamberlain to take such measures as are needful, and assuring him of his own cooperation."

AMERICAN AND BRITISH ART BUYERS AGAIN CLINCH

IT WAS TOO MUCH to expect Britons to let Hoppner's portrait of Pitt to go out of England. So this at least found a patriotic buyer in the Burdett-Countts sale held in London on May 4. England has relinquished hundreds of her art treasures, whether by necessity or indifference, as great estates have crumbled before the hand of super-taxes, but Lord Cowdray

SIR JOSHUA'S FUN WITH THE FASHIONS.

The Mob Cap, as this picture in the Burdett-Countts collection is named, was affected by old ladies of the eighteenth century, but Reynolds thus decorates a child.

saved this one for the moment at least. British art lovers were "nervously apprehensive on the eve of the auction at Christie's of the famous Burdett-Countts collection," reports the *New York Herald*, lest the choicest gems should go to Americans. Helpless to save the famous "Blue Boy," which lately came to Mr. Huntington's collection in Los Angeles, they are reported to have bade it adieu with a song popularly called the "Blue Boy Blues." Even the guineas were lavishly spent it is not yet apparent how much of the Burdett-Countts collection was bought for American collectors. What is expected, tho, is that some of the "authentic" Shakespeare portraits will come here. At recent sales, it is said, prices have been lower than for years; but this sale brought out many English competitors as well as American. Whatever was acquired for this country will come in quietly, so we record the possibilities as they may be detected in the cable dispatch to the *New York Times*:

"Dramatic moments came when guineas rose by twenties and fifties for Raeburn's portrait of Sir Walter Scott, for Hobbemas, for some of the Reynoldses and for the wonderful Pitt portrait by Hoppner, which fell to Messrs. Vicars. It was bought on behalf of Lord Cowdray, who, in an interview, said he felt that the picture ought not to leave England. It will be added to his collection. Seven thousand guineas was paid for this picture, but the highest price was won by the Scott portrait, which fell to

Messrs. Knoedler of London and New York for 9,000 guineas. The fact that this firm has a branch in New York was commented on when the final bid was reached, but it was learned that the picture was bought in the ordinary way of business and not on commission.

"There was quite a ripple of applause when Hobbema's two landscapes, numbers 94 and 95 in the catalog, were bought by Messrs. Leggatt for 6,200 guineas each. These masterpieces have been secured for a private collection in this country. The

The London *Sphere* gives this brief account of the Shakespeare portraits which we show on the opposite page:

"The famous Felton portrait is here seen in the bottom right corner; this shows the poet with a pale moustache and slight tuft of hair under the lower lip, and extremely high forehead accentuated by partial baldness. This portrait was discovered in a broker's shop in the Minories in 1788. It was bought at a sale in 1792 by Mr. Felton for 5 guineas; the panel is said to bear on the back an inscription and date, 'Gul. Shakspear, 1597, R.B.,' but the lettering is now almost illegible. The Lumley portrait is given above the Felton; it represents Shakespeare in middle age. It was originally in the possession of John Lord Lumley, at Lumley Castle in Durham; Lord Lumley was a contemporary of Shakespeare, and died in 1609. The portrait came into the possession of the late Baroness Burdett-Coutts in 1875, after its purchase at Christie's by Mr. H. Wagner. The Zuccaro portrait (bottom left) is usually attributed to the year 1602, and was added to the Baroness's collection in 1862. The top left portrait is that known as the 'Burdett-Coutts portrait.'"

A BROADSIDE AGAINST WELLS

THE "MUDDLE-HEADED" H. G. WELLS once produced a book which everybody seems to have read and many people praised, but which now turns out to be "silly" in parts, with evidences that its author's qualifications as a historian are "nil." These phrases are the high lights of a broadside leveled at the author of the "Outline of History" by the Department on Study of Revolutionary Movements of the National Civic Federation. One hundred college professors contribute to the bulky pamphlet containing their judgments. The consensus of opinion, says Condé M. Pallen, chairman of the department, "with some exceptions, is that Mr. Wells is not a historian at all." This will be a blow for the doughty writer, after he has subsisted for several years on the tangible evidences of public approval, one of the most enthusiastic tributes coming from Dean Cary Thomas of Bryn Mawr. The *New York Times*, digesting the pamphlet, reports that some "historians and teachers of history hold that Wells is as accurate as he needs to be for the ordinary reader and that, in spite of some shortcomings, he has performed a useful service in getting thousands interested in history who were indifferent to it before. As to the style of the work, there is a difference of opinion, some thinking it brilliant and others inferior."

Here are some specimen judgments extracted by the *Times*:

"Dr. D. C. Munro, Princeton—The facts are generally accurate because Wells had the assistance of many critics. Occasionally, however, there is a curious blunder, e. g., that Washington was 'indolent.'"

Dr. William H. Mace, Syracuse University—Mr. Wells is neither accurate in his statements of facts nor dependable in his deductions.

"Dr. Theodore Clark Smith, Williams College—His facts seem fairly well checked up; his deductions are worth no more than Mr. Wells's snap judgments on anything else—marriage, diplomacy, God or anything he happens to notice.

"Dr. William Stearns Davis, University of Minnesota—Apparently he did not like the Romans, and his account of them seems to me, at least, almost grotesque in its misconceptions and its inadequacy.

"Dr. R. V. D. Magoffin, Johns Hopkins University—The accuracy and dependability of Mr. Wells's statements would seem to run about 85 per cent. right; his deductions therefrom at least 85 per cent. wrong.

"Dr. Frederick K. Paxson, University of Wisconsin—As a journalist and man of letters he has shown remarkable capacity in constructing imaginary civilization around the structure provided by some interesting or novel hypothesis.

"Dean John L. Hill, Georgetown College—In my judgment the social and moral philosophy of Mr. Wells disqualifies him as a leader and teacher of young people.

"Dr. William Milligan Sloane, Columbia University—I have read large portions and find no 'gripping qualities.'

"Professor William Starr Myers, Princeton—In my opinion,

LORD NELSON, IN THE BURDETT-COUTTS COLLECTION.

Painted by L. F. Abbott, and engraved by Valentine Green.

total paid for the two was the most sensational investment made at the sale.

"There were one or two surprises. Bidding started at one guinea, for instance, and ended at two guineas for the gruesome picture of the head of John the Baptist, vaguely attributed to Murillo without the initial prefix. Two authentic Murillos, but not of the best period, realized respectively 70 and 130 guineas.

"Measuring by inches, the most valuable picture in the sale was probably a small section of the predella of an altar-piece, No. 118 in the catalog, painted by Raphael for the community at Perugia. The altar-piece itself is now in the Metropolitan Museum, New York, and apprehensions as to its ultimate destination were not exactly allayed when the successful bid was made by Duveen, who sold 'Blue Boy' to America. Duveen paid 7,000 guineas for this precious fragment, which measures 9½ inches by 11 inches.

"The much debated Shakespeare portraits were the last pictures put up to-day. One thousand four hundred and fifty guineas was paid for the Felton portrait. Another bidder secured the other three portraits, known as the Lumley, the Zuccaro and the Burdett-Coutts, for 300 guineas apiece.

"Close on £89,000 will change hands as the result of to-day's sale. The outstanding prices paid included the following: Abbott's Nelson portrait, 1,700; Gainsborough's 'The Drinking Place,' 1,100; Hoppner's Hebe portrait, 1,800; Sir Thomas Lawrence's portrait of William IV, when Duke of Clarence, 3,300; Sir Joshua Reynolds's 'Cupid and Psyche,' 2,400; Reynolds's 'The Mob Cap,' 2,000; Reynolds's 'A Girl Sketching,' 5,200; Romney's portrait of Lady Grenze, 4,000; 'The Courtship,' 1,000; Holbein portrait of Sir Thomas More, 800; N. de Largilliere's 'Duc d'Anjou and His Gouvernante,' 1,000; Rembrandt's 'A Forest Scene,' 110; Tintoretto's 'Miracle of St. Mark,' 800; Watteau's 'Fête Champetre,' 600, all guineas."

Wells's 'Outline of History' is inaccurate, misleading and calculated to appeal only to ignorant and thoughtless people. Mr. Wells lacks both scholarship and ability to write history, and I do not see how any teacher or scholar can honestly use this work as a text and keep his or her professional self-respect."

The Brooklyn *Eagle* is "not quite clear" as to why the National Civic Federation has gone about this work of showing up Wells, and thinks that Mr. Pallen's summary dismissal of Wells's pretensions to being a historian "will please Mr. Wells and his admirers immensely," for—

"They will hold that conclusions based upon a 'consensus of opinion' admitting so many exceptions are not conclusive at all. As a matter of fact, Mr. Wells's book does not come off so badly. Asking professors of history to pass on such a work is not unlike inviting the opinion of medical men on the efficacy of a faith healer's miracles. But why go to so much trouble to prove that Wells is not a historian? He never made such a claim for himself and has in his book repeatedly emphasized his own deficiencies.

"Henry Adams, who was himself a professor of history, long ago pointed out the weaknesses of the calling. Mr. Wells, in attempting an outline of history, tried to do something that no one else had undertaken. By common consent he produced one of the most remarkable books of the period. It may not be good history, but it is fascinating reading. He may be a propagandist, as charged, but he would doubtless suggest that the Civic Federation in getting up this symposium was interested in propaganda of its own.

"There is one point, however, that the Civic Federation and professorial critics of Mr. Wells seem to have overlooked. Unlike real historians and professors of history, he did not intend that his 'Outline of History' should stand as written indefinitely. He invited criticism and corrections and has already rewritten and republished his work. He plans a constant revision. All his critics and those who find him inaccurate are invited to help in getting his story of mankind straight. That, at least, is something new in history writing."

The New York *Herald* seems to have discovered that the Federation's action is due to the report that "Wells's admirers were engaged in a movement to introduce the 'Outline' into schools and colleges as a text-book." And it is impressed with the unlikelihood that such a result will be forthcoming. The *Herald* culls some evidence in support of its belief:

"The Federation has published in pamphlet form the replies favorable to Wells and 'a considerable part of those unfavorable.' Even with some of the unfavorable answers omitted the nays seem to have it; yet Wells may be proud of a few testimonials given to his history. President Thwing of Western Reserve University declares that the 'interest, and fascination even,' of the 'Outline' more than meets any objections. Professor Mary Williams of Goucher College says that if the book could be taught in all the colleges of the world 'the war drum would never throb again.' Professor Martin of Stanford University thinks the book could be used to advantage in some college courses.

"Among the dissenters Professor Tryon of the University of Chicago finds in the 'Outline' too much Wells and not enough reliable history. Professor Sweet of De Pauw is cruel enough to say that Wells's few paragraphs on Feudalism are 'taken almost verbatim from the Encyclopedia Britannica.' Professor William Starr Myers of Princeton remarks that the 'Outline' is 'inaccurate, misleading and calculated to appeal only to ignorant or thoughtless people.' If he wishes to read historical fiction, he adds, he prefers Scott. Another of the Princeton faculty, Professor Corwin, regards Wells not as a historian but as a pamphleteer and propagandist—'usually quite muddleheaded, but the master of an attractive and brilliant style.' A third Princetonian, Professor William Milligan Sloane, who wrote a life of Napoleon, whom Wells minimizes, considers the 'Outline of History' neither accurate nor dependable; 'still less erudite or philosophical.'

"In an essay of 2,000 words on the 'Outline' Professor J. S.

Shapiro of the College of the City of New York says some kind things about Wells's work: 'He has interested the average intelligent reader in history; no professional historian now living has ever done it or could do it.' That is true. Our Parkmans and Fiskes are dead, and James Ford Rhodes has not the drawing qualities of a natural publicity man like Wells. Professor Shapiro is fairly gentle with Wells, for he realizes that the task which the novelist undertook 'would require the industry of a Ranke, the versatility of a Leonardo da Vinci, the learning of a Mommsen and the style of a Macaulay.' And Wells, altho he is Wells, is only Wells. The American reader who finds him giving two pages to an expedition of Darius which may never have taken place and only one paragraph to the American Civil War; omitting the name of Gettysburg and calling George

WHICH WILL AMERICA COME TO OWN?

Four "authentic" portraits of Shakespeare in the Burdette-Countts collection. The upper left would be doubtful if the coat of arms should be proved a later addition. The upper right is called the "Lumley" portrait; the lower left the "Zuccaro" portrait, and the lower right is said by some to have been painted by Richard Burbage.

Washington 'a conspicuously indolent man'—that reader may have a passing vexation toward Mr. Wells. But the author of the 'Outline' is still young, and the eightieth or ninetieth edition, with the help of the critics, may see the last possible error corrected."

Readers of some of these newspapers also take a hand in the discussion. Mr. William L. Sullivan, writing to the *Herald*, thinks Mr. Wells's shortcomings as a historian arise from his "anti-patriotism," and declares "no anti-patriot or anti-nationalist can understand institutions; for institutions are nationality and Governments organized." A humorous contribution is to be found in the letter written to the New York *Times* by Estelle D. Dyke, who asks if it "would not be illuminating to add the advice of an eminent historian as reported by Anatole France in the preface to 'L'Ile des Pingouins'?"

"Why, my poor man, give yourself so much trouble? Why compose a history when you have only to copy the best known, as is the accepted custom? If you have any new insight, any original idea, if you present men and affairs under an unwonted aspect, you will surprise the reader. And the reader does not like to be surprised. He seeks in a history only the stupidities with which he is already familiar."

RELIGION-AND-SOCIAL-SERVICE

NINE CENTS A WEEK FOR SALVATION

NINE CENTS A WEEK is the magnificent contribution which 30,000,000 Protestant church members averaged in 1916 toward the support of their ministry. Three years later this sum was increased by a little less than two mills—probably to cover the increased cost of living. Of course, as we are told, there were (and still are) “pound” and “barrel” parties to cover deficiencies in salary. A pastor’s wife living in Wyoming, for instance, found in the barrel which kind members of the congregation had given her a discarded and moth-eaten bathing-suit made for a woman twice her size. But she had a sense of humor, if little else, and did not dream of Palm Beach or the sands of California. It is a

magnificent faith, once said a cynic, which puts a nickel in the collection basket every week and expects a crown of glory in Kingdom Come, and it forms the subject of an article in the *Ladies’ Home Journal* by Charles A. Selden. Mr. Selden observes that the chief difference between the man who gets all of his little in cash and the one who gets it partly in discarded clothing from a barrel is that the former is spared special insult, and so has less of a struggle to maintain the dignity of his calling. Everything for which the barrel stands is objectionable. For instance, it is the traditional part of the family job that the minister’s family should sit up front in church;

“but it is neither comfortable nor decent for them to sit there, wearing discarded garments in the plain sight of those, sitting farther back, who have given them.” This underpayment of clergymen in an institution that is constantly growing in wealth and membership, says Mr. Selden, is “the most amazing inconsistency in American life.” Statistics show that there are now in the United States 45,997,199 church members. Nearly 38,000,000 of them, we are told, are Protestant Christians. Combining the members with those in sympathy with the Church, there is a grand total of 96,338,096 persons, of which 74,800,000 are listed as Protestants.

“In the last five years the churches have gained more than four million members. Sunday schools have gained two million. There are fifty-six hundred more church organizations than there were in 1916 and an increase of eighty-three hundred in the number of clergymen. These gains may surprise considerable groups of men and women, chiefly in large cities, who take it for granted that the Church is dying because they themselves have lost interest in it. They are the people who, removed by one or two generations from devout, church-going ancestors, feel that they have outgrown public worship. But these groups, with their silent indifference or exprest skepticism, do not figure in the case.

“The charge of inconsistency still holds against the church members. Here we have forty-five millions of our population who have exprest their belief in the church by joining it. They believe that the future of the American Government actually depends upon character building by the churches. They

believe that the church is absolutely indispensable to make this world a safe and moral place for their children. But, regardless of all such beliefs, these forty-five millions come as near as they can to starving the leaders whom they choose for these churches.

“The latest figures on the vital subject of ministers’ pay are those of the United States Government’s Church Census of 1916 and the final reports of the Interchurch World Movement, giving precise and complete figures up to 1916 and some partial figures and estimates up to the end of 1919. In 1916 the 170,000 active Protestant clergymen in the country received \$125,000,000 as the aggregate of their salaries, from something over twenty-six million members then enrolled in the Protestant churches. The average salary per minister in 1916 was \$735 a year, or \$14.13 a week.”

Courtesy of "The Presbyterian Advance."

FOR THEIR RAINY DAY.

Intelligent guessing of men who work on church statistics is, we are told, that there has been a total increase of about 20 per cent. in ministers’ salaries since 1914. Half of this had been gained by 1916, and the remainder for the period from 1916 to the present time would bring the average salary up to \$808 a year, or \$15.54 a week in 1922 for the Protestant Christian clergyman. Fifteen hundred dollars a year is about the lowest estimate that various groups of experts have hit upon as the minimum on which the American family can now live decently. Yet ninety-nine ministers out of every hundred are so poor that the Government tax collector passes them

by. Meantime it has been estimated, we are told, that the average income of the Protestant church membership is \$400 a year, the apparent smallness of the sum being due to the fact that all women and children and other so-called non-earning members are included in the figuring. “If the Biblical tithe, or tenth, of that were contributed to the church it would pay all present expenses and leave a balance of a billion dollars. The estimated aggregate income of Methodists is \$2,500,000 a year. They paid their ministers not a tithe of that, but a tithe of a tithe—that is, one cent out of the dollar. The combined income of the Congregational, Baptist, Presbyterian and Methodist church members is \$4,600,000,000 a year. The ministers of these several denominations do not get more than the cent on the dollar.” Mr. Selden proceeds:

“But the tendency of the Church does not seem to be to give this increase of three or four pennies a week for each member. The congregations have erected two billion dollars’ worth of church buildings. Protestants expended last year alone for all church purposes considerably more than four hundred million dollars. The Catholics and Jews spent eighty million dollars in their several religious activities. Individual expenditures of the laymen are unchecked. Many a church member spends more each year on his automobile than the whole congregation to which he belongs contributes to the salary of the minister. . . .

“It is only fair, however, to many church members to say that some of them in various parts of the country do allow their ministers to earn money at odd jobs outside their church work. Among

the Southern Baptists one-third of the clergy do other than ministerial work.

"But the ministers themselves do not want the taint of mere money-getting attached to their profession. They prefer only a decent living. There is far more of the true spirit of *noblesse oblige* in the pulpit than in the pews in this matter.

"Recognition by the Church that its ministers are helpless to provide, unaided, for their old age or for retirement due to illness is implied by the arrangements that the several denominations are making for pension systems. But this, so far as it goes, seeks to eliminate in part only one of the anxieties which beset the clergyman. It promises a little for the period of his life when he can no longer serve the church; it offers no relief from the difficulties which confront him in the years of his activity and which impair, by worry, the quality of his service. That is where the loss to the church members themselves comes in as the result of their shortsightedness."

KEEPING RELIGION OUT OF POLITICS

INTENSIVE EFFORTS to influence political decisions by appealing to religious prejudice have occurred at not infrequent intervals in the history of America, and we are warned that there are some signs that we are approaching a recrudescence of such unhappy appeals now. In an address in St. Louis, recently, former Vice-President Thomas R. Marshall called attention to the distrust between persons of different religious faiths, and declared that, in forgetting the principle of democracy, that every man has the right to follow the dictates of his own conscience, we are flirting with an alliance of Church and State. Secretary of State Hughes, in discussing the same principle at the recent laying of the corner-stone for the National Baptist Memorial to Roger Williams, said:

"The right of religious liberty, which has become a truism, carries with it an inhibition that no one should seek through politics, to promote the activities of religious organizations, or should intrude differences of religious faith or practise into political controversies.

"We are so familiar with the conception of religious liberty that we are likely to forget at what cost freedom of conscience has been won and also the danger to which we are constantly exposed of a recrudescence of bigotry.

"The hardest lesson mankind has had to learn is that religious truth, which is held to be most precious, can not prosper by attempts forcibly to impose it on others. Strong convictions, especially religious convictions, are apt to develop tyrannical purpose and no faith is so pure that it is never in danger of being made the instrument of the mistaken zeal of those who would deny to others the right to think as they choose."

It is true that the lesson has been a hard one, says the *Fresno Republican*; and this may be the reason why there are still a few who have not learned it. However,

"Their numbers are diminishing. Some of their organizations flourished for a time but soon dwindled away and are now little more than a memory. Every once in a while, some self-ordained individual comes into our midst, spreading his propaganda of religious hatred, but he passes almost as quickly.

"Religion has always been a subject of controversy and probably always will be. The reason is very plain. There is no one who can say that his religion or his method of worship is the only one.

"This, then, makes it all the more necessary that we accord to others the same rights that we claim for ourselves, the right to choose our own religion and to worship as we please without abuse."

GOOD NEWS FOR THE LEPER

STONING, OR PERHAPS a funeral pyre, once answered the leper's haunting cry, "Unclean! Unclean!", and it is only within recent times that Christian charity has stirred itself to heed Christ's command, "As ye go, cleanse the lepers." Now, we are told, the Mission to Lepers is leading a world movement for their segregation and scientific treatment, and out

Courtesy of the Methodist Board of Foreign Missions.

THOSE WHO CRY, "UNCLEAN! UNCLEAN!" ARE NO LONGER STONED.

But, as shown by this leper band at a mission at Cullion, Philippine Islands, they are helped and cared for, in keeping with Christ's command: "As ye go, cleanse the lepers."

of the 2,000,000 lepers in the world, 8,000 and their children are being cared for in the institutions which the mission provides or with which it cooperates. The various mission boards lend a helping hand by designating missionaries for the work, and governments are also assisting. Last year, writes John T. Merrill in *Zion's Herald* (Methodist), India contributed \$77,000 in Government appropriations and individual gifts. Wu Ting Fang gave \$5,000 to purchase an island in South China for a leper colony. Japan and Siam are also taking official steps to wipe out the dread disease, and in the United States the Federal Government has purchased a home for lepers at Carville, Louisiana, on the Mississippi River. This institution is already filled to overflowing, we are told, and has a substantial waiting list.

As a matter of fact there is said to have been much unnecessary fear of leprosy as a communicable disease, and the writer tells us the cheering news that workers among the lepers believe that seventy-five per cent. of the cases will respond to the new treatments. Indeed, there is every reason to believe that the Christian Church can, in a very few years, entirely eradicate leprosy if it will set itself to the task. The report of a recent visitor to a modern leper settlement in India, which is quoted by the writer, is interesting in showing what a Christian asylum can do for the afflicted:

"A model village on a fifty-acre tract in an evergreen forest with good roads, and sixty spacious houses, each surrounded by a flower and vegetable garden. The street is lined with trees sprung from roots of the primeval forests.

"The dominant feature is the beautiful church. It embodies the spirit that created and sustains this Christlike undertaking. With open windows and outside shutters, it is a welcome retreat, accommodating 700 people. Besides two Sabbath services, there are daily Bible, singing, prayer, and communicant classes.

"Half-way between the railroad station and the asylum stands the Children's Home, where healthy children of leper parents are given wholesome care and Christian education. To the right live forty girls; to the left, the same number of boys. The middle house serves for a schoolhouse and dwelling for the 'house-father and mother.' After elementary education, the

boys learn a trade, generally carpentry or masonry, while the girls learn domestic arts and help in the gardens.

"Prevention of leprosy for these children of lepers is not only possible but practicable, effectual, and inexpensive. At the office the head caretaker and assistants are busy with registrations, accounts, giving out clothing, and arranging daily visits to each leper.

"The medical work and dispensary are under the charge of a qualified Indian Christian doctor, superintended by the civil surgeon, who pays periodical visits and performs major operations. Two young leper men assist. In addition to surgical

loaned by business organizations scurry over the countryside to bring in those who live beyond the sound of a locomotive whistle.

The institutes are provided by special enactment and by the appropriation of small grants available for certain purposes which may be had on application to the Minister of Agriculture, "but the real heart and soul of the movement is in the energy and interest of the local women." Not less than eight women, married or single, but not less than sixteen years old, may join in a petition to form a Woman's Institute. Dues of not less than 25 cents a year are paid by each member. Besides authorizing the institutes to be corporate bodies, capable of holding property, the act provides for—

"The improvement of social conditions in rural and other communities by means of (1) The study of home economics, including home nursing, household science, sanitation, food values, sick-room cookery, housefurnishing, sewing and other matters; child welfare; prevention of disease; local neighborhood needs; industrial and social conditions; (2) Establishing the women's institute as a social and educational center in the community and by utilizing it as a means of welcoming new settlers; (3) The encouragement of agriculture and improvement of agricultural conditions; (4) The holding, establishment and maintenance of demonstrations, lectures, short course schools, traveling and other libraries, exhibitions, competitions, meetings, conventions and such other utilities and attractions as may from time to time be deemed useful for the promotion of the foregoing objects or any of them."

BUTTER-MAKING—A PRACTICAL LESSON IN HOME ECONOMICS.

The Women's Institutes of Canada help the farmers' wives to fill their jobs, and give them, besides, the opportunity for entertainment and culture.

treatment, the principal remedies employed are gurjan and chaulmoogra oil, arsenic, quinine, and carbolic oil.

"Fully four-fifths of the inhabitants are Christians. Their readiness to attend worship, their love for the Bible, their sacrificing contributions to missions, their peaceful lives, their mutual helpfulness, show the real work of grace in their hearts."

GOVERNMENT AID FOR HOME BUILDERS

BABIES AND BERRY PATCHES are listed among the subjects for instruction in the Women's Institutes of Canada, which, we are told, have helped advance all educational and welfare work since the first institute was established thirty years ago in Ontario. With the rapid settlement of the rich agricultural stretches of the West the institutes have proved invaluable in meeting the needs of "tenderfoot" wives and mothers in rural communities, and they have been awakened to the fact that recreation, health and religious advancement must come through community effort, and that the home and school are logical points from which to attack all social problems. To the wives of soldiers holding land under the Soldiers' Settlement Board in Western Canada the institutes have been particularly helpful, and, in turn, the women are learning to take hold of local government affairs with practised hands. Activities have been most intensive in the Province of Alberta, writes Edward Jerome Dies in *The Forecaster* (New York). Experts from the University of Alberta and numerous other educational institutions act as instructors in the teaching of scientific farming, fruit canning, bread-making, food values, child welfare, proper care of babies and beautifying the farmyard. A comprehensive clinic for babies is an important phase of the instruction. The courses last about a week, and during that time housing facilities, meals, nurses for babies, and social entertainment are provided. Railways give free transportation, and motor cars

The community corporations flourished, and in 1920, records the writer, Alberta had 290 institutes with a membership of 14,500 women. These groups raised for community and charitable purposes a total of \$88,795.14. Wide as is their charity, the clubs are not limited to this and domestic needs. They discuss political questions, and succeeded in raising the minimum wage for girls from \$9 to \$15 a week. Mothercraft teaching in the schools was taken up, but was abandoned because of the manifest difficulties under which the many male teachers would labor. However,

"The better school movement was especially supported and it developed that the women members of the institutes had taken into their own practical hands many features that add to the comfort and efficiency of the schools. They had secured playground equipment, provided sanitary drinking cups and towels, and hot lunches, in many districts. The leader of the educational work, Mrs. Aylesworth, urged a better acquaintance with the books of Canadian authors, more mothers to visit the schools, to launch campaigns for women school trustees, and to get acquainted with the teachers and see that they have a suitable place to board. Twenty-five institutes gave prizes for various competitions in drawing, essays and in agriculture. . . .

"Everything from founding a municipal hospital to maintaining an amateur dramatic club is a part of the women's institute program. They carry the tide of civilization into the great virgin country, already so rich in all natural resources. Without the splendid spirit of the women, these riches might lie fallow forever, for however rich a new country may be in soil and crop possibilities, it is of little use to mankind until it has been made livable for men, women and children, and homes have been established there.

"With this splendid organization of women already in vigorous community work, it is not so difficult to recruit young married couples, eager to make a place for themselves, and not daunted but rather anticipating the difficulties and adventure of life in a new and growing country. It is to this kind of life that many returned soldiers with their wives and families have turned in the Canadian province of Alberta."

CURRENT - POETRY

Unsolicited contributions to this department cannot be returned.

POETRY that is not wholly political tho with that motivation may be redeemed by passion. Such, we deem it, is the case with this which *The Surrey* publishes, and we reprint without prejudice:

GANDHI

BY MARY SIEGRIST

Who is it walks across the world today?
A Christ or Buddha on the common way—
This man of peace through whom all India draws
Breathlessly near to the eternal will?
Husb, what if on our earth is born again
A leader who shall conquer by the sign
Of one who went strange ways in Nazareth?

Who is it sits within his prison cell
The while his spirit goes astride the world?
This age-fulfilling one through whom speak out
The Vedas and Upanishads—who went
Naked and hungry forth to find the place
Where human woe is deepest and to feel
The bitterest grief of India's tragic land?
Whose is this peace that challenges a world,
That calls divine resistance to a will
No man upholds? Whose is this voice
Through whom the Orient comes articulate?
Whose love is this that is an unsheathed sword
To pierce the body of hypocrisy?
Whose silence this that calls across the world?

In this strange leader are all races met;
In his heart East and West are one immortally;
Through him love sounds her clarion endlessly
To millions prostrate who have lain age-long
Beneath the oppressor's heel—unwearied saint
Who gives them back the ancient memory
Of a great dawn, a lost inheritance.

* * * *

In his deep prison there in India
Somchow abreast with sun and sky he waits.
What if again a Christ is crucified
By some reluctant Pilate—if again
The blind enact their old Gethsemane?

* * * *

Tread softly, world, perhaps a Christ leads on
Today in India

EVERY little while we feel a duty to the ultra moderns. If we profess "current poetry" we can not neglect poetry that is current, and a good deal like this found in the *New Republic* is elsewhere as well as there. Perhaps there are readers who enjoy puzzles in elucidation:

HER VOICE

BY ALFRED KREYMBORG

Her eyes have already transfixed him,
and it only remains for her mouth
to transport him.

Her mouth just assumes the pert form
of a cross that is dimpled, then grave,
as she presses him on
to the next generation.

What thought can avail to revive him,
unless he should spy his own boy
building blocks,
his own girl playing house?

Herself will be busy with ferns, yes
and plants in old pots and old vases—
and she who might likewise be thinking
won't have to.

The night without, peopled with silent,
dark cypresses hured on to stars,
had her voice—
now the light of the dawn.

Having listened to that, now to this,
and grown slowly bereft of himself—
is quiet.

The same number of the *New Republic* prints the verses of one who will never be an ultra-modern, and who too modestly sings praises over a missed vocation:

SONG OF PRAISE FOR NOT BEING A POET

BY ANNE O'HARE MCCORMICK

I have heard fountains singing in the grass
I have seen rainbows thrilling to the sun
I have felt south winds dancing as they pass
All joy is one!

I have touched heaven's radiance with a star
I have drunk earth's brown vintage with a tree
I have plucked splendors where the lightnings are
Beauty is free!

I have chased angels on a sea gull's wing
I have learned laughter from the spinning spheres;
Yet I who am no poet need not sing
Or care who hears!

Ah, happy is the owner of the sky
Who is not exiled by the flaming sword
To seek the phrase that paints it till he die,
Slave of the Word

Is FAITH to give way to such certainties as Sir Arthur Conan Doyle offers us or the "sporting chance" recommended by this poem which has been widely syndicated, but gleaned for this column from the *Asheville Citizen*? A census might be interesting to teach us what number would acknowledge each of these lamps to the future:

ON BEYOND

BY GRANTLAND RICE

"Some day we may know in advance just what life we will lead in the world beyond"—Sir Arthur Conan Doyle.

Leave it as a sporting chance
Through the shadow-guarded gates,
Just a last shot at Romance
Where the Great Adventure waits.
Let the curtain stay until
We have said "Good-by, old scout,"
With a last look from the hill
Where the gray road wanders out.

We have often seen how life
Might grow stale along the road;
Sorrow, struggle, greed and strife,
Old age with its heavy load;
Then, as some far light might gleam
We can look, apart from fear,
Some day to a newer dream
On beyond the Last Frontier.

If the road ends at the grave,
How may that be called forlorn?
Dreamless sleep for all the brave,
For the weary and the worn;
If it wanders throughout space,
Who would know it in advance?
Hear the true-hearts of the race,
"Leave it as a sporting chance!"

CHOICE things appear every now and then in the *Double Dealer* (New Orleans). Two poems in the May issue give us two rare types. W. A. Percy is one old friend—the other may become one:

BETH MARIE

BY WILLIAM ALEXANDER PERCY

Impatiently she drew her breath,
So new was life, so wild:
But patiently she waited death
And when he touched her, smiled.

She who had never wished to die,
Who had such fear of pain,
Was tranquil as an evening sky
That flowers from spent rain.

For us her loss was different
From all we could suppose:
The calm of spartan stars she lent
Who only seemed a rose.

SHE SEWS

BY HAROLD VINAL

She's always mending aprons or making bits of lace,
She hasn't time to look out at a passing face,
The lads of Camden are nothing to her—
Only the sound of needles or the wheel's whir.

She was born a dreamer but she never leaves her room,
She sweeps up the thread ends with a little broom,
And what she is thinking and what she knows
Is less than the sound of the wind when it blows.

She was born a gipsy but she never seeks the road,
Nor follows after pipers with a gipsy load,
Neither moon or water make her catch her breath,
Perhaps she knows that love is as hard as death.

She's always mending aprons or making bits of lace,
She hasn't time to look out at a passing face,
The lads of Camden are nothing to her—
Only the sound of needles or the wheel's whir.

THE *University Record* (Chicago) publishes the John Billings Fisk Prize poem, which runs to seven pages of "imagist" picturing. We should like to give more of it than our space permits, and our omissions imply no criticism, but simply that we must stop at the bottom of our own column:

THROUGH THE YEAR

BY BERTHA TEN EYCK JAMES

THE SINGER OF THE STILLNESS

I am the great Singer in the Stillness;
Those who listen at dawn in the High Places may hear me:
My voice is the wind as it sweeps over the prairies,
And at night, when the stars sing in the heavens,
My song mingles with the music of the spheres.
The bare oak branches in the winter are my harp strings,
And my words are heard in the throbbing of the moon-haunted sea.
Great things have I to tell to those who hark to me;
I lift them above the world and they see life spread out before them,
For I am the Wisdom of the ages, I am the great Singer in the Stillness.

SPRING

A DAY IN FEBRUARY

The snow lies white along the black boughs of the trees;
The stars gleam on the snow;
The moon glows through the tangled twigs
Like a silver salmon in a fisher's net.

GRAY DAYS

The trees are pale as sage against the sky,
The frozen misted sky, and every leaf
Hangs at its pointed tip a drop of rain.

EARLY SPRING

The low clouds hang heavily in the sky;
The white breath of the snow fills the air;
Now a shower blows out of the east
Gray ravelled threads; the hills are hidden
In early spring I doubt there is any heaven;
But when summer comes I scarcely care.

Underwood Accounting lifts the "Shadow of the Pen"

Actual photograph of the Guaranty Trust Co. Bookkeeping Department at present, showing installation of 23 Underwood Bookkeeping Machines.

Drawn from photograph taken in the Bookkeeping Department of the Guaranty Trust Co., before the installation of Underwood Bookkeeping Machines.

"We feel that the machines are a demonstrated success, resulting in economy for the company, better working conditions for our employees and better service to our customers."

Joseph R. Mullen
Vice-President
Guaranty Trust Co. of N. Y.

UNDERWOOD ACCOUNTING supplants the slow hand with the quick machine; it substitutes mechanical accuracy for human fallibility. In every way it modernizes, it standardizes, it cuts costs.

And more—it helps the executive keep perfect

control over the business by providing for his study up-to-the-*moment* figures that show dependable facts as they *are*, not treacherous facts as they *were*. In all kinds of businesses, the Underwood Bookkeeping Machine has lifted "the Shadow of the Pen."

DAVISON AND PATTERSON, FARM-BOYS WHO ROSE

A WILD-LOOKING MAN entered a New York bank and presented a check for \$100,000 drawn to the order of "The Almighty," at the same time pointing a revolver at the paying teller's head.

"One hundred thousand dollars for The Almighty!" called out the paying teller. "How will you have it?" he asked the man.

Then he proceeded to count out the money in small bills, while the presenter of the check continued to point the revolver. The paying teller's cool remarks to the stranger were intended to

recounts a few fundamental similarities between the two men. Other analogies are that each turned to philanthropy, after he had won his way to wealth and power, each was a furious worker, and each died suddenly of a disease affecting a vital organ—in Davison's case the brain, in Patterson's the heart. Mr. Patterson's "competitors' graveyard" is matched by Mr. Davison's remark, apropos of the present market among German-Americans for Tonten bonds, that "sentiment counts only in business when two propositions of equal merit are placed before a man."

Among the columns of newspaper appreciation of Mr. Davison appears this story of how he got his first job in New York. While working in a Bridgeport bank, we are told,

Davison read in the newspaper one morning of the proposed organization of the Astor Place Bank in New York City.

"My chance to break into New York," thought the young teller.

Luck was with him. A director in the Pequonnock knew the vice-president of the new bank. Armed with a letter of introduction, Davison took a train for New York that afternoon. At 96 Broadway he found the vice-president and prest his aspiration to become paying teller of the new bank. The banker heard him through, patiently and kindly, but shook his head at the end.

"I'm sorry, my boy," he said, "but you won't do. We must have a man who knows New York and its banking problems. I'm not a banker myself and the men back of us feel they're taking some chance on me. So it would be folly—sheer folly—to give a responsible office to a young outsider."

"The vice-president was so fair and logical that I had to agree," Davison said afterward. "So you know, I was half-way back to Bridgeport before I realized that I had failed to get what I went after."

The plucky young Trojan was unused to defeat. Its taste was not palatable. The next day he mulled over the situation until he decided to try his luck again. Twenty-four hours after his first rebuff he stood once more before the New York banking man. Bad fortune played an encore. His fingers were tingling with the vice-president's good-by grip before he realized the fact that he was no nearer the coveted prize than before.

The third day, as soon as banking hours were over, he caught the New York train. By the time he reached the Broadway office the bank executive had left it.

"Sorry you missed him to-day," said a friendly clerk. "Try his home," and he gave the address.

The vice-president was dressing for dinner when Davison arrived. Yes, the young man would like to wait for him. When the financier threw open his library door twenty minutes later and saw his would-be paying teller sitting solemnly in a chair, he burst into a laugh.

"What on earth are you doing here?" he asked.

Davison knew it was now or never.

"I can't give up, sir," he cried. "You'll make a big mistake if you don't take me on. I know you'll be proud of me if you do. I've got to speak for myself. There's no one else to do it for me."

The smile lingered on the face of the vice-president and his eyes lighted with approval. He walked to the window and looked out for a minute, his hands clasped behind him. Finally he swung around.

"You've won, my young friend," he said. "How much money do you want at the start?"

"I want \$1,500 a year," replied Davison, "but I'll take anything I can live on—\$500, if you say so."

"Fifteen hundred suits me. Good-night and good luck."

There seemed to be three feet of air between Davison's shoes and the sidewalk as he floated back toward the trolley line.

ENERGY AND THE WILL TO SUCCEED.

The strain of their upward road, a physiognomist might find, is marked on the lined faces of these two men. Henry P. Davison of the firm of J. P. Morgan & Co. (on the left), and John H. Patterson of the National Cash Register Co. They both died suddenly on May 6, and left large fortunes to their heirs.

attract the attention of the bank's guards, who jumped upon the man from behind and placed him under arrest. The paying-teller of that incident, which happened in 1891, was Henry P. Davison, later widely known as one of the members of the firm of J. P. Morgan & Co. He had won his way upward largely by grit and will-power and other "elements," as the editor of the Brooklyn *Eagle* remarks, "that make for success in a competitive civilization." He died suddenly on May 6, on the same day with another man who reached success by a similar climb against odds in an equally competitive portion of the same civilization. John Henry Patterson of Dayton, Ohio, President of the National Cash Register Co., is comparable to Davison in many ways. Patterson, it is recalled, for a long time maintained a "graveyard" near the huge plant of the Cash Register Company in Dayton. Piles of rusty cash-registers were to be seen in this burying-ground, with "tombstones" reading, "Remains of the Blank-Blank Cash Register Company, Put Out of Business—" followed by the date.

"Each had been a farm-worker as a boy. Neither had a college degree. Both were self-made." So one newspaper editor

"I P S E D I X I T"

SOMETHING like twenty-five hundred years ago lived Pythagoras, the wisest and most learned man of his time. He was the first to reason that the earth was a globe and with the other planets revolved around a central body. He made discoveries which elevated mathematics to a science. He was a leader in medicine, music, ethics and government.

News of his wisdom and his learning spread far and wide. The size of the town in which he lived was doubled by the people who came to study his doctrines. Such was the faith in his word that when his followers made an assertion upon any subject, if they were asked how they knew it to be true,

they would reply simply: "*Ipse Dixit*"—"He himself has said it."

The world accepts its ideas—and its commercial products—largely on such faith. The unknown product, though it have a guarantee written in the strongest terms, fails to inspire the confidence that the known product commands, though it have no guarantee at all. A name of recognized worth is its own promise and its own pledge. Reputation is the best of all salesmen. It is the business of advertising to make character known, and by so doing to create reputation. It is the power of advertising to make people feel, when they see the name of a recognized manufacturer upon a product: "He himself has made it—it must be good."

\$10 SAVING
If You Act
Quickly**

Warning:

This is the last appearance of this offer. It is your only opportunity.

OLIVER

**This Offer
Expires July 1st**

To all who have been planning to buy a typewriter, we make this special announcement—up to July 1st you can save \$45 on the famous \$100 Oliver, the price being \$55. After July 1st, the price will be \$65. Prompt action saves you the extra \$10.

Total Saving, \$45

This offer is made by the Oliver Typewriter Company itself. You get a brand new Standard Oliver, Model Nine, direct from the factory, not second-hand, not rebuilt. It is the identical Oliver, long priced at \$100. Over 950,000 have been sold to satisfied users the world over.

SEND NO MONEY

Just mail the coupon and we send you an Oliver for Five Days Free Trial. If you want to buy it, pay \$3 after trial, then \$4 per month. If you don't want it, ship it back at our expense. By dealing direct with the factory, you save the usual selling cost. Sending the coupon does not obligate you to buy. We leave the decision to you after the Oliver arrives.

Mail the Coupon NOW

Note that the coupon is valid only until midnight, June 30th. After that the price will be \$65. So act quickly. Mail the coupon now and get the Free Trial Oliver. You do not assume the slightest risk. The Oliver must sell itself.

PERSONAL GLIMPSES
Continued

After a sumptuous dinner in a Broadway restaurant he marched in triumph to the theater.

In the middle of the first act he turned suddenly to a man sitting beside him.

"Do you know who I am?" he asked.

"No," said the stranger, staring his amazement.

"I'm the paying teller of a New York bank!" exclaimed Davison.

Mr. Patterson, from first to last, had a somewhat stormier life. He had gone further than Mr. Davison in early education, having spent two years at Dartmouth. In 1901, recalls the Brooklyn *Eagle*, he had been made a Chevalier of the Legion of Honor in token of French appreciation of what he had done for his employees:

He had established the National Cash Register works at Dayton, had introduced gymnasiums, cooking schools, lunches at cost, lecture courses, stimulations to home beautification and the spirit of cooperation. But here as elsewhere unionism did not take kindly to what was called industrial paternalism, and he had several strikes to struggle with. He also had to face Government attacks on the theory that his business had made itself a monopoly. He was indicted under the Sherman Law in 1912, tried, found guilty and sentenced. Friends asked a pardon from President Wilson. Mr. Patterson sent a telegram to the Chief Executive, refusing a pardon, saying he wanted only justice. On appeal the judgment was quashed, and he was relieved of further prosecution. In the meantime the great Dayton flood of 1913 had given him an opportunity to display both physical courage and organizing capacity.

The greatest monument that he leaves behind, says a writer in the Cincinnati *Commercial Tribune*, is the conservancy system by which the waters of the Miami River around Dayton can be kept hemmed in during the flood period. The writer recalls the terrible March days of 1913, when the need of such a system was shown:

It was during those times that Mr. Patterson's genius for directing affairs was called upon for the best that he had to offer. With the first rush of the water from the broken reservoirs farther up the river Mr. Patterson seemed to sense that this was no ordinary flood, and a half dozen hours after the inundation started he had turned the wood-working department of his factory into a boat-making establishment.

It is probable that not one man in the place knew anything beyond the rudiments of making skiffs, but when Mr. Patterson commanded, that was enough. By nightfall three or four skiffs were being turned out every hour, some that were seaworthy and some that were not—but they were boats and that was what he wanted.

When this "capacity production" reached the point that he wanted, the Miami was such a swirling mass of water that the best of steam launches could not live in the current, so but few of them were ever placed in use.

The special men of *The Commercial Tribune*, sent up to cover the flood, arrived about the time that the first of these boats were being put in commission, and they,

not realizing the enormity of the catastrophe, believed that they could better "cover the story" by getting a boat. Appeal to several heads of departments got them nowhere, so they started off to find Mr. Patterson, to whom all things apparently were referred.

His trail was picked up toward the rushing waters of the river, and there they found him doing his best, personally, in the rescue work that was going on, for by this time women and men were crawling along the network of telephone wires from their homes to safety. A life line had been stretched out into the water and a dozen men were standing waist deep in the water, stopping rafts laden with humans that were floating down. One of the newspaper men wanted to know where Mr. Patterson could be found, and some one pointed out the farthest man out, who had just picked a boy from a raft and was bringing the youngster to shore. That was John H. Patterson.

**"BOOTLEGGERS I HAVE KNOWN"—BY
A PROHIBITION OFFICER**

THE rise of the bootlegger, the growth of the fraternity in power and deadliness, and the counter-measures of Government agents, is a theme which Harold B. Dobbs, of much experience in prohibition enforcement circles, is following in a series of articles in the New York *World*. Bands of brigands, "as gentle as ever cut a throat or scuttled a ship," have turned from less lucrative pursuits, he says, especially in the purlieus of New York City, where the picking is good, to bootlegging. Old familiar faces of the "hop ring" and drug peddlers appear among the bootleggers. Many of them, most of them, in fact, make their own liquor. Much of the stuff is rank poison; it killed more than a hundred people in the neighborhood of New York before the gang chiefly concerned in its making was rounded up. There was money in it, however, enough money to draw in a fine group of assorted counterfeiters, ex-saloon-keepers, drug-runners and distributors of narcotics. Introducing his story of the breaking-up of one such gang, Mr. Dobbs writes:

This large clique of law-breakers, whetted by the larger profits of bootlegging, turned their narcotic "business" over to subordinates and entered a new field. A great many of them began by counterfeiting, not United States currency, but whisky labels, revenue strip stamps, fac-simile signatures of bottlers and distillers, withdrawal permits and doctors' prescription blanks.

It was a logical move for these criminals to make. They had plenty of forgers, photo-engravers, printing-presses, pressmen and all the necessary equipment. These things were left-overs from former activities of the money-counterfeiting gangs with whom this crowd had many times held communion.

In any event they changed their methods and soon were head over heels in the counterfeiting and bootlegging game. After I began to dig into the operations, mostly conducted in the Italian quarter, of which Mulberry Street is perhaps the main thoroughfare, I met up with familiar faces. It was not long until these men began to change in appearance. I saw and heard of

Isn't this feeling about tires pretty universal

MOST car-owners intend to have a car the rest of their lives. Economical operation is getting more and more fashionable.

How many men do you know who won't expect tires to do their share of the saving?

This is the year for tire merchants to study their customers closely.

* * *

The makers of U. S. Royal Cords have recently stated what is the biggest opportunity to serve in the tire business.

U. S. Royal Cords cannot take care of all the people who want the *upward quality* in tires.

Nor do they claim a monopoly of all good tire making methods.

It is the things they refuse to leave *undone* that make U. S.

Royal Cords the measure of all automobile tires.

Not only what is *put in* but what is *never left out*—that reveals the Royal Cord practical ideal.

* * *

So Royal Cord makers feel free to say again what they have said before—

Let us compete for higher and higher quality.

For more and more public confidence.

The makers of United States Tires urge upon everybody — manufacturer and dealer alike—a new kind of competition.

Let us compete for more and more public confidence.

Let us compete for higher and higher quality.

Let us compete for still more dependable public service.

diamonds, ultra-fashionable clothes, limousines, stories of nightly debauches, where fortunes were spent in an evening. They were in it for good, and I knew that if any one attempted to break up their parties and their money-making murder would be in order.

I soon began to step on somebody's toes. One night a steel-jacketed pistol bullet whistled too near to be comfortable. Again, I arrested one of their runners with a few quarts of poisonous hooch. I was getting close to them. Soon I knew the names of several who were implicated. The two leaders were John Romanelli, an undertaker, and Carmine Licenziata, a cheese merchant of Mott Street in the Italian quarter. Romanelli was later convicted of grand larceny in Kings County, while Licenziata was found guilty of manslaughter. The others were a Massachusetts saloon-keeper; D'Ambrosio, a Mulberry Street drug-runner; a truckman; a hotel-keeper, and one other man.

Here was as gentle a band as ever cut a throat or scuttled a ship. Others, of course, were implicated in the operations, but were minor actors in the largest and most deadly murder plot recorded since the Volstead act went into full force and effect.

Bear in mind that the bootlegger of the type I was dealing with was ruthless. He was equipped with plenty of money, and his modern counterfeiting plant was as complete as any modern small newspaper. Most all of them had criminal records and were raised with utter contempt for law. Their shops were scattered all over New York and Brooklyn and were held under fictitious names. Their bottling plants were apart from the counterfeiting establishments.

Manufactured or denatured alcohol, the writer notes in passing, is a deadly poison. There are some fifty denaturing liquids used, but most perhaps are acetone, formaldehyde and wood alcohol. The bootlegger then purchases and takes the barrels and their contents away to his small shop tax-free. In this manner the cost is negligible and he can if he has the time redistill the fluid. The bootlegger can not eliminate the poison, but the expert chemist can. Mr. Dobbs returns to his story:

Licenziata had an insane lust for money. He would bottle anything that had the smell of alcohol and was white. In his hurry to build up his first million, he sold right and left. And it was his innate greed that led to ultimate arrest and conviction

and flight to the Italian Riviera, where he now basks under sunny skies, with a retinue of servants doing his bidding.

The whole countryside was startled on New Year's Day, 1920, when press dispatches told of scores of citizens dropping like flies from wood alcohol poisoning in Massachusetts and Connecticut. Within forty-eight hours 110 persons made up the death toll. Officials flew up in arms. Who had sold the murderous liquid?

I was ordered to take up the investigation. I could almost put my finger on the bootleggers, but the evidence had to be clear and convincing before a jury. I set out to get it.

THE CAMELS ARE COMING.

—Reid in the New York Evening Mail.

Tracing a lot of wood alcohol amounting to twelve barrels, containing 110 gallons each, from Pier 14, North River, to Pier 42, I discovered that instead of arriving at the latter dock, where it should have been loaded on board an ocean liner for export to England, it had been diverted to some spot in Brooklyn. The truckman who took this burden of liquid death from Pier 14 did not deliver it as per directions, but at the instance of the undertaker, Romanelli, took it to his garage in Brooklyn. From there it was sold by Romanelli to a local druggist, who in turn sold half of it to Licenziata.

Licenziata immediately set about bottling the poison under the following fake labels: Martel brandy, cognac, rye, Bourbon and gin. Coloring and flavoring extracts were added. Then he sold it. He was careful not to save any for his own sideboard. Then I traced the entire lot to Springfield and Chicopee Falls, Mass. From there a small portion was resold in Connecticut.

By this time I had enough evidence to begin rounding up the band and started out after Romanelli, the undertaker, or "King John," as he was called.

"King John" was the leader of the district and a big politician among the Italians in this quarter. I knew that he and the crowd of gunmen at his disposal would resort to any means to keep the "big boss" out of jail.

I realized that I could get him only by a ruse. Stopping the policeman on the beat

It's here at Last!

A Revolutionizing Invention

*The SUPERFEX Burner
that cooks as fast as gas
and is absolutely reliable*

What you get in this new stove—
See it NOW at your dealer's

1. Cooking speed of the giant gas burner—in the Giant SUPERFEX Burner.
Cooking speed of the standard gas burner—in the standard size SUPERFEX burner.
2. Abundant heat that is absolutely clean and odorless.
3. Greater economy and reliability of cooking with all grades of kerosene oil.
4. Operating convenience, cleanliness and new time saving features.
5. Handsome, sturdy, long-lived stove with higher and bigger Aladdin Quality Porcelain Enameled Cooking Top, and new base shelf for utensils.
6. One Giant and 3 Standard SUPERFEX burners.
7. A new (more beautiful) Gray Enamel finish on all chimneys.

THE world's largest makers of oil stoves and ranges have crowned their achievements with the production of an oil range that cooks as fast as gas and is absolutely reliable.

Its speed and success are all in the New SUPERFEX Burner, a new and revolutionizing invention, which adds quickness and absolute heat control to the remarkable cleanliness and sturdy virtues of the world-famous New Perfection Oil Cook Stove—now used by more than 4,000,000 housewives.

To accommodate the SUPERFEX Burners and the Giant SUPERFEX, we have constructed a stove that for beauty, strength, smartness, convenience, completeness and all-around satisfaction, sets a new standard. Now on exhibition for the first time—America over. Visit your dealer.

This new "300 line" of New Perfection Stoves with SUPERFEX Burners, is additional to the long-established "Blue Chimney" New Perfection Stove, famous and favored the world over and still the most popular oil stove made at its price.

Canadian inquiries regarding these new ranges should be addressed to The Perfection Stove Company, Limited, Sarnia, Ontario, manufacturers in Canada of the famous Blue Chimney New Perfection Oil Cook Stoves.

NEW PERFECTION Oil Range

with SUPERFEX Burners

I asked him to go into the undertaking establishment and say that he had found a man on the doorstep, drunk, who said he knew Romanelli.

The officer did as requested. In the rear, seated around a long table, he found the undertaker and some twenty men drinking red wine and gambling.

"King John" was persuaded to come out to the street and I led him to the waiting automobile. I told the driver to drive to the police station.

Romanelli "turned as white as an alabaster jar." Italians swarmed out from the back room of the undertaking place demanding to know what the trouble was. It happened so quickly that the Government agents were down the street before the gunmen and bootlegging gang realized that their leader had been arrested. Later—

Romanelli was convicted of grand larceny and is now in Sing Sing under a sentence of from three and a half to seven years.

I then began the search for Licenziata. So brave and secure was he in the belief that he was too important and rich to be arrested that he made no pretense at hiding.

I walked into his shop on Mott Street, accompanied by Michael Batto of the Police Headquarters Italian Squad, who knew him. He was seated at his desk, surrounded by his Italian cheeses and macaroni. I told him he was under arrest. He said he would come along, and reaching down into a desk drawer I saw him pull out a 38 pearl-handled revolver.

"What are you going to do with that?" I asked him, at the same time taking it out of his hand.

"Well, you see," he explained, "I don't want the detective to see it. I was arrested once before for carrying a gun."

I searched the shop and found one of the most complete counterfeiting establishments I had ever seen. Electric-driven press, plates for making all the necessary paraphernalia, such as fake labels, strip stamps, new tinfoil caps, empty barrels and bottles.

He was held in bail of \$100,000 and furnished it within a few hours' notice. Later he was turned over to the authorities of Kings County. There his bail was reduced to \$50,000. He was indicted for manslaughter in the second degree, convicted before a jury and sentenced to serve eighteen years and six months in Sing Sing. He appealed the case.

While the appeal was pending Licenziata liquidated his affairs, turned his inventory of bootleg liquor into cash and took a hurried journey to the sunny shores of Italy. I have since learned that he bought a seventeenth century chateau, and the life that he leads, secure in his liberty, would put to shame the dissipations of many an old Roman Senator. There is no extradition from Italy to the United States and Licenziata is safe. But if he ever reads these lines he will know what I mean when I say that he was the cause of 110 deaths and that these shores are forbidden to him for all time.

These were types of men who had turned from making spurious \$20 notes to the illicit and unscrupulous sale of bootleg whisky because of the lure of greater profits. The old game of counterfeiting was tame beside this new "business" made possible by the Volstead act. It was less precise and no expert engravers were needed:

Last year, the Government seized over 3,000,000 fake labels, strip stamps, counterfeit withdrawal papers and doctors' prescription blanks. Scores of printing-presses and plates have been confiscated, and many convictions have been obtained, with sentences ranging from two to five years.

HE RUNS HIS CAR ON CORN MEAL AND RAISINS

PERPETUAL MOTION MAY still await discovery, but something approaching it has been hit upon by a North Carolina genius, as related in a special dispatch to the *New York Times*. The man, we solemnly are informed, has perfected a car which carries its own still, and produces moonshine fuel so fast that, in place of having to fill the gas tank from time to time, the motorist frequently has to stop in order to empty his tank of the excess fuel produced while he runs. He uses the radiator as part of his still, and the exhaust from his engine heats the "mash" to exactly the proper temperature to produce the grade of moonshine needed to give 30 or 40 miles to the gallon. Like Captain Jinks of the Horse Marines, who fed his horse on corn and beans, all this motorist has to buy is corn meal and yeast, according to his story. As *The Times* correspondent gravely relates in a dispatch which appears to have been sent, received and published in good faith:

A young business man from Hickory, who was driving with his family over the new highway, stopped at Carpenter's Knob to change the air in one of his tires, when a young man in a big roadster drew up alongside and inquired if he might be of help. The Hickory man, who had been trying for half an hour to make seventy pounds of air grow where only fifteen were before, was glad to turn the pump over to the stranger, and while he was resting his back, he walked over and looked at the roadster, the engine of which was still running.

Noticing the clear snap to the exhaust and the absence

of any smoke or odor, the Hickory man said: "That's pretty good gasoline you're using."

"That's not gasoline, that's moonshine," replied the stranger.

"Moonshine?" questioned the Hickory man. "Do you mean moonshine?"

"Yes, moonshine, red-eye, liquid joy," answered the young fellow, taking a key from his pocket. "Here, let me show you something."

Then the young fellow unlocked the lid from the big deck on the back of the roadster and, raising it up, disclosed not the customary jumble of tools and tire chains, but a shiny, copper still, which was bubbling away as merrily as if it were hidden in the mountains.

He explained to the Hickory man that he had disconnected the hose running from the cylinder block to the radiator and had piped the hot water to a double-jacket copper vessel surrounding the still and had also taken off the muffler from the exhaust pipe and had run the hot gases through a copper tube which was immersed in the outside jacket in order to superheat the water, and in this way generate enough heat to operate the still in a very efficient manner, while the vapor from the still, instead of being carried off through the familiar copper "worm," was piped direct to the radiator, which formed a perfect condenser, from the bottom of which the precious fluid was conducted through a small copper tube back to the gasoline tank from which it was drawn to the carburetor in the ordinary manner. The Hickory man says he told the stranger he did not know a gas engine would run on corn liquor, and the man replied:

"Ordinarily that's true, but the carburetor on this car's my own invention."

The young man explained the extraction of fusel oil and the number of thermal units in a calory, etc., until the Hickory man was lost in a maze of technicalities. He learned, however, that about thirty or forty miles could be gotten from one gallon and

that instead of having to stop at every service station to lay in a supply of gas, the new car had to stop every two hours to have the surplus drawn off from the tank at the rear, as the outfit generated the fuel faster than it was consumed. He also learned that it was only necessary to stop at a country store once in a while to buy a peek of corn meal, a dollar's worth of sugar, a cake of yeast and a few other simple ingredients, the names of which were not divulged, to make the contrivance practically self-supporting.

The Hickory man asked if the stranger had made any effort to learn the commercial possibilities of the invention and was told that the owner was in communication with two big automobile manufacturers who were anxious to purchase both the carburetor and the formula.

The young man said he was born and reared in the South Mountains, but had taken two years at college, where he had studied physics and chemistry. His name was not learned.

WHY—AND HOW—EUROPE LEAVES HOME

THERE were three young men from the American Consulate sitting behind a long counter in a big room at a North European port of embarkation for America. Before them passed a constant stream of emigrants from Poland, from Czecho-Slovakia, from Lithuania, from Roumania, and from various other countries of Central Europe. The stream oozed in at a double door at the end of the room, wound slowly past the three young men, and slowly trickled out of another double door far behind them. It had flowed steadily through the room from nine o'clock in the morning until noon, when it had been temporarily dammed to allow the three young men to get something to eat, and from early afternoon until two hours after nightfall.

The same thing was happening, at the same time, says the writer of a new book called "Why Europe Leaves Home" (Bobbs-Merrill), at a number of European ports of embarkation where immigration to America was not rigorously restricted. Streams of humanity were oozing slowly but ceaselessly out of Central Europe to America; streams of "undersized, peculiar, alien people moving perpetually through consulate and steamship offices and delousing plants on their way from the slums of Europe to the slums of America; streams trickling through Havre and Boulogne and Cherbourg; streams flowing through Antwerp and Rotterdam and Danzig; streams gnawing at the temporary barriers which keep them from Bremen and Hamburg and Stettin; streams which swell to torrents just before the ocean liners sail and dwindle again to orderly and steady currents when the liners have departed, but which flow without cessation under all conditions."

The writer, Kenneth L. Roberts, is an alarmist in a way—at least he presents material of an alarming nature. He calls it "Accurate and depropagandized information gathered in England, Scotland, France, Belgium, Holland, Germany, Danzig, Poland, Czecho-Slovakia, Italy, Turkey and Greece." One of the morals of this information is brought out, as he continues the story introduced in the first paragraph:

These three young men from the American Consulate, then, were "sitting on the line" in one of Europe's ports of embarkation. They were watching for fake passports or false American visés or counterfeit American ten-dollar consular fee stamps.

It was not until early in 1921 that passports began to be examined at the ships for frauds, but fraudulent passports had been in use for months. There is no way of knowing how many thousands of persons entered the United States during 1920 with forged papers.

In front of the three young men there

TOO MUCH GUEST.

—Oargill in the Indianapolis News.

was a little pile of Polish passports bearing forged American visés, forged signatures of J. K. Huddle, American Vice-Consul in Warsaw in charge of American visés, and counterfeit American ten-dollar consular fee stamps. The young man beside whom I was sitting had been scrutinizing visés for nearly eight hours. He was plainly very tired and very nervous, and very much on edge from the stench of the emigrants, and from their ceaseless efforts to better their positions in the line by little tricks and meannesses, and from their eternal and obvious falsehoods when questioned. In the space of ten minutes, as I sat there, he took three passports from three mean-faced, shifty-eyed Jews who were traveling on Polish papers. He threw them with the other fraudulent passports, motioned their bearers to come behind the counter for examination, and then swung around on his stool and faced me.

There were tears in his eyes—a fact which was no doubt due to the eight hours of exacting and unpleasant and wearying labor in which he had been engaged; and in repeating his words I would like to say again that the work had made him very nervous and very much on edge.

"I want to tell you something," he said. "My father wanted me to get my education out of a college. A college is a good thing, of course; but it never appealed to me very much. I had an idea that if I took a pack-horse and a few books and got out into the

Unloading a cargo of Pacific Coast Douglas Fir at the Weyerhaeuser plant at Baltimore.

One of the storage sheds for Douglas Fir at the Weyerhaeuser plant at Baltimore.

A few of the large timbers in the timber yard at the Weyerhaeuser plant at Baltimore.

Douglas Fir
for Industrial Buildings
—via Panama Canal

THE huge Weyerhaeuser re-distributing plant at Baltimore, Maryland, makes immediately available to the Eastern markets the great Douglas Fir forests of the Pacific Coast.

No other wood produces structural timbers their equal—great timbers up to 80 feet long and of almost any size. All heart-wood and enduring—no sap-wood to decay, as with ordinary timber. This wonderful wood grows over a wide country at varying altitudes, producing variations adapted for many purposes.

The highest type for structural timbers requires *scientific selection* of standing timber, careful sorting in the log-pond, sawing into structural timbers only that portion that contains the greatest strength—followed by rigid inspection and grading.

All a Weyerhaeuser detail—to produce a more efficient, uniform type of timbers adapted to the heaviest needs of industrial construction.

More about the Weyerhaeuser method of timber selection and why it is important to industrial builders is contained in two booklets, mailed free on request.

A Special Lumber Service for American Industry

FOR YEARS industrial men—purchasing agents, engineers, executives—men responsible for the day in and day out activity of American Industry—have been searching for a dependable source of lumber supply.

There is a real need, with so many kinds of lumber on the market, for a lumber organization with the industrial point of view.

SUCH a service the Weyerhaeuser organization is now equipped to render to the industries of the country.

A corps of men, specially trained, with a broad vision of industrial needs and conditions; men who think *industrially*; and backed by shipping facilities *planned for industry*; lumber and even standing timber *selected for industrial requirements*; all coupled with timber and manufacturing resources strong enough and varied enough to meet the wide scope of industrial demand.

Here you have sixteen saw-mills with complete stocks of fifteen kinds of lumber all available through one organization.

Every standard grade of "Finish," "Factory," "Structural"

and "Common" lumber suitable for the manifold factory and industrial uses.

THE Panama Canal now makes possible an additional service to the Eastern markets.

A great Distributing and Re-manufacturing Plant is now in operation at Baltimore, Maryland, serving the needs of that section from well-balanced stocks of Pacific Coast woods 3000 miles closer at hand, and all designed to save for industry the large losses so often incident to delayed shipments and unforeseen contingencies.

The resources of this great lumber service organization are being recognized as indispensable to more and more industrial lumber buyers.

Their knowledge of industrial lumber needs is available to you.

Weyerhaeuser Forest Products are distributed through the established trade channels by the Weyerhaeuser Sales Company, Spokane, Washington, with branch offices at 208 S. country, I could soak up as much education as I could get out of a college. It seemed to be all the same to my father; so when I had finished prep school he gave me my college money and I went out to Colorado and got a saddle-horse and a pack-horse. I wandered all through that country, mountains and deserts, and cañons. It's a wonderful country, like all the rest of our country. I loved it then and I love it now. . . ."

He hesitated and looked around at the human stream which moved steadily on its serpentine course before us.

"When I think," he went on, "that these people, who don't know the meaning of the word 'patriotism,' and who have been brought up to hate every form of government, are going to America to have a voice in the future of that country, it makes me see red!"

One of the other young men pushed back his stool and looked around at me.

"That goes for me, too," he said. "After you've seen these mobs pouring over to America for a few weeks, you get so fighting mad that you can't talk about it."

The third young man looked up from a scrutiny of a doubtful consular fee stamp. "What do they say about it at home?" he asked. "What are they letting this go on for? They can't know what's going on, or they'd stop it in a second. What's the matter with them, anyway? Are they crazy?"

Mr. Roberts then comes to a point which he considers of great importance to the future of America. It is the stimulation of Jewish immigration to our shores by the Hebrew Immigration Aid Society. His criticism of this society is presented here as he gives it, without prejudice, purely for the information of both sides. Mr. Roberts writes:

Hias is not exactly what its name implies. When an alien leaves Europe for America, he is an emigrant. When he arrives in America, he is an immigrant. If Hias stopt with being an *Immigrant* aid society, and confined its work to America alone, nobody could have the slightest objection. When, however, it becomes an *Emigrant* aid society and moves its activities to Europe, it automatically becomes an artificial stimulator of emigration; and stimulated emigration has always been recognized by every immigration authority in America as a very offensive and undesirable thing. It was offensive and undesirable in the past because those who left their homes to go to America did not do so in answer to an economic demand in this country, and because America was in no way benefited by them. The Jews who are coming to America to-day are—through no fault of their own—undesirable for these reasons, and for several others as well. In the old days there were two great stimulators of emigration in Central and Southeastern Europe—the transportation agents and the labor agents. The work of these agents in stimulating emigration was characterized by the United States Commissioner General of Immigration in 1909 as a "crying shame." Hias is as much of an emigration stimulator in the sections where it operates as transportation agents and labor agents were before their activities became illegal and were forbidden.

The American flag floats from a flagstaff above the door of the Hias office in Warsaw, and—when conditions are normal, as they were in early 1921—under this flag pass one thousand prospective Hebrew emigrants every day. Every one of the thousand is ruthlessly selfish, and is determined—as the Warsaw head of the Hias organization stated—to get there first. Nevertheless, the struggling, excited, irritating crowd is handled quietly, expeditiously and patiently by Hias. It is a remarkably efficient and excellent organization; and the work for which it exists could not be done in a more capable and praiseworthy manner.

When the doors of the Hias office are thrown open every morning and the struggling crowd claws and fights its way up the twisted stairway that leads from the courtyard to the offices, each applicant is given a green card, a red card, or a blue card, depending on whether he has come to cable to his relatives in America, to get money which has been sent from America, or to get his passport.

This business of getting money from America to stimulate immigration is highly systematized. If the Jew in America does not reply to the first two cabled requests—

The Warsaw cable will contain the phrase "Jacob Goldberg sent cable Samuel Goldberg for \$300. Locate." Samuel Goldberg may be a resident of New York or of Chicago or of Detroit. Wherever he may be, an American Hias office gets in touch with him and asks brusquely why he hasn't answered the request of Jacob Goldberg for three hundred dollars. Samuel Goldberg's address may have changed. If that has happened, the Hias organization in America sends out special messengers, locates his new address and tells him to hurry up and answer Jacob Goldberg's cable. If he is still reluctant, Hias works on his sympathies by telling him of the sufferings which Jacob Goldberg is undergoing. Almost invariably the money is sent; of course, through Hias. Doctor Schluger, head of the Warsaw Hias, told me that during December, 1920, Hias paid out half a million American dollars to emigrants.

All the detail work in connection with securing passports from the Polish Government for Jews is done by Hias. It takes the applications and the necessary documents from its clients, bunches them, presents them to the proper Polish authorities; and all that the clients need to do is to come around on the proper day and collect them.

To all intents and purposes, the Hebrew Immigration Aid Society might as well be issuing Polish visés. An attempt was actually made by the Society to persuade the Department of State of the United States to allow American visés to be issued by Hias officials in Europe without interference by American consuls, so that Jews would not be put to the annoyance of going all the way to an American consulate and of standing in line in order to get an American visé.

The Hias organization is one of the smoothest and most capable travel agencies that ever operated. If its operations should continue to develop in the future with the same overwhelming success that characterized them during the year 1920, and if the United States doesn't produce less talk and more action as regards immigration, a majority of the Jewish population of Europe will be transferred to America in one of the most stupendous Cook's tours ever known. The organization is so strong, so efficient, and so energetic that no other people can compete with the Jews in the matter of emigration to America.

Calumet Golf Club—Chicago
DONALD J. ROSS
Golf Architect

Over the Course— And a Perfect Ball to Sink on the 18th

After all, it is the inaccuracies of hitting that give to the game of golf its delightful uncertainty, its sporting challenge to skill and self-control and the happy rewards of precision. These items of physical error are taken into account in the construction of a Dunlop golf ball.

In addition to its well-balanced playing qualities a Dunlop is capable of taking a lot of punishment. It has the *durability* to carry its full quota of topping and hacking. Give a Dunlop all the gaff that you would expect a good golf ball to stand for and still it will land on the 18th green in fit condition to hole out with an accurate-rolling putt. Yes, it ought to be good for another half-dozen rounds.

It is the scientific gauging of Dunlop covers, exactness of their thickness and hardness to match the inward resiliency of each particular ball that gives to Dunlop their fine qualities of durability—not easy to pound out of shape, to cut or to split.

Then, too, the skillful application of these covers, under hydraulic pressure, adds many holes to the life of a Dunlop. The gutta-percha penetrates the core to a considerable depth and the Dunlop Vacuum process prevents air bubbles, the frequent cause of splitting with balls less carefully made.

The durability of the new *standard* Dunlops represents just one item of economy contributed to the game. Dunlops are now obtainable for 85¢ each, a price only slightly in excess of the best grade domestic brands and that offers a material saving as compared with most of the other imported balls. The Dunlop *Warwick* (really, much superior to the average ball) sells for 70¢.

The difference a Dunlop adds to your game, makes it a ball worth *insisting* upon.

CANOEING AND CAMPING THROUGH ENGLAND

ONE WAY, A SPORTING WAY, to visit the heart of England is to get close to it in a large Canadian canoe, carrying a gypsy tent, a cooking kit, and various other impedimenta commonly used in the Canadian wilds. It may be an unusual method but, says R. J. Evans, a man who tried it,

flapping slowly overhead and the great castle in the background complete the picture. It is a very "haunt of ancient peace."

On leaving the park our course became more difficult, and great care was necessary to avoid the shallows and rocks which plentifully bestrewed the river-bed. Fortunately, no mishap occurred, and by nightfall we were safely encamped at Stratford, the home of Shakespeare.

We were lucky enough to arrive during the annual Shakespeare festival and found the town crowded with visitors. Is there any significance in the fact that by far the greater number hailed from America? Certainly he who wishes to understand the English people and the things which have gone to make them must visit Stratford; and we counted it a happy augury to see the two great branches of the English-speaking peoples meeting here in common homage to the greatest of English-speaking writers.

The whole town and neighborhood is given up to the cult of Shakespeare, and this is as it should be. Shakespeare is England's poet, and Stratford is a typical English town, set in the heart of England.

We first climbed the tower of the Memorial Theater and looked around. The Avon flows gently past the very foot of the building, and close by is crossed by the two ancient bridges, with their many arches, while in the distance is the smiling Midland plain.

The town itself is like many En-

AN AMERICAN CANOE IN AN ENGLISH SETTING.

Equipped with a tent, cooking utensils and other camping paraphernalia, two canoeists managed to see more of England than falls to the lot of the average tourist, and to do it very inexpensively, too.

it worked beautifully. Together with a canoeing friend, he got away from the ordinary tourist's routes, and viewed "a series of pictures of English life unspoiled by modern innovations." They paddled from Oxford north through Banbury, of nursery rhyme fame, to Warwick, thence up the historic Avon, with a stop at Shakespeare's birthplace, and on to Tewkesbury. From there they went by train to Cricklade, and followed the Thames down to London. Taking up the narrative of their journey, after the trip up from Oxford by way of the Oxford Canal, Mr. Evans's account runs, in the *National Geographic Magazine*:

From Warwick the Avon winds away toward Stratford through the grounds of the castle, and there we realized to the full the extraordinary charm of the English park-land.

The low-lying fields, covered with the lush green grass and dotted with the golden buttercups and snow-white daisies, stretch away on either side, broken by the trees, singly, in clumps, or great masses, which are the glory of the place. Here is a group of oaks which were saplings when the Armada sailed, and there a giant beech raises its clean, velvet-smooth trunk.

Herds of deer move lazily and securely along, while from all around come the calls of innumerable wild fowl. A noble heron

From the "National Geographic Magazine."

HOW TWO IN A CANOE SAW ENGLAND.

They left Oxford and paddled north through Banbury of the famous nursery rhyme, and thence around through Warwick, Stratford-on-Avon, and Tewkesbury. After a short journey by train to Cricklade, they paddled down the Thames to London. In this way, they report, they caught glimpses of the "real heart of England, unspoiled by innovations."

English country towns—quiet, dignified, and peaceful. Shakespeare's house, one of the world's most visited literary shrines, lies in a by-street. With its gables, small diamond-paned windows, and framing of oak beams, it is

"Well," said the little Eskimo, "I'll tell you all about it"

LONG, long ago there was a King whose boast it was that he had the best feasts that men could devise or cooks could cook.

"He had a beautiful daughter, as all Kings of olden time had. When she was old enough, the King announced that he would give his daughter's hand to him who would bring a new beverage that would be as beautiful as golden sunlight, would be icy-cold and hot at the same time, would sparkle and live through a whole feast, and which, while it quenched the thirst of the moment, would awaken desire for it in young and old, rich and poor, male and female.

"And in due time it came to pass that a handsome young Prince, aided by an old wizard, brought some roots from one island, some canes from another, and some fruits from a third. From below the ground he drew the living waters of a magic spring. Then the old wizard blended the essences of the root and the fruits, sweetened them to a nicety, and infused the whole with the bubbles that gave it life. And at the next feast the Prince won the King's daughter with the wonderful new beverage, which fulfilled all the King's conditions.

"And what is the name of this beautiful golden liquid?" asked the King when the feast was over.

"But the Prince had walked into the garden with the King's daughter, and there was no answer.

"So, my dears, we must assume that then and there was discovered the universal beverage, Ginger Ale—the one of which we say, *'They all like it.'*"

Under the ground at Millis, Massachusetts, are springs of pure, cold water. The ginger used in Clicquot Club Ginger Ale comes from Jamaica. The sugar is from the cane. Lemon and lime juice are combined in the Ginger Ale that is cold and hot, is alive and golden, and which pleases everybody. For your feasts, for meals and between meals, drink Clicquot Club Ginger Ale.

typical of the sixteenth-century middle-class house.

Above Stratford the river, no longer looked after, is "slipping back to its unimproved condition." The canoe-traveler found that—

Some of the Leeks and weirs have been partially removed, and shallows, terminating in awkward and sometimes dangerous obstructions, have thus been created. We were frequently hindered also by the weeds and rushes, which in places stretch from bank to bank. Bent on pleasure as we were, and with plenty of time, these difficulties added to our enjoyment.

The twenty-mile stretch to Evesham is full of interest. There are no towns and few villages. The prevailing impression was one of remoteness, which was added to by the obstacles we had to surmount. It was hard to believe that within a few miles were manufacturing towns, full of busy people. Here everything betokened peace and the absence of man.

Evesham has a fine position in a loop of the river, and is specially famous for its orchards. Lying in a sheltered district called the "Golden Valley," its fruit rivals that of Kent, and in springtime the miles and miles of pink and white blossoms, filling the air with their fragrance, make a sight not easily forgotten.

Below Evesham the river widens, but still keeps its air of quietness. We paddled down reach after reach, all invested with the same spirit of remoteness from man and his doings and all beautiful with the beauty of English meadowland and woods.

The locks, which below Evesham have not been taken away, taxed our ingenuity and patience very highly. At Chadbury, after a specially vigorous struggle, we were told by a contemplative old man, who watched us with great interest and amusement, that that particular lock had not been opened for two years, but that it was much better than the next one, at Fladbury.

He was right. Fladbury was our Waterloo. By great efforts we succeeded in shutting the bottom gates and opening one of the sluices; but the lock then refused to fill, owing to the numerous leaks; so that, after all, we were compelled to portage the canoe to a spot nearly half a mile below.

This done, we soon arrived at Pershore, where we spent a few hours exploring the little town, which on the hot summer afternoon seemed wrapt in slumber, before tackling Pershore lock. Fortunately, this was in comparatively good condition, so that we managed to push on to Tewkesbury without much delay.

The last few miles were through monotonous country, tho we might have seen more beauty in it if there had not been a strong head wind which taxed our temper and delayed our progress.

Tewkesbury stands at the junction of the Avon and Severn, and so has always been an important route town. The greatest day in its history was May 4, 1471, when, at Bloody Meadow, between the two rivers, the Yorkist King Edward IV defeated the Lancastrians under Queen Margaret and her son Edward, both of whom were captured.

Tradition points out the spot on the old Avon bridge near by on which Richard Crookback, brother of the king, slew the Lancastrian prince in cold blood after the battle.

The town itself has many interesting old houses, including the Hop Pole Inn, at which Mr. Pickwick dined on his memorable journey from Bristol to Birmingham, in company with Mr. Ben Allen and Mr. Bob Sawyer.

The old Norman Abbey Church is one of the stateliest buildings in the West County, and contains the tombs of many great men, including that of George, Duke of Clarence, who, condemned to death for high treason, was allowed to choose the form his end should take, and, in accordance with his choice, was drowned in a butt of malmsey wine—or so tradition says.

The trip down the Thames began in the upper reaches of the famous river, where weeds so filled the tiny stream as to make paddling almost impossible. The paddlers dropt down to Henley, famous wherever boat-racing has been heard of. Mr. Evans writes:

Henley is a quiet little place for fifty-one weeks in the year; but for one crowded week in July it is the scene of the first river regatta in the world.

The whole scene is a glorious riot of color, health, and sunshine, while in the middle is the cool green water, broken only by the racing-boats coming swiftly up the straight, accompanied by an ever-growing roar from the partizans on either side. To be a member of the crew which wins the Grand Challenge Cup at Henley is every oarman's ambition and is a feat which entitles him to a place among the immortals.

THE AMERICAN INDIAN'S WARPATH ON DIAMOND AND GRIDIRON

LOUIS SOCKALEXIS—a name, it will be observed, with a punch in it—lugged his Penobscot Indian war club into our national game, back in 1897, and started in “to whale the scalps off the paleface pitchers of the baseball world.” About that time, also, the Carlisle Indian School began to pick twigs and leaves from the laurel wreath that adorned the “classic brow of the then exclusive Big Four of the college football world.” Ever since that time, remarks Jim Nasium—who also has an interesting name if you say it as one word—in *Sporting Life* (Philadelphia), the American Indian has been making more noise in the sporting world than the small number of him still left in the American body politic would seem to justify. The *Sporting Life* writer recalls and ruminates:

Years after the plowshare of the paleface had wrecked the hunting grounds of his ancestor and shoved his bare back up against the wall, a reincarnation of the racial proclivities for craft and deeds of valor in open-air sports has arisen Phoenix-like from the lethargy of the passing years and the remnants of the dying race are blazing a trail through the favorite sports of the paleface.

Baseball annals contain no names that have achieved more prominence than those of Bender, the Chippewa; Myers, the Mission Indian, and Sockalexis, the Penobscot; the football world has never known such sensationally consistent teams as those representing the Carlisle Indian School, while the names of Hudson, Mt. Pleasant, Cayou, Pierce and the great

The Name is Fitting

THE new Royal has all the refinements that would be expected of an aristocrat of typewriters. Its title has been earned, not inherited. It is self-made. Though mute, its actions are unmistakably those of a thoroughbred. It can't help being somewhat exclusive, for masterly craftsmanship has given it true distinction.

There's a poise and dignity in the outward appearance of the new Royal that bespeak a fine character within. The cleanness and uniformity of its typing unconsciously suggest good taste, discrimination. Its marked quietness makes it a good companion for concentration. It has a respect for the feelings of others.

The Light-Running, Quiet-Running Royal combines the strength and durability of a fine machine with the responsiveness and accuracy of an instrument—the achievement that makes its name so fitting.

Our fifty-six page book, "The Evolution of the Typewriter", beautifully illustrated in color, will be mailed free on request. Address Department D.

"Compare the Work"

ROYAL

Light-Running

Quiet-Running

Thorpe are ranked with the kings of the gridiron game. Thorpe, the Sac and Fox from Oklahoma, has been classed as the greatest all-round athlete the world has ever known, and Longboat, the Onondaga; Deerfoot, the Penobscot; and Tewanima, the Hopi, have run rings around their paleface opponents on the cinder-path.

When these Indian athletes of the past began to fade, the last to slip out of fast company being Bender, Thorpe and Chief Meyers, it looked for a while as tho the Indian was disappearing from our national sports. But just as this seemed a probability along comes a Pawnee Indian baseball pitcher named Moses Yellowhorse, now with the Pittsburgh National League club, displaying ability that gives every promise that he will perpetuate his race in our national pastime, and "Chief" Elmer C. Wheeler, an Osage Indian, of Pawhuska, Okla., who has become celebrated as one of the most expert trapshooters in the country.

On these two most recent arrivals of a scattered race, together with Bender, who is now managing the Reading International League baseball club and occasionally shows his native cunning on the pitcher's slab, and Jim Thorpe, still one of the greatest football players in the country, with the Canton, Ohio, professional team, depends the perpetuation of their race in our American sports until some representatives may arrive to take their places.

The story of one is the story of all, this racial trait being dominant. What the Indian athlete has been he always was. His is not a story of gradual development, arriving at his highest efficiency through a steadfast application of industry and careful training that improved on his past efforts such as the paleface athlete, but rather a story of gradual retrogression from the point of highest efficiency that marked his natural ability.

Hook up the natural adaptability of the Indian for athletics with the industry, mental poise and capacity for overcoming difficulties of his paleface brother and you would probably give the world an athlete that would boost marks so high that the present existing athletes couldn't see them with the aid of the Lick telescope.

Aside from their physical ability, each aboriginal American who has left the mark of his tomahawk on athletic records has succeeded mainly through the same natural racial characteristics, just as each has been handicapped by the same racial traits of character. The dominant factor in each Indian athlete's success, aside from his natural physical adaptability to the sport, has been a coolness under fire that amounts almost to carelessness, a quick, unerring eye, craftiness, cool, calculating judgment under the most trying conditions, an absolute lack of nervous system, and a stoicism that refuses to be shaken in the most crucial situations. Each has been a "pinch" player and has excelled in those points of the game that call for an unerring eye and a lack of nerves. Sockalexis, Meyers and Bender, the baseball representatives of aboriginal America, have all been unerring batsmen and excelled in their work in the most crucial situations. No batsmen of their day have been more feared in the "pinches" than have Soxalexis and Meyers, and in a crucial series on which everything depended on the result of that one game no pitcher known to baseball has proved more effective than has Bender, while when a "pinch hit" was needed to clinch an important argument his manager has frequently overlooked the rest of his available swatting talent and called on the Indian pitcher in the crisis.

In a like degree, however, the writer says, all have shown that other racial characteristic of failing to improve on their natural ability through their individual efforts. Sockalexis was the baseball sensation of the day his first year in the big league, then rapidly dropt out of sight. Also:

Longboat ran his greatest races when he first came out, and threatened to become the distance sensation of all time until he hit the "white lights" of paleface civilization, while Deerfoot flashed across the cinder-path like a meteor for a spell and then also went in much the same way. Thorpe was the "greatest all-round athlete the world had ever known" the first time he crawled into a track suit at Carlisle. Meyers and Bender were as good ballplayers when first picked out of the sage brush as they were later. Hudson, Pierce, Mt. Pleasant, Houser and the rest of that Carlisle bunch were football stars when they were first jammed into the moleskins.

One of the finest Indian athletes is Charles Albert Bender, a Chippewa, born at Brainard, Minn., in 1883, and subsequently the pitching hero of three World Series with the Philadelphia Athletics. Bender joined the Athletics in the spring of 1903, after serving a brief apprenticeship on the baseball teams of Carlisle Indian School and Dickinson College. He needed no minor league experience. Always a consistent winner from the time of his big league debut, it was not until 1910 that the "Chief," with a great team behind him, set his best mark of victories by leading the American League pitchers with a record of twenty-three games won and five lost. He has been a potent factor in the win-

ning of three pennants and two World Series for the Athletics, and has always showed his best work in these crucial games. Bender has known a longer period of athletic efficiency than any aborigine that has ever broken into the sports of the paleface.

Bender is also one of the most proficient trapshots in the country; in fact, could probably win all the target championships there are if he devoted the attention to that sport that many of his paleface brothers do. And he is just as good a field shot as he is at the traps, both with shotgun and rifle. He is an expert billiard player, a wonderful swimmer, and has achieved prominence in any sport that he ever tackled. The sporting world has seen few more proficient all-round performers than Chief Bender.

"Chief" Meyers was a Mission Indian from California, whom the New York National League club bought from St. Paul in 1908. Then came Tom Longboat, an Onondaga from Canada, who during the "Marathon craze" was ranked as one of the world's greatest distance runners; and Tewanima, the Hopi Indian from Arizona, who represented the United States in the Marathon at the Stockholm Olympiad in 1912.

Then came the greatest of them all, and the greatest all-round athlete that the world has ever known—Jim Thorpe, the Sac and Fox Indian from Oklahoma. Thorpe, whose disqualification by the A. A. U., following his confession of having once played baseball for money in North Carolina startled the athletic world, can never have the honors he won on the athletic fields of the paleface taken from him.

As a football player the world has never seen the equal of Jim Thorpe, and his wonderful durability and strength is exemplified by the fact that after years of service at this roughest of all sports, in which injuries are frequent, Thorpe is still the greatest of them all and plays more football each fall than any other player in the country as a member of the Canton Professional team.

But Bender, Thorpe, Meyers, and the rest of them, the Chippewa, the Sac and Fox, and the Mission, along with the Penobscot and the Onondaga, are passing down the long trail that leads to athletic oblivion.

And as their athletic valor fades into a glorious past, up rises the Osage and the Pawnee, "Chief" Wheeler and Yellowhorse, to perpetuate the name of the American Indian in American sports.

THE PERFECT GAME THAT ROOKIE ROBERTSON PITCHED

STARTLING EPISODES DESCEND SWIFTLY in sport, philosophizes Grantland Rice, of the *New York Tribune*, inspired by the no-hit, no-run game, pitched by "young Charlie Robertson," a raw rookie of the White Sox clan. Such a pitching feat happens only once in several blue moons, and then it usually occurs to a veteran. "Robertson was barely hanging on," as one sports writer puts it, "when he suddenly steps forward with a stunt that only Addie Joss and Cy Young of the more or less modernists have equaled—that of restraining any runner from reaching first base." Another sports writer, Robert F. Kelly, of the *New York Evening Post*, had a talk with Robertson about how "a pitcher must feel as he nears the end of a perfect game of ball in the major league." But Robertson, in New York with his team for a series of games with the Yankees, says that it does not "feel" at all. However, Mr. Kelly managed to get a good story out of him. As the *Post* writer describes and quotes:

Sitting in the Ansonia, where his team is stopping in the city, about an hour after arriving from the West yesterday, young Robertson told of his sensations in pitching a perfect game of ball. The story the young Texas pitcher told was extremely interesting and rather a surprise to those who had visualized a hard mental struggle going on in the youngster's mind as fewer and fewer men stood between him and the most prized performance of any pitcher.

"You know," said Robertson, "it never occurred to me that I was nearing the big thing until after two men were out in the ninth inning. Then, when Cobb sent up a pinch-hitter—I afterwards found out it was Bassler, the catcher—it suddenly dawned on me that I was standing right on the brink of the thing. It made me feel a bit funny, and I wondered if the rest of the fellows realized the fact. I turned and walked over to Mulligan, who was playing in the infield in that game. 'Do you realize that that funny little fat guy is the only thing between me and a perfect game?' I asked him. He didn't say anything, just turned me around and gave me a little shove towards the pitcher's box. I went in and served one up; the fat guy swung and

SEIBERLING CORDS

From Bead to Bead The Same Tough Tread

When your wheel drops into a rut or grazes a curb, your tire is all tread.

If the side-wall of your casing has less resistant qualities than good *tread* qualities, it is right there and then that you pay for any real or assumed saving by the use of somewhat less expensive side-wall material.

Seiberling Cords have the same kind of rubber—"tread-stock", we call it—from bead to bead. It is thicker, of course, at the center, where most of the wear comes, but is one and the same tough piece throughout—built to take the hard rubs and the hard knocks and the sharp stones and bits of glass with least injury.

There is no joining of two pieces of surfacing material, so that there can not be any separation of the tread from the sidewall, such as you often notice in looking at a car standing by the curb.

This one Seiberling Cord feature is a good illustration of the principles you'll find in all other points of construction, which will be fully explained in subsequent advertisements.

If you do not find a Seiberling dealer in your community, write us for nearest address at which you can procure Seiberling Cords and Tubes.

SEIBERLING RUBBER COMPANY · AKRON, OHIO

"CORDS ONLY": Seiberling Tires are Cords only. All Tires, Tubes and other products carrying the Seiberling name and trade-mark are of one grade only—as good as we can make it.

SEIBERLING TUBES: Seiberling Tubes, like Seiberling Cords, are of "one grade only, as good as we can make it". They are heavy, large tubes, of long-lived "pure gum, floating stock", and should last as long as the casing itself.

**"A Tire that Will be
Known Everywhere"**

Seiberling Cords are as good
as the best materials and
human skill can make them.

TO TIRE DEALERS: Seiberling Cords and Tubes are distributed through regular retail channels. We desire to establish connections with good business men who agree with us that high-grade products, a policy of selected and not closely competitive distribution, and service to the user form the right basis for a lasting and mutually profitable relationship. Write or wire Seiberling Rubber Company, Akron, Ohio.

UNIVENT

"LIVE OUTDOORS-INDOORS"
(TRADE MARK)

Phantom view

Fresh heated air from the window

What the Jamestown and other school boards found out about the Univent

In 1914, the Board of Education of Jamestown, New York, made a thorough study of ventilating systems. As a result they approved and accepted the Univent idea for ventilating a school.

They did this because the Univent permitted each and every room to be ventilated independently of any other room. Instead of a system of long, uncleanable ducts and flues, each Univent took fresh air directly from outdoors, heated it, and thoroughly diffused it throughout the rooms.

This was their ideal of perfect ventilation—as simple and more positive than opening the windows—without cold, dangerous drafts.

They found the absence of ducts saved space, lowered building costs and assured each room of its own individual supply of fresh air. When only one room was being used, only the Univent in that room was used. This saved operating cost. So, in 1920, when a big

school building program was decided upon, the Jamestown School Board installed the Univent System in five more large schools.

In 1913, Utica, New York, tried out the Univent. Today nine schools in Utica are Univentilated.

School authorities, everywhere, from New York to California, say the Univent makes class room air as fresh as outdoors. This perfect ventilation increases mental alertness and decreases sick leave.

The Univent is designed for schools and all buildings requiring mechanical ventilation; it may be installed in old or new buildings.

If you are interested in better ventilation, write for free copy of our 32-page illustrated book—"Univent Ventilation."

Note to Architects and Engineers—If you will send request on your professional letterhead you will receive a copy of our special 72-page Architects' and Engineers' edition—"Univent Ventilation."

SPORTS AND ATHLETICS Continued

the ball sailed into Mostil's hands in the outfield. That's all there was to it.

"Yes, I can see where such a thing would appear strange to any one at first thought. But think it over again. I never was going better in my life than that day. Everything worked properly. I was able to put the ball right where I wanted it and I had a lot of luck in making various batters hit the kind that we wanted them to hit. You see, I wasn't thinking about any ball game. I was just wrapt up in working on each batter as he came up. I'd look at him, figure out who he was, and then remember what it was he was supposed to have pitched to him.

"Then I'd bend my efforts toward putting what he was supposed to be unable to hit up there where he could swing at it. No, even the business of having Cobb and his players feel my glove and trousers and things didn't bring me to a full realization of what was going on. You see, it was just perfect concentration of mind and body. I can't explain it or make it clear to you, I'm afraid, but it was just that. And you know the superstition of the thing prevented anybody from saying anything on the bench. So my feelings on the matter were almost all confined to after the game, when I will say I was pretty excited. But I felt pretty queer when I saw that fat guy and knew that he was all there was left to be put away."

Robertson came to the White Sox this spring from Minneapolis, where he had been since 1919. In 1919 the Sox had given him a brief trial, but in those days they had all of the machine that afterwards destroyed itself and had only a little time to spare in looking over youngsters. So Robertson was sent back to the minors for further seasoning. Apparently he picked it up during the two seasons he spent there.

The natural supposition would be that a twenty-five-year-old youth who attained the tallest heights of his profession during the first year of his attempt would be apt to fall a victim to at least a slight enlargement of the cranial structure, as the ball-players have it—conceit, as it is in English. But Robertson gives no such impression to those he comes in contact with. He is a clean-eyed, quiet-spoken young man, and still is just a pitcher on the White Sox. "There's the kid now," is the way the older players point him out to inquirers.

Robertson is another of the college men in baseball. He stuck it out in Austin University, down in Sherman, Tex., his home, until 1918, when he finally quit and went into the Army. But not as baseball instructor or athletic director. Robertson picked out the aviation and stuck to it until he "won his wings" in 1919. Then he started his baseball.

And in talking of his perfect game he had this to say, which is perhaps indicative of his character: "There has been a lot of stuff printed about the way Cobb acted in that game. And I think this ought to be told. I had the honor of being the guest of the Intervarsity Club of Detroit a while after I pitched that game and sat at the table with Cobb. And he told me then, personally, that he had never seen more 'stuff' on a ball in his life and that that was the reason why he kept looking at it. And he added that whatever talk there had been aroused about his protesting the game was all false; that as far as he was

Towels that soothe the skin as they dry

It is Thirsty Fibre (millions of him in each ScotTissue Towel) who absorbs four times his weight in water and is responsible for that essential, thirsty, absorbent quality found only in ScotTissue Towels.

SCOTTISSUE Towels do more than instantly and thoroughly dry the skin—they also soothe and refresh it—making it both preferable and pleasant to have clean hands in business.

Thirsty Fibres, millions upon millions of them, go to make up a ScotTissue Towel. It is their amazing capacity for absorbing moisture that makes ScotTissue Towels so different and so famous.

If you want to be certain that the towels in your washroom are absolutely sanitary, agreeably soft, thoroughly absorbent, make sure to order ScotTissue Towels. 150 fresh towels in a carton. Only 50 cents (except in foreign countries). Less by the case.

FREE—"Thirsty Fibre—His Biography," an interesting and instructive little booklet—Send for it.

concerned he had been licked fair and square and that was the end of it all."

"We recall, a good many years ago," writes Grantland Riee, inspired to reminiscences, when

Another Robertson, of Yale, shut out Princeton without a hit. "And the tough part of this game," remarked Herman Suts, of Princeton, who played for the Tigers that day, "is that we hit Robertson hard all through the game and yet couldn't get one safe. There must have been eight line drives caught by the outfield."

Some years ago King Bailey, an old-time left-handed star, let New Orleans down without a hit, and yet was beaten 5 to 0. That's rasping luck on the other side of it.

One of the toughest breaks we ever saw in baseball happened to Theodore Breitenstein, the old \$10,000 wonder.

Breitenstein was pitching then for New Orleans against Nashville.

Nashville hadn't made the raw semblance of a hit; with two gone in the ninth, the last man up cracked a line drive through the box that broke Breitenstein's ankle, robbing him of a no-hit game and driving him to the hospital for six weeks. That double dose of misfortune has few equals in the game.

"Skill? Sure," says the old-timer. "But that ain't all. You gotta have the breaks."

A BOY WHO HAS BROKEN ALL SWIMMING RECORDS.

EVERY now and then, at long intervals, the sports fraternity is startled by the sudden rise to fame of some unknown athlete whose extraordinary skill enables him to leap almost over-night from obscurity to international leadership. So observes L. de B. Handley, in the *New York World*, introducing John Weissmuller, a Chicago boy who has broken nearly every swimming record in sight, and hasn't had to exert himself very much, apparently, to do it. He belongs to the Illinois Athletic Club of Chicago, and the *World* sports writer calls him "the greatest all-around swimmer of all time." Taking up his recent history, Mr. Hadley writes:

Ten months ago none outside of his own city had heard of young Weissmuller. To-day his name is familiar in swimming circles the world over. Since he broke into the competitive field last summer he has won a long string of championships, defeated international stars like Norman Ross and Ludy Langer, and shattered world's records all the way from 50 to 500 yards.

And the strangest part of it all is that Weissmuller never was taught the rudiments of watermanship. He is a self-made swimmer.

Five years ago, while bathing at Baby Beach, in the Lincoln Park Lagoon, Johnnie saw a couple of expert life guards engaging in friendly brushes off shore, and the exhibition of skill stirred within him a great longing to learn to swim as they did, that he also might thrash around boldly and swiftly in the water. Eagerly he watched them, taking careful note of their every movement, every trick of action. Then he proceeded to imitate. And, probably due to inborn watermanship, he acquired a serviceable stroke almost immediately.

But in those days Johnnie's opportunities

THE SHEPARD ELECTRIC LIFTABOUT

A New and Smaller ELECTRIC HOIST

Cuts haulage costs

AMONG the hundreds of lifting and load-moving jobs that *LiftABOUTs* are doing, these powerful new small hoists have lowered trucking and haulage costs.

How? By carrying boxes, bales, barrels, crates, and other articles to or from motor trucks or wagons in less time and with less labor. The big saving is effected by cutting down the waiting time of each vehicle, with the result that more trips a day can be made over each route. The driver very often loads and unloads his own truck.

A *LiftABOUT* operating on overhead track to shipping department will pick its load from any point within and carry it to shipping room or truck; or in receiving, will take its load from the truck and deliver it direct to the department inside to which it should go. On track extending over the sidewalk, a *LiftABOUT* will raise or lower loads through a sidewalk hatch (when used in this manner, it provides very economical elevator service).

The *LiftABOUT* is made in capacities to 2,000 pounds, and with it one man can handle loads of practically every type and proportion. Due to standardized manufacture and quantity production, this product of America's largest manufacturer of electric hoists is surprisingly low in price. It has the same features that have made "Shepards" famous the country over.

Right now the *LiftABOUT* is giving hundreds of widely varying businesses the low cost load-moving that has long been sought. It may be your hoist, too. Investigate its advantages and economies. **WHAT DO YOU HANDLE?—TELL US.**

DISTRIBUTORS WRITE—*LiftABOUTs* are being distributed throughout the U. S. by machinery and mill supply dealers, central stations, and electrical contractor-dealers. Some territories available. Write.

Shepard builds Electric Hoists and Cranes in capacities to 30 tons.

for practise were few and far between. Altho he took advantage of every chance afforded him to study champions and fashion his methods after theirs, he had none to school him, and his progress was slow. By 1919, however, he had advanced sufficiently to qualify for competition, so he joined the Larrabee Street Y. M. C. A. and started his novitiate as a contestant. The following year he was able to figure in the junior championships of the Amateur Athletic Federation.

This first taste of success, small as it was, aroused his ambitions and led him to seek affiliation with some club that he might receive the competent coaching he felt he needed. But it is significant of his lack of ability at the time that one of Chicago's foremost athletic organizations, always on the lookout for promising swimming material, gave him a short trial, then told him frankly he did not meet requirements.

Not one whit discouraged, Weissmuller next applied at the Illinois Athletic Club, and there it took just one exhibition on his part to convince old Bill Bachrach, the able club coach, that he had looked upon a coming champion. Thus Johnnie became a member of the Tricolor water squad.

Then Bachrach, aided by Norman Ross, the Olympic champion, set to work at changing and improving the lad's stroke, and within a few weeks his speed for 100 yards had increased to the point of landing him among the country's fastest sprinters. But of this the outside world knew nothing then.

It was not until last August that Weissmuller sprung his earliest sensation. At that time, says Mr. Handley:

Competing in open water he thrashed 100 yards straightaway in the amazing time of 52 seconds, or one full second under the world's record. The feat was received with quite general skepticism and, unfortunately, conditions prevented official recognition of the new standard. But developments since make it decidedly probable that Johnnie actually attained the pace credited to him, for indoors under less favorable conditions he has covered the century officially in 52 3-5 seconds in a 60-foot pool. The famous Duke Kahanamoku of Honolulu never beat 54 seconds for the distance in a short bath, altho he holds the straightaway world's standard at 53 seconds.

Weissmuller hung up his first international marks at the Brighton Beach Bath in September when he turned 100 yards in 53 1-3 seconds, 120 yards in 1 minute 8 2-5 seconds, and 150 yards in 1 minute 27 2-5 seconds, all new figures for a regulation 75-foot pool, and he has kept on smashing records ever since. His greatest feats, achieved in 75-foot pools also, include 100 yards in 53 seconds, 210 yards in 2 minutes 17 4-5 seconds, or exactly two seconds under Teddy Cann's former standard; 300 yards in 3 minutes 35 1-5 seconds, a great slash of ten seconds from Norman Ross's listed record; and 500 yards in 5 minutes 56 3-5 seconds, or 2 1-5 seconds faster than the latter's registered mark.

The 500-yard record, set in the national championship pentathlon at the Brooklyn Young Men's Christian Association recently, is earnest of what may be expected of the Chicago youth hereafter. That very evening he had taken part in four races before the 500-yard event was called, and he did not have to extend himself to win it. In fact, he plodded along leisurely, stopping at every turn to survey the field, and there is no doubt whatsoever that he could have gone 15 to 20 seconds faster had circumstances required. None who witnessed the contest questions Johnnie's ability to put great dents in all other world's records, from 500 yards to one mile. His speed and stamina are almost unbelievable.

Norman Ross, the recognized all-around international swimming champion, said to the writer some time ago: "Johnnie has everything I ever had, plus youth. He is enjoying also the advantage of more efficient methods than known when I started swimming. It is my firm belief that he will do 100 yards free style in 50 seconds and with back stroke in 60 seconds before long. I am convinced, too, that if he trains for all distances every world's record for both styles of swimming will be at his mercy. He is absolutely a marvel."

Weissmuller is tall and rangy, it seems, ideally built for swimming. He stands six-feet one-inch, weighs 170 lbs., and he tapers gracefully from broad, powerful shoulders, to narrow hips and slight, agile legs. He uses the stroke known technically as the six-beat double trudgen crawl, and his form is well-nigh perfect. His action is so smooth and easy that it appears effortless. He has two points hard to beat, says the writer:

His extraordinary speed is due to a combination of exceptional natural ability and thorough exploitation of present-day methods. The six-beat double rhythm crawl, as he uses it, enables him to travel higher in the water than most swimmers, thus reducing virtually to a minimum body resistance. His arms apply power

with vigor, raising the shoulders, then exert full force in mid-drive, hurling him forward and upward, in a manner to take full advantage of the hydroplaning principle. And the body never drops, for one starts its drive before the other leaves the water and the legs help to maintain the momentum by thrashing continuously, the thrash consisting of six narrow scissoring motions to each cycle of the two arms, with the first and fourth scissors slightly emphasized. Thus the propulsion is constant from both arms and legs. At the same time Weissmuller makes the above water recovery of the arms very slowly, gaining opportunity to relax and recuperate fully between efforts.

Johnnie is a happy-go-lucky lad, totally unspoiled by the world-wide fame suddenly fallen to his lot. He loves swimming and lives in the pool most of his spare hours, but he takes lightly the honors he is winning. After his final achievements here Bachrach, who was in charge of the Illinois swimmers, ventured to congratulate him. "That's all right," said Johnnie with a grin. "But are the rigors of training discipline lifted now? Can I have a real feed of frankfurters and ice-cream at last?" Still a big boy despite the international prominence earned.

"ATHLETICS OUGHT TO INTERFERE WITH STUDIES"

ATHLETICS OUGHT TO INTERFERE with studies," declares one of the country's leading athletic authorities, Dr. J. Duncan Spaeth, of Princeton, in a widely circulated interview; and, conversely, he says, "Studies ought to interfere with athletics." The suggestion, in a slightly different form, has frequently been made by visiting English sportsmen, as well as by the less professionally minded of our own sports authorities. Dr. Spaeth goes on to apply his doctrine to athletic games in our schools and colleges in the assertion that: "I believe what we ought to do is polarize the athletes, and athleticize the polers, and not have highly specialized groups of mere polers and other highly specialized of mere athletes." The critic is, in a way, an illustration of his own doctrine, for he is both the Director of Rowing and Professor of English Literature at Princeton. He is given most of the credit for developing Princeton's champion crews. A special dispatch to the New York *Herald* tells about his ideas and the way in which he applies them:

He has always insisted that the candidates for his varsity eights be well up in their studies, and is never troubled by problems of ineligibility. Last year's varsity B, undefeated throughout its four races, held an unusually high academic average. Heinie Leh, the stroke, and Jack Brush, bow, were Phi Beta Kappa men.

Dr. Spaeth is strongly opposed to "cramming" for either examinations or athletic contests. "If our ideal was to prevent athletics from interfering with studies," he says, "we ought to have all our baseball games in summer, football during a long Thanksgiving vacation, and rowing after commencement. But that is not our ideal. The value of athletics is that they offer a legitimate change from studies, both for the players and the spectators, just as studies offer a legitimate change from athletics."

"I don't believe in athletics without studies any more than I believe in studies without athletics of some kind. Men now go from an orgy of "cramming" for football to an orgy of "cramming" for examinations. I don't believe in "cramming" for either football tests or academic tests. I believe in wholesome alternation every day between strenuous intellectual work and strenuous physical work of some kind. Each is recreation after the other, and so you approximate the normal idea in which work is a pleasure and you may derive pleasure from your work."

Dr. Spaeth firmly believes that extra-curriculum activities are a good thing in college, because, he says, "the purpose of education is to teach a man to add himself up. The more versatile a man is, the more difficult will be the task. He will have to learn better how to organize himself and his time."

It is also his opinion that studies should have equal share with athletics in college life, with the emphasis mainly on the studies. "My quarrel with athletics," continued Dr. Spaeth, "is that athletics as often conducted at present do not interfere with studies at all, because the athlete is not doing enough studying to interfere with his athletic pursuits, and then very often at the close of the season he goes to the opposite extreme and hasn't sufficient athletics to interfere with his studies during the 'cramming' period before exams."

The period of special intensive training for Princeton crews before the big races in the spring is short, because of the fact that Dr. Spaeth keeps his men in good physical condition all the year

George W. Wells' Dream of Better Vision

ONE night, thirty years ago, George W. Wells told a group of friends the great dream of his later years. He spoke of the priceless value of fine vision and the evil effects upon the mind and general health of eyes imperfect and overtaxed. He realized how poorly the optical knowledge of that day met the needs of humanity.

He explained that a quarter of all people over six years of age are handicapped by visual defects, that millions at that time did not realize their needs and that most glasses were not correctly made and fitted.

Speaking as the greatest manufacturer of glasses in the world, he told how little help he was able to get from scientists here and abroad in solving the problems of lens making.

"From now on," said he, "we shall spare no expense on scientific research and experiment until those who most need glasses—a quarter of the whole public—shall have glasses of true scientific merit."

The great task so inspiringly conceived has

been aggressively pushed by his three sons. It remains an inspiration to the Wellsworth Scientific Staff to the present day. Discoveries have followed one after another, some of them being profoundly revolutionary. Instruments for testing eyes and apparatus for grinding and polishing lenses have been perfected.

No European country enjoys the blessings which are at hand in almost any American community for those who need glasses.

The remarkable facts to be brought out in this series of advertisements will barely indicate the facilities, skill and scientific knowledge which are being applied by Optical Specialists today throughout America.

And this wonderful progress is largely due to the foresight, energy and courage of the late George W. Wells—America's pioneer in the science and art of eye correction.

The benefits of this policy for the correction and comfort of your eyes are available to you, no matter where you live, through the services of Eyesight Specialists in your community.

*All that Science can give;
all that Artistry can add*

round. He makes a distinction between the physical training of a man and the expert skill needed for the special contest, and points out the difference between crew and football. In the former sport the training is slow and regular throughout the year, so that the men are not subjected to the severe strain of a hard preparation for a big race longer than a month in the spring.

In football the men are out of condition most of the year, and then suddenly are subjected to a long, hard, sudden period of training in the fall. "If football men rowed in the spring they wouldn't be so soft in the fall; they can not with safety enter a scrimmage without two weeks' previous hardening," declared Dr. Spaeth.

Dr. Spaeth declined to state the time football men should spend in preparation for the big games, leaving that matter to football coaches. He himself has a careful system worked out for his men.

"My duty as a faculty member and a varsity coach," said he, "is to see that the men so arrange their time that athletics, while interfering with their studies, do not absorb their whole time and become their chief interest. Play to win, but don't live to play, is my motto."

Dr. Spaeth is not in favor of regattas for which preparation is made after college is closed. "When men devote all their time exclusively to sport, when they live to play, then the amateur spirit is gone," he declared. "It is sometimes said that what is worth doing at all is worth doing as well as it can be done, but college athletics are not worth being done so well that the fever for efficiency drives out the joy of the game.

"I find that excessive efficiency often acts as a boomerang, for men who have lost their zest for the game are no longer capable of doing their best in the game. Never play a game that you can't afford to lose, and then play as tho you couldn't afford to lose, is a good rule to follow, and if followed it will take much of the sting out of defeat and destroy much of the zest of winning.

"When you play a game that you can't afford to lose, it is war, not sport. Unfortunately the spirit of intercollegiate athletics is too often like that of the spirit of war, and then we get a condition that reminds us of General Sherman's definition of war."

SUFFERINGS OF MEN WHO GET GOLF-HYPNOSIS

GOLF IS FULL OF RECORDS of strangely hypnotic influences, and unfortunate is the man who becomes a victim of one of them. So says Grantland Rice, the sports writer, in a little article contributed to the *American Golfer* (New York), which he edits in his spare time. He begins with the case of Cyril Walker, the Englewood professional. "One of the most interesting I ever heard," he calls this story of a golf-hypnotic. A few years ago, he writes:

Mr. Walker had always played at normal speed, somewhat faster, perhaps, than the average player. "Then," he said, "I began to take a little more care with my game. I began first, picking up any stray sticks or leaves around the ball through the fairway. Then I began adding another waggle or so in addressing the ball to be sure that I was all set to hit it in the right way. Finally the habit began to grow on me. This last winter I got so that I was trying to find imaginary objects around the ball. It might be lying perfectly, but from force of habit I would stoop over to look for something, picking up the smallest sort of objects that could never affect my swing. In the same way I began to use more and more time addressing the ball, until there were days when I couldn't seem to hit the ball until I had address the ball ten or twelve times.

"I had undoubtedly hypnotized myself. I wanted to play faster, but I couldn't. I had worked myself into a habit that I couldn't stop in the middle of a tournament season. But that is now all over. From this time on I am going to be one of the fastest golfers in the game in place of being one of the slowest. I am not going to play in another tournament until I am sure I have broken the old spell and can step up and hit the ball."

Golf is full of such records of strange hypnotic influences. We have seen men who couldn't swing at the ball until they had waggled the club three times or five times or seven times in a certain way. We have seen others who had to dip their bodies at least once or twice before they could play.

Strange habits of form develop that hang to one like a leech, finally taking complete possession of one's mental being.

It is for this reason that one comes upon certain hoodoo holes. Francis Ouimet had one of this type at Woodland, his home course. This particular hole had the habit of wrecking every medal round he started, until one day after holding his putt on the previous green he says he rushed up to the tee, dropt the ball and swung before he had time to think about it. He hap-

pened to get away a good tee shot, play a good second and after that was never troubled again.

Take, for example, the brilliant Sandy Herd, who will soon be seen on this side of the water. Herd has developed the habit of just so many preliminary waggles, and he can't hit the ball until these have been completed. He has hypnotized himself to this extent.

We have seen any number of golfers who overdeveloped the habit of careful play. Cyril Walker isn't the only example. There are any number who can't swing at the ball if there are any loose leaves or sticks around.

We recall one day swinging at the ball just as a dead leaf blew across it, causing a complete fizzle. After that we began picking up loose leaves in the immediate vicinity. That led to picking up all small sticks. Within two weeks we found that we were in Walker's fix, looking for unseen impediments. We decided then and there to pick up nothing around the ball and to break up the habit before it had gone too far. It was a tough battle for a round or two, but after that the desire to manure the fairway passed out.

In the same way one can take up entirely too much time in addressing the ball on tee or fairway. It is easy enough to develop queer habits that soon become fixt if one isn't on the lookout.

We knew of several men who could never play well on a sunshiny day because they had developed the habit of looking for their moving shadows as they started to swing. And once they had started looking for these shadows they couldn't quit. It was all self-hypnotism, but self-hypnotism isn't always easy to cure.

This is all due, says Mr. Rice, to the fact that the mental side of golf is even more important than the physical. By mental side, he explains:

We don't mean the possession of surplus brains. We mean rather the matter of mental control, where it is easily possible that a thin mentality may work better than a broad one. No physical strength is required for a chip shot or a three-foot putt. Yet only think of the number who muddle up these efforts by suddenly lifting the head on the down stroke.

Once the head-lifting habit is developed, it can tear the soul out of any round. It isn't so much that one gets physically stale as it is that one gets mentally stale. This means complete loss of mental control, and the ruination of one's play.

The golfer who gets the idea that he can't play if any one is whispering or moving about the tee well out of his range is under a certain hypnotic influence. He has merely, through the pressure of nerves, worked himself into this unfortunate state of mind. Each one knows dozens of golfers who have certain little characteristics that have become a part of their game, not to be given up. Some of these are unimportant. Others have a big effect upon the play. And this is especially true when one has developed the habit of a fast, jerky back swing, one of the most common faults in golf.

We asked Walker later how he was coming on with his test of faster play and he was glad to report that he was doing surprisingly well. "Before," he said, "I was almost completely exhausted after eighteen holes. Now I am getting some fun out of the game and I am sure I will be able to play much steadier golf. I can see now why it is that George Duncan and Abe Mitchell can look so fresh after thirty-six holes, day after day. They merely step up and hit the ball. Hereafter I am going to follow Alex Smith's putting tip—"Miss 'em quick."

That is why one can keep thinking in golf entirely too long. It is why one should make up his mind what he or she intends to do and from that point on, once the swing has started, hit the ball with a blank mind. It explains why one can concentrate himself into a state of rigidity, compared to which a telegraph pole is a pliable object. Walker says that at times his sufferings were intense. He knew he was holding up the field, but the harder he tried to hurry the more he would seem to hesitate over each stroke. As he is a first-class golfer in every way, among the best, it will be interesting to see how his method of faster play will work out. Before he would be good for one or two brilliant rounds, only to fade out toward the finish from the crushing strain. Now he may have the chance to hold his stride throughout.

These startling forms of self-hypnosis should be caught and killed while still young and weak. They may soon grow into such formidable proportions that they are the ones that do the killing, when it comes to any ease and poise of play.

Expectant.—SAMBO—"Rastus, were you eber sick when you wuz in France?"

RASTUS—"Man, I had the flu so bad dat I used to look in the casualty list for my own name."—*Reel*.

Twenty-six Eagle-A Mills and the G. T. M.

The American Writing Paper Company, of Holyoke, Massachusetts, comprises 26 mills throughout the country, making the nationally celebrated Eagle-A Quality-Standards of printing papers. The belting equipment and requirements of their every plant, involving hundreds of drives, have been analyzed in the past two years by a G. T. M.—Goodyear Technical Man.

As a result of this vast survey, this Company, which is the largest fine paper-making institution in the world, today is in possession of a tabulated record of every belt in each of its mills, complete data on dimensions and grades of belts used on the various drives, and specific recommendations for the types of belts best suited to the varying duties. The report is used continually by the plant engineers and by the Purchasing Department in choosing different sizes and types of belts.

"This analysis of the belt equipment in each of our 26 plants is the most comprehensive and valuable work of its kind that has ever come to my attention," writes Mr. J. Moles, Chief Engineer of the American Writing Paper Company. "The actual G. T. M. work required months, and the final report, together with recommendations submitted by the Goodyear Company, comprises several volumes."

A great deal of the equipment installed on the basis of this expert analysis is Goodyear Blue Streak Belting. This is particularly true of the

equipment of the great beater drives, which transmit the power from the main shaft to the great revolving cylinders where numerous knives beat rags into stock for the paper machines.

Two of these Goodyear Blue Streak Belts, 18-inch, 6-ply, were installed in the Crocker Division in Holyoke, in June, 1920. These two Goodyears have been in constant operation for two years now, and have never been touched. They never required taking-up or repairing. Mr. Moles says they are as good today as the day they were installed, though they have been working on this heavy drive for 24 hours a day, six days a week.

Hundreds of other Goodyear Belts in American Writing Paper plants are giving correspondingly faithful, trouble-free and long-wearing service. Their efficient and economical performance is a tribute to the quality built into them and to the correctness and exactness with which they are specified to their jobs.

This is a splendid example of the work of the G. T. M., the working of the Goodyear Plant Analysis Method, and the performance of Goodyear Belts. You can have a similar survey made of your transmission or conveying problem. There is a G. T. M. in your neighborhood, and you may rely on his recommendations and on the quality of Goodyear Belts. For further information about the Goodyear Analysis Plan, write to Goodyear, Akron, Ohio, or Los Angeles, Calif.

Why Accept 4% When You Can Get 8%

If your money is earning only 4% or 4½%, you are getting only about half as much as you should be getting. Maybe you think that your present method of putting money out at interest is safer or more convenient than other means, or you like to know that your interest is compounding every six months.

You can obtain every one of these advantages—Safety, Convenience, Compound Interest—by investing in Miller First Mortgage Bonds, yielding 8%. You can invest as little as \$100, or you can invest on easy partial payments. If you use your interest to help pay for your bond, you are compounding your money. Miller Bonds have an unbroken record of safety.

Write today for "Every Man," an Investment Story from Real Life, telling how one family doubled its income in this way.

PROSPERITY RETURNING TO CANADA

THAT Canada is sharing the business and industrial improvement experienced by her neighbor to the south is evidenced by a recent circular of the Royal Bank of Canada, summarized by the *London Statist*. In the eastern provinces, particularly, a more optimistic feeling now prevails. There, "a fairly large number of manufacturers are experiencing a slight revival in business, the impetus of which is extending, in some measure, to the wholesale and to the retail trades." While the movement is said to be less pronounced in the west, "here, too, there is some ground for encouragement." As the situation in western Canada is so much affected by the harvest, the final figures of the various crops, that are now available, will, we are told, throw light on present conditions:

The total yield of the 1921 wheat crop is finally estimated at 300,858,100 bushels for the entire Dominion, from a sown area of over 23,000,000 acres. This is an increase in yield of fourteen per cent. over the previous year. The total value of the crop, however, is estimated at about 243 million dollars, which is forty-three per cent. lower than the estimated value of the 1920 crop. This statement emphasizes the drastic decline in the price of wheat that occurred during the autumn months of 1921. When the 1921 crop came to be marketed the farmers, in view of the experience of the previous year, sold the great bulk of their wheat at the low prices that were prevailing last autumn. The present year has witnessed a marked improvement in the price of wheat, but for the most part the farmers have not benefited by it to the extent that might have been expected because a considerable proportion of the crop was sold before the prices improved. Nevertheless, the recent improvement in prices of certain agricultural products has had the effect, in some sections, of inducing slight business activity. The final figures of the oat crop show the yield to be 426,232,900 bushels, as compared with 530,709,700 bushels in 1920. Barley and flax also registered a considerable drop from the 1920 crops. The final estimate of the production of potatoes indicates a falling off from 133,831,400 bushels in 1920 to 107,246,000 bushels in 1921. In addition to the reduction in yield, the average price per bushel was twenty cents lower during 1921, decreasing the total value of the crop by over forty-seven million dollars.

Taking the country as a whole, there is said to be "justification for optimism in certain branches of industry":

Plants are, of course, operating at less than full capacity in most centers. Some concerns, however, which had considerably reduced staffs are bringing the office and plant forces nearly to normal. Orders were extremely few during February, but a much better showing was made in March. Stocks in many lines are almost depleted, and this fact augurs well for renewed activity in the near future.

The Royal Bank of Canada points out

that reports on the paper trade throughout the Dominion show some signs of improvement. It would appear, from the statements of jobbers and manufacturers, that the future outlook as to prices is favorable. Orders for book papers, fine papers, and Kraft already show improvement; but very little activity is observable in the pulp market. Concerning the lumber industry very little favorable comment can be made at the present time.

The year 1922, observes *Canadian Finance* (Winnipeg), bids fair to be "the year of the Big Turn." And this Canadian financial weekly is even more positive than the Montreal bank in setting down as follows the following "real facts" to justify its belief:

Freight Rates are coming down.

Labor is coming down.

Good Immigrants are coming in.

The proper relation between the value of farm products and those things the farmer must buy is being established slowly but surely.

Necessity has compelled us to be economical.

The acreage under crop in the West this year will exceed that of 1921 by at least 25 per cent.

BEATING EUROPEAN COMPETITION IN ARGENTINA

A MOST encouraging straw—after so many predictions that our foreign trade might have to succumb to German competition in South America and other markets—is found by the *New York Journal of Commerce* in our Department of Commerce's announcement that American firms have in recent months been able to secure attractive steel contracts from the Argentine State railways. And these contracts, the New York paper notes, "have been secured in the face of the keenest sort of competition with German and Belgian concerns." It continues:

Our prices are said to be somewhat higher than European quotations when everything is considered, but the quality of our products is sufficiently superior to those of our competitors to permit us to get the business.

It is of no little interest that the reason assigned for the superiority of our goods is that of the use of much better grade of machinery, made possible by more highly skilled labor available here. We have here an answer, in part at least, to the tariff argument so frequently heard that European cheap labor makes it necessary for us to protect our industry if our workmen are to enjoy the "American standard" of living.

Without going into the question of whether a protective tariff can in the nature of the case really "protect" labor, it is sufficient to point out that by use of better organization and superior machinery our workers and our industries can well take care of themselves in competition with Europe.

SO WE REALLY HAVEN'T ANY MONEY TO SPARE, AFTER ALL!
